Appointment to a fellowship shall be for one year, subject to renewal for a second year. In special cases a fellowship may be held for a third year, but no longer. The officers of the American University shall decide upon the length of the term of each fellow.

This scheme, submitted by Chancellor Hamilton, has been adopted by the Board of Trustees, and the Church should rejoice that this long projected American University is at last to be put into practical operation. We believe there is nothing like it in America. It is almost like getting something for nothing; and yet the scheme is tied up to the Church. It interferes in nowise with present educational institutions, and

we believe its operation will mark a new epoch in higher education in the United States. We hope the launching of this institution, which has been building so long, will be attended with the greatest enthusiasm. We wish Chancellor Hamilton and his co-laborers Godspeed in this great undertaking.—*Western Christian Advocate.*

\$20,000 for a Foreign Traveling Fellowship

Two classes of fellowships are to be supported by the American University. One class is to enable the holder of the fellowship to pursue work in European Universities or indeed in any foreign field where the subject of his special study is taught or presented to best advantage. Such fellowships ought each to have as a suitable endowment the sum of \$20,000. The fellowship will bear the name of the giver or can be made to bear the name of any person whom the giver may designate.

In special cases the field of work which the fellowship shall enter may be defined if the giver has some special line of study in which he or she may be interested. In any event we seek now only to make clear the amount of money needed for endowing such a traveling foreign fellowship.

This ought to be \$20,000 to insure the proper support of a student.

This amount would insure such aid as will enable the student work to be carried on and take care of the necessary traveling expenses in addition. Let these words stir some generous heart to endow under our auspices a fellowship that can open unique opportunities and train young men and young women to the highest efficiency that the wide world can provide.

\$16,000 for a Fellowship in the American University

Sixteen thousand dollars will endow a fellowship in the American University. We have settled on this amount for the reason that we cannot count with certainty upon much more than 4½ per cent returns from capital invested in such securities as trust funds require. And the amount of money which is set to support a fellowship ought to furnish a net return of from \$600 to \$700 annually.

What nobler way is there than this to commemorate one's own life interest or to erect a memorial to a loved relative or friend? By this means money can be dedicated to useful ends for all time. But more, here is the best method yet devised for granting some worthy young man or woman just that one supreme chance in life which will mean the difference between being hidden in the common-place ranks of work and being enabled to serve as a leader in the fight for God and humanity. Who does not know of some youthful aspiring heart yearning for this supreme chance in life? To train true inspiring leaders is to give our age its heavenly heaven. Help now by endowing a fellowship.

We Must Wake Up.

We simply *must* wake up and get up and get to business, as regards our opportunity in the capital of this Republic.

One eminent Methodist, President Edmund L. James, LL. D., of the University of Illinois, has begun the preparation of a bill at the next regular session of Congress looking to the establishment of a great federal university at Washington. The movement has the endorsement of the National Association of State Universities, and as we understand it, also of the President of the United States.

The bill will be designed to carry a preliminary appropriation of \$500,000 towards the establishment of a university to be under the control of a board appointed by the President. It will propose an advisory board made up of one delegate from each state to frame the policy of the institution.

"This would be an institution for advanced work," says President James. "It will compare, when established, with the University of Paris and the University of Berlin. The latter has 17,000 students who come from all over the world."

There will still be room—even a greater demand—for our own university at Washington, which after a whole generation still sleeps in the twilight of the gods. The reasons are apparent.

Let Methodism awake. We are caring for the educational interests of Japan, of China; let us not find still the call of our university at Washington merely a nurse's lullaby that puts our millionaires asleep.—*Central Christian Advocate.*

Madame Mountford's Aid to Washington's Christmas

A signal contribution to the interest and success of Washington's Community Christmas Tree celebration was made by Madame Lydia M. vonF. Mountford in preparing and carrying into effect the scenes of the Nativity on the steps of the Capitol. The grouping of the characters, representing the Holy Child, the Virgin Mother, Joseph, the inn keeper, the shepherds, and others, all arrayed in appropriate costumes from the biblical museum of the American University, was very fascinating and effective, and added a great religious

LIBRARY OF CONGRESS—MINERVA IN MOSAIC

feature to the first community Christmas Eve at the National Capital. Our museum is attracting much attention, both by its beauty and its extent. People from distant parts of the country and from foreign parts are inquiring about it and visiting it.

To Minerva—Mosaic

Maid of the mazes of matter and mind,
Inspire us the clue of all life to find,
Nor end to the quest of man let there be
Ere his race from blind error and sin shall be free,
Radiant queen of the art Cadmean,
Veining thy light with the love Galilean,
Aid us and lead us to life empyrean.

Trustees' Annual Meeting

The annual meeting of the trustees of the American University at Washington, D. C., was held December 17, 1913. There was a goodly attendance. Increased interest was manifested in the new plans for the university. Chancellor Hamilton's report showed that while the university plant now is being equipped for actual service there is also a steady strengthening in the resources of the university. The report also incorporated two propositions which are of wide-spread interest. One was a provision for establishing an episcopal residence for the Resident Bishop at Washington, on the grounds of the American University. The second proposition was a statement of definite plans for securing proper workers and for holding an official opening day for the university. Col. J. G. Battelle, President of the Columbus Steel and Iron Company of Columbus, Ohio, and Mr. William T. Gallier, President of the American National Bank of Washington, D. C., were elected new trustees.

Some Personals

The Rev. Gervase A. Viets of New York East Conference, who is in the field in the interest of the American University at Washington, D. C., has removed his family to New Haven, Conn. Mrs. Viets' home, where the children will attend school. He is traveling through New England, urging the support of the new university at Washington upon the attention of people of means.—*The Christian Advocate*.

Dr. Fred M. Stone of the American University, while in our office recently, related some of his experiences in connection with obtaining contributions for the university. Among others he told the story of how the first gift he ever received for this institution was given by his little niece on the night after his return from conference when first appointed to this work by Bishop Berry about six years ago. His little niece, Frances Stephens, became much interested in the story of his appointment and, coming to him, presented him with a penny, saying: "Uncle Fred, I want to help the American University." Dr. Stone said that the relation of this incident to some who have felt they could not give as large gifts as they might wish to this institution has without doubt resulted in bringing to the university at least \$5,000 in amounts varying from ten to one hundred dollars.—*Northwestern Christian Advocate*.

Good Work by a Trustee of the American University

By courtesy of R. B. Ward, the New York Deaconess Home had the use of an old mansion on its estate at Wykagyl, N. Y., for a summer home for city children.

One hundred and twenty were sent in weekly parties of twenty from the close confines of the city to the hospitable manse, with its wide verandas and spacious grounds, and cared for by deaconesses.—*The Christian Advocate*.

Catholic University at Washington Shows Remarkable Growth

The chancellor of the Catholic University, Cardinal Gibbons, recently sent to the various archbishops and bishops a copy of a letter sent him by Pope Pius X., concerning this (annual) collection and a circular under his own name, congratulating the chancellor on the prosperous condition of the institution and rejoicing "that in this noble seat of learning the finest culture is thoroughly united with purity of faith, in such wise that the students, both clerical and lay, are trained in the truths and practice of religion, and in the various branches of science as well."

Cardinal Gibbons reports that in the last three years the number of students has increased from a modest number to 1000, while the faculty staff has just doubled, from 28 to 56. Two large edifices have been added to the group of buildings, a power house and the Cardinal Gibbons Memorial Hall. The library has increased to 80,000 volumes. The laboratories of chemistry, physics and biology have added notably to their equipment. The University Summer School for teaching sisters this year received over 300, representing 26 orders, while the recently established Sisters' College has already fifty students. The cardinal says that besides a new residence hall and an ample dining hall for at least 600 students, the university needs a new chemical laboratory, a gymnasium, a library and other edifices, if it is to conduct its work with the dignity and efficiency befitting an institution that represents the attitude of the Catholic Church towards learning.—*Boston Transcript*.

Origin of the Name "The American University"

In a helpful and highly appreciated letter to Chancellor Hamilton, President Emeritus Warren calls attention to the origin of the name "The American University." In one of the reports of the Bureau of Education (No. 5, in 1891) the whole subject is elucidated. In his "History of Higher Education in

LIBRARY OF CONGRESS—STACK IN MANUSCRIPT DIVISION

America," President Charles F. Thwing gives a brief statement of the same facts. In order that this matter may be made clear at last we quote from Dr. Thwing's valuable handbook the paragraphs which he gives to the discussion:

"Manasseh Cutler was born in Connecticut in 1742, and graduated at Yale College in 1765. The son of a farmer, he seems to have embodied the strongest and best elements that belong to the simple life of the early New England community. * * * He was a minister, a lawyer, and a physician. He was best known, however, as a scientist. * * * It may also be said that he was a statesman. Washington appointed him a judge of the Supreme Court of the Northwest Territory, an appointment which he declined. For four years he was a member of the lower house of Congress. He served also as a chaplain in the Revolutionary Army. By reason of his service as a chaplain, and his consequent interest in the soldiers, and by reason of his larger interest in the government and its development he was efficient in the formation of the Ohio Company of Associates. * * * * To him above all other men belongs the priceless honor of the introduction of the land system of educational endowment. * * *

In 1802 the legislature of the Northwest Territory passed an act establishing a university and giving to it in trust the grant of two townships of land. The charter was pre-

pared by Dr. Cutler, although he himself was never a permanent resident of Ohio. In the proposed charter, Dr. Cutler recognized that institutions for the liberal education of youth are essential to the progress of the arts and sciences, important to morals and religion, and friendly to the best order and prosperity of society. He also proposed that the law-making body should establish a university to be known as the American University. It should be governed by a Board of Trustees, which board should have power to appoint all teachers in the University and to make all proper rules for its government. This board should be a close corporation, choosing its own members. The establishing of the course of instruction should be committed, together with the president and vice-president, to the actual teachers. To the board also was given authority to manage the two townships set aside for the purposes of the University.

It also had authority for holding real estate, provided that the annual income should not exceed forty thousand dollars, or the income of their property fifty thousand. Such are the main provisions which Dr. Cutler included in the fundamental act chartering the American University.

The law-making body, however, altered one fundamental element in the proposed charter. The legislature determined that the corporation should not be a close one, and that the successors of the first incumbents should be chosen by the legislature, and also decided that no limit was to be placed upon the amount of property which the corporation might hold. The first of these two alterations is profoundly significant. It transferred the relation of what came to be

known as Ohio University, had located at the spot, significantly known as Athens, from belonging to the class of private colleges into an institution having direct relation to the state. The change thus embodied the beginning of a movement which has proved to be of the utmost value and of pregnant significance." *President Charles F. Thwing, "A History of Higher Education in America,"* pp. 189-191.

The Idea of a National University at the Capital

In another column we quote from President Thwing's "History of Higher Education in America," the substance of the origin of the name of "The American University." In another place President Thwing graphically sketches the history of the attempts to establish a National University at the National Capital. One story seems hardly complete without the other. We here transcribe, therefore, for the benefit of our readers, a portion of Dr. Thwing's outline of the National University movement:

"The second form in which the collegiate spirit manifested itself at the conclusion of the great war had its origin in the desire to found and to promote the higher education through a university of and for the new Nation. * * * The special form which this desire assumed was a plan to establish a national university.

In the Federal Convention of 1787, an attempt was made to give Congress powers over public education.

Charles Pinckney * * * especially promoted the endeavor to provide for a national university at the seat of government. But his endeavors, together with the endeavors of the president of the Convention, were without result.

Constitutional objections apparently weighed with some of the members, and indifference to the whole subject prevailed with others.

But in the next thirty years the cause of a National University appears under diverse forms, although with one unvarying result. No one of the statesmen of that period following the Revolution held the purpose of founding and providing for a National University more close to his heart than Washington. In conversation, message, and other documents he insisted upon the importance of the plan. * * *

In a paragraph which he had thought of inserting in his farewell address, but which was not included, he says, 'I mean education generally. * * * but particularly the establishment of a university * * * (this seminary being at the seat of the general government), where the legislature would be in session half the year and the interests and politics of the nation of course would be discussed, [thus] they would lay the surest foundation for the practical part (of enlightening) also.' * * * In his will, also, Washington made a bequest toward the endowment of a university.

But Washington was not alone in his purpose. * * * Directly or indirectly, the first six presidents seem to have favored, with a greater or less degree of earnestness, the foundation of a National University * * * But every attempt, even at its best estate, was remote from success. From the close of the administration of the second President Adams, until the end of the Paris Exposition in 1873, the idea of the establishment of a National University was not generally discussed. The results of the World's Fair revealed to America that its best universities did not compare favorably with the universities of Europe. The American Spirit was quickened. The quickening of the American Spirit resulted in an endeavor to found a National University. But these endeavors have also proved resultless. * * * Yet the project of establishing a National University will from time to time emerge until an actual foundation be made."—*Pres. C. F. Thwing, "A History of Higher Education in America,"* pp. 183-6.

The Library of Congress

We present in this issue of the COURIER five illustrations showing a few phases of the vast scope of this "palace of letters." As the Smithsonian Institution, whose value we set forth in our September number, forms the leading asset of the Federal government in its scientific work and treasure, so the Library of Congress stands for and focuses the incalculable riches of the United States capital in the world of literature. Both are the promoters and conservators of art—the one as the custodian of art products and the other as the depository of the literature of art.

The Library now has 2,128,255 books, 135,223 maps and charts, 630,790 pieces of music, 360,404 prints and photographs. The building covers three and a half acres, and has more than eight acres of floor. It employs a force of about 500 persons—distributed in part as follows: Administration 9, mail and delivery 5, order 13, printing variable numbers from Government Printing office, and binding 3, cataloguing 91, card

LIBRARY OF CONGRESS—PUBLIC READING ROOM
WEST SECTION

LIBRARY OF CONGRESS—WEST FRONT

distribution 27, bibliography 7, reading rooms 58, periodicals 12, documents 5, manuscripts 4, maps and charts 5, music 6, prints 2, law 6, copyright 84.

Mr. William Warner Bishop, superintendent of the reading room, in his brochure on the Library of Congress says:

"It has become in fact, if not in name, the national library. The librarian, in pursuance of his authority to make rules and regulations, occasionally grants this privilege (of drawing books for home use) to scholars engaged in research. * * * There is no limit to the number of books a reader may draw for reference use, and he has direct access to a reference collection of over 15,000 volumes in the main reading room. If his studies require that he have access to the shelves, this privilege is granted him, and if he needs to have continuous use of the same books day after day, he is given a table where they may be reserved for him. * * * About 1,000 readers can be accommodated at one time in the various reading rooms and alcoves. * * * By virtue of the copyright law it has received the most complete collection in existence of the products of the American press. American local history and biography are represented with unusual fullness."

A new addition to the sources of American history is the acquisition of the famous Schuller collection, containing vast portions of the native Indian tongues of Spanish America.

The richness of the collections in this great treasure house is not confined to material bearing on America. Here one finds 80,000 Russian books, especially the famous collection of Yudin of Krasnoyarsk in Siberia. One of the greatest of oriental collections in the world here invites the student of the East. Chinese and Japanese books here have an abiding place—among them the choice purchase of about 25,000 volumes made by Professor Assakawa of Yale University. Here are housed a magnificent gathering of Hebrew literature rich in Talmudic and Rabbinical lore, the gift of Jacob Schiff, including no less than seventeen out of about fifty known books printed before 1501—a group of Hebrew incunables. The deposits of works bearing on the higher drama include no less than 20,000 librettos of the mediæval and later years. Books on the fine arts alone are here by the thousands, chosen with great care and at large cost—the results of special effort during the last few years.

The annual cost of maintenance and increase of the Library is considerably more than one-half million dollars. Accessions the last year were over 115,000. Concerning the manuscript division (see illustration on page 5), Mr. Herbert Putnam, the Librarian, says:

"The usefulness of the collections has steadily increased, until now it is not too much to say that truth and accuracy require that anyone who is writing or compiling American history as a narrative of events must consult these papers, unless his field is a very narrow one. This statement is enough to indicate the serious problem which confronts the Division of devising a means of making its resources generally accessible to historical scholars, students, and writers, who do not find it possible to come to Washington to pursue their investigations. The manuscripts cannot be lent. Many of them are given to the Library on condition that they shall never leave it. They are not replaceable as books are. No plan can be acceptable which proposes that they shall be used in any other place than this Division."

Washington's Sky Line Changed

"Absence from Washington for a number of years gives one who has lived here for some time appreciation of what wonderful strides the National Capital is making," remarked Dominic I. Murphy, former commissioner of pensions, at the Raleigh. Mr. Murphy has been in the consular service for nearly six years, having first been sent to Bordeaux, France, and then transferred to St. Gall, Switzerland, his present post.

"I have been away long enough to contemplate with wonder the great changes that have taken place in Washington in that time," continued Mr. Murphy. "One would hardly think that the city could have made such remarkable progress in half a decade. I went into the more remote sections of the northwest and was simply amazed at the development that has taken place. It is only a very few years since that part of Washington was an open space; now there are magnificent apartment houses and splendid private residences. Even in the downtown sections the city has taken on a new aspect. The sky line has been entirely changed and Washington today presents the appearance of a first-class business municipality."

"I always liked Washington, but after several years spent abroad, where I had opportunity to see great capitals of Europe, I am more than ever in love with it. There is no question that in years to come Washington will be the most beautiful city in the world. It now surpasses most of the European cities."—*Washington Post*.

Epworth Herald Expectant

The American University has some new plans not yet ready for publication, which will give that institution a great impetus toward the goal which has been so long sought, the opening of the university for actual work. An announcement of the largest significance may be expected at an early date.

—*Epworth Herald*.

Recent Actions Illustrating Wisdom of Our Plan

TRAVELING LECTURERS

Attention is being drawn in the daily press to a decidedly new idea in educational matters worked out by President Vincent of the University of Minnesota. Dr. Vincent, who is a son of Bishop Vincent of our church, with true Methodist instinct has felt the educational needs of the people, and has devised a scheme whereby the university is actually taken to the masses. Equipments, lecturers, exhibits and students go into various parts of the State, and in a tent during the summer lectures are delivered on the problems that deal with the home life, hygiene, literature, and other departments of knowledge. It is something entirely novel in educational circles; but, asks the *Boston Herald*: "Who shall dispute its practical usefulness? There is little danger of taking too much education to the people who do not go to the universities for it."—*Zion's Herald*.

MILLION FOR RESEARCH WORK

Berkeley, Cal.—In memory of a husband who for years had suffered from a malady that eluded medical skill, Mrs. George William Hooper, of San Francisco, has transferred to the University of California \$1,000,000 for the establishment of an institute of medical research.

In announcing the gift today at the commencement exercises of the university, President Benjamin I. Wheeler said:

"Mr. Hooper knew that he could not be helped, but he hoped that something might be done for others who suffered in the same way. His devoted wife has made possible a realization of his wish in behalf of the sons of men."—*Public Press*.

INDUSTRIAL FELLOWSHIPS

Just sixty years ago a British Royal Commission outlined a plan to establish closer relations between education and industry. That plan involved the award of bursaries to young men who, after graduating from approved technical colleges, desired to enter engineering, chemical or other manufacturing works. The main characteristic of the scheme was to lead the student to the industry. Today the contrary idea is taking hold in England, and a proposition to lead the manufacturers to the university is meeting with considerable favor. Especially is there commendation of the plan of industrial fellowships that has been in successful operation for four years at the University of Kansas.

By this ingenious arrangement the interests of all parties are safeguarded. To the university the influence of the fellows and their teaching work are valuable assets, while its character as a public institution is protected by the right to publish the results of researches conducted within its walls after the lapse of three years. The fellow carries on his work under greater advantages than are possible in a factory. He can consult the university professors, specialists in all departments of knowledge, in any difficulties that may arise, and he has the stimulus of working alongside others with similar objects; the resources of libraries and museums are placed unreservedly at his disposal; he has the opportunity of carrying out his laboratory experiments under factory conditions in the donor's works, and he becomes an expert in his partic-

ular study, with excellent prospects of remunerative employment in the factory of the company or elsewhere. Lastly, the conditions have proved to be satisfactory to the manufacturer.—*Boston Transcript*.

A Thought Compelling Argument for the American University

We never have intended to employ an anti-Romanist campaign as a means of helping the American University. On the contrary we sedulously have guarded against this. Indeed, Chancellor Hamilton, more than once, when insulted and repeatedly misrepresented has held his peace for the sake of the institution which he is laboring to advance. Once when publicly reviled to his face, in a great public assembly, he reviled not again but preserved a courteous silence.

There are, however, signs of the times which occasionally compel thought and of themselves point the evident way of light. Such a sign is the present discussion between Dr. Randolph H. McKim, Rector of the Episcopal Church of the Epiphany, and Monsignor Russell, Rector of the Roman Catholic Church of St. Patrick, of the City of Washington. The occasion of this discussion is so serious and the dispute itself is on so high a plane that no citizen of this land is without interest in the questions involved. The discussion arose out of the efforts of the Paulist Fathers to convert Protestants to Romanism. The Romanists were the aggressors. Let this suffice. We have no intention of joining in the matter. Needless to say Dr. McKim has our heartiest backing and endorsement. He has wrought a great work for civil and religious liberty. We pray the blessing of the Father of all light upon his noble and manly spirit and stand. We quote a fragment from his recent reply to Monsignor Russell as illustrating how vital to us all is the truth for which the devoted Rector of the Church of the Epiphany is battling:

"And now, my dear Monsignor, let me assure you that we Protestants have no enmity for our Roman Catholic fellow-citizens. We desire to live with them in peace and amity. We hope that should the time ever come when they shall be called upon to choose between their loyalty to the constitution and laws of the United States and their loyalty to the Pope as a temporal sovereign, they will choose as nobly as did the Roman Catholic army of England, who, when the Pope launched the Spanish Armada against the English shores, took their places bravely with the captains who stilled forth to meet the 'invincible armada'. We have nothing to say against the doctrines of your church except when your controversialists attack our faith and seek to proselyte our people.

But we do seriously object to the ambitious political schemes which priests and prelates of your church have long been carrying on in the United States. We see your priesthood telling the people how they shall cast their ballots. We see you using the boycott to limit the freedom of the press. We see Roman Catholic mobs in four States of the Union during the last four months attacking preachers and lecturers, and so abridging the liberty of speech.

In conclusion, my dear Monsignor, I beg you to use your great influence to have the priests and prelates of your church devote themselves to an exclusively spiritual ideal of the Christian Church. Sooner or later the American people will repudiate any church which attempts to play the role of a political-religious organization."

Letter of Dr. McKim in the *Washington Post*, Dec. 20, 1913.

Life-Girding and the New Vision of the American University

By Chancellor Franklin Hamilton

[A Discussion of Conditions Bearing upon the Opening of the American University.]

[Reprinted from the *Methodist Review*, March, 1914.]

An old Arab woman on the River Nile in Egypt was looking for top soil for her melon patch. Scratching at a mound by the river side, she uncovered some clay tablets. These tablets, when deciphered, furnished authentic historical data for a period in Egyptian history which had been understood but little. The mound was Tel-el-Amarna. It marked the spot where the Pharaoh Akhenaten had built his capital and had reared his temple for the worship of the true God as a spiritual deity over against the materialistic animal worship of the time. But the new departure was too high for that day. The Pharaoh died overwhelmed. His body was hidden away in a dishonored tomb. Temple and city fell into ruins and became heaps for the bittern and the jackal. But in time the tablets re-hearsing the story were found. And now Egyptologists pronounce Akhenaten "the world's first idealist and the world's first individual."

John Fletcher Hurst was an idealist. He belonged to the Brahmin caste of scholarship and refinement. All the more keenly, perhaps, did he feel the certain condescension among scholars, even in his day, concerning the people called Methodists. He recalled that Warburton, in the earlier days, had said of Methodism that it was the social waste which has been cast aside and by spontaneous combustion took fire. He lived to hear the fling of Matthew Arnold that Methodism might be emotionalism tinged with morality, but it lacked sweetness and light. Himself an approved scholar, welcome in any circle of intellectual exclusiveness, John Fletcher Hurst determined to claim for his church that leadership in the realm of the mind which long since she had won in the life of the spirit. As the location for his venture he selected the capital of this country. Here he sought to found a university of loftiest pretension. Through the medium of the same undertaking he purposed, moreover, to unite the two, so long disjointed, knowledge and vital piety. Against the glow of his own enthusiasm there soon arose the inevitable shadow of reaction. He himself was misunderstood. His scheme was deemed "a dream," "a white elephant," a "flash in the pan," a "Gargantuan Frankenstein which must fall apart through its own unworkability." And so he died. Many discerned not the signs of the times. Of the American University they said, "It is heaps for the bittern and the jackal."

They did not understand. Nor little wonder. He himself must be an idealist to understand that word of Nietzsche. "It seems that in order to inscribe themselves upon the heart of humanity with everlasting claims, all great things have first to wander about the earth as enormous and awe-inspiring caricatures." Again was this paradox an actuality. For, while the enterprise of a university at the national capital seemed only to be wandering about the earth as a caricature, in reality it was inscribing itself with everlasting claims on the hearts of multitudes. "The Whirligig of Time," says the clown in *Twelfth Night*, "brings on his revenges." The emphasis in human events and in human interest has been shifting since that earlier day of Hurst the dreamer. Joseph's dreams always come true. The spirit of the times, even now under our own eyes, is changing. To us is being revealed, through the American University idea itself, the opening of a great and effectual door for service in enlightenment and Christian learning. Changes, almost spontaneously, step by step unfolding themselves, are obliterating one by one the grounds of objection to the enterprise. The question of competition, for example, already has been eliminated. The query as to how extraordinary advantages for higher learning could be provided for through this undertaking, without the raising of some Cressus-like, impossible sum of money, has been answered. The fear that the plan itself has been outgrown is seen now to be only a mental quickening to a different angle of approach. Closet philosophers remind us that this is a wonderful age and that if we are to do our day's task worthily in this new world of thought and life-girding, it must be no ordinary contribution that we shall make to the guidance of men. Aye, verily. But here we find the very clue from the labyrinth for which we have sought so long.

This is a new day not only in the life of the spirit, but also in the practical affairs of men. And it is this vision of the new day that has lighted us to a new faith in the American University undertaking. For under the new light it is seen that within the bosom of this very enterprise there lies slumbering the one norm of life which can adapt itself efficaciously to the altered needs of the time and through this very adaptation thrive. Let us pause for a moment and see what are the needs which thus must be met.

Three characteristics mark the thought life of our time. The first is the search for ultimate reality. The human spirit seems bewitched in its eagerness to find the ultimate explanation of things. This attitude of spirit expresses itself in research work of every character. Our industries and trade, manufactures, our inventions, methods of transportation and communication, our food production, our agricultural conservation,

even our fisheries, all are revealing our increasing dependence on science and discovery. The social fabric is involved in the outcome of research investigations now being conducted in laboratories, research stations, experimental plants, observatories, weather bureaus, and hospitals. Remedial agencies for the race in unfathomed richness are found to inure to research workers. Radium and mesothorium project their light of hope into medicine. Serum therapy reinforces the fight against contagion. The *anopheles maculi pennis*, the dread yellow-fever bearer, is caught on the wing. And these results are merest sparks or scintillations from the fires of the toiling research benefactor. At last we have come to see that humanity itself is to get on largely through the discoveries and ventures of such pioneers as Harvey, Jenner, Lord Rayleigh, Sir William Crookes, Edison, Madame Curie, Stiles, Major-Surgeon Reed, Pasteur, Richet, Carrel, Burbank, and their like. As a consequent upon this is the fact that these very investigations and results are revealing a hitherto undreamed of partnership between research and the training of youthful minds. Louis Agassiz foresaw this. In his university work long ago he combined the two ideas. His students at the outset were put at research work as the best method of developing their own powers.

A second characteristic of the thought life of today is the vitalizing of truth when once discovered. This vitalizing of truth we find made possible through the dissemination of educative information at first hand to the people. The effort to prevent disease, ignorance, and immorality by enlightenment through channels that shall reach the humblest classes, such as health exhibits, warning signs, picture displays, and various other morally instructive objective demonstrations, is one of the marks of the day. The new vision of social service, the uplift of the people through organizations directed toward publicity and instructional ends, the ever-widening utilization of the printed page, the pulpit, and reform campaigns, with their frank discussion of subjects hitherto *tabu*, the bringing of new facts and inspiration through Chautauqua circuits to communities where the common people live, the enormous popularity of the problem novel, and the new utilization of the stage for informing the careless—all such tendencies, to one who understands, mark a supreme trend of present-day life.

A third characteristic of our time is the development of individualism. The secret of the present vogue of Dr. Maria Montessori is that through her method of training childhood she is endeavoring to answer a demand aroused by the psychologic and biologic researches of the past two decades. She says, "The fundamental principle must be, indeed, the liberty of the pupil." In this doctrine of liberty the Montessori method is based upon the individual.

No longer is there any thought of molding all individuals alike in life training. Now it is sought to find the capabilities of each individual and to develop

those capabilities. The principle is being accepted that the selection of particular individuals of unusual powers for special development will secure to the race its most rapid advancement through properly equipped leadership. This may account for the revival of interest in the work of the Austrian monk Gregor Mendel. Certain it is that there is a well-defined evolution forward from the work of the great forerunners in education—Rousseau, Pestalozzi, Herbart, and Froebel. And there is a new emphasis given to individual divergence from type. So we have increasing specialization in study and more and more emphasis laid on vocational training.

Now, what is the inevitable conclusion to be drawn from all this? Is it not that any institution which to-day aims to minister to the modern needs must adjust itself to these new tendencies and interests in life? Gone forever is the day when human learning can be summed up in the old academic *trivium* and *quadrivium*—*Lingua, Tropus, Ratio, Numerus, Tonus, Angulus, Astra*. Gone forever the day when a university doctor can lecture on all fields of knowledge, or a medical professor can occupy, as Oliver Wendell Holmes said that once he did, not a chair in the professional school, but a whole settee. This is because we are coming to realize that the old saying that knowledge is power is not true. Useless knowledge has no relation to power. And it is *power* that we must have as girding for the life of the new day. For, as De Quincey suggests, the difference between knowledge and power is of celestial diameter. Every step that we take in knowledge only gets us further along the same plane. But the very first step in power is a step upward as on an ascending Jacob's ladder stretching from earth to things above the earth; it is a flight upward into another sphere where earth is forgot and angels come and minister unto us.

With the problem thus frankly stated, is there any way by which the American University can be put into functioning existence, so that it can meet the needs which are characteristic of the life of our time? Is there any field which this institution can enter, bringing the gift of power, and yet be saved from useless or destructive competition with other existing institutions? Is it possible to retain the ideals of the founders and yet at the same time enable the university to enter on a beneficent career of bringing to other existing schools, not rivalry in the struggle for funds, students, and prestige, but cooperation, elements of assisting strength and quickening, wider scope of life and a projected efficiency? Is it possible? In this day and generation of grueling fight for one's own, can such things be? Again the answer is, "Aye, verily!" As ground for our answer, let me hasten to call attention at once to unique conditions existing to which the American University has access. It is not so much what this institution has as what now it is able strategically to do.

All the world knows that over a century ago George

Washington called the attention of the American people to the extraordinary advantages that would inure to the whole country through the right utilization of the government resources for education and scholarly research. These resources are massed in the government archives, departments, bureaus, museums, libraries, and similar institutions. It often has been recited how George Washington in his will made provision for the actual founding of a national university at the capital of the country, which should carry out this plan of putting the government departments to distinctively educational use. It may not be so familiar to all, however, that "Washington was not alone in his purpose. Directly or indirectly, the first six presidents favored with a greater or less degree of earnestness the foundation of a national university."

Nothing came of it all, however, while the government treasures themselves kept heaping up and multiplying, until now they represent an almost unparalleled storehouse of riches. "Every branch of human knowledge has a literary deposit in Washington."

It is to this educational equipment of the national government, which for a century thus steadily has been accreting, that we propose to turn for the means of enabling the American University to do some of the things to which allusion has been made.

Certainly will the university be enabled, through this Federal treasure house of educational material, to attempt her first task, that of helping to answer the call to a *search for ultimate reality*. This will be done through the organization of an institute for research to be operated in connection with the government departments and bureaus and yet to be a component function in the life of the American University. This institute will not be intended to carry on research work of its own. Rather will it be simply a *nerus*, or connecting link, by means of which students may be introduced to the opportunities for research now existing in the government departments. It is designed to make available what already exists, but is not being put to its maximum educational use. This institute will have a director of research. He will have a thorough knowledge of the opportunities for research in the government offices. The primary function, therefore, of the director of research will be to open the door to those channels of new discovery and scientific suggestion which exist under government auspices.

What is involved in this proposal may be gathered from a remarkable statement by President Hadley concerning research facilities now existing in the government departments at Washington: President A. T. Hadley, Facilities for Study and Research in the Offices of the United States Government at Washington, p. 9.

It would be time wasted to seek to demonstrate the research opportunities open in Washington. Professor Balfour, of Oxford University, declared: "There is no city in the world where scientific study can be pur-

sued to so great advantage as in Washington." In learning and enlightenment Washington will take the place which Paris has held. She will be what the Greeks called Athens, the *omphalos*, the world's center.

It is easy to see a thing after it is done. Here the statesman is he who, like Francis Asbury, foreseeing the great future of this country, is wise enough to desire to preoccupy its most strategic points with centers of Christian light, but in a larger day than that of the apostolic circuit rider shall not forget the national capital, where in balance hang the issues of life and death for many peoples. The Roman Catholic Church, which so wisely, for her purposes, maintains in this country 321 newspapers and public prints, counts it worth her supreme effort to build at Washington a great school of learning, which with vision she calls The Catholic University of America. And his Holiness, who has taken this university under his own special watch-care and for it cherishes unending solicitude, announces to the world that the institution is to be the chief training station of Catholicism for the western hemisphere. One is reminded even now of those earlier lines of the poet Wordsworth:

The ancient thrones of Christendom are stuff
For occupation of a magic wand,
And 'tis the Pope that wields it: whether rough
Or smooth his front, our world is in his hand.

At such a center as the national capital, therefore, none ought to feel that such direction of effort as is contemplated by the American University is unwise or ill advised. The research work of the Rockefeller Institute alone would demonstrate the wisdom of the initial part of the plan. But in Germany research work distinctively is carried on under the auspices of the universities. And there notably, while with us increasingly, there is a remarkable development in industrial research as a recognized function of universities and technical schools.

Such an attempt upon our part, moreover, answers the desire recently expressed by the University of Pennsylvania to set apart certain of her professors for purely research work. The kind of work which we have in mind has been done at the government departments with high success by post-graduate students from West Point and the Naval Academy. Students of the Catholic University of America at Washington now are putting to valuable use the same resources. Such an institute as we intend to operate can become an intermediary and intellectual clearing house between other American institutions of learning and the government offices. In time it could become a bureau of information for foreign scholars and institutions. As such the scope and value of its life would be measureless.

How clear the field is may be gathered from the fact that national legislation has provided for the free use by students of all that the government has in the way

The American University Courier

Office, 1422 F Street N. W. Site, Massachusetts and Nebraska
Avenues, Washington, D. C.

ALBERT OSBORN, Editor

25 Cents a Year—Free to Contributors of University Funds.

Form for Will.

I give and bequeath to "The American University," a corporation in the District of Columbia, the sum of (insert amount), and the receipt of its Treasurer shall be a sufficient discharge to my executors for the same.

MARCH, 1914.

Officers of the American University

Chancellor, Franklin Hamilton
Vice-Chancellor, Bishop A. W. Wilson, D. D., LL. D.
Financial Secretaries, J. A. Gutteridge, D. D., J. F. St. Clair, D. D.
Rev. Gervase A. Viets,
Endowment Secretary, Fred M. Stone, D. D.
Registrar and Assistant Secretary, Albert Osborn, B. D.
Field Secretary, J. B. Polsgrove, D. D.

Officers of the Board of Trustees

President, Mr. Aldis B. Browne
Vice-President, Mr. Benjamin F. Leighton
Treasurer, Mr. Charles C. Glover
Secretary, Charles W. Baldwin, D. D.

Board of Trustees Class of 1915.

of educational equipment. The expense of the adventure, therefore, would be nominal. The institution, moreover, which puts into operation this plan will not be encroaching on the field or work of any other existing institution. For such an undertaking could be possible at no place but at Washington. The government collections which have been gathered and massed at the national capital, by the very nature of the case, can have no duplicate. They must remain unique.

Again, this is the accepted time. Events each day make more evident the growing feeling that the time has come when the educational resources of the government at Washington ought to be put to practical ends. We arrogate not to ourselves or to our enterprise that which is beyond our capabilities or our proper scope—none the less, we fully are minded now to make the high adventure, to break through the hedge, and to lay virile and quickening hands on these resources.

What wealth of material, what matchless opportunities are ours! Authorized and justified by the spirit and the letter of two acts of Congress, one can say, "Here is the equipment of The American University. Here are our laboratories, our libraries, our museums, our experiment stations, our art galleries, our botanical gardens. They are ready and waiting. Have they not dignity and promise? Where on earth can they be surpassed."

The second step in the development of the life of the American University will consist in an attempt to assist in the *vitalizing of truth* that once has been discovered. This will be done by means of a system of lectureships. The dissemination of knowledge through lectures, as a defense for its dignity and value, does not need to cite the lectures of Plato in his garden or the discussions by Aristotle in the shady walks around the lyceum. Aberdeen University for four years existed on lectures alone. Illustration of the power that can be exercised through a wise system of lectures is found in the Bampton lectures in Oxford University. These discourses on theological and philosophical thought, made possible by the beneficence of John Bampton and delivered in Saint Mary's, Oxford, where John Wesley preached, have had not a little to do with changing the course of higher thinking in the Anglo-Saxon world. Mark also the delightful labors of enlightenment revealed in the work of the Lowell Institute of Boston. Whether it be the young poet, Noyes, picturing the sea in English poetry, or the learned Von Dobschutz explaining the influence of the Bible on civilization, or that wizard of speech George Herbert Palmer discoursing on Edmund Spenser—tell me, is there any one element more distinctive and helpful in the higher education of the American people than is provided by the choice spirits summoned to noble task and utterance through the call of the Lowell Institute?

Exchange professorships and popular university extension lectures are assuming more and more an earnest and permanent character. Institutions of learning are coming to feel that diversified series of attractive free lectures are a fitting part of university life as related to the community life of the people. No undertaking of any university in the country is attracting more widespread interest, perhaps, than are the picturesque but highly satisfactory traveling tent exhibitions and peripatetic platform demonstrations for instructing rural populations now being conducted by the University of Minnesota. Out in his own State the farmers affectionately call the scheme "George Vincent's Circus." And when were farmers or farmers' boys ever backward about attending a circus? Such lectures as are proposed in the American University need not necessarily be confined to Washington. Lecturers can be secured and sent to such points as will offer largest opportunity and most fruitful field for the message. Such of the lectures as may deserve permanent form will be published. Thus, like the Bampton lectures,

these discussions can be made a continuous contribution by the university to the advancement of knowledge, and they will be conveyed through that channel which carries to the largest numbers and the most ready minds at the least possible cost.

The third and final provision in the proposed inauguration of work by the American University will be an attempt to meet the demand for a higher development of *individualism*. This will be done through the maintenance of a comprehensive system of fellowships. On the nomination of other universities, colleges, technical and professional schools, proper students will be selected and granted fellowships for study at agreed-upon universities or places of investigation in America and abroad. The selection of these fellows and the academic oversight of their work will be lodged in a board of award of seven members, who will be given the right to employ for special needs the services of approved scholars. The university convocation day will be the set time for public functions in connection with the fellowships, and indeed for all public work involved by academic degrees or distinctions. These fellowships will provide for the payment of satisfactory stipends to assist the students to unique opportunities for the development of themselves as instruments for the higher development of others. Fellows who have pursued satisfactory work will be invited to embody the results of their study in popular lectures to be delivered on the convocation day at Washington, or at such other places and times as the university may direct. Lectures which are deemed worthy will be published as a part of the permanent educational output of the institution.

The fellowship provision will be found, at certain points, to coalesce with the research idea, since it will permit a wider distribution of research work than can be carried on at Washington, or, indeed, at any one given locality. It is interesting to see how the fellowship plan is beginning to ramify throughout the whole field of higher university work. The formulation of such a plan will be recalled as characterizing the initial efforts of our own Federal government for educating the Filipinos. In connection with a proposed exchange of professors between South American institutions and Harvard, the republics of Chile and Uruguay are planning to send students as well to study at Cambridge, while Argentina proposes annually to send to the United States from 50 to 100 students of high grade to carry on post-graduate work in their varied fields.

In making his presidential address to the Chemical Section of the British Association this year (September 15, 1913), Professor W. P. Wynne declared that "he who is able to convert education committees and private donors to the view that a far better return for the money can be assured if part of the large expenditure on scholarships for matriculated or non-matriculated students were diverted to post-graduate purposes, would have done a service to science and the state the value of which, in my opinion, cannot be overesti-

mate." This advice is being followed by some of the women's colleges in England. Newnham College, Cambridge, for example, has been putting increasing stress on fellowship work, with the result that several brilliant young women recently have been enabled to do work, in which they have contributed vitally to the advancement of science. (The Englishwoman, November, 1913. Women and Scientific Research, by E. Eleanor Field, p. 153-4.)

The present activity of the Carnegie Institution of Washington is an attempt at the development of the field of knowledge through the work of approved scholars who make researches and experiments or collect material for subsequent work by other matured scholars. We, on the other hand, shall concentrate our efforts on the training of the human instrument itself. We shall do this through the molding of young men and women who as yet have not "arrived," to borrow the French phrase. May we not, therefore, be doing a more vital work than the Carnegie Institution in the degree that trained manhood and womanhood and potentially developed youthful life transcend in importance for future usefulness the mere addition to the sum of human knowledge or the heaping up of material for future exploitation? The world moves by great personalities. There is no substitute for the contagion of personality, and it is into the radiant arena of the possible achievement by personalities brought to flower and fruition through our efforts that we make our venture and take our chance.

The Rhodes Scholarship plan is a most interesting contribution to the better good fellowship of the English-speaking races. But Cecil Rhodes was an Englishman. Some very admirable and highly competent Englishmen are a little predisposed—dare we say it?—to be insular. They have such excellent and thoroughly satisfactory reasons for being insular in the glorious life history of their own "tight little isle." None the less, insularity does interfere somewhat with that *Weltblick*, that world-vision, on which a very good friend of mine, Herr Hegel, was wont to insist as the prerequisite for a right understanding. Was not Cecil Rhodes, the empire-builder, touched a little with insularity when he provided that his scholars must study at Oxford University alone? Who would utter other than reverence for Oxford University, that sweet mother nurturer of English culture—*Alma Mater, fortunata, illuminata, beata*? But are there not other spots than Oxford where angels do come and minister unto men? Is it heresy to suggest that the *Pane degli Angeli* of Dante's dream may be distributed to even better advantage for mental assimilation and soul-quickening elsewhere than at Oxford if that venerable mother possesses only in mere fragments or possesses not at all some particular portion of the bread of the angels which the heart doth covet? He who would know the science of the Romance languages wisely might prefer the Sorbonne even to the towers and halls which do hold such purple charm in the gloaming on

the meadows of the Isis. For some reason best known to themselves, have not medical men beaten a path to Vienna? Why should a young architect overlook the *ecole des Beaux Arts* at Paris, or wherefore should a young engineer of any race neglect our own Massachusetts Institute of Technology? Out of what varied races have come the ardent souls who now recall the plain rooms and hard benches where in Jena, perhaps, or Leipzig, or beside the Spree, through metaphysical mists more wonderful than any English fog, spirit spoke to spirit and the soul made answer and followed the gleam! The Oxonian John Wesley, desiring a change, went to Herrnhut and there found Zinzendorf. So, by extending the privileges of the fellowships of the American University to allow the fellows to pursue their studies at any university or in any place where the opportunities are greatest, may there not be accomplished work more significant for the future than can be done by any method which restricts the study to one university or one environment alone?

The Chinese government saw great possibilities in the Boxer indemnity money which was returned to China by the United States. Acting under the best expert advice that the world affords, the Chinese authorities have devoted the income from the indemnity fund thus returned to the support of a national university fellowship system. By means of this fellowship system Chinamen of unusual promise are being sent each year to America to be educated at American colleges and universities. Bishop Lewis informs me that, through intelligent administration, the funds and the usefulness of this fellowship plan itself constantly are expanding. The plan is becoming of increasing leavening power to the whole Chinese nation. The last report of the indemnity university fellowship fund certainly is a commanding proof that the Mongolian spirit is awake to the cumulative advantage which by this means will endow the Middle Kingdom more and more with a true world vision and world feeling.

To add one last personal note of interest to this picture, take, as a concrete illustration of the thought, the case of a young physician who for several years was on the staff of the Wuhu General Hospital in Wuhu, China, and who now is on the staff of the Harvard Medical School in Shanghai, China. During his service in the Far East there has come to this earnest medical worker an insistent need for instruction in his special branch of research in parasitic diseases, especially the diseases incident to residence in that part of the Orient. But there are only two men who can furnish this physician what he requires. One man is in Europe, in London, at the School for the Study of Tropical Diseases; the other man is in the University of Illinois. Or, as a complement to this case, take the experience of a young man who, after studying at Wesleyan University, had determined on a course of study which must take him to the famous Dr. Koch, in Berlin, Germany. It was a hard struggle to reach that goal, but the way was conquered. The young man

gave himself to the opportunity. Personally I recall him now as I saw him in those student days in the Prussian capital, laboring as an unknown toiler with such devotion at his self-appointed task. But not in vain, for there that young man received the direction and impulse which later issued in a priceless service to the world through his discovery of the cause of the hook disease. As a friend and counselor suggests, "How much simpler and better to seek out and find men like these and give them opportunity for study under those specialists in the whole wide world who can teach them what they need to know, than to undertake the duplication of grounds, buildings, and faculties already in existence."

Thus, in the American University, as now projected, we have a plan that is at once irenic and practical. It can be worked from the plant as now we have it. But far more vital than this is the fact that this proposition covers the latest modern needs in life-training. We are not rash, therefore, we believe, in expressing the hope that as this plan is considered it will come to be accepted as the natural starting point for an undertaking in the higher life-training which can be made of far-reaching scope and importance. If there are objections to the plan, let us not forget the old saying, "Nothing will ever be attempted if all possible objections must be first overcome." The late William Stead was appealing to all hearts when he said, "My idea is that everything wrong in the world is a divine call to use my life in righting it." Such a thought absorbed into the soul would find a holy and transforming use for criticism. It would change the critical attitude at its very source into a yearning to help.

"Very good," says some one, "but some pertinent questions will have to be answered. May not this plan be a plausible make-shift for simply opening the institution? Will not recourse be had later to the more commonly accepted and traditionally distinctive university faculty work? By and by will there not be founded an ordinary academic college? Thus competition, crowded out at the door, may climb in later at the window accompanied by seven more dreadful attendants?" In all frankness we answer that no action by the present board of trustees of the American University can be made binding upon any subsequent board of trustees. Only the provisions of the university charter granted by the United States government itself are immutable, save as changed by act of Congress. Moreover, who can forecast or foresee what a generation or two may bring forth of change in the life of any American school of high standing? Professor Bowne somewhat facetiously was accustomed to say that we ourselves dwell in a constant razzle-dazzle in the life of the spirit. Things change rapidly in this land. The plan of Bishop Hurst, for example, only a quarter of a century ago, without question was the last word in higher education at that time. But within these twenty-five years the whole spirit of education and the emphasis of the educated life itself have shift-

ed. And so the original plan of Bishop Hurst—let us be frank—is outgrown, and we are forced into a new adjustment. This same process may be true concerning the working basis of our own present initial effort. Undoubtedly the present plan will require constant shifting and steady vital readjustments, but, notwithstanding all this, this plan, as now laid bare, hides nothing. In itself it is the whole enterprise so far as, with our present light, we are able to compass it. We do not intend to open an undergraduate college. We have no intention whatever to have recourse later to any hidden schemes which for the moment are held in the background. On the contrary, we distinctly are of the opinion that this present plan in itself is an undertaking calling for all attention and effort. If worked untried by us all, it can be made a great achievement, not so much for the Methodist Episcopal Church as for the whole country, where now the battle of Protestantism and the Light again is being fought out for humanity. Only this time it must be fought to the finish. We can flee no further to escape it.

The great thing, the truly momentous issue here involved, which does not, at the first cursory hearing, appear on the surface, is this: The provision which admits all other schools to all the benefits inuring from the undertaking of the American University itself is truly of far-reaching significance. If the provision is correlated properly, if the work itself is carried out in a generous spirit of mutual consideration, if, for the sake of the larger hope, we will hold in abeyance some of our own questionings, the enterprise can be made a natural working out to fitting conclusion of the theory of Christian education as understood and propounded by the Methodist Episcopal Church.

"But," says Mr. Worldly-Wise-Man, "are you not overvaliant for the truth? Who will pay for all this? Whence will come the money?" The answer is that the financial plan under which now we are working is a proposition that the American University shall raise \$1,500,000, in three units of \$500,000 each. The first unit of \$500,000, when raised, shall be used for the opening of the institution. After the university has been opened, the general plan will be continued through the effort to complete the whole fund by raising the additional two units amounting to a million dollars. We have raised the first unit of \$500,000. Thus we hope to have in hand for our initial operations a working endowment fund of \$500,000 clear of all encumbrances. And this amount is the exact sum which by a bill now in Congress has been asked of the United States government as the preliminary foundation for establishing the proposed Federal University at Washington. Toward the subsequent additional million-dollar endowment fund which we propose, we already have subscriptions amounting to \$200,000, without mentioning certain other dependent funds. But, without thought of any futurities of asset, let there not be forgotten, in considering this project, that wise word of Professor Faulkner, "The history of education is

the best commentary on the question of the sacred prophet, 'Who hath despised the day of small things?'"

"But that Federal University proposition," says Mr. Faintheart, "is not that, after all, to be the effective stop to all your hopes and plans? What need will there be for the American University when the great Federal University at last is founded at the national capital? Will not such a national school of learning, supported by the Federal Government, render futile the hope of activity upon the part of such an institution as you are trying to establish? Would it not be wiser to sell to the promoters of the Federal enterprise your site and buildings and use the proceeds in some practical way for educational work or institutions already existing?" We shall enter upon no discussion of the proposed Federal University. Such an institution may be founded; and again it may not be founded. We, like the hero of traditional fiction, have a heart prepared for any fate. Lest we may be charged with trifling, however, let it be said that the present proposed plan for the American University has thoroughly in mind the possibility of a national university at the national capital. But this possibility of the future establishment at Washington of a Federal university only adds to the availability of our plan. In the event that a Federal institution is organized, this plan assures such conditions that the existence of the American University will not be disturbed thereby. Rather will the call for its activity be the clearer and more insistent. For now mark clearly two consequences that would spring out of the existence, side by side, of the American University and the proposed Federal institution. The only changes necessitated in the scholastic life of the American University through the existence of its neighbor would be the shifting of the center of emphasis in the American University. Not only would the American University be afforded a heightened ability to accomplish its distinctive work through a proper affiliation with the Federal institution—some such role, perhaps, as is filled by Mansfield College at Oxford—but also it would have committed to it a new duty, a vast opportunity, unique and priceless.

If the proposed Federal institution is founded, it will be weak and practically atrophied at one point. By the nature of the case the Federal University must resemble in character all of the similar American institutions supported by the State. One of the significant features in connection with our State universities is the need that is emerging for influences outside of the State university to supply to its students that religious instruction and care which the institution itself does not offer. This condition is one of the crucial problems in our national life. More than one half of our Methodist students are in State-supported institutions, and the increase in the number of students thus situated is so rapid that at the present rate of increase it will be but a few years before the proportion will be three quarters. In meeting the problem of supplying religious care and instruction to its students,

the Federal University would resemble the State universities. Because of this fact, in the selfsame hour that recorded the foundation of a Federal university at Washington there would be opened to the American University a great and effectual door of spiritual usefulness.

The devoted labors of the Christian workers who now at four State universities are pushing a campaign of constantly growing effectiveness and triumph for their Lord is a suggestion of what is meant. These spiritual masters of men, at these most vital centers of life for all the States involved, are laying the sweet persuasions of the Christian Church, like the healing shadow of Peter, across the hearts of receptive multitudes. These are prophetic workers. They have caught the vision of a great opportunity for community centers bringing community leadership. They are holding open channels of supply of ministers for the altars of God. Through activities of like character with these so singularly blessed of the Master, the American University could become the pilot-flame of the spiritual life for the National University at the national capital. As such the American University would possess always a unique field of loftiest influence. For to all our science there is a vital doctrine of final causes that "articulates us back from the halls of learning to the seething life of humanity." And there we could furnish a spiritual note to a materialistic time.

The supreme culminating virtue, says the poet of the Faerie Queene, is the virtue of magnificence. To see large, to mark the end from the beginning, to behold the glory where others see only the mean or the commonplace—that is the culminating virtue of life. It is this virtue of magnificence that distinguishes, we believe, the American University. As yet her glory is the glory of the imperfect. But face to face with her opportunity, would it not be a sad thing indeed, would it not be evidence of dethronement from any right to divinely granted power, if this undertaking, freighted with such vicissitudes and also with such prayers, did not seek to have in its plans some fore-gleam at least of what the future may bring? This is an adventure not for a day. It claims the far-off increase of the years. Other men, other generations must have a part in molding this work, which we shall commit to their hands as only our beginning. Then, by the faith and vision of the fathers, by the toil and sacrifice that have been the hidden foundations of the present existence, by the assurance that comes from the consciousness of high purpose, let us build worthy of the early hopes. The supreme fact of a right direction at last is secure. Have no fear of the outcome. Here are involved elements and interests that will compel success. Only let us meet the divine testing as it was met by Seneca's pilot in the storm: "O Neptune! you may save me if you will; you may sink me if you will; but, whatever happens, I shall keep my rudder true!"

President Wilson Will Open The American University.

President Woodrow Wilson will open the American University on the afternoon of Wednesday, May 27, 1914. The public exercises will take the form of an open air assembly on the grounds of the University. Bishop Earl Craunton will preside and Bishop Alfred Harding of the Protestant Episcopal Church will offer the opening prayer. Distinguished speakers will take part. The Marine Band will furnish music. A detailed program will be published later. The new car line to the University is being pushed vigorously to a completion.

Trustees of American University Meet.

The trustees of the American University met on March 25, 1914. The plan for an Episcopal residence on the university site was reported as making progress. The Honorable William Jennings Bryan, the Honorable Josephus Daniels, Mr. William S. Corby and Colonel H. O. S. Heistand, U. S. A., were elected Trustees. The Board of Award for the University were appointed as follows: Hon. William Jennings Bryan, Secretary of State; Hon. Josephus Daniels, Secretary of the Navy; Hon. Philander P. Claxton, United States Commissioner of Education; Dr. Alfred Charles True, Dean of the Graduate School of Agriculture and Director of Experiment Stations, Department of Agriculture; Dr. Thomas N. Carver, Director of Rural Organization Service, United States Government, and Professor of Economics in Harvard University; Dr. John W. Hancher, Assistant Secretary of the Board of Education of the Methodist Episcopal Church; and Dr. William Andrew Wood, pastor of Maple Street Methodist Episcopal Church, Lynn, Mass. Dr. Frank W. Collier of Boston was selected as Director of Research.

Miss Susan E. Bayard Bequeaths \$1,000 to the American University.

By the will of Miss Susan E. Bayard, late of Pittsburgh, Pa., \$34,000 is left for thirteen different public benefactions. Among these bequests is one for the sum of \$1,000 to the American University, subject like the other twelve to the life estate of Miss Mary Bayard, the sister of the deceased. Through personal legacies she has distributed \$38,000 to nineteen different beneficiaries in sums varying from \$250 to \$5,000. The Fidelity Title and Trust Company of Pittsburgh, William M. Galbraith and Ralph Bayard Baldrige are appointed executors of the will.

This is another noble instance of the projection of one's powers and possessions into channels of blessing for future generations. The number of thoughtful and consecrated friends of humanity is diminished by the death of Miss Bayard. May many be found to emulate her example.

President Wilson Opens the American University.

May 27, 1914, forever will be the historic day of the American University. The plans of Chancellor Hamilton for opening the University already had received the unanimous approval of the Board of Education, the College Presidents' Association, and the University Senate. Not a few of the foremost educators in the land to whom these plans had been submitted for counsel and help had given their unqualified endorsement. There now only remained to inaugurate the plans for actual application and development. This last has been done in a public function which will remain memorable in the minds of those who were privileged to be present. The occasion, moreover, promises to have no small significance in the new trend of modern Christian training.

Every auspice was favorable. A cloudless day had wrapped in beauty the noble westward slope whereon lies the great university campus. On one side below was the national capital, its snowy buildings framed with green. Around the foot of the slope toward the south and east rolled the Potomac in a picturesque sweep toward the sea. The distant vista was of blue stretching mountains. To this spot it was that on May 27, in the afternoon, came President Wilson to lend his own personal interest as an educator and his official recognition as head of the nation to the university whose true natal day it was,

It was to be an open-air assembly. Long before the hour set for the formal exercises the people had been gathering. Automobiles had been rolling out over Massachusetts Avenue boulevard. The new electric railroad which had been completed for this special day had brought visitors in a steady stream. For a half hour, while the seats were being occupied, the Marine Band, sent by the Navy Department, gave a concert. Twenty of the leading clergymen of Washington, representing all denominations, under the leadership of Dr. William A. Haggerty, as Chief Marshal, looked after the ticket bearers. Soon all seats were exhausted. When Bishop Cranston, as Presiding Officer of the Day, arose to call the assembly to order and to introduce Bishop Harding, Protestant Episcopal Bishop of Washington, to make the invocation, there was a vast expectant throng centered around the speakers' platform and on the lawns between the university buildings.

Bishop McDowell probably never spoke with more intellectual vigor and reach than now as with characteristic eloquence he voiced the hopes and purposes of the many workers who had contributed to this hour. For among these workers he had had no inconspicuous place. Washington people especially were grateful for his help and presence. With striking apothegm, keen analysis and sympathetic vision of the new adventure, his classic utterances served as a keynote for all that followed.

The national anthem now fittingly introduced the President of the United States. President Wilson also was in congenial atmosphere. His was an unaffected personal interest. Sympathetically he expressed the high significance of the occasion and of the undertaking. Then with impressive utterance the Chief Magistrate formally declared the university open for the work to which its founders had dedicated it. The emphasis which he placed on vision lifted the occasion to lofty heights of spiritual significance. It is questionable whether the President ever condensed into so brief a compass thought that was at once rich, inspirational and practical in its application.

It was wholly fitting that the next speaker, Bishop Hamilton, should have a leading part on the program. He could not but make an address of rare persuasiveness and vision. For had he not contributed the first dollar to the enterprise? He was the life-long friend of Bishop Hurst, the Founder. Bishop Hamilton now is enjoying two lectureships for the university. He spoke out of a sincere love for the enterprise and gave a graphic word picture of the effort of the university to adapt itself to the modern trend of thought in education and life training.

A thrilling incident that followed was the flag raising, which was in charge of the Secretary of the Navy, the Honorable Josephus Daniels. The embodiment of patriotism, gathering inspiration from the present outlook in national affairs, this popular son of North Carolina made a moving address on the university motto, "Pro Deo et Patria."—For God and Country. Then at the word of the speaker, a great naval ensign, which together with a lofty mast, had been presented by Mr. John B. Hammond and friends, was flung out above the university grounds and buildings. The band took up the strain of the "Star Spangled Banner," while the people, springing to their feet, sang, under the contagious leadership of Mr. Percy S. Foster, the immortal lines of Francis Scott Key.

No better setting could have been found to rouse William Jennings Bryan to one of those inimitable utterances which have given the Secretary of State a place unique in present-day affairs. Mr. Bryan was at his best. A member of the Board of Trustees of the university and of its Board of Award, the Secretary felt at home. His gracious words cheered every heart. A cool breeze, which began to blow over the campus while Mr. Bryan spoke, seemed to catch its refreshing and stimulating vigor from his own spirit.

In the absence of Bishop Alphens W. Wilson, Senior Bishop of the Methodist Episcopal Church, South, Rev. Dr. F. J. Prettyman, chaplain of the United States Senate, pronounced the benediction. And the American University had commenced its academic functions as the youngest in the mighty fellowship of American institutions of learning.

At a meeting of the trustees preceding the opening exercises the report of Chancellor Hamilton was presented and showed a steady gathering of money, friends and important forces to the help of the university. Stated concisely, the new plans for the university are as follows: First, fellowships for graduate study; second, a director of research work for the service of students wishing to avail themselves of the resources of Washington; third, lectureships in Washington on important matters; fourth, lectureships at educational centers elsewhere under the auspices of

the American University; fifth, the publication of significant volumes of lectures and theses.

Dr. John W. Hancher, a member of the Board of Award, read to the assembly a paper ordered by the Trustees at the morning session, voicing their appreciation and approval of the seven years administration of Chancellor Hamilton, and pledging him their co-operation and support for the future in terms and phraseology so commendatory and so confident, as to command his gratitude and to prompt his best endeavor for years to come.

A copy of the official program is subjoined, the text of the hymns being omitted:

Laud Domino.

SECRETARY BRYAN SPEAKING

Prayer of Bishop Alfred Harding.

Almighty God, our heavenly Father, giver of every good and perfect gift, we invoke thy blessing on the exercises of this day, and upon this "new sowing for the Master and for man," the American University, whose doors are now opening.

We bless thy Holy Name that thou didst put it into the hearts of thy servants who inaugurated this enterprise to establish here, in the Capital of the Nation, an institution to be devoted to the advancement of learning and to the promotion of the religion of our Lord and Savior Jesus Christ. We thank thee, O Lord, for thy blessing on the labors and thy answer to the prayers of those who for a score of years have labored and prayed for the consummation of this day.

Be graciously pleased to indue with heavenly wisdom those to whom is entrusted the direction of this university. Guide them in their policies, that the work may grow and prosper, and that the courses of studies to be pursued may be of such value, as to place this University in the forefront of the institutions of learning in the world. Give to those who shall be chosen to teach the guidance of thy Holy Spirit, and to those who come to learn, such diligence and devotion as will result in sending forth men well equipped for their life-work, consecrated by the Holy Ghost, and filled with the spirit of true patriotism, bringing to the service of Church and Commonwealth trained and disciplined minds, and a willingness to give themselves to the uttermost for the good of the nation, and the well being of their fellows.

We ask thy blessing in all things upon the President of the United States and the Members of his Cabinet and the Congress, beseeching thee that all their deliberations and all their acts and decisions may be for the safety, honor and welfare of thy people, and the benefit of our most holy faith and true religion.

Grant, O Lord, that the founders, benefactors, and all those who, to the furtherance of the work of this University faithfully offer to thee of their prayers, their labors and their substance, may come, together with all thy Saints, to those unspeakable joys which thou hast prepared for those who unfeignedly love thee.

Prosper thou the work of our hands upon us; prosper thou our handiwork.

We ask all these blessings and mercies in the name of Our Lord and Savior, Jesus Christ, who has taught us to pray. (The audience joined Bishop Harding in the Lord's Prayer.)

SECRETARY DANIELS SPEAKING

Address by Bishop Earl Cranston.

As an organization The American University had its inception in 1891. It was chartered by act of Congress in 1893, twenty one years ago. Being of full age this corporation today takes its place among the teaching institutions of the nation and of the world and enters upon its life work. Back of every new enterprise there must be a constructive and determining mind. This institution was conceived and projected upon the consciousness and into the plans of the church of which he was a bishop by the Rev. John Fletcher Hurst, D. D., LL. D. By him this broad site was purchased in 1890, and held until the corporation was formed. Measuring his faith by his courage in that transaction we perceive the spiritual quality of the foundation upon which the University was established. God loves a brave, true man who, once assured of the autograph affixed to his orders, dares to the uttermost venture of life or reputation. There are crises in the march of souls and in the fulfilling of trusts. Mr. President, when it is braver to stand still with all the enginery of action tensely throbbing against the restraining will than it is to advance. (Applause.) In such a stress God helps his man to stand firm, and God's people know the quality of that type of heroism. (Applause.) But Bishop Hurst's call was to action until his strength gave away and he was summoned to his rest. He had done his part. It was to his successors in commission and to his surviving associates in the great undertaking that there came that period of brave inaction which tries loyalty and beats down zeal until patience may prove itself the greater virtue. Even Bishop McCabe, who succeeded Bishop Hurst as the leader of the movement, and whose genius rioted in opportunity when dollars were needed for God's work, balked in his efforts to give new momentum to the enterprise and add to its list of active friends. Meanwhile the public was left to wonder if at last the Methodists had found a task too big for them. (Laughter.)

Bishop Hurst's first call was for \$10,000,000. To a church that has expended approximately \$40,000,000 annually in its multiplied activities that sum was not a staggering demand in itself. But there were other church colleges already upon the hearts of our people, and in their life and administration colleges are human things. They do not welcome rivals or more pretentious candidates for the favor of their natural supporters. The last twenty years have been wonderful years in church expenditure. Besides the building of endowments for growing church universities we have had an era of church building. The people have and they

selves heavily for new and costly temples. Under these conditions the American University has had to bide its time. Meanwhile all our important institutions of learning have been rapidly advancing their standards and the problem of the American University has been one of shifting factors. Some of Bishop Hurst's plans have been modified in the light of later educational developments. But the original purpose to create here at the national capital a commanding center of advanced teaching which shall be at once reverently Christian and fearlessly progressive has never for one moment been abandoned.

We have now come to the beginning only of the realization of that purpose. Let not the impressive program of this hour mislead any one. We are going about our Master's work in a very modest way. Today's program is prophetic rather than monumental. The presence of these distinguished churchmen and statesmen not only indicates their appreciation of the importance of the kind of service which is promised by this foundation, but suggests also that in the training of the typical American both the church and the state have a legitimate part, and that loyalty to God and his church and loyalty to the national Government so far from being incompatible virtues, are indissolubly united in the best conception of American Citizenship. (Applause.)

We are cheered by the presence today of so many of our faithful friends. We miss the visible presence of the long honored President of our board of trustees, Dr. David H. Carroll, by whose generous bequest this opening day was hastened, and we lament the illness which confines Dr. Carroll's successor, the Hon. Aldis B. Browne, to his home, while his heart is here with us. But with God's glorious sky above us, and the thrill of his approving voice making jubilant our spirits, we are ready to consecrate to the perpetual service

of God and the world for time and for eternity, for men and for women who would seek truth at its purest fountain and life at its only source, the American University—chartered by the American Congress and pillared upon the one corner stone that can support a holy church and a righteous and abiding state—Jesus Christ, the Son of God, the Savior of Men, the Light of the World. (Prolonged applause.)

Bishop Cranston: Among those who counsel the University has been brought to its present plan of going forward with its great work to which it is committed—prominently among those who have been foremost in this work—is Bishop William Fraser McDowell, whose counsel to us has been invaluable, whose presence here today certifies the profound interest of one who has been an educator in our church, and an administrator of our educational affairs, in the office of the Secretary of the Board of Education and who later has administered the highest office of the Church, Bishop William Fraser McDowell, whom I have the pleasure of presenting to you at this moment. (Applause.)

Address by Bishop William Fraser McDowell, President of the Board of Education of the Methodist Episcopal Church.

It is many years since Mr. Emerson, at Harvard, on the banks of the Charles, spoke of the American scholar. Harvard College and the Republic itself were both young on that long-gone August day. (The speaker looked up from his manuscript and said, "like this," which evoked laughter.) This event of ours is related to that. Both terms in the old subject have changed, both have become larger and richer in their content, but here on the banks of the Potomac, as yonder on the Charles, we still have to do with the American scholar; we are still planning to "write a new chapter in his biography." We count ourselves happy that we can thus relate ourselves to all the high ideals and noble purposes of all our past. We especially rejoice that our happy and auspicious festival, the inauguration of our new educational experiment is honored by the presence of the President of the Republic, who embodies and illustrates in his own culture, his character and consecration to public service, the finest traditions, the fairest example and the holiest uses of scholarship. (Applause.)

We are formally inaugurating today a notable experiment in higher education. Nothing else quite like this has been planned or tried on our soil. We propose at least four unique, distinct lines:

(1) The opening of the rich and varied materials of education and research, afforded by the government, to the students of the world, under competent direction and guidance.

(2) By a carefully devised system of scholarships and fellowships, the opening of the graduate instruction of the world to our select young men and women.

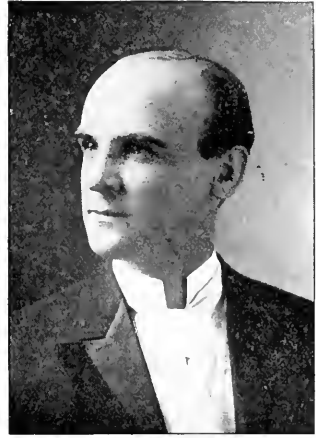

(3) The creation of a body of scholars, gathered from everywhere, sent everywhere, united here as Fellows, recognized and pledged to humanity's service and the larger uses of the largest learning.

(4) The creation of lectureships for Washington and elsewhere and the making of a literature which shall in ample and steady stream refresh the life of the Republic and the world.

This is the simple outline of our large purpose. It would be easy to grow prophetic and to foresee the day not far off when there shall be a thousand scholars, gathered out of all the land, bearing the advanced degrees of the world's universities and bound together as Fellows of the American University. (Cries of "Hear! Hear!" and applause.) Nothing else I venture to think so daring or so wise has been proposed by any American church. Happy the body that can hold fast to traditions, happy the body that can also make traditions. (Exclamation of "Amen" and applause.) This movement has due regard to those English ideals in which our early roots were struck, and those later German influences now so profoundly affecting our entire educational life. It remains true to both streams and sets a new and living stream flowing in the world. It has always been believed, for example, that an institution must have a vast equipment in the way of buildings and grounds, and a strong teaching body of eminent scholars or it could not be a university. Our institutions have had to be visualized or they could not get money either from private benefactors or public treasuries. Brick and stone have been thought imperative both for attracting dollars and drawing students. Well, if today you ask to see the Ameri-

MR. ALDIS BIRDSEY BROWNE

DR. FRANK W. COLLIER
Director of Research

can University, I ask you to look beyond what is visible here, to the universities of the old world and the new, to every place where a foremost scholar dwells and teaches, to every laboratory and library holding truth for the eager student. (At this point the speaker was handed a glass of water, and said, "Thank you, but is it getting as dry as that?" which evoked laughter. The speaker then interjected, "One might think that this were an agricultural address and that problems of irrigation were now in process of solution!" which brought forth more laughter.) The American University exalts in its plans not the local but the universal, not the provincial but the cosmopolitan, not the visible but the invisible. And to him who has the eyes of his mind and heart opened this high mound presents the rising vision of open doors in Berlin and Leipzig, Oxford and Paris, Edinburgh and Glasgow, Cambridge and New Haven, Columbia and Princeton, Chicago and Wisconsin, and a great host beside. And through this fair gateway opened this hour streams of youth are starting to these open doors in all the learned world, and hither soon they will be returning, and the outgoers with hearts all eager will meet the incomers with their hands full and the light of purpose on their brows. (Applause.)

And never before, it seems to me, has here been quite such an application of the democracy and the cosmopolitanism of advanced learning. Yonder at the top of the world sleeps England's foremost dreamer, Cecil Rhodes, who opened the Universities of England to the youth of America. No finer plan had ever been devised to make acquaintances and friends of the youth who pretty soon will lead the English-speaking peoples. Already that plan makes mightily for the world's peace and will make for it still more mightily in days to come. And this in even larger measure will serve like purpose. "Saxon, Norman, Dane are we," says England's poet. Saxon, Norman, Dane, and everything besides are we. And that final federation of the world toward which the whole creation moves, will come not at the point of bayonet or mouth of cannon, but at the hands of the clear thinkers, the world-trained scholars (applause), the brotherhood of learning, the people—men and women who study together in youth and in manhood, and come together for the common good. (Applause.)

The words have dropped out earlier than I thought they would—the common good. The common good is before our eyes this afternoon, the common good not as interpreted

for Methodism or for America; but the common good as interpreted for humanity. (Applause.) Goldwin Smith's seat at Cornell contains the words: "Above all nations is humanity." We shall be smart enough in America and I think we shall be rich enough, but if we ever break it will be because we set our hearts on learning and wealth and all that belongs to them, for their own sake, and for our own sake, instead of consecrating ourselves to the common good, interpreted in world terms. Maybe this is not what I was expected to say, but I am not thinking chiefly of the American University as opening a new gate of educational privilege for American youth. I am thinking of it chiefly as opening a new chapter of service for the American scholar, whose biography we are always writing. We shall open up and apply new and wonderful resources? We shall push back the boundaries of the unknown? We shall not be content simply to learn what is already known? We shall make lectures and theses and monographs? We shall open the wealth of the world for our eager and aspiring youth? All that surely and proudly and gratefully. But our service will not be final and perfect until we have opened new resources of life to those whose lives are barren; or until we have pushed back the boundaries of the unendurable. (Applause.) We shall defend the truth with many a brave blow, but the scholar will strike his bravest blows for humanity. The wealth of the world open for eager youth, the need of the world open for the touch of the trained youth.

"Round the cape of a sudden came the sea,

And the sun looked over the mountain's rim,

And straight was a path of gold for him,

And the need of a world of men for me."

Path of gold opens for those we send to Berlin and Paris and the rest; need of the world of men for those whose faces turn this way after Berlin. Wealth easily becomes selfish, culture just as easily becomes selfish and betrays itself in so doing—and both must be saved by service.

Every year I pass through a noble campus gateway bearing this inscription: "So enter that daily thou mayst become more thoughtful and more learned. So depart that daily thou mayst become more useful to thy country and to mankind." That is our thought in all our plans.

There have been many theories of education since Aristotle, who believed in education as a training for good Greek citizenship. Many have thought of it chiefly for its ecclesiastical uses. In our time there is rather undue emphasis upon the demand for practical results. Philosophy is being compelled both to bake and butter the modern man's bread. One of Mr. Howell's best known characters thought all education was to train a man to exploit the community for his own benefit. Nations have sometimes had such ideals. In the face of this intensely practical demand, one has an increasing regard for those blessed old humanists who did not have the

fear of a dollar before their eyes, but just loved sweetness and light because they were sweetness and light. Many of us were brought up on the theory that the end of higher education was character, but the modern world has learned a better word and enlarged the meaning of all these noble terms by putting that better word into them. That better word, now on scholars' lips, is service and its example and interpreter is that one world citizen, head of the church, supreme Teacher of mankind who came "not to be ministered unto but to minister." (Applause.)

Modern education has become very expensive, but it has also become very necessary. The world's machinery has become very complicated. The world's engineers must be very competent. The people become increasingly omnipotent. Their leaders must be ever more capable. Learning is to be pressed into the last fold of our life. Truth is not for the few but for the many. Therefore our interest is not in these highly privileged Fellows of the American University to whom gates shall be opened, but in that universal humanity whom these Fellows will help to lead out of ignorance. Our final concern is not the higher education of the few but the highest possible education of the many. It is not easy to keep wealth democratic. Heaven save the world from a scholarship that is not democratic. (Cries of "Hear! Hear!" and applause.) Selfish and snobbish learning is intolerable. Wealth will be asked for this as for other educational movements. Wealth ought to be so asked for or given without the asking. One wishes that the day might come that Professor Malaffy described when he was here and when the first great gifts were being made and he wrote that in America "The rich men are going about like roaring lions seeking what they may devour." (Laughter.) What shall be asked of the University in return? Here again we must go back to one of our oldest universities for answer. When, in young manhood, Charles W. Eliot was becoming president of Harvard he said: "The University will make to the community rich return of learning, of poetry, of piety, and of that fine sense of civic duty without which republics are impossible."

Pastour defined democracy in these words: "Democracy is that order in the state which permits each individual to put forth his utmost effort." But you feel the incompleteness of that. The period came before the sentence was finished. This utmost effort must be like Abraham's election—you understand that Abraham was a candidate for a long time (laughter)—that the nations of the earth may be blessed. This American University thus takes upon itself an immense responsibility in the very name it bears. For it is to help make that new American who shall help to make that new America, which shall help make that new world which is the goal of history. (Applause.) It will take the provincial and make him a cosmopolitan even while it deepens his patriotism. Seated here at the capital it will act as a unifying force for a world group, making for peace and righteousness with all men of light and leading and goodwill. Goldwin Smith declared that "democracy is not yet large minded." If not, it must be made so. For the whole world needs a large-minded America. I shall not soon forget a night in Calcutta when several hundred native Indian students gathered about me after an address and asked me to speak again. One of them spoke for all, saying: "Tell us about George Washington and Abraham Lincoln." (Applause.) To hear these names thus spoken in the heart of that Eastern world gave me a new, keen sense of America's place in the world. And that sense of our world place is upon me today as I speak these opening words for this vast venture into the higher life. We cannot make the world American, nor English nor German. We cannot make it republican in form. The Master of our souls did not direct us to go into all the world and teach the English language to every creature. We cannot even whip the whole world, though some seem to think we can, and ought. But we can unite with the men and nations who keep the lamp of truth aflame, and the love of men alive, to teach the world; to train it in truth and peace, sympathy and righteousness; to lead it in paths of brotherhood; to break down the caste spirit everywhere. "The youth of a nation are the trustees of posterity," and the American University solemnly pledges itself to perform its tasks in such spirit that the trustees of posterity shall nobly fulfill their holy trust for humanity's sake. We look for the time,

"When light shall spread and man be like man

Through all the seasons of the Golden year."

When the whole round world shall

"Be bound in every way

By gold chains about the feet of God."

And upon this vast endeavor the Methodist Church asks the favor of men and the blessing of Almighty God. (Prolonged applause.)

Bishop Cranston: At this early period in our history as an institution, we shall not begin by giving any exhibition of disloyalty to the American government. We have drawn very heavily upon the executive departments for our program today. We have no thought, however, of suspending the operations of government. (Laughter.) Important as the hour is, we shall not have ventured so far. We are very sure there can be no war measures taken this afternoon. (Applause and laughter.) We are bound to have peace. (Cries of "Hear! Hear!" and laughter.) But while we realize the great favor which has been shown us in the President's having given his consent to be with us, and formally to open the American University, our realization binds us to any arrangement by which the President's convenience or duty may be accommodated. I shall introduce him to you now. How greatly embarrassed have we been as a people in finding fitting terms in which to present those who hold our highest offices? I can remember in the olden days, when we were taught to say, "His Excellency," and "Your Excellency," until we found out that every little secondary individual in Europe was called "Your Excellency"! (Laughter.) And now comes the suggestion, "His Majesty"! (Laughter.) You could not find a little kingdom anywhere in the wide world, whose ruler is not presented and looked up to as "His Majesty." Well, I think we have a majesty equal to any majesty that occupies any throne the world over! (Applause.) And I believe I will venture (laughter) "His Majesty," the President of the United States, primarily representing the majesty of Christian manhood (applause), and officially representing the majesty of the American people. (Applause.) The President—our President! (Prolonged applause.)

Address by the President of the United States.

Bishop Cranston, ladies and gentlemen: The distinguished gentlemen who arranged the programme of the afternoon have been gracious enough to excuse me from making an address. They have permitted me to say the few and simple words, which I can say with so much depth of feeling, which will welcome into the world of American scholarship this new university.

There is a sort of imaginative excitement about witnessing the inauguration of a great adventure of the mind, an adventure of the immortal part of us, which, if it do its work as it should be done, may leave its mark upon mankind for all time. Universities may outlast nations and their history is not marked by the movements of parties or the changes of politics.

I do not know of any fight which is more heartening than fighting for the ideals of scholarship. I have never pretended, of course, that in a college you could make a scholar in four years. A Yale friend of mine said that after teaching for twenty years he had come to the conclusion that the human mind possessed infinite resources for resisting the introduction of knowledge; and it takes considerably more than four years to break down the defenses and begin the high enterprise of scholarship. But I have at least fought to have the opportunity to begin it and to awaken the mind to the seriousness of the undertaking.

Scholarship is the mastery, the exact mastery and comprehension of great bodies of knowledge; and the comprehension is more difficult than the mastery. It is much easier to know than it is to understand. It is much easier to acquire than it is to interpret. And yet all knowledge is dead which is not interpreted. The vision of the scholar is worth more to the world than his industry.

It is appropriate that a university should be set upon a hill. It must be a place of outlook and there must be eyes in it that can comprehend the things that are seen, even the things distant and vague upon the horizon. For the object of scholarship is not to please the scholar, is not to amuse the leisure of inquisitive minds, but to be put forth, to release the human spirit from every kind of thralldom, particularly from the thralldom of darkness, from the thralldom of not knowing the path and not being able to see the way as it trends it. It is knowledge properly interpreted, seen with a vision of insight, that is uniting the spirits of the world. Charles Lamb made a remark once which seems to me to go pretty deep as a human remark. He was speaking very ill of some man not

present in the little company in which he was talking, and one of his friends said, "Why, Charles, I didn't know that you knew him." He said, "I-I don't; I-I can't h-hate a man I-I know." How profound and how human that is! There are races whom we despise, and it generally turns out that we despise them because we do not know them. We have not found the common footing of humanity with which to touch them and deal with them. I have sometimes, when sitting in the company of particularly ably dressed people who were interested in philanthropy, wondered whether they knew how to be philanthropic. Philanthropy does not consist in giving your money to pay for what somebody else will do for mankind. It consists, at the fountain head, of putting yourself on the same level of life and comprehension with the persons whom you wish to help and letting your heart beat in tune with their heart so that you will understand.

The object of scholarship, the object of all knowledge, whether you call it by the large name of scholarship or not, is to understand, is to comprehend, is to know what the need of mankind is and to find that need in yourself, so that you can interpret it without going to the books—merely by looking in your own heart and listening to your own understanding. That is the reason, ladies and gentlemen, why scholarship has usually been most fruitful when associated with religion; and scholarship has never, so far as I can at this moment recollect, been associated with any religion except the religion of Jesus Christ. The religion of humanity and the comprehension of humanity are of the same breed and kind; they go together. It is very proper, therefore, that under Christian auspices a great adventure of the mind, a great enterprise of the spirit, should be entered upon.

There is no particular propriety in my being present to open a university merely because I am President of the United States. Nobody is president of any part of the human mind. The mind is free. It owes subservience and allegiance to nobody under God. The only thing that one can do in opening a university is to say we wish to add one more means of emancipating the human mind, emancipating it from fear, from misunderstanding, emancipating it from the dark and leading it into the light.

I hope there may be lecturers in this university who can interpret life. I have not met many, but I hope you will catch some of them. Carlyle had a fancy once of an old professor who was the Professor of Things in General; and I do not see how anybody can be a successful professor of anything in particular unless he is a professor also in some degree of things in general; because unless he knows, and knows with real vision, how that particular thing is related to all the rest, he does not know anything about it. I have often used this illustration: A man loses his way in a desert, and we say he has lost himself. If you will reflect for a moment, that is the only thing he has not lost. He is there; but he has lost all the rest of the world. He does not know where any other fixed thing in the world is. If he did, he could steer by it and get home, or get out of the desert, at any rate. His whole validity as a man depends upon his knowledge of the points of the compass and where everything else in the world is. He will run his head against a stone wall if he does not know where the stone wall is; and after he has run his head against the stone wall his identity is of no particular importance. He has lost identity. He has lost his life, not by not knowing himself, but by not knowing where the stone wall was. That is what the German scholar has in his mind when he speaks of orienting ourselves.—Knowing where the East is, we will not have to go East, but if we know where the East is we can steer for any part of the compass by relating ourselves properly to the East.

So we are here setting up on this hill as upon a high pedestal once more the compass of human life with its great needle pointing steadily at the lodestar of the human spirit. Let men who wish to know come and look upon this compass and thereafter determine which way they will go!

Resolutions of the Trustees on the Death of Aldis Birdsey Browne.

WHEREAS, In his allwise Providence, our Heavenly Father has called from earth our friend and brother, Mr. Aldis Birdsey Browne; and

WHEREAS, This eminent citizen, this useful and beloved servant of the Church, long has been a partici-

pant in many activities in civic, educational and philanthropic channels of power; and

WHEREAS, We, the Trustees of the American University, feel ourselves especially bereaved in the decease of our tried and aggressive leader; he it therefore

Resolved, First, that in the death of Aldis Birdsey Browne the citizenship of the National Capital has lost one of its noblest spirits and the Christian Church one of its most earnest, helpful and devoted sons;

Resolved, Second, that the many causes of charity and righteousness of which he was an exponent and a director have parted with one of their wisest and most efficient administrators;

Resolved, Third, that the American University, in the removal from its councils of the President of its Board of Trustees, feels poignantly the loss of his leadership, and records its deep appreciation of his generous gifts of time, energy and money and of his unflinching zeal in response to all its calls and needs;

Resolved, Fourth, that, as comrades in labor with this broad-visioned worker, we express our sense of personal loss, and declare our own purpose the more earnestly to promote this cause of the university which he so dearly loved;

Resolved, Fifth, that these resolutions be spread upon the minutes of the Board and that a copy of them be sent to the family of our deceased brother.

Adopted June 2, 1914.

CHARLES W. BALDWIN,

Secretary.

John A. Gutteridge.

A life of unwonted energy and purposeful labor closed its earthly stage when on May 6, 1914, the Rev. Dr. John A. Gutteridge, after a prolonged illness, at his peaceful seaside home in Ocean Grove, New Jersey, found his eternal rest. Under handicaps that would have discouraged many a stout heart, this man pushed and won his way to merited distinction in the ranks of his ministerial brethren. In the pastoral and benevolent work of his own Conference, the Newark, he attained a high level and achieved notable results. For many years he wrought successfully in the service of Syracuse University, and during the closing decade of his life he served as Field Secretary of the American University. In his personality he united geniality and grit, accuracy of detail and breadth of system. His name will be cherished in the homes of thousands. His faith has triumphed and his crown is won.

Action of the Board of Trustees on the Death of Bishop Bowman.

WHEREAS, It has pleased our Heavenly Father to remove from us the Rev. Bishop Thomas Bowman, D. D., LL. D., and

WHEREAS, The venerable Bishop long was associated with us as an earnest supporter and faithful counselor in the cause of the American University; he it therefore

Resolved, First, that we will cherish the memory of this good man and faithful bishop whose words and work shall live long in the history of the church;

Resolved, Second, that we are deeply sensible of the loss to us and to the church at large in the closing of his most estimable life;

Resolved, Third, that we assure the family and relatives that we shall cherish always his kindly spirit and active brotherly interest in the University and do now wish to convey to these bereaved friends our heartfelt sympathy;

Resolved, Fourth, that we order these resolutions spread upon our records and a copy sent to the family.
Adopted May 27, 1914.

CHARLES W. BALDWIN,
Secretary.

Resolutions on the Death of Mr. Truman D. Collins.

WHEREAS, In His allwise Providence it hath pleased our Heavenly Father to remove from among us our friend and collaborer, Truman D. Collins; and

WHEREAS, Our friend long was associated with us as a loyal friend of the American University and a generous supporter of the work with his counsel, interest and money; and

WHEREAS, He often had expressed his earnest desire that the University in some way might inaugurate the actual work for which it was planned; be it therefore

Resolved, First, that we have experienced a most serious loss in this passing of our friend and that the American University has suffered greatly by this cutting off of our associate from his loved activities;

Resolved, Second, that we shall cherish always in the memory of workers associated with us in this enterprise the active interest and optimistic hope of our brother;

Resolved, Third, that we assure the son and other relatives and friends of our brother that they have our heartfelt sympathy in their affliction;

Resolved, Fourth, that we order these resolutions spread upon our records, and that a copy be sent to the son of Brother Collins.

Adopted May 27, 1914.

CHARLES W. BALDWIN,
Secretary.

Our Biblical Museum.

A new interest has developed on the part of the public in the Mountford-Mannreov Palestinian Museum, located in our College of History. Through the joint labors of Madame Mountford and Miss Mannreov the collection recently has been enlarged in scope and put in an improved condition. Large numbers have been present on the days when the Museum has been open, and the descriptions of the costumes, utensils and curios have been given by these artistic and informing daughters of Israel. Madame Mountford is now filling engagements lecturing in the middle West. Miss Mannreov for the summer will be at the Museum on Wednesdays from 2 to 4:30 P. M., and on Sundays from 3 to 5 P. M. to show visitors the rich and instructive contents of the Museum.

Frank W. Collier, Ph. D., Director of Research.

On the fifth page of the COURIER we present the picture of our new Director of Research, the Reverend Doctor Frank W. Collier, who was elected to this important position on March 25, 1914, and entered upon

his work the first of May. A native of Maryland and a graduate of Johns Hopkins, he is thoroughly at home in the region of which Washington and Baltimore are the great centers. He is also an alumnus of the School of Theology of Boston University, and long was associated intimately, as student and collaborator, with the late gifted philosophical writer and teacher, Professor Borden Parker Bowne.

Dr. Collier comes to the University directly from the pastorate of the First Methodist Episcopal Church of Boston. He now is vigorously at work preparing the first catalogue or manual which will appear probably in the early fall and will contain information for graduates from college, as to materials, facilities, privileges and helps to be found in Washington for prosecuting studies and researches along special lines.

Our American University.

The advice of old ERICHTUS still holds good: "If you cannot frame your circumstances in accordance with your wishes, frame your will into harmony with your circumstances." The beauty of this philosophy is that it not only brings comfort to those who practice it, but also in many cases it furnishes a better course of action than was at first contemplated. This truth is illustrated in the career of our American University, which was so auspiciously opened last week. The sponsors of that institution, finding it impossible exactly to fulfill the dream of Bishop Hurst, its founder, turned to a line of action quite different, with the result that many persons are convinced that the new design is better than the original plan. Instead of the traditional university, with its elaborate equipment, its varied faculties and its numerous students in residence, the American University will in the first place consist of an institution for research, to be operated in connection with the departments and bureaus of the government, which constitute Washington an unrivaled center for such investigation. In the second place, a system of lectureships and publications will be arranged, through which widest diffusion of knowledge will be made possible. Finally, on the nomination of other universities, colleges and technical and professional schools, approved students will be granted fellowships for study in universities at home and abroad. In the March-April number of the Methodist Review Chancellor Franklin Hamilton presented a finely constructed description of the work which is to be carried on by the American University, and outlined the expectations which are cherished by its friends. At that time he also answered certain objections which were urged against the university by persons not familiar with the terms under which its work is to be conducted.

The whole Church should rejoice in this culmination. Elsewhere a complete account of the opening is given. As showing the motive of the university, Bishop Hamilton said:

"The object of education is not only the diffusion of the improved arts, science, philosophy and literature of America and Europe, which are only means to an end, it is not only cultural and vocational, to be conformed to the world, but for the higher and holier purpose of being transformed by the renewing of the mind to exert a right influence on the manners, the conduct and the character of mankind."

The financial plan under which the American University is to be conducted is worthy of attention. It is proposed to secure \$1,500,000 in three units of \$500,000 each. The first of these has been raised and will be put into immediate use. The securing of the balance will go forward now as rapidly as possible, and it is believed that so much interest has been awakened in the enterprise that many persons will rise to its support who hitherto have hesitated, because they could see for the near future no practical outcome of their gifts. Time alone can show whether the scheme of this educational departure is wise; but surely there is no further occasion for misgivings and doubt, much less for those vague irritations which were experienced by many of our educational leaders when they assumed that the American University would be a competitor with existing institutions. That was a fine putting of the case which Bishop McDowell gave when he said, "Nothing else so daring, and I venture to think nothing else so wise, has ever been proposed in an educational way by an American Church."—*The Christian Advocate*.

No. 2

OPENING DAY—BISHOP HAMILTON SPEAKING

Opening Day, May 27, 1914 Formal Exercises Continued.

Bishop Cranston: Now we will resume our program. Among the early friends of this college—of this institution—was John W. Hamilton, the brother of the Chancellor. I believe it is a matter of tradition that Bishop Hurst mentioned to Dr. Hamilton his project of the American University and that Dr. Hamilton went down into his pocket at once and said, "and I will give the first dollar." So that the foundation upon which we are already resting today is the dollar offered by Dr. Hamilton to Bishop Hurst. (Applause.) Dr. Hamilton's interest in the institution, like the man, has been unfolding, and recently he has used that marvellously persuasive power of his so effectually with his friends as to endow a chair and is already at work in constructing another chair. But I will not stop to tell you just what that means, because the time is short and I wish to present to you Bishop John Hamilton, who will speak to us now. (Applause.)

Address by Bishop John William Hamilton, LL. D.,
Boston, Massachusetts.

Mr. Chairman, Mr. Chancellor, if he is about here anywhere (voice from platform: "Here he is."), Mr. President, Honored Guests and Friends:

I esteem it a most distinguished honor to be present today, to share in the courtesy and favor of the nation's official countenance. It is most fitting for us, Mr. President, that you, not only as the most distinguished resident of this city, and in your high office our first citizen of the world, but as *primus inter pares* in your educational position among the distinguished Presidents of the great Universities of the United States, should grace this occasion with your presence and approval. And it is in like keeping with the appropriateness of this hour, and the high calling of the great school whose doors we open today, that the hon-

OPENING DAY BISHOP McDOWELL SPEAKING.

ored members of your cabinet, who are distinguished representatives of the Christian Church as of the National Government, should lend us their influence and encouragement (Applause.)

The importance of this day will mark an epoch in the history of the American University. But the importance of the occasion is not to be measured by the present resources of the institution. It is to be determined by all of its future history. The great Aberdeen University of Scotland for four years consisted of a single professorship.

Neither is the significance of these exercises to be measured by the honor and distinction of all these great representatives, even though they were unprecedented in their abilities, excellence of spirit and great friendly environment. Our presence here will be magnified or minified by what is to come. It is not the pretensions of this day, but the quality and amount of work to be done, down the long years by this University, which shall give significance to what we say and do.

Who are the young men and women to be, who will enter these open doors and go forth from them to help influence the nations and the world? We are but the men of today; they shall be the great men of tomorrow, the greater men of the greater tomorrow after tomorrow, and then again of the tomorrow after that tomorrow. Say not that either privilege or achievement is near to the finish. The great men of all the past should be as little men in contrast with the great men who are to come. We have witnessed great intellectual achievements, but we are far away from the greatest and best of achievements yet to be accomplished by the greatest and best of men. We have often been told of the eccentric head-master in the German School who never removed his hat when he met or stood in the presence of the nobles and even princes of the realm, but always accosted the boys of his school when he met them by bowing to them and lifting his hat. When he was reproached for his disrespect of the nobility he answered promptly, "I know who these men are, but I do not know who these boys may be."

And we were told that it was one of the boys, who was then in his school, whose words as a man "shook the world."

"The task of the future," said an Englishman who was interested in the education of India, "is gigantic but not impracticable." And the task is one, the world over, and the world under. Education has not yet arrived at the age of definition. The whole system of education has been like the ship styled "King of Cork" in a fantasy of Mediterranean travel:

"The King of Cork was a funny ship
As ever ploughed the main,
She kep' no log, she went where she liked,
So her Cap'n want to blame."

We have started with our youth as if they were so many dolts with so many cubic inches of vacuum in their heads, which had to be filled with so many cubic inches of a certain kind of filling. And we have gone to a single gravel bed or two for the material with which to fill all alike, principally to a town of Phocis in Greece, where "the oracles were given forth by a priestess, the Pythia, who (according to a late tradition) seated herself upon a golden tripod above a chasm whence issued mephitic vapors. Inspired by these she uttered words which were then arranged by prophets especially educated for the purpose." When the vacuum was supposed to be filled, the psychosis reached total consciousness at a given moment, and the student was turned out of the schools at the period ironically named Commencement, a finished product, in most cases.

"The bookful blockhead ignorantly read
With loads of learned lumber in his head,"

—a "mere machine of memory." He was then expected to start out and learn his lesson all over again in trying to find his place in life where for the substance of his success he was to engage in what has been vulgarly called "making a living." To be a bit more explicit, it may be said these Delphian oracles were reduced to a system, in a mechanical factory known as the college where so much Greek—and to modernize it a little, considerable Latin was added—with occasionally only enough chemistry to make the solution (Laughter), and all kinds of so much boy were mixed up for four years, and when the drugs were all gone, the finished product was turned out to be selected and labeled. By the process very often of unnatural selection the first collection was deemed good enough to be set aside for the ministry, the second only good enough for the law, and the third would just about do for the practice of medicine. (Laughter.) After that, what was left was known as cullings, and they were thrown in a heap for the schools, the trades and the labor unions generally, to pick out as they came along, and set to work as occasion might require. The carpenter was at liberty to set aside the brassy timber from the sound, and the fishmonger to cull the small oysters from the large. The outcome of such schools was more misfits than fits. And the result has been the professions, with here and there an exception, have gone along "jargonizing like a foreigner at his food," and the tradesmen have had a happy-go-lucky time of it, or have been playing at a game in which from the very start, it was evident to the skillful mind, that they were sure to lose. Hence, ninety to ninety-five percent of all the men who have "gone into business" have made failures of it; full as large a percentage as the profession should show. The unfortunates have clamored, and made their own matters worse by seeking to correct the deep-seated error with revolts and strikes. And the whole country has been wild with panics which, like the seasons, have come in cycles, one about every nineteen years. Whether it is because the education has been so misfitting, or many parents and guardians have no care for the welfare of their children, we have now whole sections of the country which provide no kind of schools for their youth, except when and where the saloon and other liquor interests supply the funds. And there are whole states where ignorance is such bliss and learning such a luxury that the ruling class furnish only such schools for the most ignorant as the taxes on the poverty of the most indigent poor can pay for.

President Eliot, of Harvard University, has described conditions which must not be allowed to continue. He says, "The efficiency of legislatures and the respect in which they are held have declined. The courts are, as a whole, less efficient and less respected today than they were a generation or two ago. Reverence for law is not maintained at its old level." And he includes the church in his description of de-

linquency, in its unwillingness to "rely on * * * fundamental teachings of Christ." "Legislature, court and church then," he says, "seem to be passing through some organic transition which temporarily impairs their powers." He turns to the schools for his hope of their recovery from these conditions and concludes that "In our country education is the one great agency for promoting intelligence and righteousness, which unquestionably has gained power in the United States during the last half century."

But it is quite evident that a better education or a different dissemination of it is needed to correct the spirit of the age, for it is the public spirit which needs the schooling.

We must lift our eyes to a larger vision; we must lift our age to a nobler living. We have come to the verge of the old learning. We must cross the chasm to the school and the era of the New Learning. We must seek for and acquaint ourselves with new definitions. The old no longer will do. "Education," said Emerson, "should be broad as man."

This it must be to keep abreast of all his needs and all his aspirations. And what the one man needs and feels all men need and feel. Individual education must be made national, and the national education must provide for the needs and feelings of every individual until the blight of ignorance is lifted from every mind under its sway. As an eagle stirreth her nest, it must awaken sluggish minds, and where there is no impulse in the community it must incarnate one, to make provision for the two needs of knowing and loving. Ignorance, like slavery, is a prison, and no nation is wholly free so long as there remains an ignorant person in it. No man is a good citizen who can look with the least degree of allowance on the ignorance of his fellow man.

It was Raja Ram Mohan Roy more than any other of his race who incarnated the impulse which led thinking Indians to desire and work for "English education." This he did, he said, that "the ideas and science of the West should liberate the minds of his countrymen and bring new light." It was not long before the policy of the Government was changed. It was Frederick the Great who said: "An educated people can be easily governed." Lord Macaulay soon saw that uniformity of language was necessary to unity of government, and it is to him the Government owes the English education, as it has since been developed all over India. If there is unrest there now, what would there have been without the schools for the study of the English language, with the "147 vernacular languages of extraordinary variety, and these languages spoken by nearly or quite 300,000,000 persons."

There are 3,424 spoken languages or dialects in the world, and 1,624 of these in America, while there are only 937 in all Asia, 587 in Europe and 276 in Africa. Can there be any argument framed, therefore, which would not select the English language for all Americans. There is more room in the language than any other for the freedom of all other tongues. It contains approximately 600,000 words. The vocabulary of one of our standard dictionaries aggregates about 450,000 words. No obstacle or contrivance can hinder the much wider usage of English than by Americans only. It is the language of business and travel already around the world. It is now spoken by more than 27 percent of all the persons who speak respectively all the European languages combined, and by more than one-tenth of the world's population or more than 160,000,000 persons. The number of persons who speak the language now, are eight times the number who spoke it at the beginning of the last century, and it is spoken by nearly as many persons as speak the French, Italian and Spanish all taken together. Time was, when it was widely rumored that no great scholarship could be contained within the English language, and scholarship generally was supposed to consist mostly of familiarity with the dead languages. "Scholars, so called, could only feed their minds on the classics such as the vultures crave and find their food. But scholarship is no longer confined to things which are past and dead." "Experience to most men," said Coleridge, "is like the stern lights of a ship, which illumine only the track it has passed." The thorough scholarship needed in our day must be attained and given through the living to the living and not through the dead to the dead. Garrick was right when he said we are obliged to our imagination for three-fourths of our importance, if the ambiguity of the saying includes such use of the imagination as to clear the way and help on to whatever it is important that we should know. Such scholarship demands a living vehicle of expression, and if ever the English language was too limited for scholarship it has gotten bravely over it, for its

life gives it scope. "Wherever language is alive," said Lowell, "it grows."

Our education must not only be a national one, but it must be American—our own. We must, therefore, school ourselves to our own task. Come here who may, they must adapt themselves to our way. There is no such process of assimilation going on anywhere else in the world. We are the crucible in which is melted the outcome of all nations. We calcine and oxidize until the valence is complete. To this end we must use our own methods. We must Americanize all our foreign peoples. The largeness of the task must appear when we class one-third of all our ninety millions and more as foreign born, and still add a million more each year.

As I said, when this ground was consecrated to the New Learning, we are making history fast, but faster now than then. We have seen since then a half dozen nations born in a day. Mr. Stead was strictly accurate when he wrote his book on the Americanization of the world. Our prodigal expenditure of money in travel has opened hostleries in foreign lands which cater to Americans, and are found all around the globe. Our academies, colleges and universities are frequented by students from the backward nations in the Eastern hemisphere as well as the Western. The uprising in Mexico is inspired and fostered by the influence of agitations in the United States. Japan and China and Korea are all indebted to our Western civilization for their awakening. Our form of republican government is copied in whole or in part by the Republics of Argentina, Bolivia, Brazil, Chile, China, Columbia, Costa Rica, Cuba, Dominican Republic, France, Guatemala, Hayti, Honduras, Liberia, Mexico, Nicaragua, Panama, Paraguay, Salvador, Switzerland, Uruguay and Venezuela. Under pressure of the same powerful influence the limited monarchies watching and waiting stand with fear and trembling. The whole British Empire quakes with the forebodings of a woman scorned and the Ulster militia. (Laughter.)

And no other government is so set for the peace of all nations. It has often been said that England, Germany and the United States can compel the peace of the world. The time is not far distant when the United States can do it alone. (Laughter.) The German Imperial Commandant Lazarus von Schwendi spoke from experience when he said, "To carry on war three things are necessary. Money! Money! Money!" (Laughter.) If the story told of the Rothschilds is true, they held back a European war a few years ago by refusing the loan of money for war purposes; this country can soon check any great war in the same way. We are already the wealthiest of all nations; the balance of trade has crossed to this side of the seas, and we shall not stand long waiting for the balance of money. But we now have the better way of putting an end to war, and that is by our preaching and practice. Our example can do more than our money. So long as we can bear slight and injury without anger and resentment, and when we have been wronged turn to international courts for recourse, the other nations sooner or later will imitate us. We have held back already "the iron cure of humanity" in more instances than one, and we have taught victorious nations to settle with their defeated enemies, by paying them satisfactorily for the damage they have done them and in sending back tribute money after it has been handed over. It is our privilege to teach mankind:

"Peace hath her victories
No less renowned than war."

It behooves us therefore to look well to ourselves as the world's example.

If education, as President Eliot assures us, "is the one agency for promoting intelligence and righteousness," it must be so defined as to meet the need of every unlearned person, keep abreast of the aspirations of the learned and secure the welfare and usefulness of all the people by bringing the greatest good within the reach of each and every individual to promote his well-being and usefulness. The Pythia, then, not of mephitic vapors, but the priestess of inspiration to noble living and well doing,

"Shall sit at the gates of the world,
Where nations shall gather and meet.
And the East and the West at her bidding
Shall lie in a leash at her feet."

We have given more attention to the making and teaching of books than to the study and development of the students—"The proper study of mankind is man." Experimental psychology is comparatively a new study, and a psychological

laboratory is a purely modern invention. It is only the New Learning which has discovered that the school is less for tuition than ignition, and that the teacher is more a torch-bearer than a cotton press. Education is more an awakening of inborn and embryonate faculties than the filling of a helpless vacuum, whether applied to the individual or the nation. It is an inlook for the calling forth of an outlook. We do not educate the man by "telling him what he knows not, but by making him what he was not and what he will remain forever." It is not then simply the intellectual side of education which is needed—there need be no under-estimate of its importance—it is essential to all learning. And there is inestimable value in education for itself alone. But the supreme importance of education is in the creating and strengthening of character which alone gives certain steadfastness and permanent prestige to the whole man and the whole nation, and this has not been done and cannot be done by intellectual attainments only. How this is to be done is the great question engaging the minds of the strongest educators everywhere.

During the year 1910 there were 462,530 admissions or commitments to the prisons of this country, and on the first day of that year the prison population was 109,311. The number of juvenile delinquents reported during the same year was 22,903. By far the larger proportion of these numbers is not chargeable to our foreign-born population. Five-sixths of the total number of prisoners in the United States reported by the Commissioner-General of Immigration for 1908 were native born, and for the most part had at some time been in our schools. The average number of murders annually during the twenty years from 1885 to 1904 was 6,597. In 1896 the number was 10,662. In Germany the convictions equaled 95 percent and a fraction; in the United States 1.3 percent. We are the most criminal nation upon the face of the earth. The civil prosecutions are similar games of chance; probably with 95 to 1, the plaintiff and the defendant both will give the lawyers all they have in it and possibly all they have besides. A case was settled this last week in New York which had been in the courts twenty-five years and cost the litigants from a quarter to half a million of dollars, and the total amount in dispute went for costs long years ago. The courts are merely a travesty of Justice—spectacular debating societies to try the wits of men for the support of the court officials and the attorneys by a burdensome taxation of disinterested persons who seldom go near them.

If the schools are to reduce and finally eliminate these lamentable statistics and make over these trifling tribunals, "the task" may seem "gigantic," but is it impracticable? It certainly becomes us to look into the character of our schools and the kind of instruction which is given. If the mere filling process is to continue, it would seem at least prudent to change from the pits whence the kind of gravel has been taken. Little wonder that Bishop Wellden who knew something of India, and much of education, should declare that he held with an intensity of conviction which it was difficult to express, "that secular education, wherever it was given and by whomsoever it was given, was a lamentable failure." One of the members of the Madras Council of Education said more than a half century ago, "Education without moral culture is probably as often injurious as beneficial to society."

It must be admitted that "the education of character, which is presumably what is meant by moral education, is something very deep-lying and depends on a number of factors of which school life is only one." If such education is beset with so great difficulty in State schools as to make it impracticable because of the traditions and religious differences of the people then some school must be found in which such education may prevail. It is not impracticable, and no other safeguard has been discovered for human conduct and private character. And such tuition does avail in preventing crime and securing integrity. But it must be a religious instruction which obtains. Education which is not rooted in religion has no safeguards. But it is not enough that it should be religious only. There is a religion that teaches that a common water snake is the embodiment of the god of the floods, and a little while ago the prime minister of the country in which such belief prevails, went into the temple into which one of the snakes had crawled and worshipped it. In this Christian country we accept the statement of Mark Hopkins that "religion without morality is superstition and a curse, and anything like an adequate and complete morality without religion is impossible." Because the water-snake religion, with numerous others, is in this country we have been driven into the churches for both

our religion and morality. And it is the persons who elude the church schools that fill our prisons. Judge Faucett of Brooklyn stated recently that of the 2,700 boys charged with crime who had come before him during his five years as Judge not one attended Sunday School. During the eight years that I was in charge of the more than fifty secondary schools and colleges of the church, among both the white and colored people in the South, which for so many generations had been the schoolless section of the country, not a single student of all those schools was lynched or charged with the crime for which the savages pretentiously claimed to lynch their victims. And what was true of our schools was true of all the students in the schools of the American Missionary Association.

But Christian Schools without Christian teachers are like a ship at sea whose captain has "crawled in through the cabin window." When Sir Alexander Arbuthnot, who later was twice Vice-Chancellor of Calcutta University, was addressing a Convocation in Madras in 1868, "he singled out as the man to be named first for greatness of character in the nineteenth century not any statesman or soldier or man of letters, but Dr. Thomas Arnold of Rugly." (Cries of "Hear! Hear!")

The baffling nature of the hindrances led the English Government in India to divorce the higher education from government control. And such will be the American policy when all the higher education sets up its only essential aim

and assumes responsibility; for, as Renan said, "The question of education is for the modern world a question of life or death on which depends the future." The fear of the Lord is the beginning of wisdom, and the conclusion of the whole matter is, "Fear God and keep His Commandments, for this is the whole duty of man." To this end we open this University today with full confidence that the blessing of the Immanent Presence shall rest upon all its teachers and all its students always, for "religion and education are not a match for evil without the grace of God."

I was present in the meeting of a ministerial association at Plymouth, Massachusetts, during the erection of the great Faith Monument. The association was invited to visit the monument, and they went in a body. They happened to be there at the very hour when the builders had the great granite basal figure entitled "Education" swinging by the ropes. The master mason, evidently a man of much sentiment, said, "Education ought to be set by religion," and he called to the preachers to take the ropes, which they did, and lower the great stone symbol of the nation's presiding genius, to its final resting place on one of the four significant corners of the monument.

In no other city of the world than Washington should education in like manner be set, so certainly, so firmly, so permanently upon the one foundation of the Christian faith. (Prolonged applause.)

Bishop Cranston: This band which has been playing for us today is always in demand, and is now required elsewhere. We must, therefore, change the program just a little again. We will have the raising of the flag at this time, and the singing of "The Star Spangled Banner." We want you all to join in the singing and then Secretary Daniels, of the Navy, will address us. The audience will stand and face about during the ceremony of raising of the flag.

The audience stood and sang "The Star Spangled Banner," by Francis Scott Key, accompanied by the Marine Band and led by the precentor, Mr. Percy S. Foster, while the National Ensign was hoisted by Mr. John B. Hammond, Superintendent of the University grounds.

Bishop Cranston: Thank you, Gentlemen. The audience will be seated.

Bishop Cranston: The Secretary of the Navy can say some things which are rather thrilling when he speaks through the mouths of those great cannon which constitute our offensive and defensive means of expression as a nation. At such time he is rather formidable, but I have known him to be quite peaceable and rather fraternal. He is in a good mood today, and you need not be afraid at all. Besides that, he is a good Methodist. (Laughter and applause.) The Honorable Josephus Daniels, Secretary of the Navy, and a trustee of the American University. (Applause)

Address by the Honorable Josephus Daniels, Secretary of the Navy, on the Subject, "Pro Deo Et Patria."

A few moments ago we raised the stars and stripes over a great University, dedicated to the glory of God and service of mankind. They are one and inseparable, now and forever. (Applause.) It is appropriate that on such an occasion the flag of our country shall be hoisted. The flag is the symbol of our love of country and our worship of God. From the most ancient times men have been swayed by symbols. There has always been a craving in the human heart that its fathomless feeling, its inexpressible emotions, shall find some outward representation. Unable often to interpret the passions and longings of its own breast, the soul has craved some object in which they might be concentrated, crystallized, and visualized. The Almighty recognized this instinct of the human nature when He put the bow in the skies. Man's need of the symbol is therefore doubtless the reflection in himself of his Maker's image.

Our flag is the proud confession to the world, in the laconic but eloquent speech of symbolism, of the principles, faith and history of the nation. Designed partly by the Father of his Country, shaped originally by the soft hands of woman, originated in the City of Brotherly Love, dedicated by poetry, bathed in the blood of patriots, tattered with the bullets of enemies, and glorified with the forty-eight stars of a perfect union (Applause), the stars and stripes is the most beautiful symbol of nationality the world has ever seen. (Exclamation of "Amen" and applause.)

The beauty of our flag has had just tribute paid it by the

OPENING DAY—DOCTOR HANCHER READING.

late Senator Hoar, of Massachusetts, to whom it was given to be spokesman for the Nation, when he said:

"I have seen the glories of art and architecture, and of mountain and river. I have seen the sun set on Jungfrau and the full moon rise over Mont Blanc, but the fairest vision on which these eyes ever looked was the flag of my country in a foreign land. (Exclamation of "Amen" and applause.) Beautiful as the flowers to those who love it, terrible as a meteor to those who hate it, it is the symbol of power and glory, and the honor," said Senator Hoar, "of seventy million Americans."

Seventy millions then, nearer one hundred millions now, and hundreds of millions yet unborn. (Applause.)

It is a symbol which stands for liberty. The men of the Thirteen Colonies, who first settled this country, came here that they might find liberty—that freedom which was not theirs under the ancient governments of Europe, and Old Glory today never flies down the street above the tattoo of the drums and the flare of the trumpet but that we hear in her fluttering the heart-beat of man from the time he first yearned for liberty—liberty of person, liberty of conscience, liberty of speech, liberty of the mind, liberty for the exercise of genius and the development of talent. (Applause.) For the inalienable rights of man, "for life, liberty and the pursuit of happiness," the stars and stripes stand as no ensign ever stood before. It speaks to us of Concord, of Bunker Hill, of Trenton and King's Mountain, of the Declaration of Independence and the Constitution.

It speaks for hope. When the committee of Congress decided that the flag should have thirteen stars and thirteen stripes, there seemed to be something prophetic in the design. The star always speaks for hope; it tells the mariner that the midnight storm is passed; the stripe speaks for suffering from the blow of fate. Our country has had its share both of national joy and national chastening. It has been made perfect through suffering. We came to Yorktown by way of Valley Forge. We came to a perfectly

cemented union through the shedding of fraternal blood. We have come through the time of stripes to the time of stars. We can never again believe that even in the woes of panic, we shall not emerge into prosperity again. Our experience has taught us that the blackest cloud has its silver lining. We may not expect that the republic will not again have its problems to confront, its perils to pass through, its evils to correct, but we may never believe with Old Glory as the emblem of our national ideals that this republic shall ever crumble in the dust amongst the wrecks of time. (Applause.)

It stands for shelter. There has been wrought in its texture something of the tears and blood and sacrifice of the exiles from other lands who came here when our shores were bleak and our wilderness primeval in order to find a refuge from persecution and tyranny. The new world was to them a shelter in the time of storm. Since the erection of our republic, since our flag was first flung out to the winds, half the monarchies of the world have become republics, as if those who could not come to our shores would follow our example and seize for themselves the blessings which America insured to her sons and daughters.

The flag has always stood for protection of the weak and for shelter for the distressed. Does it stand for that to-day as much as it did when its splendor enraptured Washington, or when it inspired Jackson to win the West in the victory at New Orleans? Is it possible the time can ever come when it shall be planted over a conquered people, when it shall ever be carried by our armies in a war of aggression? Will it ever stand for any such principle as government of a conquered people without the consent of the governed? God forbid! (Exclamation of "Amen" and applause.) We do not believe that it will ever float over another foot of territory won by war. It must stand as it has always stood, for shelter, for protection, for refuge and rest.

It is my good fortune to be at the head of the biggest university in America. That, no doubt, accounts for my in-

vation to have a place on the program this afternoon. (Laughter and applause.) It may not be generally known that the United States Navy is our foremost educational institution, with schools and colleges afloat and ashore, giving instruction from the three R's to the most abstruse learning for diplomats and the most practical lessons in mechanics and technology. Every day fifty thousand sailors answer the call "To books," and in our school are taught not only to serve their country but to become scholars and theorists as well (Cries of "Good" and applause), and to combine education of the head with education of the hand. A few months after the American people elected a school teacher to be President (Cries of "Hear! Hear!") every officer in the American Navy became a school teacher. (Laughter and applause.) I come therefore to bring this afternoon, Mr. Chancellor, to this new University the greetings of the "University of the Seas" (Applause), and welcome it to a high place among the educational institutions of our country.

Religion and patriotism have been twins from the day they united to lead the children of Israel from Egypt to the Promised Land. It has been said that the trekking from the Nile to the Jordan was God's first university, and that in forty years it gave the world but two graduates—Joshua and Caleb. (Laughter.) But what graduates they were! (Laughter and applause.) "For God and Country" has been the shibboleth of every notable contest in the history of the world. I will not say there is no patriotism separate from religion, but it is within the truth to say that in every decade the noblest patriotism has burgeoned forth from homes where religion presided and the household worshipped God. (Cries of "That's right!" "That's true!")

Methodism was born in a university. The new and vitalizing faith that transformed the lives of John and Charles Wesley and their associates, came to them as they pursued their studies at Oxford. But the religion that made them living epistles did not stop in the university. It went out to all the world. (Applause.) It gave them a vision of duty to mankind that enabled John Wesley to declare "the world is my parish." The impulse of Methodism was given direction and organizing capacity by the training of the college, but its inspiration came from a divine source. Its mission was to preach a living gospel to dying men. The godly zeal of the early Methodists did not revolutionize Oxford, for, like many educational institutions in our day, formalism and bookishness often choke out simple faith in the Word. The Wesleys and Whitfield were learned in the classics, but they soon heard the call to go into the highways and carry the Gospel to those who sat in darkness (Exclamation of "Yes"), and publish the good news. Denied admission into pulpits, they made pulpits in God's first temples and carried their messages to the forgotten men and women in crowded factory centers and to the toilers wherever they could secure a hearing. (Exclamation of "Amen" and applause.) It has been often said—and sometimes truly—of Methodists what the Irish school master said of the pioneer Wesleys in Ohio: "The Methodists are a very narry people. I could never belong to that church. I could never hear to have to feel my spiritual pulse every morning to see if my religious temperament was normal. No; (Laughter) I could never be a Methodist. They are a very narry people. But," added the Irishman, "I have observed that a narry stream runs strong." (Laughter.) Under the auspices of this strong church, broad in everything except where it thinks the Ruler of the Universe has narrowed the way from earth to heaven, the doors of this institution are opened to promote learning and research. May it fulfill its high mission and be a leading factor in the agencies working to make the National Capital a mecca for education as it is the mecca for statesmanship!

It stands for all the ideals of the American people, and one of the greatest of these is for an educated citizenship. Will our citizenship measure up to the country's needs? In a large measure the answer to this question depends upon whether our educational institutions educate for service and illustrate the highest ideals. Only this week, a distinguished preacher in New York declared that "our universities are controlled by capital and do not heed the call of struggling humanity." If that should become true, to what source could we turn for Leadership and Light? Your university, fortunate in its environment and fortunate in its broad scope, cannot fail to hear the call to serve humanity. It will hear the clear call that Wesley heard at Oxford, and put all learning and science under contribution for the opening of doors of help and opportunity to struggling men and women. In this high service it will marry Religion and Education, a union necessary for the highest development of our race.

Because Education and Patriotism in America are one, it is fitting today that we raise the flag to float over this great school of learning which we are establishing in our nation's capital. (Prolonged applause.)

Bishop Cranston: I was just thinking as the Secretary closed that when the flag was first raised the nation was insignificantly small, but it has been growing, and let us hope that this institution will repeatedly continue in the growth and glory that came to the nation under our flag. This afternoon again and again, efforts have been made to locate the Chancellor of this institution. (Laughter.) He has not hidden away of necessity, but in the construction of the program he simply ignored himself as a factor in the affairs of this day. For seven years he has been leading the trustees and the friends of this institution up to this hour. I know that you would regard it as an unpardonable oversight if this occasion should pass and no recognition be given to the man who has touched all of the springs and set us all jumping. (Applause.) I am bound you shall see him; the trustees this morning had the same kind of an attack, and they directed that some kind of a resolution should be prepared expressing their opinion of Chancellor Hamilton. I call upon Secretary Hancher, a good-looking gentleman himself, one of the secretaries of our Board of Education, who will give you the views of our trustees.

Dr. John W. Hancher, Assistant Secretary of the Board of Education: I am highly honored to be asked by the trustees who constitute the committee for the Board of Trustees (naming the members of the Board), to bring you, at the mandate of the trustees, this utterance:

We do but emphasize the immortal dream, far-reaching vision and invincible courage of Bishop John F. Hurst first Chancellor of the American University, and the enthusiastic devotion, indomitable purpose and magnetic leadership of Bishop Charles C. McCabe, late Chancellor of the American University, when we stop a moment to make due recognition and bestow well-earned gratitude upon Chancellor Franklin Hamilton, worthy successor and present incumbent in this immortal line.

That he "is come to the kingdom for such a time as this" is well testified by the achievements which make this day possible. His seven years' administration has been full of problems most difficult, perplexities most trying, obstacles most stubborn, tasks most stupendous. He has met them all with discriminating judgment, sturdy personality, profound conviction of duty and consecrated devotion to a lofty and noble purpose. Thus has he led us to this epochal day in the history of Christian education in the world's civilization. We esteem ourselves privileged to record this expression of our official confidence and approval, and here and now pledge to Chancellor Hamilton our cordial support and unflinching cooperation in the further prosecution and development of the interests of the American University.

(Signed) EARL CRANSTON.

BENJAMIN F. LEIGHTON
CHARLES W. BALDWIN,
W. R. WEDDERSPOON,
JOHN W. HANCHER.

May 27, 1914.

Washington, D. C.

Bishop Cranston: Let me present Chancellor Hamilton to you (Applause), worthy of all tributes that have been given him. (Applause.)

Chancellor Hamilton appears on the platform and bows to the audience amid prolonged applause.

Bishop Cranston: Now, my friends,—I thought our friends of the music had all gone, but I am glad to see that some of them are here. (Applause.) I suppose that by nationality we are all Americans—all of us who are here. Ecclesiastically, I may take it, we are all Methodists! (Laughter.) Politically, we are all Democrats! (Prolonged applause and laughter.) It is the first time, I believe, I ever said that I was a Democrat! (Prolonged laughter.) Oh, well, the "Grand Old Party" was a grand old party because it was democratic in all for which it stood, and the Democratic party is a grand old Republican party, because it has stood for the Republic from the beginning! (Laughter and applause.) And we are all gloriously mixed up! (Applause.)—but hilariously so! (Applause.)

Now, in introducing Secretary Bryan, I ought to have made him an exception, perhaps. (Laughter.) I suppose accord-

ing to his theology he was foreordained to be here today, and to make us this speech, which he is about to give. I am very sure that whether foreordination works in this case or not, grace is operating (Laughter)—and that the man who is to speak to us now, who has the heart of the American people (Cries of "Hear, Hear!") and who has their sympathy in all his efforts for the keeping of the peace of the world, (Cries of "Hear! Hear!" and applause) will give to us a message that shall grip our hearts and inspire our enterprise. Honorable William J. Bryan, Secretary of State. (Prolonged applause.)

**Address by the Honorable William Jennings Bryan,
Secretary of State.**

Ladies and Gentlemen: It is worth while waiting fifty-four years to hear a Methodist Bishop say that "we are all Democratic." (Laughter and applause.) I am glad to be here, although it seems that my presence more than my speech is necessary. We can all help by our presence, but none of us can add much by speech to what has already been said. I am glad to participate in this extraordinary occasion, and if I have any right to participate, it is not due to the fact that I am holding a high office. I do not emphasize as much as some do the value of an office. Sometimes it comes by accident (Laughter), and sometimes, as in my case, by favor. (Laughter.) And if it comes rightfully, it ought to come more as a result than as a cause.

On this occasion today, and at this time, we are dealing with matters so important that the mere holding of an office does not justify participation in this program. The President was here, but he had a higher claim to the invitation and the opportunity you gave him, than because he was President. (Cries of "Hear! Hear!") He represents, as no other President has ever done the union of learning and religion in this country. (Applause.) He is the first of our Presidents taken from an educational career; the first chief executive who in his life work was an exponent of our educational system. (Applause.) And no President has brought more spiritual consecration to his work ("Hear! Hear!" and applause.) than President Wilson. And Secretary Daniels is here, not primarily because he is the Secretary of the Navy—that might entitle him to a place at a Baptist meeting; but that would not justify his coming to a Methodist meeting. (Laughter.) You might invite him because he is a Methodist; he represents the reunion of the two churches. (Cries of "Hear! Hear!" followed by applause.) I might creep in on my relationships (voice "Yes, sir"), for my mother was a Methodist when I was born, my wife was a Methodist when we were married, and the only one of my children who will carry my name down to posterity is a Methodist. (Applause.) Our only son is a member of this church; I am thus hedged about on three sides by Methodists! (Laughter.)

And yet I think I have even a better claim to a place on this program; while I place but little emphasis upon those lines that separate the church into different groups. I have a firm grip on the fundamentals of Christianity (Cries of "Hear! Hear!") that underlie all our faiths. (Applause.) And these good men of the Methodist faith who have laid the foundation here of the American University are not more interested than I am in all that this University stands for. (Applause.) I have not made the sacrifices for it that some of them have, and my name cannot be linked with it as the names of some of them are. I imagine that the Hamilton brothers will be to the American University much what the Wesley brothers were to the early Methodist Church. (Cries of "Hear! Hear!" and applause.) But even the Hamilton brothers do not appreciate more than I do the importance of bringing higher education under Christian influence. (Applause.)

It is not necessary for me to make a speech today. I think I am down for an "address" (Laughter), and there is a difference between an "address" and a "speech." I learned it in the campaign of 1896. (Laughter and applause.) I found they were overworking me (Laughter) and I told them that as a matter of self-preservation, in order that I might have assurance that I would live until election day (Laughter) I must limit my speeches to three each day. And so a few days after that, after I had spoken about ten times, I looked upon the program, and I found that I was then about to make my first "speech." (Laughter.) They had put me down for three "speeches," and twenty-six "addresses" (Laughter), by which they meant that an "address" was to be only of short duration, while a "speech" was a longer ef-

fort. I am down for an "address" this afternoon (Laughter), and I could not, without violating the proprieties of the occasion, venture to make a "speech," after all that we have heard this afternoon.

I did not know what my text was (Laughter) until after I reached the grounds. I tried to find by inquiry last night what I was expected to talk about, but I inquired of those who were going to talk, and they seemed afraid to tell me, for fear I might speak before they did (Laughter); and so it was not until today, after lunch, as we were preparing to come to the platform that I found my text. Bishop Cranston was going with me through this splendid building, and we came to the chair that you will find up in the Assembly Hall. It is a chair that was presented to this institution by the Wesleyan Methodist Conference of Great Britain, and is made from timber taken from the old church in which Wesley preached and near which he lived. We saw carved on the top of the chair these words: "Unite the Pair so Long Disjoined.—Knowledge and Vital Piety." (Cries of "Hear! Hear!") That is my text this afternoon—"the union of knowledge and religion."

My friends, I have no doubt of the future of this great university. Why? Because it is building on solid rock, and it is prepared to do a work that is important, not to this church only, not to this nation only, but to the world! (Exclamation of "Amen.")

What the world needs today is the union of the head and heart in life's work (Cries of "Hear! Hear!" and applause); and the great fault of education, as we have sometimes found it, is that it trains the mind, but does not train the heart at the same time. If I understand the weakness of education, it is, first, that it sometimes weans men away from sympathy with his fellows. When you unite the Christian religion with it, you teach brotherhood along with mental development. (Exclamation of "Amen" and applause.) And the second weakness is that the mind is sometimes so enlarged that the possessor of the mind forgets that "the fear of God is the beginning of wisdom." It is the purpose of every school with a religious impulse behind it, to secure to the individual the intellectual training that he needs without weaning him from sympathy with his fellows, and without making him forget God. And never have we needed such influences more than today. (Cries of "Hear! Hear!") We ought to teach the doctrine of brotherhood. Why? Inventive genius has so multiplied the strength of a human arm, that aggregations of individual wealth that tend to classify society, tend to separate the extremes, so that a part of the world does not know and, therefore, cannot sympathize with the rest of the world. Unless there is some force constantly teaching the doctrine of brotherhood, we will find society disrupted, because of the breaking of the bonds of sympathy. (Applause.)

Tolstoi says that the great need of the world today is sympathy; that back of every wrong and injustice of which man complains, you will find a lack of sympathy. He has suggested what is known as "bread labor" as a remedy, and he insists that man must toil himself if he would remember his brother who toils. (Applause.) His belief is that only by constant contact with manual labor can the heart of man be kept linked to the heart of other men. Whether he is right in his remedy or not is a matter for discussion, but I have no doubt that he is right when he says that what mankind needs most is sympathy.

What mankind needs is a response from the heart of his fellow man, a love broad enough to take in all mankind, and if I understand the Christian religion, its hope rests upon the bringing of all the world into a universal brotherhood. (Cries of "Hear! Hear!" and "Amen!" and applause.)

Wendell Phillips complained of the scholar when he said that he did not interest himself as he ought in the affairs of his country. He said, "The people make history, and the scholars write it, half truly and half as colored by their prejudices." We need today an education that will have a spiritual impulse behind it, an education that will send out its graduates, not to sit idly upon the shoulders of the multitude, but to get down with the multitude (Cries of "Hear! Hear!"), and help bear the burden of the world. (Applause.) There is nothing else that will make a man willing to bear burdens. The difference between the selfish man and the unselfish man is easily described. The selfish man wants somebody else to bear his burdens, and the unselfish man is looking for burdens to bear. (Applause.) Nothing but religion (Cries of "That's so") teaches a man to want to bear burdens. (Applause.) This is the change that Christ can bring in a human heart. He can change that heart from a

stagnant pool into a living spring (exclamation of "Amen"), overflowing with that which refreshes and invigorates, and an institution like this will live in proportion as it makes springs out of those who go forth from it, in proportion as it gives an impulse that will make life worth living. (Exclamation of "Amen.")

A man will not love his brother unless he loves God. I am not a preacher (Cries of "O, yes, you are!" followed by laughter). That was my first ambition, but I was only six years old when I abandoned it for the law. (Laughter.) I am not a preacher, but sometimes I feel tempted to preach (Cries of "Go on! Go ahead!"), and I cannot tell how long I shall be able to resist the temptation. But if I ever do preach, my text is already selected, and here it is: The language is stronger than I would use, for I am very conservative of statement; but I do not like to change the Bible; and this is what the Bible says, "If a man says he loves God and hates his brother, he is a liar." (Applause.) Now, that will be my text (Laughter), if I ever preach. And it will be a long sermon (Laughter) if I attempt to show how many there are. (Laughter.) It will be a long sermon, if I attempt to show in how many different ways a man can prove that he hates his brother. Therefore, before you can educate a man to love his brother, you must educate a man to love his God. And if this great university lives up to its possibilities, lives up to the ideas and ideals of those who brought it into existence, every man and every woman who goes out from its doors with a diploma will go with a fixed relation established between himself or herself and God (Exclamation of "Amen.")

Religion has been defined as "The relation that man fixes between himself and his God." And to make you understand how practical a thing religion is, the man who gave us that definition added that morality is the outward manifestation of that inward religion. In other words, religion is the basis of morals, and I know of no other foundation upon which morality can be built. I can understand how a man can borrow his morality, ready-made, from some one who built upon that foundation; I can understand how a man in a crowd may lean upon some one else when he cannot stand alone; but I know of no foundation for a moral code except religion. And when this University attempts to put the impulse of religion back of the scholars who go forth from it, it renders a service to all mankind.

We need not compare what scholars can do; some can do more than others; but there is no scholarship that the world has ever known which can, without a moral impulse and a spiritual vision, equal the work of the ignorant man whose heart has been touched by the love of God, and who has brought himself into sympathy with all humanity. (Applause.)

The boy who never entered a school but whose heart is aflame with brotherly love, will do more good than the man who leaves college with all the learning that a college can give, but who thinks that he has reached a point where there is no intellect greater than his own. (Laughter and cries of "That's so.")

The struggle today in the intellectual world is the struggle in the Garden of Eden—the struggle between Faith and Reason. Faith said, "Obey"; but Reason said, "Why should we obey?" "Why should we not follow our reason?" The struggle is just the same with every human being. It is between Reason and Faith, and the man who tries to walk by Reason will stumble. The man who goes no faster than he can see goes slowly. The man is not far-sighted who walks without faith. "The heart," said Pascal, "hath reasons that the mind cannot understand, because the heart is of an infinitely higher quality." And so faith is higher than reason. Faith is that quality of the heart that reaches out toward the throne of God, and takes hold upon the verities that the mind cannot grasp. Let the scholars who are without religion go forth, and do what they can; but the world moves through those who go out inspired by faith to do more than they can see. You cannot tell what can be done by calculation. I suppose people thought when Bishop Hurst talked about ten millions of dollars that it was a dream; but when we can give more than ten million for one battleship, is it dreaming to think that the time will come when you can give as much for such an institution of learning as this—an institution intended to uplift the world (Cries of "Hear! Hear!"), as for one battleship? (Applause.) Compare their influence. One man, educated in this university and

sent out with a passion for service, can do more for the peace of the world than any hundred battleships! (Applause.)

The nations that have rested for their hope upon their material strength have gone down. The path of history is strewn with the wrecks of nations that thought they were omnipotent.

Why did they go down? Because "the God who reigned over Babylon, is the God who is reigning yet." It is because God has so made this world that only moral forces are the permanent forces; and this institution is building for the future and without the danger of failure when it is striving to send people forth with a desire to put their shoulders under heavier loads and bear the burdens that are grievous to be borne.

What can this institution do? Estimate, if you can, the combined service of those who will feel its influence. Measure, if you can, that which will be accomplished by the faith that will be inspired here.

I have never heard a better illustration of faith than that given by a colored preacher. He said that faith was a willingness to do what God told him to do without asking any questions. To illustrate it, he said, "If God tells me to butt my head through a stone wall, I butt. That's my part. Going through the wall is the Lord's part!" (Laughter.) A homely illustration? Yes; but it is true. The great things of this world have been done by those who had the faith to attempt the seemingly impossible, and by attempting, proved what man could do.

I used to wonder how Sodom could have been saved by a few righteous men; I wonder no longer. There is not a community in this world that cannot be saved by a few righteous people (Cries of "Hear! Hear"), who have the faith to put God to the test. (Applause.) I remember hearing a great churchman from Canada, speaking in New York a little more than a year ago, quote some lines that you may have heard. They thrilled me when I heard them:

"I know of a land that is sunk in shame,

Of hearts that faint and tire;

But I know a Name, a Name, a Name

That can set that land on fire!"

The men and women who go forth from this university will not rely upon the brain alone; they will go forth with a faith which, like a consuming fire, nothing can withstand. (Applause.)

Faith does not ask what the results are to be to the individual. We were reading at family worship the other day the life of Joseph, and when we read how he was put into prison because he would not surrender his virtue, I wondered if anybody could find a better illustration of the fallibility of human reason than could be found there. If there ever was a time when a man might have felt justified in saying that it did not pay to do right, it was then; but it was through that prison that he reached a place by the side of Pharaoh, and was able to save a land from famine. (Cries of "Hear! Hear!") And so the Christian knows that the very trials through which he passes may be the steps by which he ascends to higher service. The Christian knows that it was the death of the martyrs that made the Church; and when he remembers that they could smile amid the flames because they had faith that they would accomplish more by their death than they had been able to accomplish by their lives—when the Christian remembers that, he does not ask whether he is to live for the truth or to die for it. He is as ready to die for it as to live for it, if that is to be his lot. In other words, if I understand the purpose of this institution, it is to make men indifferent as to what comes to them, but tremendously interested in contributing to the welfare of the world. (Applause.) Because that is the purpose of this institution, and because I believe that that is the way that an individual, a university, or a nation, can become great, I am glad to be with you today.

We had hoped to have the University Catalogue ready long before this, but unavoidable circumstances have delayed this first issue. It is expected, however, to be ready for distribution late this fall. Applicants will receive copies as soon as it is published.

No. 4

DR. DAY, CHANCELLOR OF SYRACUSE UNIVERSITY, DELIVERING THE FIRST CONVOCATION ADDRESS, MAY 26, 1915.

Address by Dr. James Roscoe Day, Chancellor of Syracuse University.

Ladies and Gentlemen: Now, my dear good friend Bishop Cranston has made things difficult for me. I did not consent to be a bishop, because I realized that I could never be a bishop like Bishop Cranston! And my vanity would not allow me to play a second part.

As to the gentleman referred to, I spent a very delightful evening with him just two or three weeks ago at a dinner at the home of my closest neighbor, who was his host, and I will testify to you that there is no more magnetic man on the continent of America than Theodore Roosevelt! And although I am as far away from his position on some questions as ever, I see no reason why men who differ may not like each other at the likeable points. I have had some difficulty in getting along with people for a while, until they progressed and came along to where I stood!

I think I never had any disagreement with Bishop Cranston or Bishop Wilson, at my left, nor with your Chancellor, except with regard to this hour. I did have a very decided disagreement with him about my coming here,—but perhaps you do not know, Mr. Chancellor, that I was offered the Chancellorship of the American University myself once! You remember Bishop McCabe—you never forget him—he constituted himself a board of trustees, and this board came to me and unanimously offered me the Chancellorship of the American University, at a salary very much in excess of what I have ever received, and of what I believe he could ever have raised! But the Lord in his wisdom provided a man much better adapted for this chancellorship than I would have been.

I cannot refrain from congratulating the University upon this hour. Something was said in Bishop Wilson's—the other Bishop Wilson's—prayer about "the day of small things." It seems to me that these are days of great things. I am told that forty-four years ago a brass band marching through the streets of Syracuse, the very center of the city, succeeded in picking up an audience of about a hundred and fifty persons, for the first commencement occasion of that institution, and there were forty-one students in all at those exercises. The years have passed, and now it is a little dangerous to use a brass band to gather people into an auditorium that seats three thousand people. We must not make the publicity too loud, or there will be too great a crowd! And the student body numbers, not forty-one, but four thousand! So you see the

beginning was about as small as this, if you date back a few years. And really, the American University is beginning about as large as any university has begun in this country, unless it was one immediately taken into the fostering care of some multi-millionaire. They have all been little and unknown; this has been little and known.

What to talk about! I have been told what to talk about by at least a half-dozen people, and if I were to obey five of them, I would be ruined! But these are days when it is exceedingly difficult to tell what to talk about on an occasion like this, because there is so much that ought not to be said, and there are some things that ought to be said very wisely, if they are said at all. So I think I will talk about you.

The American University suggests to me in its character and its scope and its work, that source of industry, that issue of morality and religion, and that essential unit of our land and country,—the American citizen; and it seems to me that it is a fitting time to say a few words about that American citizen, and his relation to the varied conditions and enterprises of this great land and country.

You know there is quite a prevalent thought, and strange as it may seem in a great republic, a growing thought, that our nation is founded upon navies and armies, and a great host of executives, ambassadors and consuls, and all of that, and that about the last man of them all is the plain simple citizen. But it is the citizen who is the fundamental element in the land; it is the citizen who is the primal unit. The capitalist with his great ability and vast resources is that citizen. The laboring man with his brawny arm and stout back is that citizen. The mechanic and the artisan, using the offerings of inventive genius at his task, is that citizen. The lawyer, the doctor, the minister or the teacher, is that citizen. It is upon that basis that we laid our foundations, and it is upon that unit that we predicate our future and hope for our achievement. With profoundest respect for offices which we have created, I nevertheless am forced to say to you that the executives of this land are only the servants of the citizens, to do their bidding and their will in the government, because the citizen is busy with his vocations—his agriculture, his mechanical arts, his various enterprises; and this citizen has found it necessary to guard his rights as a citizen, and that necessity was never greater than it is to-day, that he protect administration and legislation by what we call the constitution, because, since the world began, man has had a direct and rapid tendency to take charge of responsibilities that not only belong to him, but that belong to others also; and in a great land

like ours—without any person in mind, or any particular incident, but speaking upon general principles, you can see how easy it would be for a great political organization to reinforce men in executive positions, from the highest to the lowest, who will come to feel that they are governors and rulers of the people; and when that is conceded, we have not government *by* the people and *of* the people, but a government *over* the people; and it becomes paternal and meddlesome and disruptive. Therefore a duty is laid upon the American citizen to keep a sharp eye upon the form of government, that, on the one hand, it may not become too mechanical, or on the other, too socialistic, but that it may be fortified and protected and directed by that instrument which stands as the embodiment of the loftiest thinking in government, which the world has ever seen.

Now, this citizen has certain great privileges that are inalienable. They belong to him. They have always been disputed in every land and country; they have been subordinated by tyranny; they have been misused by feudalism; they have been subjected to party order and tyranny; and the citizen has been robbed of his high privilege. But in our land and country that is about the first thing that greets us, that welcomes a stranger upon our shores, as an inheritance which has been created by the men and women born on our shores. Our citizen has a privilege to the utmost that there is in him,—a privilege to make the most of himself. The Creator of us all has enforced upon him that he shall make the most of himself; that if he has one talent, it must be made two; and if he has five, they must become ten. He must make the most of himself; and no man or body of men has any right whatever to dispute his title to that privilege, itself an obligation as well as a privilege. And the more he makes of himself, the more education he has, the more property he acquires, the more influence he exerts among his fellows,—the greater asset he is in his land and country.

It is the indisputable privilege of every man, woman, and child of broad America to make the most of himself or herself in the fear of God. And he must adjust himself—that citizen—to all the new conditions that shall arise. And it is no small responsibility that is placed upon him to discover those new conditions, and seize them at their opportune moment. But he must be ready for any new arena, or any widened cycle, or any great endeavor. He must be at the front of his opportunities. Now, that has been disputed, and the man has often been suppressed, and if he shows a genius for development, and the conquest of great things, there have been those who have been disposed to enter into controversy with him upon those points. If he has become measurably successful in a community or a State, there is that in human nature characteristic of the common level to which you and I belong, which proceeds immediately to apologize for its own lack of success by accounting for the success of the transcendently successful upon some adverse and unworthy principle; and we lift ourselves into respectability and account for ourselves in the little that we do by antagonizing, upon what we claim are just principles, the man who is superlatively successful. You have seen that; that is a little bit of the philosophy of human nature.

Now, we have to adjust ourselves to our new conditions. The common level of our thought and activity must be upon heights so lofty that we can take in these widening ranges of human endeavor and consider them intelligently. There are people in the world that condemn a railway train,—because of a hot box! They say there should be no such thing as a hot box in any well regulated railway train, and they would knock off the wheel because of a hot box. Now in our great economy occasionally there is a hot box. We all understand that. And it has been something of a tendency with us to attack the hot box and to attack the train on account of the hot box. In our economy, commercially, industrially, in our large business enterprises, there are certain incidental features that are a little bit disturbing and perplexing, and we would have a right to say, in the common thought, possibly somewhat dangerous. We are not content to cool off the hot box and let the train go on its way, but we immediately begin to tear up the track and side track the train. I think possibly you might guess to what I am referring! Now the result is very disastrous, because the road is needed, and the train is needed. You know that in these days that have passed, this man, this citizen, that stood out before the civilized world in such gigantic proportions, with such tremendous endeavors, as the world had never seen at that time, was suppressed, and has been suppressed for these several years, because it was thought that there were certain dangerous tendencies in certain particular activities. That, however, was not true. That

was against logic and philosophy and sound sense, and resulted in great disaster to this citizen, in disaster to the working man, yes, more than to the rich man. A rich man can always take care of himself when his business is in trouble; a poor man has hard work when his dinner pail is empty. This attempt to regulate things by an arbitrary law proceeded at once to disturb the whole economy of our great men and country, but having once entered upon this kind of enterprise, it seemed impossible for those who assumed to have wisdom sufficient for these things to recover themselves, or to stay their hand, and the result was that your business man rolled up his money and put it in the banks safely, and withdrew it out of manufacture and out of commerce and out of trade. The outcome was something of a cyclone that struck the commercial world as it never had been stricken before. A black cyclone, rushing out of the West, is familiar to some of our eyes. With rancorous voice, the thunders roaring, with lightnings gleaming, tear down through peaceful communities, uprooting the toil of joyous and hopeful years, slaying and dismembering the toiler, and leaving desolation and wailing in their track. We launched a cyclone some years ago,—some of us thought we saw it coming; we now know we did—a cyclone of deputies and prosecutors and laws and commissions, and all sorts of lowering clouds and lightnings flashing, until the business of the country was hurled in every direction, in dismembered and scattered forms,—big business and little business, and all kinds of business; and we have been waiting some months now, waiting for a possible recovery, when the clouds shall drift past, and the sun come out. How long we shall wait is not quite known.

It is said that the terrific war is going to bring us relief. Don't you believe that. We shall pay our part of that debt. That war is yours and mine, and we must not expect to trade upon it successfully. We shall pay our part of the debt. Then what do we confront? We confront that with which we have ever contended. We are an American people. Have we reached that period in our history where now we are paralyzed? Shall we bewail the things of the past, or will we brave the cyclone? We are an American people, and we shall begin with great heroism and great courage, and there is intelligence enough and magnetism enough and strength enough, in this land of ours, to put our feet once more upon the high broad commercial summit.

You think that commercial life is the great life of the American people? I think it is a physical basis which is pretty comfortable! Somebody asked Henry Ward Beecher to account for his oratorical ability in moving audiences, and he said, "In the first place, I am a superb animal." And there is a great deal in that, a great deal. Sometimes it discounts a man because you expect more than there is of him, and a little fellow comes along and says some things, and you give him ten times more credit than belongs to him! But all commercial enterprise of this land is a physical basis, and it is a large basis. Over in the far East, the meanest caste is the commercial class, but in our land and country, commercial enterprise is something different from anything the dark parts of the world have known; it has to do with intelligence; it has to do with religion; it has to do with the highest family domesticity; it has to do with all the high forms of civilization; it is something that is interwoven and interlaced throughout the entire world, from the steppes of Russia to the plateaus of South America, from the mighty mechanical arts of the United States to the gold and diamond mines of Africa, from the enginery of enterprise in Great Britain to her unfading palms and endless resources on the plains of India. All over the world, commercialism is related to everything that has to do with the great development and progress of mankind, and is not a discredited thing; and you want to think of it in that light. It has to do with the whole world, and we belong to the whole world, and the whole world is looking to us as it never looked to us before, and if we measure up to our opportunity, we shall appreciate that fact. The world about us is surging upon us, and we belong to it all.

Now, there is one aspect of our great land that is exceedingly interesting to me, and it comes out of this thought: as no other people upon the face of the earth, we are a combination of all of the peoples of the earth. How many of us here can trace to the same progenitures on both sides of the family? Not very many. We are rather multiform; we strike into the German and into the Dutch and into the English, and so all along the line of great peoples, until these different conditions enter in to that character that we call the American, and that character is the strongest character in the world. Every great, heroic battle that ever was justified in war, every great form of literature, every form of art, by chisel

or brush, all of the mighty movements of human life, along all the currents of civilization, flow through our veins; and we incorporate them, and we impersonate them, and we represent them.

Some men have been saying recently that we have no distinct Americanism, that there is no such thing. They say, "He is an Englishman," or "He is an Irishman," or "He is a German." It may be that your citizen has come from one of those countries, but if you keep him here for three hundred and sixty-five days, he never will get back again to Ireland or England or Germany the same man that came out of that country. He will wear the American stamp, and he cannot shake it off. Pat came down the gang plank of the steamship, with a little stub clay pipe in his mouth, and a little bundle done up in a bandana handkerchief, and they said to him, as he came on the wharf, "Pat, what do you think about this country?" "Begorra, I don't know, but I'm ag'in the Government!" And he may land here "agin the Government," but you see the second generation, you see the boys and the girls that are born in his home, and go into your American schools, and your high schools, and your colleges, and go out into this great American life, and you would not recognize Pat and his bundle and his sons and daughters are not "agin the Government!"

It makes a vast difference. It may be that they are born in other countries, and it may be that some of them are foolish enough to tie themselves to the other country by a hyphen! It is possible! Well, we will not be much disturbed by that, though we hope they will get over that foolishness soon. One thing we do feel, that there should be in no procession through any city street or country road on our national holiday any flag floating but the Star Spangled Banner! We want the naturalized citizen of America to be so naturalized that he will be gladly naturalized out of what he was, *because of what he is to be*, and we believe that that is characteristic of the large host of our citizens who are said to be allied to us. They are more than allied to us; they sing our patriotic songs; they hear our patriotic orations; they mingle their children in our schools; they throng the aisles of our churches; and wherever they were born, we have an American people, and if anybody doubts that matter, it could be put to the test!

I have been a little disturbed to hear some talk about what would happen among certain of our citizens if we get into controversy with some nation across the water. There would not be any other citizens but American citizens!

So I say we stand related to the whole wide world in our commercialism. But then commercialism is not all. It is only a physical basis. We ascend from a basis as a mountain ascends from a base. And so with all that there is in commerce,—and there is much, very much; so much that the American citizen ought to be left to carry on that commerce himself. And the United States ought not to meddle, but to reinforce that citizen in his commerce.

There are some things that a citizen cannot do, like coining his money; he cannot do private post-office business, he cannot manage the revenue of his land and country. But in anything that he can do he ought to be left to do that thing which he can do. It is essential to that citizen; it is essential to our government. The less officialism and the more citizenship, the better for this broad land of ours! He should run his railroad. Put a railroad into officialism that does not know a locomotive headlight from a tail lamp! Put a train crew into officialism! Put the capitalization of a great railway into officialism! Why, the many forms of business that I might mention in addition to this great form of transportation have been created by men who have disciplined themselves by long years of arduous application to business forms, and these men are the best men to govern the business which they have created.

I would like to see our government very generous with the railways! I would not like to see much more of this haggling about space or weight in carrying mails. I would like to see the Government make it possible for railways to carry mail with fair profits. I myself am somewhat devoted to the idea of a railway. If it had not been for a railway, I would have come down to this occasion about next Wednesday! A railway increases the value of the land out yonder on both sides of its track for twenty-five or thirty or forty miles, and that cranky old brother up there among the hills that talks about how the train killed his cow, can get five times as much for his farm as he could before a railway went by that way; and for his cow, too! In fact, now he would keep a blooded cow! She would have too much sense to get on a railway track! So with all of these farmers getting iron out of the

mountains, getting harvests off the valleys, getting oil out of this great Pennsylvania over here, getting coal out of the veins where the Lord hath hidden it,—in all these things it is the man that is needed, and a great many men, men with large capital, men with many working men as their associates, in this vast business, until the great wheels begin to move again, and the great currents flow out, and the working man has once more filled his dinner pail, and Margaret and the children are happy because he is at work once more. That is what I want to see.

I would like to see a subsidy of the American marine. I do not like this idea of our people being driven over to the Clyde and Belfast (as soon as the submarines are gone!) to build their ships. I want them to build their ships on this side of the sea, as great as "The Vaterland," as great as any ship that ever floated, and I want to see them sailing those ships under the American flag. I traveled around the world a little while ago,—at the expense of my trustees. I have to say that, or you would think I was one of those bloated bondholders! What was my humiliation; what was my joy! I left New York harbor under St. George's cross. Glad I was for that! I sailed under St. George's cross after sea and ship after ship, and it was only when I sailed into the harbor of Hong Kong that I saw my native land in her flag at the mast-head of a merchant steamship. I had seen all other flags,—Norwegian, Italian, English, French, German; I had sailed one sea under the German flag, and one sea under the Dutch flag; but nowhere had I seen Old Glory until that day I sailed into the harbor of Hong Kong. I was glad, but I was humiliated. I sailed under that flag up to Shanghai, and then the Japanese flag took me, but thank the Lord, I got it again at Yokohama and sailed through the Golden Gate under the Stars and Stripes. I want the privilege of sailing around the world again,—at the expense of my trustees! And I want to sail under the Stars and Stripes. And I want this great American Government to wake up to the thought that it has a mission to its merchant marine. We have developed our prairies by the sowing of our grains and the reaping of our harvests; we have put railways in every direction through the continent; we have built our cities and our towns and have populated vast regions; and have been so absorbed by this interior development that we have forgotten the vast seas. Now, it is time to turn our attention outward to the shore line,—and if certain people do not behave themselves, we know where we will get our ships! But I think they are going to behave themselves. The President is getting after them. Sometimes I get a little hot blooded when I think of women and children, and I think of devils and fiends, and all that sort of thing; and then I say, "Oh, but you're a good Methodist; stop that!" I think it will come out all right, but I want to see every mighty endeavor of this great country moving out along the lines of the most intelligent and progressive and mighty citizenship.

And I do not want that we shall wait for men to tell us what our privileges and our opportunities are. I do not want a Congressman to find it possible to stay in Congress over one term,—and I wish it were half a term,—who will truckle and compromise with any body of men or any sentiment that in any way compromises this country! I want the notice served upon every man that makes our laws in legislature or Congress that it is not important for him to be here, but it is mighty important for him, while he is here, to be a man, and to be a patriot, and to remember first his great land and country; that is your business and duty! And if that sentiment were extended, and not mixed up so much in party politics, I think it would not be long before there would be some great reformers among our representatives in both Congress and in the States. Now, that is not a criticism of anybody, is it? Nevertheless, it is what I believe, and I think it is what you believe.

Now, there are certain elements, that if I had time, I would discuss a little. I think, for instance, that this land of ours has come to a time when there is a tremendous demand for morals and religion. Old fashioned morals and religion. Ten Commandments and a holy Sabbath! Puritanism? Yes, Puritanism. I was raised in a Puritan home. Oh, my, what a home! I used to hear dear old Dr. Upham—Bishop Hamilton, you have heard him—say, "I would to God it might rain Puritanism on this land of ours forty days and forty nights!" And to that I say "Amen!"

Congress cannot make righteousness. Now that is nothing against Congress. That is not the business of Congress. It cannot make righteousness. It cannot make dishonest business honest business. It cannot make ignorance intelligence. That is not its business. It has lots to do of itself,—lots of

righteousness to do of itself. I do not know how much I endorse Billy Sunday, but I would give more for four days of Billy Sunday in righteousness-making than I would for four years of an American Congress! Righteousness is something that must take hold of consciences and hearts, and bring about the consecration of the soul to the laws of Almighty God, and self-surrender to the things that are high and holy and unselfish and pure and true and good; and that responsibility is on the citizen, is on you and me, and all the groups of citizens up and down in this land.

Then I think that there is a certain attitude to our home franchise that we owe; and I think that this righteousness has to do with the common places,—you know, just the common places. It is not under a spire and a chime; it is in the kitchen and the parlor. It is everywhere. It is in the store and in the shop. It is not singing about "Jerusalem, the Golden." If it were, it would shut me out; I cannot sing! It is not hanging the hinges of the gates of the New Jerusalem. It is not that thing. But it is bringing the Tabernacle of God among men, and setting up "Jerusalem, the Golden" along the avenues and streets of Washington, and every city and hamlet of our country. It is being honest in business; it is being pure in conversation; it is revering the marriage bond, and not kicking it about as a plaything. It is living true and straight in every obligation. It is spending the taxes of the people so they get it back in parks, and get it back in sanitation, and get it back in schools, and get it back in paved and swept streets. It is returning to the people the money which they pay into the tax gatherer; it is in all the things that pertain to health and happiness in the domestic life, and in the civil progress. That is our home franchise. There is a view of frugality about it, and frugality that needs to be emphasized in this country as it never was emphasized before. I am just plunging right along without much regard to any outline, or anything else, because I am afraid it is going to thunder and rain, and you will leave me, but it will have to hurry if it gets here before I get through. Frugality; now that is something that we as a people are not always keeping in mind as we should. The poor try to emulate the rich, to have what the rich have, to live as the rich do, to ride in the automobiles that the rich ride in,—even if they ride into the ditch; to follow all these lines of extravagance. That insatiate mind goes on from one form of pleasure to another pleasure. That has been the case all the way up and down the land, and it is here to-day, with some people who cannot afford it, and I think I am one of them!

Now, there is an emphasis that we will do well, as American citizens, to heed with great earnestness. We say that the rich are to blame. Well, sometimes they are. There are a few fools among the rich, but the rich as a class are pretty good people. I have lots of friends among them. I am making them poor as fast as I can! But they are nice people. They have a hard time to manage their riches!

Now we get a few results, and if these people who are disturbed by the rich extravagances would only just stop for a minute and think how the order of things is not to be charged up to a false economy; but it has been so from the beginning, and ever will be so, it would make a vast difference with the peace and contentment of our country. There would be less riot and fewer strikes and less disorder, from which one would come to a feeling of contentment with what he is and what he has.

Now, let me say to you,—for I must sum it up, and sum it up in a hurry,—that we stand facing our tremendous responsibilities. They are laid upon us, and we have our opportunities, and it will be chargeable to us if we do not discharge them in the fear of God, most reverently. It is not a time for riotous living, or for careless indulgence, but it is a time for great sobriety and faithfulness.

I do not know,—possibly I am mistaken,—but looking back into the days of my boyhood, as I looked a few hours ago with one of your best known citizens, it does seem to me now that the people were very thoughtful then. They were thinking great questions; they were reading sober books. The largest proportion of the books were the books of the Bible and the dictionary. They were intelligent at the franchise. The women were qualified to vote if they did not have the privilege. The boys and the girls were taught that life is a sober thing; sometimes perhaps a little too sober. But that period created great men, and when the Congress wanted them, they were waiting, and when the great war wanted them, they marched out of every State of this great northern zone, and went down to preserve the Union, because they were men of gigantic convictions and gigantic thinking. They were as great in the South as they were in the North,—great East

and West. Statesmen and soldiers, scholars and merchants, teachers and ministers, lawyers and doctors. That great host of a generation ago was a thinking generation, and I think the secret of it all was because of the forms of education which addressed themselves to those people. The public school was a college in those days, the public school on the hill and in the valley, and all along the country ways; and in those schools there were declamations, there were lyceums, there were forensics, that were worthy of young men and young women; and the academy was there with its brick walls and its white French dome; and the old academy took in some of the brighter and more enterprising boys and girls; and the seminary was not a great way off, and they went there to this denomination or that denomination; and there were colleges beginning to spring up all along through the States; and the people began to send their sons and daughters out into the colleges, and that was the hope of the beginning of this tremendous people.

Now, what we have to do as an American citizenship is to build on the same basis,—the church, the school, the college, the university; and our land and country should be exceedingly generous with the university. It should not build a State university in one State and in another State,—one college in each State,—and think that that is the full duty done, when those institutions are put into rivalry and competition with older institutions, doing equally worthy work, and leave those older universities to struggle on with debt and with difficulty, simply because they are religious; but it should give its sympathy and it should give its aid to every form of secular education that can be approved by the general Bureau of Education of our country and the departments of education in our States, until the whole land is feeling the power of the universal pulse of this land, financial, as well as intellectual, through the entire bounds of education, in so far as they touch the national life and the secular interests of the people, in preparing citizenship and scholarship for subordinate teaching through the whole realm. The country should foster these forms of education—this institution and all the institutions of like character throughout our land.

If I were going to moralize a minute, I would say this, in danger of touching perhaps neutrality: Sometimes an assertion of force is the shortest road to peace! I am a very pious and peaceable man, but the Lord help the fellow that will strike a woman in my presence! I think you get the thought! Our people should be defended by our flag, wherever they walk or sail, in all God's earth, if their pursuits are lawful. And the President of the United States had done nothing so praiseworthy since he came to yonder White House as he did when he demanded that their rights be respected. If our flag is not an assurance and guaranty of protection to every man and woman, whether on land or sea, then it is only a colored fabric that floats idly and mockingly in the sky! Our flag is something more than a patent of trade. Our flag has in its folds the blood of heroes, and the blood of heroes must appeal to even the peaceful citizenship of this age, and we must understand that peaceful as we will be, and for peace as we will pray, nevertheless that flag symbolizes all the protection which our men and women, brothers and sisters, have a right to levy upon us in their helplessness and in their distress.

First Convocation Day.

The address by Dr. James Roscoe Day, Chancellor of Syracuse University, at the first Convocation of the American University at Washington, D. C., on Wednesday, May 26, 1915, rendered the occasion truly memorable. Many well-known people from a distance attended the exercises which were presided over by Franklin Hamilton, Chancellor of the university. The formal exercises of the day had been preceded by a meeting of the board of trustees of the university at which there was a large attendance. Matters of moment transpired among which was the election of Mrs. Sarah B. Cochran of Dawson, Pa., as a member of the board, and the appointment of Samuel J. McWatters as Counseling Professor of the Interpretation of Sacred Literature. At the trustees' luncheon Mrs. Earl Crans-ton was hostess. The announcement was made of many new gifts to the university of great interest.

The convocation exercises were held in the new permanent open-air amphitheater which has just been erected in a charming dell on the university grounds, shaded by a delightful grove of giant tulip poplars. The new structure which is modeled after the ancient Greek theater was the gift of Mr. William T. Galliber, president of one of the leading banks of the national capital. Here before the great assembly which had gathered Chancellor Day made an address that profoundly impressed all who heard it. The speaker whose topic was "The American Citizen," began by reprehending the policy of regulating the commercial enterprises of the country "by arbitrary laws," and declared that this system brought the country several months ago to a business depression which could not be passed without constructive legislation by the States and by the Federal government.

The speaker said that the attacks upon "big business" were directly responsible for the depression, because they caused financiers to refuse to invest their money in enterprises that had hitherto been considered sound. "The cyclone of laws and commissions," he

from the College of History Building to the open-air theater. Those who participated in the assembly were attired in academic costumes. There was a goodly number of representatives from other schools of learning. Chief Marshal Dr. James Shera Montgomery, with aides from the clergymen of all denominations in the city, followed by a military band, led the way to the theater.

The invocation was by Dr. William R. Wedderspoon and the convocation prayer by Bishop Alphaeus W. Wilson, senior bishop of the Methodist Episcopal Church, South. Bishop Earl Cranston, senior bishop of the Methodist Episcopal Church, introduced Chancellor Day.

The work and growth of the University were discussed by Bishop John W. Hamilton, of Boston, Mass., and Dr. Frank Wilbur Collier, director of research at the university. A statement was made by Mrs. Thomas H. Anderson, president of the Woman's Guild of the American University, on the work of the guild. The purpose of this new and enthusiastic organization of women, which is to be nation-wide, is to add to the gen-

PROPOSED COLLEGE OF COMPARATIVE RELIGION

said, "scattered big business and little business alike. We have been waiting many months for the sun to break through the clouds. How long we shall be compelled to wait is unknown. It is said that this terrific war will bring relief, but I am certain that we shall pay our share of the debt of the war. This war is your war and my war."

The world will look to America for trade after the war as never before, Chancellor Day predicted. The speaker praised President Wilson's note to Germany following the sinking of the Lusitania, and predicted that Americans of every class would support him in case of war. He said that American character is the strongest in the world, and he emphasized the fact that all classes would unite in times of stress. Chancellor Day then made a plea for the return of "Puritanism" in the American homes, and declared: "I do not know how much I endorse Billy Sunday, but I would give more for four days of Billy Sunday's righteous making than four months of righteous making by the Congress of the United States."

The convocation exercises opened with a procession

eral endowment of the university, to build a College of Comparative Religion and increase the endowment for this College, which already is \$100,000, and to complete the McKinley College of Government.

Much interest was manifest in the assignment of fellowships which was announced at the close of the exercises by Chancellor Hamilton. Owing to the disturbed conditions across the sea, no foreign fellowships as such were assigned. The money granted, if desired for this purpose, however, could be so used. Five candidates were created Fellows of the American University. The appointments were:

Merrill Jacob Holmes, A. B., Simpson College, B. D., Garrett Biblical Institute. Nominated by Garrett Biblical Institute. Is to study the philosophy of religion at Harvard University.

Hasse Octavius Enwall, A. B., Northwestern University, S. T. B., Boston University School of Theology. Nominated by Boston University. Is to study philosophy at the University of Paris.

Marie Louise Townsend Morse, A. B., Vassar College. Nominated by Goucher College. Is to study physics at the Johns Hopkins University.

John Wesley Edward Bowen, Jr., A. B., Wesleyan University, M. A., Harvard University. Nominated by Harvard University. Is to study American history at Harvard University.

Frank Blair Hanson, A. B., George Washington University, A. M., University of Illinois. Nominated by George Washington University and the University of Illinois. Is to study Zoology at the University of Illinois.

The Board which made the awards, consists of Secretary Bryan, Secretary Daniels, P. P. Claxton, United States Commissioner of Education; Dr. Alfred Charles True, dean of the graduate agricultural schools of the United States government; Professor Thomas N. Carver, of Harvard University; Dr. John W. Hancher, a secretary of the board of education of the Methodist Episcopal Church, and Dr. William Andrew Wood, a New England clergyman.

Dr. Whitford L. McDowell, district superintendent of Washington District, Baltimore Annual Conference, dismissed the assembly with the Apostolic benediction.

Address of Mrs. Thomas H. Anderson, President of the Woman's Guild of the American University.

I appear before you to-day reluctantly so far as I am personally concerned, but gladly for the cause I represent.

The Woman's Guild of the American University has had a vision of marble buildings dotting this spacious campus of more than ninety acres and hundreds of students thronging their halls. The work we have inaugurated to make possible this vision is nation-wide and our goal a dollar for every member of Methodism. The plan we have adopted for securing this is so simple in conception, the sum asked from each individual so small, and the object to be attained so vast and far-reaching, that it almost transcends comprehension, but we believe, with your personal assistance and co-operation, it will be speedily realized.

This means interested co-operation on the part of our bishops, our district superintendents and our ministers everywhere, and judging from the unanimous endorsement and support of our resident bishop, Bishop Cranston, our district superintendent, Dr. McDowell, and the ministers of Washington, I believe we shall have it in full measure.

Since the organization of our Guild such elect women as Mrs. S. M. Hartsock, our first president, Mrs. J. Ellen Foster, Mrs. Charles W. Fairbanks, Mrs. C. C. McCabe, and Mrs. Miranda B. Tulloch, honored vice-presidents, have passed to their reward. In the work of the Guild, we cannot but feel the presence of these noble Christian women and are inspired to our best and most determined efforts to win success. There remain with us such women as Mrs. John A. Logan, of dynamic force and a potential factor in all good works, Mrs. Benjamin F. Leighton, Mrs. Aldis B. Browne, Mrs. Andrew B. Duvall, Mrs. T. DeWitt Talmage, Miss Elisabeth F. Pierce, and Mrs. Jonathan P. Dooliver, whose husband (the late Senator Dooliver) met with us here and thrilled us with his eloquence only a few short years ago. Mrs. Earl Cranston, Mrs. W. F. McDowell, Mrs. Anthony Wayne Cook, and others, are coming in to fill the places of those who have passed to the beyond.

We have as our object the general endowment of the University, and the specific work of erecting and endowing the Woman's Guild College of Comparative Religion, which is one of the greatest Home and Foreign Missionary projects ever contemplated, the building to conform in material and general architecture to the present splendid and imposing buildings, and is already endowed in the sum of \$100,000, and the completion of the McKinley College of Government, honored with the name of that loyal Methodist and devout Christian gentleman, our martyred President William McKinley.

This woman's movement, that has been enthusiastically endorsed from the beginning by the university fathers, is a mighty impetus toward the completion of the American University, that has been in course of building for the past twenty years, and which will stand as a monument to Methodism and Protestantism, as the great Catholic University does to Catholicism at our National Capital. A fairer, more commanding site does not exist here, and would be difficult to surpass anywhere, and as Bishop Hurst and his associates se-

lected a location thus wisely it remains for us, their successors, to build wisely.

The time is ripe for such concerted action on the part of Methodism, when the universities of the old world, because of the conflict raging there, are closed to the hundreds of our students, who, if they could secure the same advantages, would and should remain at home.

The work of the university, as you know, will be wholly post-graduate, and will, therefore, not conflict with the interests of any of our other institutions.

The practical work of our Guild was inaugurated on Sunday, May 2d, in Metropolitan Church, the National Church of Methodism, being presented by the pastor, Rev. Dr. Montgomery, and supplemented by our personal efforts, in three weeks, almost the full amount of one dollar for every member has been secured, and the lauded and saintly Miss Lewie M. Foss, whom we all admired for her beautiful Christian character, was made the first memorial member by the payment of \$100 by her sister, Mrs. Benjamin F. Leighton, wife of the president of the Board of Trustees of this university. The other churches of Washington are inaugurating a like campaign, and we are now appealing to the churches throughout the United States to co-operate in this truly Christian educational work.

Every cent of every dollar will be used for the purpose contributed, and we will not decline a dollar from any of our friends, but the Treasurer, Mrs. William M. Hannay, of 207 J Street, N. W., daughter of the late Matthew G. Emery, an honored trustee of this university, will welcome your contribution and preserve your name.

This campaign will bring the university to the attention of not only Methodists, but friends of Christian education everywhere, and this mecca they will proudly seek when visiting Washington. In the years to come, who knows but our children and our children's children will rise and call us blessed for the part we have taken in contributing a dollar toward the realization of this vision?

The first money that was handed me for this work was two dollars from a Presbyterian Congressman and his wife, and just before leaving home this morning, a phone message came from a Presbyterian clergyman saying: "Tell Mrs. Anderson I would like to contribute a dollar toward the work of the Guild," and with his Scotch humor added, "I think one good Presbyterian dollar ought to count as much as ten Methodist dollars," and I am not so sure but that it does. At all events we accept it as an encouraging omen.

"Build thee more stately mansions, O my soul,
As the swift seasons roll,
Leave thy low vaulted past!
Let each new temple, nobler than the last,
Shut thee from heaven with a dome more vast,
Till thou at length art free,
Leaving thine outgrown shell by life's unresting sea."

Progress of Our Working Plan.

By DOCTOR FRANK W. COLLIER, DIRECTOR OF RESEARCH.

On May 1, 1914, I began my duties as Director of Research of the American University. I visited the departments, bureaus, and institutions of the National Government, and other facilities for study and research not under the control of the Government. In all they number about fifty. I found that the year which I had spent in Washington in this very work facilitated my task. I was received courteously. A few heads of departments at first seemed a little lukewarm. Others heard our proposition with enthusiastic interest. The majority heartily offered to co-operate with us to the extent of their ability.

Having learned what were the opportunities offered by these government bureaus and institutions, my next work was to assist in compiling the catalogue. One cause of the delay in issuing the catalogue was the baffling difficulty of segregating clearly the material describing these bureaus. To arrange the material scientifically was a very difficult and delicate task, since this has never yet been done in any handbook issued to the public.

The Library of Congress has been used by us more extensively than any institution of the government service. Dr. Putnam, the librarian, Mr. Bishop, superintendent of the reading room, and Mr. Slade, the chief of the periodical division, have given their services unstintedly.

In the Department of Agriculture we have three very able students who are doing work of the very highest order. They

are under the direction of Dr. Oswald Schreiner and Dr. B. M. Duggar, two of our own counseling professors.

We have one student in the Bureau of Education where he has the advantage of the guidance of Commissioner Claxton himself. Next year we are to have at least two more students in this same bureau.

Tuesday, October 6, 1915, the first actual class-room work was begun in the College of History building. There I met some earnest students, and we began our classes in philosophy. The work was difficult in its very nature, being courses in Theory of Thought, Theory of Knowledge, Metaphysics, and Theism. The students, however, have profited so much that they have become our missionaries, and I am told that these classes in philosophy will be larger next year.

We have had twenty-eight students enrolled. To these must be added the five fellows whom the Board of Award are to ask you to confirm, thus making a sum total of all students actually enrolled for the year of thirty-three. The actual number of applicants for fellowships has been twenty. But if our catalogue could have been issued earlier, and the proper announcements made, we certainly would have had over one hundred applications. And had we the money to finance this plan, there is no limit to the scope to which it can be expanded.

In addition to my overseeing the research work in the government departments, and my classes in philosophy, I have tried to do some university extension work. This took the form of a teachers' training class which met each Wednesday night during the winter at the Foundry Church.

We have not had as many courses of lectures as we expected. Nevertheless we did something. The course on the English Bible by Dr. I. J. Peritz was both interesting and instructive, and it is to be continued next year by Dr. Peritz. Next year we are planning to give additional courses by several leading men, among them Dr. John R. Mott, Justice Thomas H. Anderson, Dr. Wm. A. Wood, and others with whom we are making preliminary arrangements.

The work of the year prompts me to make the following recommendations:

1. A School of Comparative Religion. This is our first need. It would supplement the work in philosophy, and increase the number of students in class-room work. The first school of comparative religion in America was proposed by the American University, and it should be realized by the American University.

2. A School of American History. Dr. J. F. Jameson, of the Carnegie Institution, tells me there ought to be at Washington a School of American History similar to the American Classical Schools at Athens and at Rome. No man can properly cover the field of American history without spending some time in Washington.

3. Another open door of great usefulness would be the founding of a School of Diplomacy, appropriately located at the National Capital.

4. In time it might be wise to organize a graduate School of Agriculture.

Rev. S. Townsend Weaver, Our New Financial Secretary.

The Rev. S. Townsend Weaver, for fifteen years a member of the Des Moines, Dakota, and Upper Iowa Conferences, has been appointed Financial Secretary of the American University. Mr. Weaver has studied at Temple University and the University of Pennsylvania in Philadelphia and at other schools. For several years he has been engaged in literary work and has published "The University New Testament" (1909), "The Biblical Life of Christ" (1911), and "The New Testament in Its Inspired Literary Form" (1915), all books of acknowledged worth. In 1912, 1913 and 1914 Mr. Weaver was the pastor of the Grace Methodist Episcopal Church, Washington D. C.

Mr. Weaver has a high reputation as a platform speaker, and has filled many Lyceum and Chautauqua engagements to the delight and profit of large audiences. His entrance upon the work of the American University will give new scope for his talents and large field for his efficiency. He begins his services at once.

REV. S. TOWNSEND WEAVER

Seal of the American University.

On December 7, 1892, at the regular meeting of the trustees, "on motion of A. B. Browne, the Executive Committee was authorized to procure a seal for the corporation."

The Executive Committee through a sub-committee, of which Mr. Andrew B. Duvall was chairman, on December 3, 1893, reported a form of seal which on motion was adopted as the seal of the Trustees of the American University, and which is described as follows:

"In perspective a representation of the Capitol Building at Washington, D. C., as seen from the southeast; in chief the legend 'Pro Deo et Patria'; in base, the figures '1891.' The whole surrounded by a circular band milled upon its outer edge and inscribed with the words, in chief, 'The American University,' and in base, 'Washington, D. C.,' in manner and in form substantially as more plainly appeareth, depicted and stamped in the margin."

Our New Open-Air Amphitheater.

On the first page of this issue of the *Courier* will be seen a glimpse of the new open-air amphitheatre, on the site of the American University. This sylvan setting for the first Convocation Day exercises was used for the first time on Wednesday, May 26, 1915, when Chancellor Day of Syracuse University delivered the Convocation Oration. The picture gives a good idea of the spacious platform, one hundred feet long and twenty feet broad, seating one hundred people. The faces shown are those of Bishop John W. Hamilton (at the left), Chancellor Franklin Hamilton, Bishop Earl Cranston, Bishop Luther B. Wilson, Chancellor James R. Day, Mr. Holmes, the stenographer, Mrs. J. Frank Robinson, Mrs. John F. Keator, and Dr. Charles W. Baldwin.

The great trunks and some of the beautiful foliage of the native tulip trees that surround and shade the place are well reproduced. Around one of the largest of these trees the platform has been built, and the lower branches extending above the speaker form a natural sounding board, while the branches from others of the group reach out their friendly aid in completing the excellent acoustics of the amphitheatre.

Semi-circular rows of seats constructed of chestnut and cypress firmly anchored in the ground confront the platform, and rise tier upon tier on the sloping hillside. Here an audience of twelve hundred may be comfortably seated, and all enjoy a clear view and distinct hearing of the speaker. In the rear of these permanent seats the space is ample for extra chairs, and standing room for thousands more within easy hearing of the platform.

The location of the amphitheatre is about two hundred paces west of the College of History, where the level of the main campus declines gently at first and then dips at an angle just suited to the purposes of an out-door assembly. A little to the south and west of the platform a generous and unfailing spring of cool water issues from the ground and sends its perennial stream down the shady run toward the west. The diversified topography beyond the amphitheatre with its variegated growths of shrubs, vines and trees adds charm to the scene. This gift of God through nature is a peculiar asset to the University. On the sunniest of summer days here a multitude may sit and feast in comfort on music and eloquence.

Sherman and Garfield Chairs for the American University.

The headquarters chair of General William T. Sherman, used by the great soldier from 1869 to 1880 while commander-in-chief of the United States army, and the armchair used by President Garfield during his too brief term at the White House, have been added to the historic furniture collection of the American University. The donor is Mr. John La Monte Hurst, of Denver, Colorado, son of the late Bishop Hurst. Mr. Hurst,

who maintains unabated his father's interest in the educational enterprise at the capital, has furnished with his gift original official documents authenticating the chairs. The antique gatherings of the American University, already impressive, are enriched by this new accession in a singularly happy way, for the chairs will be joined to the sofa of Abraham Lincoln, the armchair of President Grant, the dining table and chairs of Senator Charles Sumner, the Civil War desk of Secretary Stanton, the manuscript cabinet of Bancroft the historian, the ancient rush seat of a Plymouth plantation elder, the oak throne carved from the beams of Wesley's City Road Chapel, the standing work desk and file-case of Bishop Hurst, which formerly was that of the encyclopaedist McClintock, and the cavernous work-desk of Chaplain McCabe, from which went out the thrilling call "A Million for Missions." Other pieces of furniture similarly associated with creative men and women have been promised for the university collection which soon will be a feature of Washington.

OPEN-AIR AMPHITHEATRE, THE AMERICAN UNIVERSITY, CONVOCATION DAY, MAY 26, 1915
FROM SOUTHEAST CORNER OF PLATFORM, MIDDLE SECTION

BUILDING A GREAT SCHOOL.

[Reprint from Boston Transcript.]

Good Progress on the American University.

WASHINGTON, May 14.

The eyes of American Protestantism will turn to Washington on Wednesday, May 26, when the first Convocation Day of the American University will be held here on the grounds of that institution overlooking the valley of the Potomac. This interesting ceremony was opened last year by President Woodrow Wilson, a former president of Princeton University. The convocation orator this year will be Dr. James Roscoe Day, chancellor of Syracuse University, whose outspoken criticisms in opposition to governmental interference with American commerce and industry have added to his reputation as a great educator. It is to be presumed that, speaking in one of the most critical moments of our national life, Dr. Day again will give voice to ideas that may command country-wide attention.

This gathering will be noteworthy in many ways, for, although the American University is being developed under the auspices of the Methodist Episcopal Church, it is not a theological institution but rather represents the endeavor of all Protestant denominations to establish a notable experiment in higher education like nothing else that has been planned or tried upon American soil. The university is unique not only in spirit and purpose but in its material settlement, for authorities have agreed that perhaps nowhere else in the United States could be found a site in itself so nearly ideal for the needs of a great university; while its location at the seat of the National Government, with which its relations are so close, must give it an eminence unrivalled among the educational institutions of the country.

In a Natural Amphitheatre.

This correspondence already has referred to the national beauties of the great tract of land which with wondrous foresight the projectors of the American University acquired and

paid for many years ago. Complete plans for the development of the nearly one hundred acres owned by the university drawn by Frederick Law Olmsted are in existence, and the time inevitably will come when the group of buildings erected among the hills and vales of the Potomac will attract the admiration of visitors from all lands. A natural amphitheater only a short distance from the College of History will be used for the coming convocation and all other subsequent gatherings which may take place out of doors. Upon a sloping hillside stout benches of the almost everlasting cypress wood are being constructed to seat 1,200 persons. Surrounding this open-air auditorium and almost completely shielding it from the rays of the summer sun is a circle of huge tulip trees. The amphitheater is of such sweep and the ground of such contour that the seats may be expanded indefinitely. Upon the surrounding acres a screen of picturesque bushes has been permitted to grow until the whole audience would find itself protected from the rays of the western sun upon the hottest day. A trickling brook which makes through the whole property toward the Potomac takes its rise in a spring of sweet water just below the amphitheater. A little distance to the north, upon one of the countless knolls, stands a grove of primeval oak trees said to be more than two hundred years old. Across to the southwest rise the trees of Sycamore Hill, each planted by a bishop of the Church and in time to set off the beauties of the projected administration building.

Not a Thing of Stone and Faculties.

But the American University is not a thing of stone and faculties. Its finished College of History, its uncompleted McKinley College of Government building, the only important structures within the ground, impress the observer as only the almost hopeless start of an ambitious dream of the future. The impression does injustice, for the American University is a thing of spirit and purpose rather than of buildings and teaching staff, and this purpose already is achieved in large degree. The popular misconception of the status of the American University no doubt is widespread and has been encouraged by the seeming lack of equipment suggested by

here although beautiful grounds and partly untenanted buildings. It is only simple justice on this eve of Convocation Day, to state something of the purposes and achievements of the institution.

The Keynote of the Work.

In his striking address at the Convocation Day exercises a year ago, Bishop William Fraser McDowell outlined as follows the four "unique, distinct lines" upon which the American University was inaugurated:

1. The opening of the rich and varied materials of education and research, afforded by the Government, to the students of the world, under competent direction and guidance.
2. By a carefully devised system of scholarships and fellowships, the opening of the graduate instruction of the world to our select young men and women.
3. The creation of a body of scholars, gathered from everywhere, sent everywhere, united here as fellows, recognized and pledged to humanity's service and the larger uses of the largest learning.
4. The creation of lectureships for Washington and elsewhere and the making of a literature which shall in ample and steady stream refresh the life of the republic and the world.

Embraces All Protestantism.

It should be emphasized that the work of the university is not denominational. It embraces all Protestantism. Bishop Harding of the Episcopal Church and head of the Cathedral Foundation is as much interested in the success of the American University as Dr. Franklin Hamilton, its chancellor. All denominations, even to the (Dutch) Reformed Church by Theodore Roosevelt, are represented upon its board of trustees. The university stands for education under the auspices of Protestantism, but not along the lines of any sect thereof. In time it will make a study of comparative religion, as part of its curriculum, but not for the purpose of advancing any one religion. Neither does the university seek to compete with any of the other excellent colleges and universities of the land. It will operate in a field peculiarly its own and distinct from that of any other educational institution.

Study in Government Offices.

Under acts of Congress passed in 1892 and 1901, one of them drawn and sponsored by William McKinley, all the learning stored in twelve of the most advanced departments of the United States Government is available for students. These include such aids to general education as the Library of Congress, the National Museum, the Bureau of Education and the Department of Agriculture; such specialties as may be represented by the Patent Office, the National Botanic Garden and the Bureau of Ethnology; such offerings in applied science as may be discovered in the Army Medical Museum, the Coast and Geodetic Survey, the Geological Survey and the Naval Observatory. The conservationist even may avail himself of the researches of the United States Fish Commission, as may the future scientific forester observe the practical work of the forest service. Already students, under the guidance of the university, have tutored upon courses in connection with these bureaus. No tuition fee is charged, except five dollars for the cost of matriculation, the trustees going upon the theory that if the Government can offer its facilities without cost they are in fairness bound to do the same. Thus the graduate school already is open and is enrolling students continually.

This utilization of the immense educational resources of the Federal Government duplicates the work of no other college nor could it naturally be done except by an institution situated in the city of Washington. In addition, this graduate school will be supplemented by a widespread system of fellowships which will give to young people the choice of advance study not only in Washington but anywhere else in the world that the best is to be found. Thus no instruction in the Romance languages is to be found in the United States comparable to that of the Sorbonne at Paris. A student desiring the privileges of that unrivaled school may secure them through a fellowship of the American University. If he would study the best to be learned of literature, he may be sent to Oxford. Two applications for fellowships are on file by young men desiring special instruction at Columbia, another at Harvard. This vast system will be floated after the manner of the Rhodes scholarships, but it will avoid the fatal mistake of that useful enterprise in compressing all its interests at one university. One of the features of the forth-

coming Convocation Day will be the awarding of several of these priceless fellowships. The graduate, therefore, will receive his diploma, not from a narrow faculty assembled at Washington but with the stamp of the greatest scholarship in the world. Yet he will come back to his own country a Fellow of the American University. This system, as stated, already is in successful operation, and to that extent the American University is a going concern.

College of Comparative Religion.

The ambition of Chancellor Hamilton and the trustees who are loyally supporting it is not, as will be seen, to assemble a ten-million-dollar university plant in the shortest possible time. On the contrary, Chancellor Hamilton believes that if the three additional projects now in mind are accomplished during his own lifetime his work will have been well rewarded. The first of these is the establishment of a College of Comparative Religion. This, as its name implies, will offer facilities for a complete survey of the field of religious history. But more than that, it will cover all missionary propaganda, make possible a study of all problems in connection with missionary work and provide an unexcelled fitting school for missionary endeavor. John R. Mott, the well-known international secretary of the Y. M. C. A., has been engaged for a series of lectures upon this general subject next fall. The American University aims to establish a nucleus, indeed, for a study of the religious problems of the world, and it is pointed out that the breaking down of many things in Government and tradition in the Far East has opened a new field of incomparable fertility.

Schools of History and Diplomacy.

A building will be needed for the purposes of this branch of education, and the Woman's Guild, under the leadership of Mrs. (Justice) Anderson, of Washington, has undertaken the management of a countrywide movement to secure what is needed. The building will cost about \$350,000, and already about \$100,000 bequeathed for this specific purpose is in hand. The structure would be used not only for the College of Religion but to house all woman's interests, including the appurtenances of feminism, suffrage, and whatever else might be particularly a collective interest of womankind. As Chancellor Hamilton says, "The women will succeed, of course—they always do."

A second project under way is the establishment of a School of American History, for which unrivaled opportunities for research are under the hand of the student; and a third the founding of a School of Diplomacy, for which the American University may be said to possess the best strategic location in the world. The United States is rapidly becoming a world center in governmental affairs, and the advantage of a school of this character might by reflex action prove of inestimable benefit to the government which so generously has placed its treasures at the disposal of this institution.

W. E. BRIGHAM.

DR. CHARLES E. SLOCUM LEAVES AMERICAN UNIVERSITY \$10,000.

Dr. Charles E. Slocum, of Defiance, Ohio, recently deceased, made provision through insurance policies and an invested sustaining fund by which the American University at Washington, D. C., now inherits \$10,000. Dr. Slocum was widely known as a publicist and authority in historic-genealogical matters connected with Ohio. He was a scholar of vast learning and acute intelligence. He was a cousin of the celebrated General Slocum, of Civil War fame, of whom he had written a life.

Dr. Slocum long had been interested in the American University. Especially did he approve of its later development in the direction of post-graduate study and research. He had contemplated and had discussed with Chancellor Hamilton the practicability of further endowing in the University a lectureship whereby might be perpetuated the investigations to which he had devoted so much labor and love.

PICTURE GIFTS FOR THE AMERICAN UNIVERSITY.

Two highly interesting and valuable collections of pictures have been given to the American University by friends of the institution in the National Capital. Mr. and Mrs. John C. Letts, of Washington, D. C., learning that the Camp Gallery of National Portraits was for sale, bought the entire collection and presented it to the university. This remarkable gathering of steel engravings, etchings and crayons, showing, in life-sized proportions, eminent Americans who represent the heroic era of our past history, now fittingly adorns the university Assembly Hall.

Thoroughly in keeping with this first gift is the second offering of pictures, though different in character. These were presented by Mr. William S. Corby, a trustee of the university. Mr. Corby, an intelligent collector and connoisseur of art, had gathered twenty-one choice examples of the work of Lucien Powell in water color and oil, showing classic and sacred scenes. These all now in their vivid and romantic coloring decorate the library and trustees' room in the College of History.

A unique accompaniment is the gift to the university by Bishop and Mrs. Cranston of a Chinese mother of pearl inlaid picture of the board of bishops of the Methodist Episcopal Church, at the time of Bishop Cranston's election. This curious and valued gift accompanied a donation of a goodly portion of the bishop's library with additional interesting souvenirs. Not the least of these is an ancient lamp excavated by Bishop Hurst with his own hands at the site of the city of Sidon, and afterwards given to Mrs. Cranston.

RECENT GIFTS OF MONEY.

General Fund.

\$2,500, Mrs. G. F. Swift; \$1,000, Thos. W. Smith, F. X. Kreitler, Estate Clara M. Eads; \$500, Mrs. Wm. McEchron; \$100, W. J. Sibley Estate; \$200, T. C. Hunter, B. S. Graves, A. A. Chapin; \$125, Mrs. E. B. Kellogg, W. R. Walker, Mrs. M. M. Sprowles; \$105, C. C. Glover; \$100, G. T. Spahr, T. F. Miller, Mrs. W. H. White, Mrs. Emma Sconce, J. W. Jackson, W. S. Pilling, H. A. RECENT GIFTS TO OUR LIBRARY.

The Glenriddell Manuscripts of Robert Burns.

Mr. John Gribbel, of Philadelphia, has presented to the American University copies of the two volumes of the famous Glenriddell manuscripts of the poems and letters of Robert Burns. Mr. Gribbel two years ago purchased the original documents and has won the admiration of the literary people of America and Great Britain by returning the books as a gift to the library at Edinburgh. While the books were in his possession, Mr. Gribbel had one hundred and fifty copies printed from etched plates, after which the plates were destroyed. Each of the two volumes in the set given to the American University has the Glenriddell arms stamped upon the board, and also an impression of the Bongo engraving of Burns. Each volume also contains a copy of the deed of gift by which Mr. Gribbel names as trustees of the manuscripts the Lords Provost of Edinburgh and Glasgow, and the Earl of Rosebery and Mithlothian. This rich addition to the literary treasures of the university comes from the hand that has frequently opened in liberal helpfulness to our enterprise.

PROFESSOR COLLIER'S POPULAR SEMINARS ON PHILOSOPHY.

Among his other plans of work for the coming year, as director of research of the American University, Dr. Frank W. Collier is to carry on two seminars in the history of philosophy.

One of these will be of special interest to students of cotemporary opinion. This seminar is to be no less than an examination of the cotemporary systems of thought, which have been the foundation of twentieth century life, and which, it is declared, are now most potently molding the moral and spiritual attitude of the world.

Beginning with Spencer and scientific agnosticism, Dr. Collier will examine modern pessimism, Nietzsche and the school of revolt, modern spiritualistic cults and present-day vedantism, pragmatism and radical empiricism, Eucken, Bergson and the basis or explanation of the materialism which so increasingly, he declares, is becoming a dominant characteristic in modern life.

As it is the province of philosophy to interpret human experience, and thus become the guide of life, the seminar will be of practical significance, and because of the popular interest in these subjects it will be open to all.

MACWATTERS JOINS FACULTY OF THE AMERICAN UNIVERSITY.

Washington, May 29.—A brilliant man has just been added to the faculty of the American University. At their annual meeting the university trustees confirmed the appointment of Samuel J. MacWatters as counseling professor in the interpretation of sacred literature. Although still a young man, Professor MacWatters has a long record of accomplishments. He has pupils scattered in every part of the country. For years Professor MacWatters has held a chair in Boston University School of Theology. He has just resigned

OFFICERS OF WOMAN'S GUILD OF THE AMERICAN UNIVERSITY

MRS. THOMAS H. ANDERSON
PRESIDENT

MRS. JOHN A. LOGAN
FIRST VICE-PRESIDENT

MISS ELISABETH F. PIERCE
RECORDING SECRETARY

MRS. ALDIS B. BROWNE
CORRESPONDING SECRETARY

MRS. WILLIAM M. HANNAY
TREASURER

this position and forthwith been transferred to the faculty of the new university now building in the National Capital. Professor MacWatters studied with the artist von Mueller in Berlin, Vanuciumi in Rome, Emil Behnkan and Shakespeare in London, with Sprieglea in Paris, and finally with Dudley Buck in New York. His own music is like that of the Stainer School. He is a distinguished composer and a musical virtuoso of high ability both in singing and instrumentation. But it is through his remarkable gift of literary interpretation that Professor MacWatters comes to unique expression. He is famous as an interpreter of Browning, Robert Burns and the Bible. During the coming autumn and winter Professor MacWatters will give lectures and literary interpretation of the great masterpieces in the American University courses, which will be open to all. A new artistic and intellectual asset has been added to the life of the city.

W. E. BRIGHAM,
in *Boston Evening Transcript*.

THE OFFICERS OF THE WOMAN'S GUILD OF THE AMERICAN UNIVERSITY.

In this number of THE COURIER we present the pictures of the officers of the Woman's Guild of the American University. Mrs. Thomas H. Anderson, wife of one of our university trustees, Justice Anderson, of the Supreme Court of the District of Columbia, is the efficient and capable president. Her address on the purpose and work of the Guild on our first Convocation Day is a complete expression of the spirit of the organization. Mrs. John A. Logan, long and popularly known for her large and broad public attitude and activity, in civic and charitable lines, is vice-president. Miss Elisabeth F. Pierce, honored and loved for her devotion and able administration of varied forms of missionary and church endeavor, and possessed of the gift of song, wields the pen as recording secretary. Mrs. Aldis B. Browne, whose husband up to the time of his lamented death one year ago was president of

our board of trustees, and who is herself one of the busiest and most successful helpers of every good cause, is the corresponding secretary. Mrs. William M. Hannay, the treasurer, is the daughter of our first university treasurer, Hon. Matthew G. Emery, who for many years successfully served the institution in that important office. She is well fitted for her position.

THE AMERICAN UNIVERSITY CLUB.

REV. S. TOWNSEND WEAVER, Financial Secretary.

I.

Since the publication of the last number of THE COURIER the American University Club has been instituted for the purpose of identifying a multitude of friends of the university, of the highest Christian education, and of American ideals and institutions all over the United States, with the general organization and work of the American University, bringing them together into one body, enabling them to contribute to the success of the institution, to promote its enterprises and enjoy its ministry. It is a well-considered and approved plan of co-operation, and has enrolled in its membership a considerable body of men and women in the District of Columbia and the various States of the Union, such as Maryland, Virginia, New York, Pennsylvania, Massachusetts, Ohio, Illinois, Tennessee, Iowa, Kansas, and others. Though the purpose of the Club is large and manifold, its plan of organization is simplicity itself, as may be seen by the application for membership attached hereto, which every minister and layman, and the multitude of friends of our great work in all the denominations, is urgently invited to sign and forward without delay. The American University and the American University Club will minister ambitiously and effectively to every locality and interest, and will thus lay claim upon the active support of everyone who is interested in the great work of the church in promoting the highest Christian education, the true Protestant Americanism of the Republic, and the practical ministry for the common good. Some have united with the Club by subscribing one dollar a year for five years, others two dollars, others five, others ten, others twenty-five, and others one hundred dollars a year for five years.

The following contributing members are cordially solicited:

| | | | |
|-------|----------------------|----------|---------|
| 25 | members contributing | \$100.00 | a year. |
| 50 | " | 50.00 | " " |
| 100 | " | 25.00 | " " |
| 250 | " | 10.00 | " " |
| 500 | " | 5.00 | " " |
| 1,000 | " | 2.50 | " " |
| 1,250 | " | 2.00 | " " |

There are no membership responsibilities aside from the subscription for the support of the university, the branches in various parts of the country being directed by the university in conference and counsel with the local members. The Club should increase the enrollment and strengthen the work of every educational institution in our country.

II.

It is the supreme purpose of the Club to advance and promote the general program of the university, as this is being directed by the Chancellor and his associates.

This general program has been stated in his own strong way by Bishop W. F. McDowell, at the opening of the university, May 27th, 1914, "the historic day of the American University," and is as follows:

"We are formally inaugurating today a notable experiment in higher education. Nothing else quite like this has been planned or tried on our soil. We propose at least four unique, distinct lines:

(1) The opening of the rich and varied materials of education and research afforded by the government to the students of the world under competent direction and guidance.

(2) By a carefully devised system of scholarships and fellowships the opening of the graduate instruction of the world to our select young men and women.

(3) The creation of a body of scholars, gathered from everywhere, sent everywhere, united here as Fellows, recognized and pledged to humanity's service and the larger uses of the largest learning.

(4) The creation of Lectureships for Washington and elsewhere and the making of a literature which shall in ample and steady stream refresh the life of the Republic and the world.

This is the simple outline of our large purpose. It would be easy to grow prophetic and to foresee the day not far off when there shall be a thousand scholars, gathered out of all the land, bearing the advanced degrees of the world's universities, and bound together as Fellows of the American University. Nothing else I venture to think so daring or so wise has been proposed by any American Church. * * * The common good is before our eyes this afternoon, the common good * * * as interpreted for humanity. * * * I am thinking of the American University as opening a new chapter of service for the American scholar, whose biography we are always writing. We shall open up and apply new and wonderful resources. We shall push back the boundaries of the unknown. * * * We shall make lectures and theses and monographs. We shall open the wealth of the world for our eager and aspiring youth. All that surely and proudly and gratefully. But our service will not be final and perfect until we have opened new resources of life to those whose lives are barren, or until we have pushed back the boundaries of the unendurable. We shall defend the truth with many a brave blow, but the scholar will strike his bravest blow for humanity."

Who that reads this noble statement of the purpose of a great church does not feel a fine fire burning in his very brain and heart as he thinks of the presence in the way of life of such an ambitious program in behalf of our humanity? It is for the advancement within the immediate future of this great purpose that the American University Club has been instituted. Every man and woman is earnestly and cordially invited to share in this great enterprise by filling out the application hereto attached and forwarding the same by early mail.

III.

The American University Club is admirably suited to the preparation in many localities of a foundation for the University Lectureship which is to be instituted in city and country throughout the United States. When the membership in any city or county has become sufficient to insure the success of the Lectureship the American University may introduce the instruction it has for the multitude in behalf of the common good, and thus refresh and enrich the neighborhood, minister to the needs of all the people, arouse many young men and women and start them off to the preparatory school, the college or professional school, and interest the graduate in further study and research for the benefit of his neighbors. One of the outstanding institutions of New England for many years was the Boston Monday Lecture of Joseph Cook, which refreshed the life of the com-

munity and of the country at large. This is the fine evangelism of the university in behalf of salvation from sin, and of righteousness which recovers the whole man, instructs him fully in the things of the Spirit, and builds him up in the most holy faith in the midst of a society that is more and more becoming the kingdom of God. Earnest men and women everywhere and of every faith are urged to inform themselves fully about this department of our great work, and co-operate with us in the early introduction of the Lectureship and the promotion of its ministry in their localities by the immediate enrollment of a considerable number of men and women in the American University Club.

IV.

A not unimportant duty of the American University Club is the promotion of the highest ideals and essential institutions which have made our country illustrious since the coming of the Pilgrim Fathers. Washington is the United States in miniature. Here all the States assemble and become the Republic, each State exerting a greater power here than at home, New York greater than at Albany, California than at Sacramento, Minnesota than at St. Paul, and Louisiana than at Baton Rouge. This strategic position of the Capital City has not been overlooked by amiable neighbors among religious and other organizations. Our Roman Catholic friends have colonized here heavily, planting strong churches, colleges and universities, and entering with great energy into the life and work of the Capital and the Nation. Here are brought the large financial resources and the strongest leaders of the Roman Church, and here these friends are founding the center of their educational activities, with a great university that will rival anything in Europe. We cannot but commend them for this. America is a free country, and invites the men and women of the world to its hospitable shores. But this it is fair and just to state: The American University and the Catholic University differ in the fact that the first seeks by every approved means to keep and make the Republic American, while the Catholic University seeks to make it Roman. The Americanizing and Romanizing agencies and influences are earnestly at work in Washington and throughout the Nation. There is room within the sphere of the American University, however, for those forces and ministries only which are consecrated to the defense and promotion of America as a free country with an untrammelled ballot, a free church with an open Bible, a free school with an open mind for the youth, and a free society with all the ideals and institutions of our liberty-loving humanity. The men and women of the United States should know without malice or prejudice the situation at the Capital of their country, and assemble in large numbers in the American University Club for the intelligent and effectual defense and promotion of our essential Americanism. Our Roman Catholic friends, aside from the irreconcilable differences between Americanism and Romanism, are seeking to exercise an influence over the Republic that is wholly disproportioned to their numbers. There are more Methodists in the United States than Roman Catholics, to say nothing of the vast body of Protestant communicants in the various denomination of evangelical churches. It is of much more than incidental importance that the American University Club

is an institution admirably suited to the enrollment of the great multitude of friends through the United States who desire to participate with money and influence in the making of an Americanism that shall guarantee the perpetuity and efficiency of the ideals and institutions that have made America illustrious and powerful throughout the world.

Every reader of these words is urgently and cordially invited to take up the plan of the American University Club in his own locality. Any person may become a member of the Club by the subscription of one dollar or more a year for five years and receive the University COURIER, giving the news of the American University in its great work at Washington and throughout the world.

Application for Membership.

I desire to be enrolled as a member of the American University Club, and hereby subscribe.....
dollars a year for
 five years, payable on the first day of.....
of each year, toward the support of the American University of Washington, D. C., and the advancement of the highest Christian education at the National Capital and throughout the United States.

15. Benediction,

Rev. Whitford L. McDowell, D. D.,

District Superintendent Washington District,

Baltimore Annual Conference.

16. Music by the Band and Lawn Reception.

sities in Europe will be obliged to look elsewhere for higher education, not only this year, but perhaps for years to come. Many foreign students are already coming to us, many more will come as the result, direct and indirect, of present events.

"We have now a supreme opportunity to demonstrate our capacity for intellectual leadership. Whether the war continues three months or three years, our opportunities and obligations to take the lead in education and civilization will be the same, and America should respond by offering the best opportunity in the world for her own students and for those who may come from other countries.

"In the case of South America this student migration will be facilitated by the opportune opening of the Panama Canal. Students from the western coast of South America will find it alluringly convenient to go via the canal to educational centers in the United States.

"Within the last two decades the increase in opportunity for graduate study and research, and for professional and technical education has been very remarkable, much greater than most people even in America realize. The recent raising of standards and the better equipment of medical schools, the large endowments and appropriations for all forms of engineering, the marvellous growth of our colleges of agriculture, the development of colleges and schools of education, and the rapid increase in income of all the better colleges make it possible for this country to take the lead in education in a way that would have been impossible even at the beginning of the century.

DOCTOR CLAXTON ON THE AMERICAN OPPORTUNITY.

Convinced that one of the results of the present European war will be to interest foreign students in opportunities for education in the United States, Dr. P. P. Claxton, United States Commissioner of Education, has authorized the immediate preparation and publication of a special bulletin, describing, for the use of foreign students, the facilities for professional and collegiate study in higher institutions of learning in this country. The bulletin will be printed in several languages.

Europe's academic loss is likely to be our gain. Commissioner Claxton thinks this is America's opportunity. He says:

"Thousands of students who have been attending univer-

No. 2

MRS. REBECCA GRAZIER

MR. ROBERT BOYD WARD

OVER \$100,000 FOR THE AMERICAN UNIVERSITY.

The death of Mrs. Rebecca Grazier, of Pittsburgh, Pa., puts the American University in possession of property valued conservatively at over one hundred thousand dollars. Before her death Mrs. Grazier consented to a bonded adjustment through which upon her decease the property should revert to the university, she meantime maintaining possession, use and all income. This adjustment covered extensive real estate holdings in proximity to the city of Pittsburgh, which long had served Mrs. Grazier as a summer home and farm. Recent realty developments in connection with adjacent expanding steel plants, however, already have turned the farm into an expanse of building lots for homes and business purposes. Some real estate men value the property now at \$150,000.

In addition to this real estate gift the bonded arrangement with Mrs. Grazier had covered an invested fund of \$20,000, the income from which provided annuity payments to the donor together with resources to pay the taxes and for the care of the property. This fund of \$20,000 also now reverts unconditionally to the university.

Mrs. Grazier, who had reached her ninetieth year, will be remembered by many residents of Pittsburgh and Pennsylvania as the widow of the late John Grazier, one of the foremost old-time merchants of the Steel City. She was a loyal and devoted Metho-

dist of the earlier school, a woman of wide religious and philanthropic interests and sympathies. For many years she had been one of the most earnest supporters of the historic Smithfield Street Church in Pittsburgh. Her early days of penury, Mrs. Grazier often declared, had led her to desire a better chance for other young women and men, especially for their training for leadership in fields of religious and educational activity. She craved this notably for young missionaries. This last act of beneficence gives her desires projected efficiency for the generations to come.

Action of the Trustees on the Death of Robert Boyd Ward.

WHEREAS, It has pleased our Heavenly Father in His allwise Providence to remove from the midst of this life's activities to the wider and larger activities of the higher life, Robert Boyd Ward; and

WHEREAS, While bearing heavy burdens and responsibilities arising from the vast business enterprises which he had inaugurated, Robert Boyd Ward, at real sacrifice of time and energy, had devoted himself to many religious, educational and philanthropic works; and

WHEREAS, In a peculiar sense of interest, sympathy and active labor, Robert Boyd Ward was associated with the work of the American University, serving as vice-president of the Board of Trustees, and having

assumed the personal care of one of the most important enterprises of the institution; be it, therefore,

Resolved, First, that the Christian Church and the best citizenship of this country have suffered a notable loss in the untimely decease of this strong leader of men and this faithful son of the Household of Faith;

Resolved, Second, that the associates of this true-hearted toiler and loyal comrade are conscious of having had taken from them that which time may not repair, while reminded again of the immortal value of manhood and integrity and the deathless significance of unselfish service for others;

Resolved, Third, that we as members of the Board of Trustees of the American University especially realize our own bereavement through the taking from us of one whom all had learned to respect and admire as a Christian gentleman and brother of the loftiest instincts and impulses;

Resolved, Fourth, that in gratitude for the example of the life of Robert Boyd Ward and in appreciation of his consistent high character, we do now record formally in our transactions our sense of grief at his death;

Resolved, Fifth, that these resolutions be spread upon our minutes and published in the AMERICAN UNIVERSITY COURIER, and that a copy of the same be sent to the wife and children of our departed friend.

Adopted by the Board of Trustees of the American University at their annual meeting at Washington, District of Columbia, December 16, 1915.

(Signed) CHARLES W. BALDWIN,
Secretary.

Recent Gifts to the American University.

GIFTS OF MONEY.

Fellowship and Scholarship Fund.—\$1,000.00, Mrs. G. F. Swift; \$20.00, Mrs. J. H. Herriot; \$15.00, Miss Hannah M. Pierce; \$10.00, Miss Ella R. Arnold, W. H. Rybolt, Mrs. Mary M. R. L. Blanchard, L. F. Rayfield, Benedict Nilsson, W. R. Fruit.

Asbury Memorial Fund.—\$31.15, Wm. Eakins.

GIFTS OF FURNITURE AND BOOKS.

By the will of the late Isabella Demming, a lifetime member of the Faulkner Methodist Episcopal Church in Malden, Mass., the university has been enriched in furniture and books. The executor has placed in the Chancellor's office a new mahogany desk and chair, with the latest model of L. C. Smith typewriter, a revolving bookcase, and the latest edition of the un-abridged Standard dictionary. In the classroom of the Director of Research he has also placed a new golden oak desk, with revolving chair. In addition the nucleus of a reference library of philosophy has been made possible by the purchase of about 150 volumes of the best philosophical works. These gifts, made possible by the will of Miss Demming, amount to over five hundred dollars.

Miss Frances M. Cadden has presented to the university a valuable collection of books, among them many volumes bearing on the American Indians, and also a beautiful black walnut bookcase and an old spinning wheel of black walnut. We regret to record that Miss Cadden has departed this life.

The library has been enriched by many valuable books. Mr. J. P. Camp contributes over two hundred volumes, beautifully bound in red morocco, and Drs. S. V. Leech and C. W. Miner have given some rare and valuable sets. Bishop Earl Cranston has presented the library with over two hundred volumes, some of which have proven very useful. The Bishop has given us also a beautiful map globe of the world. Mrs. Cranston, being of like mind with her husband, gives the library some rare books on classical art and literature, including a large number of valuable photographs of Greek and Roman art; and also to our museum an ancient earthen lamp which Bishop John F. Hurst had dug out of the ground in one of his excursions to the Holy Land and later had presented to her.

Mrs. B. J. Mills, through the Rev. S. F. Harriman, has contributed to the library a collection of interesting books made by her late husband, the Rev. B. J. Mills, of McConnellsville, Ohio.

Miss Alice D. Goddard, of Georgetown, has presented to the university a beautiful American flag of the design of 1812. It has the thirteen stripes and fifteen stars, and measures about five feet by three. Miss Stoddard is one of the Daughters of 1812. The flag has been placed in the library of the College of History, where it forms a conspicuous ornament and an attraction to the eye of the visitor.

Sweet, Yearlong Christmas.

Meek Son of Mary, Judah's Lion strong,
Emmanuel, born at Bethlehem's manger low,
Redeemer of our race from sin and woe,
Right ruler, just law, all power to thee belong,
Yet selfish greed and grasp wrest men to wrong;
Come where the blasts of war's dread trumpets blow;
Help each to find or make a friend of foe,
Refiner of the heart awakened long,
In thy vast crucible the nations melt,
Scorn for the weak drive out and pride of race,
Till men in mutual love from war shall cease,
Meet in true friendship that the world shall belt,
And helpful service shall mere trade outpace.
Sweet, yearlong Christmas, bring the agelong peace.
—Albert Osborn.

Rare Indian Relics for the American University.

Mr. William S. Corby, one of the leading citizens of Washington, D. C., and a member of the Board of Trustees of the American University, has just presented to the university the J. H. Reynolds Collection of Aboriginal Relics. The late J. H. Reynolds was one of the ethnologists of the Smithsonian Institution and this collection represents long and indefatigable tours of search and discovery. The implements number about seven hundred varied articles. Some of them are of rare beauty in color and texture. Among them are Aztec pieces from Central America, with objects of great interest used by the later North Carolina Indians. The collection covers hunting and war arrow heads, spear heads, axes, knives, fleshers, scrapers, hammers, chisels, beads, polishers, gorgets, pipes and drills. It forms a comprehensive historic connection with the life especially of the early aborigines in the Potomac and Shenandoah valleys. It will be, however, most helpful and suggestive in any study of the American tribes along the central section of the Atlantic coast.

Judge Hendricks Gives Historic Comanche Indian Arrow to the Museum.

Judge John A. Hendricks, of North Carolina, has just presented the university museum with an arrow used by the Comanche Indians in the battle at Lost Valley, Young County, Texas, July 12, 1854. This particular arrow has sad and tragic interest from the fact that it killed D. W. Bailey, a Texas ranger, who took part in the fight. The arrow was drawn from the dead body by S. G. McGarrath, Captain of the rangers. The deadly weapon had entered the body about eight inches, piercing the heart. The dark stain of the unfortunate's blood still marks the arrow. The rangers won the battle, discovering finally that one of the bravest of the Indian warriors was a woman. Captain McGarrath gave the arrow to Judge Hendricks. It long will be preserved and viewed with interest as a memento of those bloody forays that marked the Wild West.

Moving-Picture Machine.

The Bureau of Commercial Economics of Washington is unique as an institution. It is an association of the leading institutions, manufacturers, producers and transportation lines of America, to engage in disseminating geographical, commercial, industrial and vocational information by the graphic method of motography, showing how things in common use are made or produced, and under what conditions. Films of the Bureau are now shown in about one hundred of the universities and colleges of the United States and Canada, and its work has extended to South America and as far east as China, as far south as Australia, and as far north as Siberia. It has freely offered its services to the American University; and the Director, Mr. Francis Holley, has generously placed in the Assembly Hall of the College of History a Powers 6a moving-picture machine inclosed within a fireproof asbestos booth. This is at a cost of nearly \$900, and the outfit has been loaned to the American University indefinitely. The apparatus embraces also a first-class stereopticon.

War Helps the Values of the Carroll Estate.

By the will of the late David H. Carroll, of Baltimore, formerly president of the Board of Trustees of the American University, the university is to be a beneficiary in the distribution of the residuary estate to the extent of two-fifths. Delay in the settlement of the estate has been due in part to the fluctuations and uncertainties in the value of the Cotton-Duck securities which form a large part of the assets. Friends of the various benevolent causes, which, together with the university, are to be sharers in the final distribution, will be glad to learn that unusual activity in the Woodberry-Mt. Vernon mills and in other places growing out of extraordinary demands for cotton-duck recently has given added value to the bonds of the company. An early distribution is expected.

Annual Meeting of Trustees—Great Progress.

The annual meeting of the Trustees of the American University at Washington, D. C., held on December 16, was one of the most encouraging for the institution ever held. A large number of the Trustees were present. Social character was given to the gathering by a trustees' luncheon to which a number of guests had been invited, Mrs. Cranston serving as hostess. The occasion also was marked by the inauguration in the afternoon of a course of lectures on American Diplomacy by one of the Board, Justice Thomas H. Anderson of the Supreme Court of the District of Columbia.

Chancellor Hamilton's report revealed remarkable progress of the university, not only in its financial strengthening, but also in its educational work. Already within one year forty-one students are pursuing postgraduate study or investigations and eleven professors have been enrolled. Between two and three hundred thousand dollars of productive endowment were announced as having become available since the last meeting. Many personal gifts of interest were reported, notably those of Mrs. G. F. Swift, Mr. and Mrs. W. S. Corby, Mr. and Mrs. John C. Letts, and several secured by Dr. Frank W. Collier.

The National Capital itself now is taking a more active and vital interest in the university enterprise. This was evidenced anew by the acceptance of trusteeship with the institution by several foremost men of the city, irrespective of any denominational affiliation. But an even more gratifying proof was the report made by Mrs. Justice Anderson of the work inaugurated by the Woman's Guild of the American University of which Mrs. Anderson is President. This Guild, whose officers are from among the best known women of Washington, are planning and pushing a great national campaign in behalf of the university, which is designed, among other purposes, to carry out one of the most important Home and Foreign Missionary projects as yet conceived.

Officers of the Board of Trustees elected were President B. F. Leighton, of Washington; Vice-President, in place of the late Robert B. Ward, whose death was the source of deep sorrow to his fellow trustees, W. S. Pilling, of Philadelphia; Treasurer, Charles C. Glover, President of the Riggs National Bank; Secretary, Dr. Charles W. Baldwin, of Baltimore. The organization of several new fellowships was announced as undertaken, especially one for the

graduates of DePauw University. It is proposed also, at the earliest possible moment to finish the Convocation Auditorium which will seat 1,500 people.

One feature of unusual interest to those outside of Washington was the appointment of a committee to arrange for a fitting recognition of the approaching close of Bishop Cranston's active service as Senior Bishop of the Methodist Episcopal Church. This proposed public recognition will take place at the University exercises on Convocation Day, June 2, 1916. On that occasion a mass meeting will be convoked of every one interested, not only in Washington, but also from other cities and communities. Thus early a cordial invitation is extended to all to remember the date, June 2, and to plan to be present.

JOHN R. MOTT TO LECTURE IN THE AMERICAN UNIVERSITY.

Dr. John R. Mott, the profound student of world-wide religious conditions and outlook, will deliver a course of lectures in the American University the coming spring. The exact dates of the lectures will be announced later through the public press, with the particular subjects to be treated. Dr. Mott's thorough mastery of his great themes, coupled with his deep consecration to the progress of the Kingdom, renders his utterances of seer-like and prophetic character. All interested in the world-problems of today and in Christianity's present opportunity will hail his coming to us with great delight.

Prof. Carroll's Pro-Seminary of Art and Archæology.

Professor Mitchell Carroll, Ph.D., Counseling Professor in Archaeology and Art in the American University, who is also Professor of Archaeology and History of Art in George Washington University and General Secretary of the Archaeological Institute of America, conducts a Pro-Seminary of Art and Archæology in his offices in the Octagon, 1711 New York Avenue, every Wednesday from 4:39 to 6 p. m. During the present session the subject of study is "Pre-historic Art and Archæology." Considerable use is made of the illustrative material in the U. S. National Museum and the Library of Congress, and sessions are sometimes held in those places. Terms of admission may be obtained by applying to the Director of Research.

Professor Duncan's Course in Oriental Languages and Literatures.

We desire to call attention to the remarkable opportunity which serious students have offered to them in the courses to be given by Professor Duncan in Oriental Languages and Literatures. In the preliminary stages of organizing our work it naturally has been difficult to adjust all of our departments to the plan as a whole. But we wish here and now to call special attention to the department of which Dr. Duncan has been appointed the head. He naturally will follow his own methods in carrying on the work committed to him and plans later to project a popular study of the English Bible, book by book, using the present accurate translations as the basis of study.

But the present announcement in this department is to call attention to the unusual advantages now open for the study of Oriental languages and literatures.

In this field, as all who know the subject are aware, Professor George S. Duncan is one of the most talented and learned scholars now living. In the particular branches to which he gives his attention, he is one of the world's foremost authorities.

At our request, Professor Duncan has prepared a brief announcement of his work. We herewith publish it, inviting all who may be interested in the subject to communicate with him either directly or through this office. The statement is as follows:

In this department elementary, intermediate and advanced courses will be given in Hebrew, Aramaic, Arabic, Assyrian, Babylonian, Sumerian, Egyptian hieroglyphic and hieratic.

Special attention will be given to courses in the Hebrew Old Testament. The various books will be critically studied with the aid of the best commentaries. Every effort will be made to get at the exact idea of the sacred writer from the standpoint of his own time. The various problems of higher and lower criticism will be studied in connection with each book.

Emphasis will be put upon research work, and themes will be assigned for original investigation.

Lectures by Doctor Wood.

The first series of lectures of the present academic year were delivered by Dr. William Andrew Wood, S.T.D., on 'The Religions of the World.' The subjects were: Primitive Religions, Tribal Religions, National Religions, Religions of Prophets, Religions of Law, and Religions of Deliverance. This course was a scholarly presentation of our present day knowledge of the world's religions.

Justice Anderson on American Diplomacy.

The university has been favored with two lectures on American Diplomacy by Justice Thomas Henry Anderson of the Supreme Court of the District of Columbia. For some years the Justice was the American Minister and Representative to South American countries; and his lectures made it evident to his hearers that he not only spoke from knowledge but from the rich experience of a trained diplomat. Those who had the privilege of hearing these lectures can much more intelligently follow the diplomatic controversies through which our country is now passing.

Fellows of the American University for 1915-1916.

In this number of the COURIER may be seen the pictures of the first class of Fellows appointed by the Board of Award and confirmed by the Board of Trustees of the American University in May, 1915. The statement which follows gives the names of these five Fellows, the institutions where they received their baccalaureate degree, the institutions nominating them for fellowships, and the subject of their present studies and the institutions where they now are studying:

John Wesley Edward Bowen, Jr., A. B., Wesleyan University, M. A., Harvard University. Nominated by Harvard University. Is studying American history at Harvard University.

Frank Blair Hanson, A. B., George Washington University, A. M., University of Illinois. Nominated by George Washington University and the University of Illinois. Is studying Zoology at the University of Illinois.

Merrill Jacob Holmes, A. B., Simpson College, B. D., Garrett Biblical Institute. Nominated by Garrett Biblical Insti-

JOHN W. E. BOWEN, Jr.

FRANK B. HANSON

MERRILL J. HOLMES

HASSE O. ENWALL

MISS MARY L. T. MORSE.

tute. Is studying the philosophy of religion at Harvard University.
 Hasse Octavius Enwall, A. B., Northwestern University, S. T. B., Boston University School of Theology. Nominated by Boston University. Is studying philosophy at the University of Chicago.
 Marie Louise Townsend Morse, A. B., Vassar College. Nominated by Goucher College. Is studying physics at the Johns Hopkins University.

Professor MacWatters Inaugurates His Work.

Prof. Samuel J. MacWatters, the new Counseling Professor in Sacred Literature, is rapidly commanding the attention of the people of Washington. In addition to his organizing his work at the university, he has been busy in the Extension work, having given his Drama of Saint Paul at the Foundry and Metropolitan churches in Washington and in Alexandria, Va. He has also spoken before the Woman's Federation of Clubs of Washington on Browning, and delighted the joint meeting of the preachers of the Methodist Episcopal Church and Methodist Episcopal Church, South. He will be busy for a number of weeks to come with the schools of the higher education in Washington.

Rev. S. Townsend Weaver and Rev. J. F. St. Clair No Longer with the American University.

At the Trustees' meeting on December 16th it was announced that on December 1st the relation of Rev. S. Townsend Weaver with the American University had terminated. Previous to this the resignation of Dr. J. F. St. Clair, who had served as our representative in Iowa, had been presented and accepted. This is the stated public announcement of these two changes.

The Woman's Guild of the American University.

With contagious leadership, Mrs. Thomas H. Anderson, one of the leading women of Washington, has taken upon her heart the formation and advancement of a great national league of women in behalf of the American University. There is an old saying that imitation is the best commendation. If this be true, Mrs. Anderson and the women associated with her have high reason to be satisfied with their undertaking. Two weeks after Mrs. Anderson originally announced to the world her intention to inaugurate this Woman's Guild and to carry it out to its logical development throughout the country there appeared in the New

York Times an advertisement announcing that a great national league of the women of America was about to be organized in behalf of the Catholic University of Washington. The plan announced was to follow closely the propositions laid down by Mrs. Anderson in her first public announcement of the American University Guild. Wisdom is justified of its children.

Mrs. Anderson has associated with herself a very strong and capable body of women of experience and vision. The names of some of them alone suffice. Mrs. John A. Logan is first vice president. The secretary is Miss Elisabeth F. Pierce. The corresponding secretary is Mrs. Aldis B. Browne, whose name recalls the virile and lovable man who so long served as president of the Board of Trustees of the American University. The address of the corresponding secretary is The Dresden, Washington, D. C. The address of the president, Mrs. Anderson, is 1531 New Hampshire Ave., Washington, D. C. The treasurer of the organization is Mrs. William M. Hannay, the daughter of the late Matthew G. Emery, who was one of the founders of the University, and for many years acted as its invaluable treasurer.

With such leadership, any cause would be predestined to success. But the plans themselves of the Guild are so wise and practical that they have but to be stated to be commended. The purpose of the Guild, as concisely announced by its leaders, is as follows: "We have as our object the general endowment of the university, the completion of the McKinley College of Government, and the specific work of building and endowing a College of Comparative Religion which is to be one of the greatest and most far-reaching Home and Foreign Missionary projects ever contemplated. Already the project is endowed in the sum of \$100,000. Our goal is \$1.00 for every member of Methodism." This call rings like the note of a trumpet. The printed statement which the Guild is preparing to send out through the country has in it one item to which we call earnest attention. "The sum asked (\$1.00)," says the president, "is so small that it comes within the means of every one. It is distributed so widely and comprehensively that it should not be felt by any one church in the aggregate. Moreover, this is an appeal unlike many others, it will not be made again. The imposing Roman Catholic University at Washington, with its numerous buildings, perfect equipment and great endowment, contrasts notably with our own university almost as old in years." Let everyone lend a helping hand to the Woman's Guild of the American University.

Interesting Old Furniture, Once Used by Great Men of the Nation, Now at the American University.

(Reprint from *Boston Transcript*.)

WASHINGTON, May 7.

The headquarters chair of General William T. Sherman used by the great soldier from 1869 to 1880, while commander-in-chief of the United States Army, and the arm-chair used by President Garfield during his too brief term at the White House, have been added to the historic furniture collection of the American University. The donor is Mr. John La Monte Hurst, of Denver, son of the late Bishop Hurst.

The foregoing news dispatch published a short time ago in most of the papers serves to direct attention to the peculiar fondness of the late Bishop John F. Hurst

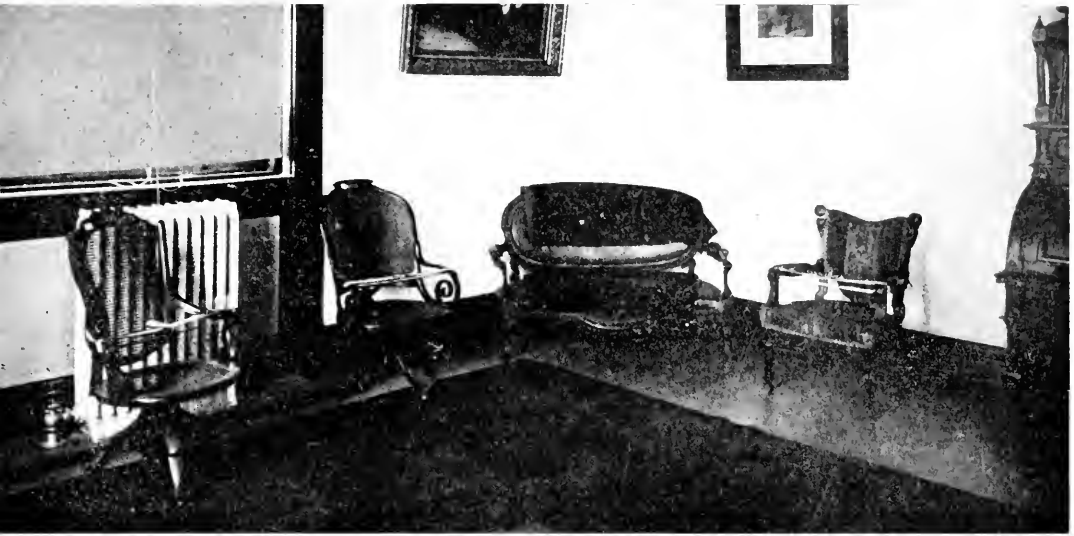

for old furniture and the unique use made of his collection, for it now is housed in the Chancellor's room of the American University. It was the dream of Bishop Hurst that a \$10,000,000 university, if one may use such a phrase intelligently, should be established in the city of Washington under the auspices of the Methodist Episcopal Church. The dream has been realized in a measure by the purchase of almost 100 acres of land in an unexcelled location upon Massachusetts and Nebraska Avenues. This is in the open country, upon a high plateau looking down to the Potomac River and across to Arlington. It is a little more than a mile west of the celebrated Cathedral grounds of the Episcopal Church and is directly in the sweep of the finest municipal development. Two buildings have been erected on the grounds. The College of History is finished and open. McKinley Memorial College of Government is completed on the outside and awaits the expenditure of about \$150,000 to complete the interior. The purpose of this letter is not, however, to discuss the American University as an institution but to write a few pleasant words of some of the curiosities, so to speak, in connection with the establishment.

CURIOS IN THE CHANCELLOR'S ROOM.

The College of History is one of the finest built structures in Washington in point of material and solidity. It is of marble and solid oak; and the most curious thing about it is that although it was finished sixteen years ago it was not opened to students until last fall. That, however, is another story. The room of the chancellor, Rev. Franklin Hamilton, Ph.D., of Boston, is the first on the left of the main entrance to the building, and one entering the spacious chamber is astonished to note the apparent poverty of its furnishings. With the exception of a beautiful mahogany desk, used by the chancellor, everything else looks as if it had just come from a second-hand furniture store and were awaiting repairs. Here, for example, is an antique black walnut sofa, bound in green leather and much the worse for wear. In fact, it is rather disgracefully frayed in some parts, and the visitor wonders why such a wreck should be left standing around. A little nickel plate on the back of the sofa tells the story, however—"Abraham Lincoln, 1861-65." So this was the sofa that served the great President in the White House through the period of the Civil War.

CHARLES SUMNER'S DINING TABLE.

A large circular dining table, of light walnut, and half a dozen badly worn chairs stand about for the daily use of visitors. These were the property of Charles Sumner, United States Senator from Massachusetts. The chairs are upholstered in leather and the supports of the table are ornamental and adorned with carvings of the lion's head. The Garfield chair was used in his office at the White House by the President from March 4 to September 19, 1881, the legend it bears informs us. It is of black walnut and the seat is of closely woven rattan, a little broken in places. The Sherman chair is of black walnut also and is of the familiar type of office swing chair, with the strands of rattan more widely spaced and perhaps more badly broken than in the other. Whether or not by the wish of the late bishop, no attempt has been made to repair and refinish any of the furniture.

SHERMAN CHAIR, GARFIELD CHAIR, LINCOLN SOFA, GRANT CHAIR, STANTON DESK.

STANTON'S GREAT DESK.

One of the most formidable articles in the room is the huge black walnut desk used by Edwin M. Stanton during his period of service as Secretary of War in the Lincoln Cabinet. It abounds with pigeon-holes, drawers and spacious compartments, and tradition says it possesses a secret compartment where Stanton was wont to hide important documents. But the most careful examination by the visitor fails to discover any such appurtenance—thereby, perhaps, demonstrating what a really "secret" kind of a place it is. A human interest touch is given this ungainly relic by two little depressions cut into the wood and through the cloth covering on either side of the face of the desk. These were made by the great War Secretary cutting off the ends of cigars with his knife; and the official who shows this curio cites these disfigurements as indicating the nervousness of Mr. Stanton, in that sometimes he would swing to the left and cut off a cigar and then again over to the right, always, however, bringing his knife down within a little spot or cup about the size of a half-dollar. Another likely explanation is that part of the time one side of the desk was more cluttered with documents than the other and that the Secretary burrowed in where he could strike bottom easiest.

GEORGE BANCROFT'S WARDROBE.

An enormous wardrobe standing in one corner of the room, of lighter wood than any of the other articles, was used by George Bancroft, historian, one-time Secretary of the Navy and acting Secretary of War, presumably in his study. This piece of furniture is noteworthy as containing nine large shallow trays wherein it is said Mr. Bancroft kept a series of maps. A third presidential souvenir in the room is an arm-chair used by U. S. Grant while President, from 1869 to 1877. Among other pictures on the wall is one painted on wood of Francis Asbury, the first American bishop of the Methodist Church. The

face is well done, but the drawing of the hands and some other features of the picture is defective. In an adjoining room is what irreverently might be described as a "whale" of a desk used by the late Bishop Charles C. McCabe—the "Chaplain" McCabe of Civil War fame. This gigantic structure, of the once universal black walnut, is a veritable arsenal of pigeon-holes, boxes and files, so elaborate in these appointments that, in fact, it might almost accommodate the correspondence of a Government bureau.

WHERE WESLEY'S VOICE RESOUNDED.

One of the most beautiful articles of furniture in the building is an exquisitely engraved chair in the lecture room made from the original beams of City Road Chapel, where Wesley preached and beside which he lived. This was presented to Bishop Hurst by Rev. Thomas Bowman Stephenson, D.D., LL.D., president of the Wesleyan Methodist Conference, at the second Ecumenical Methodist Conference, held in October, 1891. This in turn had been sent to the conference by the pastor of the original church in England. The beautiful reading desk used in the lecture room was given by Charles C. Glover, president of the Riggs National Bank, who is treasurer of the American University.

AN ORIGINAL LETTER OF WASHINGTON.

Why, or how, Bishop Hurst assembled these historic articles is not known to the writer, except in the inference that in his vision of a great American university which should render Protestantism and his country a distinct service, he deemed it appropriate to associate with the project memorials of the great patriots of America. The university possess also the original letter of George Washington in which the first president refers to the contemplated building of "an university" in the Federal City, and announces that he has determined to vest his Potomac shares in that university. Another letter of almost equal interest in the field of education is one written three

years earlier, in 1792, by Thomas Jefferson. Until Massachusetts Avenue was cut through to the west to pass the university there stood upon the grounds an ancient and picturesque house of which it is said that Washington once lodged therein.

FOUNDER'S PROPHETIC WORDS.

The American University as an educational project is well worthy more extended treatment than is possible at this time. Although the cornerstone of the first building was laid in 1896, the university was not opened until last fall and has a class of only twenty-eight students, taught by Frank W. Collier, Ph.D. For the present it will offer post graduate courses only, although in time it may develop into a full undergraduate institution. Through the efforts of Chancellor Hamilton, its finances have been placed upon a solid basis, and no one familiar with the spirit of the Methodist denomination can doubt that, despite early handicaps, the American University in time will take its place among the greatest educational institutions of the world. Perhaps the late Senator Jonathan P. Dolliver spoke prophetically when he said, at the laying of the cornerstone of the McKinley Building in 1902: "While it seems possibly a thing out of place to say, I am glad that it will have to struggle for its life. I have had an opportunity to observe the growth and influence of such institutions in the United States, and those today are the most influential—like Yale, and Harvard, and Princeton—which in their origin and early history saw all the hardships that belonged to a struggle for life. The strength of a man is made by the perils he goes through, by the hardships he encounters, and by the work he does. The same law is applicable to the life of all institutions, and most of all to the institutions which are to command the intellectual future of the United States."—W. E. BRIGHAM.

Fellowship for Graduates of DePauw University.

The plans of the American University contemplate the gradual enlargement of the foundations for fellowships until many of the other universities and colleges of the country shall be able annually to nominate from among their graduates one or more selected scholars for the post of Fellow in the American University. We now specifically are seeking to endow a fellowship for the alumni of DePauw University. For the moment the funds in hand for this purpose do not warrant a regular appointment to the proposed fellowship. Dr. Fred M. Stone, our Endowment Secretary, however, has secured a provisional gift which can be used for this purpose. With great pleasure, therefore, we announce that the first incumbent of the DePauw University Fellowship will be appointed at the Convocation Day exercises at Washington, next June. Graduates of DePauw University who may be interested in securing this fellowship may apply at once at our office for application blanks which must be submitted to their own President, Dr. Grose, for the nomination and endorsement of the proper officers of DePauw University.

Friends of DePauw University will be glad to help in the contributions toward this fellowship, every dollar of which will be held in trust sacredly for the benefit of the graduates of the university at Greencastle. All who may read these words are invited to communicate in the matter with Dr. Fred M. Stone of this office.

We Must Have a Large Convocation Hall.

The need of a commodious Convocation Hall grows upon us now with each year. The present Assembly Hall in the College of History Building is totally inadequate for Convocation Day gatherings. The Open-Air Amphitheatre, while ideal for warm, pleasant weather, is of course useless during the cold months and on wet days. The McKinley College of Government Building, as planned, has in it a Convocation Hall which will seat 1,500 people. This auditorium would give us a permanent assembly place adapted to every need. It has been estimated that for \$50,000 this main hall of the McKinley building could be completed, leaving the remaining rooms in the building for finishing later. The building is so planned and the present state of construction is so far advanced that the plan proposed is perfectly feasible. If this plan thus could be carried out the arrangement at once would relieve all our present embarrassments. At the same time it would allow us, without needless burden, opportunity to secure further funds with which to complete the remainder of the McKinley building. One of our trustees, Colonel Heistand, a lifelong personal friend of President McKinley, has taken upon his heart the completion of this memorial to his friend. Colonel Heistand at present is on United States Army duty at Chicago. He would welcome correspondence or suggestions there. But in every way we desire help in this next great needed undertaking. Who will lend a hand? Send to the office for a free picture of the McKinley Building.

No. 3

MR. HART ALMERKIN MASSEY

MR. CHESTER D. MASSEY

Fifty Thousand Dollars for Fellowships.

Mr. Chester D. Massey, of Toronto, Canada, has made arrangements to turn over to the American University at Washington, D. C., \$50,000 from the Massey Estate. The money is to create an endowment fund bearing the name of Hart A. Massey, the income of which shall be used for the support of graduate fellowships in the American University. In the assignments to such fellowships priority of claim shall be allowed to young men and women of the Dominion of Canada. But if the fellowships are not thus assigned they shall be open to all.

This gift has unusual interest from the fact that it makes operative what long had been a cherished desire of the late Hart A. Massey so widely known as the founder of the great farm implement manufactory of Canada. The senior Mr. Massey wished to make a contribution from Canada which should establish, if possible, some link between the Methodisms of Canada and of the United States.

For this purpose, the American University, from its cosmopolitan character and plans, appealed to this great iron master whose business comprehended continents. The son now puts the father's dream into practice and yet fashions it to meet the needs of the new day. In this remarkable family the son even surpasses the father, for under the generous impulse of Mr. Chester Massey the estate has been enlarging its scope and making new and increased benefactions. One of the latest has been the magnificent religious and social commons or student headquarters building for the University of Toronto which will cost probably

\$1,500,000. At a time when nation-wide efforts are being put forth to unite the various religious bodies in their programs of work at least this gift by a Canadian to the American University is notable. It reveals a fellowship of interest felt by the citizens of both countries that cannot be lost. At this time of peculiar stress the gift, in no little measure, will help to strengthen a real sense of brotherhood and true internationalism of service.

Assignment of American University Fellowships with Bishop Quayle as Convocation Orator.

Bishop William A. Quayle is to give the Convocation Day address at the American University, Washington, D. C., on June 2d, 1916. On this occasion the university is planning to grant ten Fellowships for graduate study, varying from \$500 to \$725 each. Owing to the war, no foreign traveling Fellowships as such will be assigned, but the money given may be used for foreign study and travel if so desired.

The Fellowships are open to both men and women who have been graduated from colleges and universities of recognized standing. In the actual assignments to candidates, qualifications for future life-leadership will weigh quite as much as scholarship. The Fellowship plan is designed to assist in training gifted young men and women for practical leadership in the highest walks of life.

Fellowship application blanks now may be obtained from the Registrar of the American University.

Gifts of Money.

(The acknowledgment of sums less than five dollars is to be considered sufficient receipt therefor.)

General Fund.—\$750, Mrs. G. F. Swift; \$50, W. E. Eppert; \$25, I. N. Hall; \$5, Plumley E. Perkins, A. L. Wiley.

Ashbury Memorial Fund.—\$5, J. T. Wigren.

Bishop McCabe Memorial Fund.—\$250, Miss Kate S. Gillespie.

Bishop Hamilton Lectureship Fund.—\$8, W. A. Hall; \$5, J. H. Beveridge, A. H. Nazarian, J. M. Boyd; \$1, G. R. Carver, Enos Holt; \$3, J. H. Delbridge; \$2, F. E. Taussig, J. S. Smallwood, Samuel G. Briggs, L. Ferguson; \$1, A. M. Billingsley, W. L. Clough, O. R. Miller, J. R. Fretts, W. A. Parkinson, C. E. Tripp.

Fellowship and Scholarship Fund.—\$1,750, Mrs. G. F. Swift; \$250, Miss Kate S. Gillespie; \$25, Mrs. Esther Frick, Miss Kate Bond; \$10, Miss Rebecca L. Gillespie; \$5, E. C. McGraw.

Listing of the American University.

In the current report of the Board of Education of the Methodist Episcopal Church the American University formally is listed as a graduate university. In making up this report certain facts concerning the American University were tabulated which will not be without interest to our friends and patrons. They illustrate how time itself labors often in advancing a righteous cause. Notwithstanding all the efforts that have been put into the American University enterprise and all the generous gifts that have been made, it cannot be denied that time also has worked. A cursory citation of facts will illustrate this. For example, the university site is set down as covering about ninety-two acres, but the present conservative valuation of this ground is \$800,000. In the matter of the buildings the McKinley College of Government is not completed, but the total value of buildings, based upon the estimates of a competent authority, is given as \$501,720. In the statement covering the equipment of the university the library, aside from its large number of valuable pamphlets, has 20,000 bound volumes with a value of \$12,000. The scientific apparatus is worth \$21,000. The museum and furniture together reach \$10,000.

In summing up the permanent funds of the university the total endowment for all purposes is \$834,000, of which \$555,000 is productive. In addition to this there are annuities of \$26,000. The maintenance of the university is based upon an income derived from two sources: Stated gifts and interest from endowment. The interest from endowment annually reaches \$22,275. During the past year there has been an increase of endowment of \$112,300. The total indebtedness of the university is \$82,464; but over against this there is a much larger amount of pledges and subscriptions collectable. This later side of the ledger is being increased steadily by every member of the working force of the university.

The university is listed as doing exclusively post-graduate work, and already, after its first year as a working institution, it shows an enrollment of forty-one students and seventeen professors. The university at present is engaged in raising the second unit of \$500,000 in its grand campaign to raise for endowment purposes \$1,500,000.

Some of Our New Trustees.

Sufficient notice we fear has not been called to the strengthening of our Board of Trustees by the addition of new members. Several have been added who will bring unique interest and efficiency to our board; such are Mr. Charles J. Bell, President of the American Security and Trust Company of Washington, and Mr. John C. Letts, the energetic and sagacious head of a chain of large mercantile enterprises. Unique interest is given to our work through the coming to us of Mr. Gilbert H. Grosvenor, the talented and brilliant editor and Secretary of the National Geographic Society. What woman more appropriately could have been added to the board than Mrs. Cochran, of Dawson, Pa., whose name is found in every list of large benefactors? Then there is Mr. Robert H. Ingraham, of Fond du Lac, Wis., a man whose beneficence and wisdom in religious and educational matters distinguish him as one by nature fitted to help lead a great university. George H. Maxwell, the eminent patent attorney of Boston, whose intimate knowledge of Washington gives him rare ability to help guide this enterprise has been the latest contribution from New England. The expanding interests of the university are well cared for through the coming to us of that great western railroad man, Mr. A. M. Schoyer, Vice-President of the Pennsylvania Railroad system.

Others we will announce. These whom we now name give evidence of the high field into which we have entered for our choice of trustees and directors. The very names of such leaders give assurance of success and growing achievement in our enterprise.

Mrs. Anderson, President of the Woman's Guild, Makes a Western Trip.

Mrs. Thomas H. Anderson, the President of the Woman's Guild of the American University, has taken a trip to Colorado. It is her plan while away from Washington to give close attention to the interests of the league which she represents. While her visit to the West primarily is for the sake of her health, she still hopes to find many opportunities for advancing the great cause to which, with such singular devotion, she is giving her life. Mrs. Anderson is planning work in Pittsburgh and Chicago, where she will make addresses, and in the State of Colorado where she will remain for a month. Here Mrs. Anderson is so well known and has so many associations of influence that her activities cannot but evoke ready and helpful response. First we pray that Mrs. Anderson's health may be benefited greatly by the travel and that she soon may be returned to us in her accustomed vigor and optimistic spirit of leadership. At the same time we bespeak the kindly offices of all to whom the President of the Woman's Guild may bring the cause of Christian education and Protestantism in the National Capital. Let them remember that this gifted and consecrated woman—among the choicest women of the land—out of her own spirit of helpfulness is giving herself without any remuneration whatever or any expense to anybody, but with great physical burden and nervous strain to herself, to a work in which now millions of people throughout this land vitally are involved.

Mr. Calvert Crary Succeeds Mr. R. B. Ward as Treasurer of The Patrick Clendenen Land Company.

The death of Mr. R. B. Ward, Vice-President of the Board of Trustees of the American University, and Treasurer of the Patrick Clendenen Land Company of New York City, necessitated the election of a new treasurer of this important corporation in New York. At the annual meeting of the company in New York Mr. Calvert Crary, of Newtonville, Mass., was elected to succeed Mr. Ward as treasurer. Already Mr. Crary has entered upon his important duties. With accustomed vigor and profound business sagacity Mr. Crary is straightening out the details which were disordered by Mr. Ward's death. As executive officer of this corporation Mr. Crary is looking after its interests and closing up the business and legal complications incident to a lease of the properties. A favorable lease has been executed and it is hoped that from this time on, for the subsequent ten years covered by the lease, the income from the property will justify the generous desires of the noble giver of the property. Every interest of the valuable estate is being safeguarded. It is believed by those competent to speak that the neighborhood in New York City in which the holdings of the Patrick Clendenen Land Company are situated will show an improvement with the years and that it will be distinctly advantageous to maintain this property and safeguard it for what the future will produce of increment in value. Meanwhile Mr. Crary has the gratitude of all who know how busy he is in his willingness to take on this added task.

Lectures on the Bible.

The annual lectures on the English Bible were delivered in January by Dr. Ismar J. Peritz, Ph.D., Professor of Semitics and the English Bible in Syracuse University. The general subject was the Sermon on the Mount. The special lectures were, The Literary Character and History of the Sermon on the Mount, The Essential Teachings of the Sermon on the Mount, The Sources of the Teachings of the Sermon on the Mount, and The Authority of the Teachings of Christ. The interest in this course was manifested not only by the large number who attended, but also by the constant attendance of many of the prominent clergymen of Washington, who gladly embraced this opportunity of getting the latest word on this important subject. Dr. Peritz had the pleasing experience of seeing his audiences increase in number, the final one being the largest in attendance.

Prof. MacWatters' Lectures on Literature.

Prof. Samuel J. MacWatters delivered his first course of lectures before the university during the month of February. From the large numbers who came to the Assembly Hall, even through the most inclement weather, it was evident that the masterpieces of English Literature, when interpreted by a master, are very popular. The special subjects were: Omar Khayyam and Rabbi Ben Ezra, The Drama of St. Paul, American Poets, The Faith of Tennyson, Browning's Saul, and Wagner's Parsifal. It will be pleasing to those who attended this course to learn that Prof. MacWatters is to deliver another course in the spring.

Lectures on Art.

Dr. Mitchell Carroll, Counseling Professor in Archaeology and Art in the American University, and General Secretary of the Archaeological Institute of America, lectured January 14th on Paul at Athens, and the following day on Washington the City Beautiful. The lectures were illustrated by lantern slides, and Dr. Carroll, being equally at home in ancient Athens and modern Washington, proved himself a pleasing and instructive guide to the large number who met him in the Assembly Hall of the College of History. Dr. Carroll is to deliver two other lectures in April.

The Dr. John R. Mott Lectures.

The lectures by Dr. John R. Mott which we have advertised as to be given in the American University this spring will have to be delayed a little. On his way back from the Panama Congress Dr. Mott sent us word that the exigencies in connection with the war had so altered his program that some changes would have to be made in his itinerary. The war has added enormously to his burdens. He has found it necessary to get release from a number of appointments already made, some of them of great importance. To our keen regret we ourselves must fall under this latter category. We know, of course, that our friends will appreciate the circumstances and sympathize with the feelings of Dr. Mott and the need of his conserving his energies. His leadership at this time is of such great importance that he must restrict the boundary of his labors. Dr. Mott's activities in the recent Panama Congress have been a severe strain upon his strength. Those who were present at the Congress declare that the greatest moment of the whole Congress was when Dr. Mott made his moving and inimitable address of Sunday night before the great gathering. The whole company was profoundly stirred. It is safe to say that the influence of that one meeting will abide through all the days of their lives with those who were fortunate enough to be present.

In making this announcement concerning the lectures which Dr. Mott is to give with the university we desire it expressly to be understood that the lectures are not cancelled but simply postponed. The day will come, and that we trust speedily, when the duties of Dr. Mott will permit of this course at Washington. When the course is given it will attract wide attention and hearing. We hope to put the lectures in such form as that they may have the widest possible publicity. Meantime, assuring Dr. Mott of our regret at his necessary decision, we assure him of our deepest interest, and we sincerely trust, with multitudes throughout the land, that this terrible war, with all that it has brought upon the world may, like the shadows of the night, that is burdening the heart of the world, pass from us, taking with it forever the dread spectre of armed strife among the children of men.

The Corby Collection of Pictures.

The beautiful and valuable collection of pictures by Lucian Powell, which Mr. and Mrs. Wm. S. Corby have given to the American University, has been increased by still others generously added by the donors. The trustees are grateful for this accession to the equipment of the institution. To afford the pictures

a proper opportunity for display with suitable light, two rooms have been set apart as Trustees' Reception Rooms, in which these pictures will be grouped as a permanent collection.

The rooms are especially adapted to this purpose and the pictures will have every favoring accessory of hanging and surrounding. For the walls of the rooms are being tinted with a light cream-colored paint in the new stipple wall finish, so justly popular. The floors, thoroughly renovated, are to be covered with art rugs. Appropriate furniture will be installed with several mirrors. Closets are being fitted up. And thus at last the trustees will have a home worthy of their deliberations. The Corby Collection of paintings will have a permanent setting calculated to lighten their artistic interest. Henceforth all visitors to the university will be eager to view what will prove in a real sense a gallery of art. The view from the windows of these Reception Rooms, looking out over the great western Potomac slope toward the Blue Ridge Mountains, must be seen to be realized in all its beauty and charm. We doubt if any university in America can match the prospect from the western windows of our College of History building.

"Lodestar and Compass"—The Souvenir of a Memorable Occasion.

The little book entitled "Lodestar and Compass," of which some of our readers doubtless possess copies, is the souvenir volume which the Trustees of the American University have issued to commemorate a memorable occasion. All who were present at the opening exercises of the university felt that the occasion deserved some fitting form of permanent remembrance. To this end the Trustees of the university, at their own expense, have published this book, and desire that it shall be circulated as widely as possible. A large edition has been prepared. This will make it possible to place the volume in public libraries, and in the libraries of universities and colleges throughout the land. We are anxious also that this book,—not only a commemorative publication, but also a volume of real value in itself,—shall come to the hands of the presidents of our institutions of learning, to professors, ministers, public men and other moulders of opinion. Especially do we desire that the book shall be read by young men to whom the Church and the nation are looking for leadership and the quickening impulses of new ideas. Here is the peculiar field where, without doubt, the book can accomplish greatest good. We trust that a great host of our young men coming up into places of influence and leadership shall study carefully this book. To whomsoever it comes the book carries with it the best wishes of the university, of the Trustees and of the Chancellor, the desire being that this great enterprise speedily may be brought to its rightful place in the hearts of our thoughtful and influential people. Anyone who especially is interested in this matter is invited to communicate with the Chancellor. In order that the book may receive as wide a distribution as possible some friends have been paying for the expense of a number of volumes to be given to others. It has been suggested also that such gifts may be made concrete through a contribution to the Bishop Hamilton Lectureship Fund, one or more of the volumes in return for this contribution being given either to the donor or to anyone whom the donor may indicate. Help us to spread everywhere this book, in which is

stated clearly the motive and purpose of the university. As one of the foremost educators of the land has written in a letter to the Chancellor: "Wherever this volume comes it cannot fail to be a promoter of utmost value to the cause."

The United States Weather Bureau at the American University.

We present in this number of THE COURIER two pictures, illustrative of the operations of the Weather Bureau in the observation of solar radiation and in the measurement of water evaporation. Professor H. H. Kimball, who is in charge, has written the interesting and instructive description which follows:

Figure 1 gives an interior view of the solar radiation observatory of the U. S. Weather Bureau, located in the southeast corner room on the second floor of the College of History building on the campus of the American University.

In the foreground at the left of the picture is shown the registering apparatus by means of which a continuous record is obtained of the total amount of heat received on a horizontal surface by direct radiation from the sun and reflection from the sky. The register is in electrical connection with a Callendar pyrheliometer which is mounted on the cap stone of one of the ventilating flues of the building, at a height of 451 feet above sea level. There is practically no obstruction between this pyrheliometer and the sky in any direction down to the true horizon.

On the top of the second case from the left front of the picture is shown a Marvin pyrheliometer, which is used to measure the amount of heat received by direct radiation from the sun, on days when the latter is unobscured by clouds. Its readings are more accurate than are the continuous records from the Callendar pyrheliometer, and they are therefore used to check the latter. When in use it is exposed on a shelf outside a southeast window in the morning, and a southwest window in the afternoon.

Both these pyrheliometers make use of the principle of the electrical resistance thermometer, in connection with a Wheatstone bridge, the latter, in the case of the Callendar pyrheliometer, being self-adjusting.

A close relation has been found to exist between curves representing diurnal variations in radiation, evaporation, air temperature, and the relative humidity of the atmosphere. It has also been shown that there is a close relation between these curves and one representing the diurnal variations in the transpiration of certain plants. The relation is such that Briggs and Shantz have stated in a recent publication of the Department of Agriculture that "Radiation may be looked upon as the primary causative factor in the cyclic changes." It is therefore evident that solar radiation measurements are of fundamental importance to meteorologists and biologists.

To the right of the window in the picture is shown a switchboard, which also carries a rectifier, by means of which the alternating current of the electric lighting circuit may be used to charge the batteries necessary to operate the various instruments.

The solar radiation observatory at the American University is one of four maintained by the Weather Bureau, the other three being at the University of Wisconsin, Madison, Wis.; at the University of Nebraska, Lincoln, Nebr., and at Sante Fe, New Mexico. The observation from all four stations, which represent four quite different types of climates,

UNITED STATES WEATHER BUREAU—SOLAR RADIATION PLANT FIGURE 1

are reduced at the American University, and prepared for publication in the Monthly Weather Review in such form that they may be readily compared.

Figure 2 shows a standard evaporation equipment of the Weather Bureau, installed on the campus of the university. In the center of the picture is the evaporation pan. This is kept nearly full of water, the depth of which is very accurately measured each day to ascertain how much has been lost by evaporation. To the right and a little back of the pan is a standard rain gage, for measuring the depth of the rainfall each day; and to the left is an instrument shelter, in which are the thermometers for registering the maximum and the minimum temperature of the air each day. An anemometer for measuring the air movement over the pan is not shown in the picture.

Mount Vernon Seminary to Build Close to The American University.

The Mount Vernon Seminary, so long and so widely known as one of the foremost institutions in the National Capital for the training of young women, is planning to establish a great plant just diagonally across the street from the American University. The seminary management has purchased a noble tract of land on the elevated ridge which is traversed by Nebraska Avenue. Here there is to be erected a magnificent building of size sufficient to house the seminary and of an architectural dignity in keeping with its past history and future scope. In addition, of course, there will be all the added resources which accompany today a working, progressive young women's finishing school of the highest grade. The grounds are com-

modious enough to afford every help needed. The location is the most salubrious in the whole District of Columbia. The environment must be seen to be understood in all its beauty and charm. It is hoped that the work of actual construction on the new building may be begun this spring. We certainly trust that this may be true.

The accession of the seminary as a neighbor to our own university in its permanent home will strengthen the appeal of this newer quarter of the metropolis. Just below us is arising the famous new national cathedral. Every year is demonstrating that in the not distant future the glory spot of Washington will be the slope and ridge which is crowned by the American University. Meantime we extend to our sister institution, our new neighbor, the heartiest welcome. We shall be glad to extend to the coming students any help that our resources may afford. Our grounds will be open to them, our halls will greet them often, we trust.

Why Not Place the Francis Asbury Statue at the Entrance to The American University?

The nation-wide effort that is being made to erect a statue of Francis Asbury in the National Capital will enlist the sympathy and commendation of all who are acquainted with the story of the great itinerant pioneer preacher. No one is acquainted with the deeper impulses and spiritual forces that underlie our American civilization unless the story of Francis Asbury has been mastered. Here was one who forsook the delights of home and never knew the comforts of wife and family for the welfare of his nation and his time. In these days, when we are coming to know that religion and life are one, it is no straining after effect to connect the labors of the itinerant preacher with the material success that has come upon us as a people until the wilderness indeed has

blossomed like the rose. Where better could this typical pioneer preacher stand, this heroic figure, than at the Federal City of the nation? How better could he be seen than on horseback where all eyes may mark the very form in which he rode—steed, saddle and bags, cloak, preacher hat, and Bible.

In the halls of the American University, painted on wood, there is preserved as perhaps the choicest treasure of the university an original painting of Francis Asbury taken from life. There he is seen as if about to speak. On his face are the marks of the master of men; and yet in his eyes is the unmistakable sense of loneliness, gathered, without doubt, from the lonely haunts which through the decades he traversed. Are we mistaken in feeling that the epic of this man's life does not lend itself to a best interpretation if the national statue which is to commemorate him is placed in the market or at the cross-roads of a great city where the multitudes surge? John Hay said concerning the national monument to Abraham Lincoln that it ought to be withdrawn from the center of travel and the mingling crowds. There is something peculiarly appropriate to the Lincoln national monument that it should be isolated on a slope by itself, above the Potomac. It is in keeping with the life-story of Lincoln whose experiences set him apart from his fellows. For this same reason we sincerely trust that the committee having charge of the Francis Asbury statue at Washington will not place it on the Mall or in some down-town public square. It ought to be on a height above the city, looking down upon the dwellings of men. It ought to be in a setting where the picturesque help of nature, and the sweep of field and forest and river and sky would put the figure in surroundings that would recall the man in actual life. Like Lincoln, Asbury ought to be withdrawn from the haunts of men. He ought to have a background in keeping with his experiences. He ought to have an environment that forever would recall that life of wandering over rugged places which felt the touch of his horse's hoofs only to break forth into singing. For this reason we earnestly advocate the placing of the proposed figure of Francis Asbury at the junction of Massachusetts and Nebraska avenues, on the ridge which is the highest point in the District of Columbia and is the most striking and imposing spot in the National Capital. On one side the ridge slopes away the city; toward the left the prospect widens westwardly into the noble Potomac Valley and away into blue mountains framing the horizon. Here, on horseback, Francis Asbury ought to stand. In less than twenty-five years this neighborhood will be one of the most frequently visited and highly desired sections of the national metropolis. Colleges, Seminary, University, Cathedral, homes of leading citizens, slopes, fields, and groves, great boulevards leading to utmost stretch of the Capital all will be there. We beseech those who are responsible for the erection of this national tribute to a man who helped materially to make America to remember the future years in erecting his memorial. It militates nothing against this idea to say that it is also in keeping that the spot just described is the main entrance to the grounds of the American University.

AMERICAN UNIVERSITY PLANS FREE EDUCATIONAL MOVING PICTURE SHOWS.

[Reprint from the *Washington Evening Star*.]

Bureau of Commercial Economics to Cooperate at Saturday Afternoon Meetings in Depicting Scenes—Industrial and Other Life.

The American University, in co-operation with the Bureau of Commercial Economics, an institution devoted to the dissemination of knowledge by means of the moving pictures and the stereopticon, has inaugurated a Saturday afternoon series of lectures at the college of history, on the grounds of the university, Massachusetts and Nebraska avenues.

The series is intended more especially for public school teachers and the senior scholars in the high schools, and for their convenience they will be given at 3 o'clock Saturday afternoons. Other adults and children accompanying them, however, will be welcome.

The lectures, it is said, will reveal to the eye the life, scenery, plant and animal life, the different industries—fisheries, mining, agriculture, manufacturing in its multitudinous phases—and the natural wonders of the different countries of the world. Official films of the

governments of Canada, the Latin American republics, India, China, Japan, Australia, New Zealand and South Africa will be shown. There will also be films of college athletics, Boy Scouts and Campfire Girls, which are meant to be incentives to young people to seek a better preparation for their lifework.

Government films will show the wonders and beauties of the great national parks of the United States, such as the Yellowstone, the Yosemite and the Grand Canyon of Arizona.

The United States has had prepared with great care and no small cost films picturing the different tribes of Indians in their native habitats in order that the Indian life that is rapidly passing might be preserved for posterity. These films will be shown in the course of lectures.

As the lectures are part of the extension work of the university, no admission fee will be charged.

To reach the university grounds visitors should take the Tenleytown cars and secure a transfer at Macomb street.

CAPITAL RIVALS BOSTON.

Becoming a Great Intellectual Centre.

City Rich in Schools and Universities and Other Institutions Dedicated to the Advancement of Learning—The Work of the American University and What Some of its Students and Teachers Are Doing for the Nation.

[Regular Correspondence of the *Transcript*]

Washington, March 10.

Washington is rapidly becoming the great intellectual centre of the United States. There are more names in *Who's Who* from Washington than from any State in the Union. In the Government departments and bureaus there are between twenty-five hundred and three thousand scientists. It is claimed that in one suburban section of the city there live more men given to the intellectual pursuits than in any other place of the same size in America. Washington is rich in schools. The Roman Catholics have two universities, the Catholic University of America, and Georgetown University. Then there is the George Washington University, and last year the American University began its work. The last-named school has commanded the attention of those interested in the advancement of learning at the national capital because of the peculiar plans of its brilliant chancellor, Franklin Hamilton. These plans, in addition to regular university work, which is to be developed as rapidly as funds will permit, include travelling fellowships, the use for research purposes of the wonderful scientific collections in the different Government departments and bureaus, and lecture courses.

The university confines itself to graduate work. No one is admitted as a regular student who has not first won his baccalaureate degree. This is in many ways an attractive idea, but it is a question whether or not the American University can succeed in a plan that has been tried and given up by Johns Hopkins, Clark, and the Catholic University. The future must determine whether those in authority are right in this matter. It is now a graduate school which has no ambition to grant a large number of degrees, but seeks to live up to the highest educational ideals. In the working out of the three plans there has been an honest endeavor to live up to these ideals. Of the five fellowships granted at the first convocation two are at Harvard,

one is at the Johns Hopkins, one at the Chicago, and one at the Illinois State University. Among the students at work in the Government scientific bureaus are some of remarkable ability. One of these men has discovered three agricultural laws one of which discoveries has added hundreds of millions of dollars to land values.

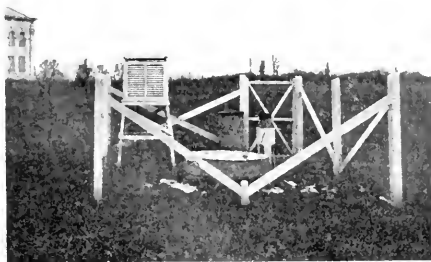

USING FILMS IN THE LECTURES

Chancellor Hamilton always has magnified the lecturership plan. By this means he holds that the latest results of investigation and discovery may be given the largest publicity. His plan in fact is double: Courses of lectures at the university, open to the public, and extension lectures delivered in Washington and later in other cities. Dr. Frank W. Collier and Professor Samuel J. MacWatters have been busy with the extension work in the District of Columbia. Lately a new plan, which will be far-reaching in its influence, has been instituted at the university. Mr. Francis Holley, director of the Bureau of Commercial Economics, an institution dedicated entirely to educational work, has been so impressed with the high educational ideals and the superb location of the university that he has joined with the university in inaugurating a new extension lecturership. The Bureau of Commercial Economics controls hundreds of thousands of feet of films of all countries of the world. Every Saturday afternoon for the remainder of the academic year these films will be used at the lectures. Films from Australia are now being used describing life and industry in Australia. In turn, the United States Government will send films to Australia picturing life and industry in America. The idea of the university is that such films have not only educational value in the ordinary sense, but they have a large power for the promotion of peace. When the people in all lands see the constructive work of peace they will be slow to allow their rulers to plunge them into the destructive work of war.

BEST KIND OF TRAVELOGUES.

These lectures are given on Saturdays in order that the school teachers and high school students may have the benefit of them. They are in fact the very best kind of travelogues, and have proved very successful in such large cities as New York, Philadelphia and Chicago. The American University is now offering Washington what these large cities have enjoyed. Before this course was inaugurated Mr. Holley and Dr. Collier submitted the plan to high Government officials, ambassadors and foreign ministers and some of the leading scientists of Washington, and it received their enthusiastic approval.

Courses of lectures have been numerous this year. Two factors in this plan we were interested to see in their working: the number and quality of the lectures. The university site is just one-half hour by trolley from the centre of the city. This would mean nothing to Greater Boston people who are accustomed to ride a number of miles to attend a lecture, a concert, or the theatre; but Washington's lecture and entertainment area is compact, and the people are not accustomed to travel any great distance to get to a lecture or a theatre. Then the number of lectures of different kinds is very large. If we may judge by the most recent lectures, Chancellor Hamilton's plan is rapidly overcoming those drawbacks of habit. He is offering the kind of lectures that are not given elsewhere, keeping the quality high, is beginning, as one scholar expressed it, "to make the people ashamed not to come."

U. S. WEATHER BUREAU—EVAPORATION PLANT FIGURE 2

The policy is to have every year at least one course of lectures on the English Bible. This policy rests upon the conviction that the English Bible has a large place in any education worthy the name. But the course may treat the Bible as a whole or some section of it. This year the subject was the "Sermon on the Mount." The lecturer was Dr. Ismar J. Peritz, a man very interesting in himself; by race a Hebrew, born in Germany, and by choice a Christian minister who is teaching Semitics and the English Bible in Syracuse University. His encyclopedia articles have made him a scholar of international reputation. Bringing his native Hebrew spirit and his Semitic and New Testament scholarship to the "Sermon on the Mount," much was expected of him. His audiences, made up as they were of scholarly clergymen and serious-minded laymen, who were anxious to get the latest word on the teachings of Jesus as found in the "Sermon on the Mount," were a challenge to the lecturer. But his audiences grew from day to day, and it was evident that this lecturer measured up to the chancellor's ideal. Dr. Peritz had the two essentials for such lectures, scholarship and moral passion; and thus his lectures were popular in the best sense of the word.

GRANT SERIES BY MACWATTERS

Literature seems to be the most popular subject with Washington people, judging from the increasingly large audiences that followed the course on the interpretation of the masterpieces of English literature. Professor MacWatters having spoken in many churches and schools, and before clubs, was better known than most of the lecturers who preceded him. He is different, however, from most interpreters of English literature. From his subject it is evident that his bent is toward the poets who treated of the deeper things of the human spirit—in fact, the philosophical and religious poets. The first lecture was an index of the man and his method. It was a comparative study of Omar Khayyam's "Rubaiyat" and Browning's "Rabbi Ben Ezra." The Rubaiyat is a fad with a certain class of people, and they came with their copies of Omar so that they might the better follow the lecturer. The speaker began by describing the Persian poet and his masterly English translator, Fitzgerald. Then he declared that the Rubaiyat is no poem at all, but a number of quatrains of a sensually minded agnostic and cynical pessimist. Those who brought their copies of Omar soon lost interest in them, their attention becoming absorbed in the strength, beauty and purity of Browning's optimism as the lecturer showed they were found in "Rabbi Ben Ezra." The second lecture was the "Drama of St. Paul," an original arrangement in

dramatic form, by the lecturer, of the words of the great apostle. The third of the course was selections from American poets, which was considered by many the best of the series. The faith of Tennyson was the subject the following day. It was the product of careful study and religious insight. Browning's "Saul" was the subject of the fourth lecture. Here again we see the lecturer's leaning towards philosophical and religious subjects; and in this poem he found the deepest things in philosophy and the highest in religion. The closing lecture of the course was in Wagner's "Parsifal," a fitting climax to the series.

CHANCELLOR'S PLAN JUSTIFIED

There are a few outstanding characteristics of MacWatters' interpretation of literature. He gives the great poets an opportunity to speak for themselves, not smothering them with commentary; his expositions have the marks of reality; scholarship is in evidence, but learning does not crush out life; and the fine personality of the man is inseparable from his work. No course could more fully justify the chancellor's plan than this one. In fact, Professor MacWatters will be compelled, because of the demand made by the large audiences that attended his lectures, to give another series before the close of the present academic year.

The university is very young, and the great war has hindered it, as it has about everything; but the fellowship system, the plan to use the treasures of knowledge in the Government bureaus, and the system of lectures have fully justified the chancellor's original plan. The university is fast becoming a factor in the life of the national capital.

W. E. B.

A Bill Now Before Congress Emphasizes the Wisdom of the Plans of The American University.

A bill offered in the Senate by Senator Gallinger and in the House by Mr. Abercrombie very clearly indicates that the direction of effort now being made by the American University is the wisest possible direction in view of the unique opportunities that come from the fact that the university is located at the National Capital. The bill in question aims at protecting the standards of educational institutions in Washington and preventing any abuse of the power of degree-giving. Proper provisions cover all needed safeguards for such purpose.

But the vital thought underlying the bill, the clear purpose of the originators of the measure, grows out of the very same perception of unique opportunities for study and research work at Washington that in the beginning evoked the dream of the American University. It is true that Bishop Hurst so clearly saw this field of opportunity that he, with that tremendous driving power which was the mark of the man, sought to translate vision into task. But others before Bishop Hurst saw this same field, and others since his day have dwelt upon it and formulated many plans and enterprises that covet treasures now clear to all.

After providing for the creation of a board to be known as the University Board, the bill gives this board three specific duties. These duties sound so familiar to the present workers in the American University that the sponsors of the bill must forgive us if we wonder whether they have been reading the catalog and prospectus of the American University. The board is to "inquire into the scientific operations of the Government and recommend * * * measures for utilizing for educational or research purposes such scientific operations and the governmental facilities connected therewith." We thank the honorable mem-

bers responsible for this bill for this reiteration of the work to which some time ago we set our hands.

A second provision concerning the proposed University Board is that it "shall advise and direct adult research students * * * in the use of such governmental operations or facilities and to organize and carry on any post-graduate teaching and research work for which Congress may hereafter appropriate or accept funds." That is just what our Institute of Research under the very capable leadership of our Director of Research, Dr. Frank W. Collier, is now doing.

As if, indeed, the board seal of the American Government were desired to dignify the Fellowship plan, which is the crown of all the efforts of the American University, mark this last provision concerning the educational duties of the proposed University Board. The board shall "promote exchange of professors or students between universities in the United States and foreign universities, and administer any funds for this purpose which may be appropriated or accepted by Congress." This is simply the Fellowship plan of the American University in so many words. May all the Stars be prosperous to its widening course. We thank the distinguished gentlemen in both houses of Congress for the commendation of our work which their bill offers. We have other reasons for gratitude to Senator Gallinger who helped us mightily in days when such help was gracious indeed. May he long remain to dignify and maintain the high traditions of the Senate of the United States of which he is so distinguished a leader.

No. 4

BISHOP JOHN W. HAMILTON

BISHOP JOHN W. HAMILTON, CHANCELLOR OF THE AMERICAN UNIVERSITY.

Bishop John W. Hamilton has been elected Chancellor of the American University. He was elected to succeed his brother, Franklin Hamilton, who at the General Conference of the Methodist Episcopal Church, held during the past month at Saratoga Springs, N. Y., was elected a bishop and appointed as resident bishop at Pittsburgh. Thus one brother succeeds the other as an active bishop in the church, while the retiring bishop succeeds his younger brother as chancellor of the university. The situation is unique and merits a word of reminiscence.

Bishop John W. Hamilton gave the first dollar toward founding the American University. In the early days of Bishop Hurst's titanic struggle to inaugurate the new university he had no closer friend and more ardent sympathizer than Bishop Hamilton. The two again and again were brought into closest association in their common interest in the great work at Washington. Again and again Bishop Hamilton

brought help to the wearied hands of Bishop Hurst. Always and everywhere the younger bishop turned the thoughts and gifts of his multitudinous friends toward Washington. This interest upon the part of Bishop Hamilton persisted through the administration of Bishop McCabe. Needless to say, it was intensified when Bishop Hamilton's youngest brother, without either the suggestion or indeed the knowledge of Bishop Hamilton was elected Chancellor of the university.

Throughout the service of Chancellor Franklin Hamilton, as the head of the institution, Bishop John Hamilton has been his closest and most valued adviser and helper. Together the two brothers wrought with unflinching zeal to advance the work which now at last was beginning to attract the attention and trust of the most conservative educators. The older brother, having the larger circle of friends and helpers, slowly but surely moulded his vast reach of acquaintanceship and financial backing into an assured support for the university. It is no exaggeration to say that Bishop Hamilton has had quite as much or perhaps more to do with the recent notable progress and success which

have come to the American University than has Chancellor Hamilton. Not a few of the bishop's plans have helped materially in giving present-day vitality and real distinction to the university in its new and chosen field of life. In real crises of the university's struggle the enterprise has found a resourceful and indomitable leader in its behalf in Bishop Hamilton.

Nothing, therefore, was more natural than that, upon the removal of Chancellor Franklin Hamilton, the trustees of the university instantly should turn to one of their fellow trustees, this long tried friend, and ask him to become the new Chancellor Hamilton. Bishop John Hamilton has accepted the trust and already has assumed the care of the institution which immediately must be relinquished by Franklin Hamilton because of the heavy and pressing duties of the great Episcopal area committed to his care. But the university will gain by the exchange, for it is safe to say that no man in the Methodist Episcopal Church, and few men in the country, could be found so imperially equipped for the task given as is Bishop John Hamilton. From earliest youth he has been a burden bearer, accustomed to difficult situations and seemingly impossible demands. Seldom or never has he failed to accomplish more than was asked or expected. He has lived the strenuous life. Times without number has he wrested victory out of defeat. Yet always has this been done without leaving behind the sting of rancor or the residuum of distrust. For if there is any one thing in which all unite in ascribing to Bishop John W. Hamilton it is the happy grace and real gift of an infinite friendly tactfulness. While efficient accomplishment follows the work of his hands, real cause for mordant grievance against John Hamilton exists with no man.

The American University counts itself happy, indeed, and has vast reason for rejoicing that the new Chancellor has come to his kingdom for such a time as this. Bishop John Hamilton is too well known to need here any biographical introduction. His induction into office instantly brings new prestige to the university and will multiply its clientele in every field, as the days go on. With characteristic forehandedness the new Chancellor is laying plans for a great forward movement in behalf of the university. Already he has secured cash and pledges sufficient to endow one lectureship in the university and has made good headway toward the endowing of a second lectureship. Thus with added increment will go on the campaign for the American University. This campaign designedly is aimed at attaining two things,—a wider circle of friends and a new attitude of helpfulness toward increasing the resources of the institution. No one is better fitted to lead optimistically and resistlessly in this forward movement than is the new Chancellor. On the recent Convocation Day Bishop John Hamilton was honored by the trustees of the American University with the gift of the degree of L.H.D., Doctor of the More Humane Letters. This highest degree which a university can confer symbolizes the faith and anticipation of all friends of the university in the leader who now comes to guide the destinies of an enterprise freighted with such vast possibilities for the future and with such prayers to God for its success. Happy indeed and divinely favoring be all auspices for this new great Chancellor.—*illuminatus, fortunatus, beatus!*

THE AMERICAN UNIVERSITY.

By CHANCELLOR JOHN W. HAMILTON.

The announcement that I have been elected chancellor of the American University has been published widely. It would seem anomalous for me to retire from one responsibility having reached the age limit, to assume another no less arduous and equally important.

When my brother was elected to the episcopacy the Bishop resident in Washington and one of the leading trustees of the University came to me to obtain my consent to accept the chancellorship if elected by the trustees. I responded promptly, "No. I am laying down cares at the voice of the Church. Why should I elect to take up others equally responsible?" But one Bishop after another continued to make the same request, until I found but one sentiment and a unanimous election in the annual meeting of the trustees.

A substantial pledge toward the erection of another building was immediately made by one of the trustees, \$1,000 in cash was placed in my hands toward a fund for free scholarships and \$500 given toward the improvements of the grounds, and the retiring chancellor announced a new bequest of \$100,000. If this order of procedure is to continue it will certainly be a matter of interest to be associated for a time with the institution which so commands the confidence of its friends. I am advised that large bequests in wills have also been made and now that the University has such assured foundation a number of very helpful annuities are offered.

It is certain no better inducements are afforded anywhere for the wise and productive use of money than in this beautifully and eligibly located school. Occupying the highest point of land in the District of Columbia, overlooking the city, Arlington and the Potomac River, the one hundred acres within the city limits give the landscape artists and the architects of buildings an opportunity not to be found elsewhere in or near the capital.—*The Christian Advocate.*

Boston, Mass.

ACTION OF TRUSTEES ON THE DEATH OF BRAINARD H. WARNER.

WHEREAS, It has pleased our Heavenly Father in His allwise Providence to remove from our earthly brotherhood to the eternal home Brainard H. Warner; and

WHEREAS, While burdened with heavy responsibilities of business, Brainard H. Warner gladly found time to devote himself to many religious, educational and philanthropic works; be it, therefore,

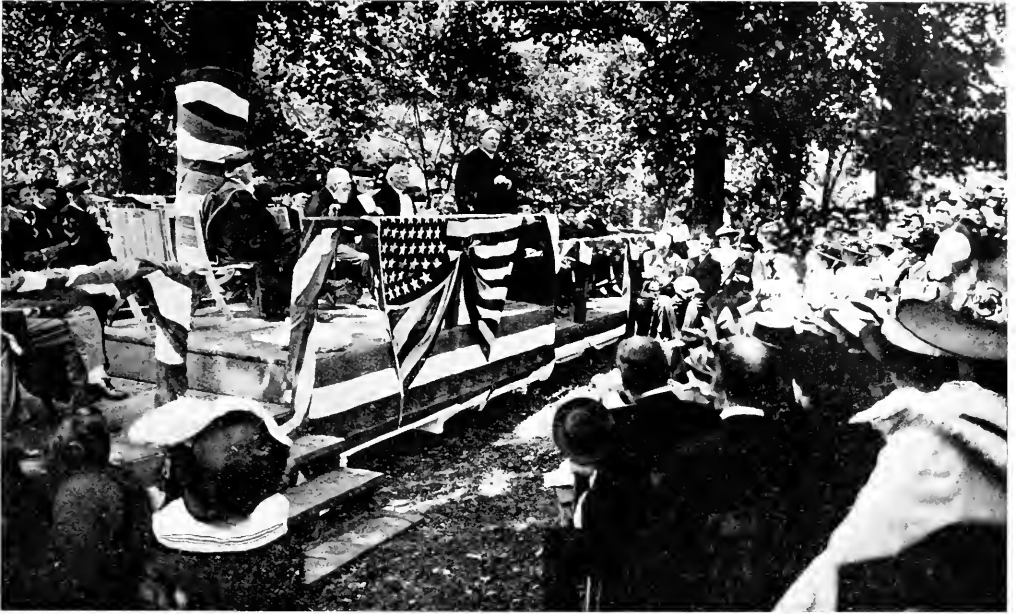

Resolved, First, that the Christian Church and the entire city of Washington have suffered a great loss in the decease of this strong leader and faithful citizen;

Resolved, Second, that we as members of the Board of Trustees of the American University express our sense of bereavement through the taking from us of one whom all loved and admired as a Christian gentleman and brother;

Resolved, Third, that these resolutions be spread upon our minutes and published in the AMERICAN UNIVERSITY COURIER and that a copy of the same be sent to the family of our departed brother.

TESTIMONIAL TO BISHOP CRANSTON.

The Second Convocation of the American University was made the occasion of a most appropriate testimonial to Bishop Cranston, one of the trustees of the institution. The members of the Board of Trustees felt that this was the fitting time to show their appreciation of the man whose active service as senior bishop of the Methodist Episcopal Church was ending on the day which marked the completion by him

THE AMERICAN UNIVERSITY SECOND CONVOCATION—BISHOP QUAYLE SPEAKING

of fifty years in the Christian ministry. And so it was planned to give formal expression to this feeling on this particular day. A committee long had taken under advisement the best manner of observing the day and finally three things were decided upon. And these three things, all of which were fulfilled, made the day memorable.

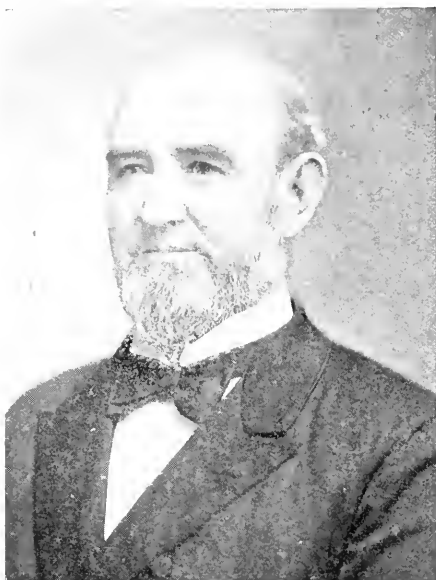

The first was the action of the trustees in conferring upon the Bishop the degree of L.H.D., Doctor of the More Humane Letters. At the public convocation exercises this degree, the highest degree which a university can confer, accordingly was given to the Bishop by the Chancellor of the university. It was conferred at the same time that a similar degree was given to Bishop John W. Hamilton. And it was a most interesting sight, indeed, when the two bishops who during so many years had served side by side, stepped forth side by side to receive their academic distinctions. Hardly had the degree been conferred, however, when Hon. B. F. Leighton, President of the Board of Trustees of the university, came forward and in behalf of the university presented Bishop Cranston with an order for an automobile. Thus the second part of the testimonial as planned had been carried out. The third and final mark of appreciation for the man and bishop took the form of a banquet in the evening of Convocation Day, and in this the university was joined by the friends in the churches and the city of Washington. This occasion, which was crowded to the capacity of the hall where the function was held, was graced by the presence of the President of the United States. But the banquet itself deserves a notice at more extended length. This will be found in another column. Here we desire to record our deep and lasting appreciation of all that Bishop Cran-

ston has done for our work and to rejoice with his legion of friends that he, in no real sense, is retired from active work, but has simply transferred his activities to other fields. The great work to which now he is dedicating his powers will give vast and congenial scope to all his efforts. May our friend be stayed in strength and health; to see the desire of his heart and to accomplish the mighty task to which he has set his hands.

BANQUET TO BISHOP CRANSTON.

On the evening of Convocation Day, Friday, June 2, the people of Washington and the surrounding district gave to Bishop Cranston a testimonial of their appreciation and affection which will not soon be forgotten. At the Maison Rauscher, in the heart of the city, the company gathered from far and wide to do honor to him who after twenty years was laying down the cares of the active episcopacy. Seven bishops had come to speak their greetings. Many people from a distance were seated at the tables. There was every evidence of a real and enthusiastic interest in the purpose for which the company had gathered.

After a bounteous repast, Dr. McDowell, District Superintendent of Washington District, called the company to order. Then in rapid succession, beginning with the toastmaster, Dr. McDowell himself, speakers followed each other in laudations and expressions of honor and appreciation to the guest of the evening. A less sensible man than Bishop Earl Cranston might have been forgiven had he lost his head under such a rain of praise. But most of it really was warranted, all of the words were sincere, and, taken all in all, the occasion was a fitting and thoroughly justified tribute to a man who has left

BISHOP EARL CRANSTON

a profound impression not only upon the national capital but also upon the country as a whole. Bishop John Hamilton, Bishop Berry, Bishop Alphaeus Wilson earlier in the day, Bishop Nuelsen, Bishop Franklin Hamilton and finally Bishop Quayle all spoke interestedly and affectionately.

A national significance was given to the function from the fact that the Secretary of the Navy, Hon. Josephus Daniels, was present and made an address that appealed to all. Not to be outdone, Woodrow Wilson, President of the United States, showed his interest in a most unusual manner. Being engaged at Annapolis both for the day and also the evening, the President none the less planned to be present. To do this he had to motor over to Washington for the banquet and then later in the night motor back to Annapolis again in order to meet an engagement there. The address of the President in commendation of Bishop Cranston was most felicitous. The President spoke especially of the spirit of the Bishop and of the influence that it never failed to exercise upon him when with Bishop Cranston. The remarks of the Chief Magistrate showed sincere feeling and they evoked universal and enthusiastic approval. Truly it was a scene long to be remembered. Earl Cranston has had many experiences in his life, but none that will abide more sweetly, we believe, than this last gathering of the faithful around their beloved leader. He goes out to a great task. The memory of this last testimonial banquet ought to hearten him through all the days that are yet to be. May those days be many!

SECOND CONVOCATION JUNE 2, 1916.

Bishop John W. Hamilton has been elected Chancellor of the American University to succeed his brother, Franklin Hamilton, who resigned to take up

his new work as a bishop of the Methodist Episcopal Church. Bishop Earl Cranston was tendered a fine testimonial at the convocation exercises in the afternoon, at which he was presented with an automobile. In the evening the city of Washington joined in a true love-feast banquet, at which, among many other notable guests, there were present and spoke Secretary Daniels and the President of the United States.

Bishop Cranston and the new Chancellor together were honored at the hands of the university trustees who conferred upon the two bishops the degree of L.H.D., Doctor of the More Humane Letters. Bishop William A. Quayle made a remarkable convocation address on the subject, "The Scholar and His Times." Those who have heard this poet-preacher know how useless is the effort to give adequate reporting of his utterances. Suffice to say that the Bishop in discoursing on John Milton and the quickening lessons drawn from his career never were more eloquent, happy or effective. The hearers were enraptured.

A great company had filled the new open-air amphitheatre in the romantic tulip grove on the university campus to mark this Second Convocation of the American University. It was Friday, June 2, in the afternoon. Many notable citizens of the national capital were present. Seven bishops were on the platform and took part in the exercises. The weather was the caressing breath of a perfect day in June. The sylvan shade, the green slopes reaching upward to form a natural amphitheatre, the bright academic costumes of those participating in the convocation, the historic significance of the hour which was witnessing the first assignment of degrees in the life of a new university, the noble spaciousness of the university campus itself,—all helped to make the occasion memorable and to give a sense of exaltation to those who were so fortunate as to be present. It was a record day in the life of the American University.

Ten fellowships were granted on the recommendation of the University Board of Awards. In addition to the two honorary degrees given, three degrees were conferred upon candidates in course. The work of the three students thus honored has been pronounced to be of the most brilliant character, each candidate having added constructively to the sum of human knowledge. One discovered three laws of agriculture which will serve to enrich millions of acres of farming land in this country. The second has made clear the methods of nitrogenous enrichment of the soil. The third has created a more economical way of producing "Baby-beef." Doctorates in philosophy were awarded to Elbert Clyde Lathrop and Junius Sidney Cates. Morton Oscar Cooper was made Master of Arts.

The fellowship awards for the scholastic year 1916-1917 were as follows:

| NAME. | NOMINATING INSTITUTION — SUBJECT AND PLACE OF STUDY. |
|----------------------------|---|
| Clyde Foster Armitage.... | Boston University, School of Theology — Religious Journalism—Columbia University. |
| Eli Edward Burriss, Jr.... | University of Pennsylvania — Philology—University of Pennsylvania. |
| Clara Frances Chassell.... | Cornell College—Religious Education—Columbia University. |
| Miriam Caris Gould..... | University of Pittsburgh—Psychology—Columbia University. |

- Archibald TremayneGarrett Biblical Institute—Semitics—Yale University.
- Thos. Jackson Woofter, Jr.University of Georgia—Sociology—Columbia University.

FIRST DEGREES CONFERRED BY THE AMERICAN UNIVERSITY.

The honorary degree of Doctor of the More Humane Letters was conferred upon Bishop Earl Cranston and Bishop John William Hamilton, in recognition of their many years of valuable services to their church and country. More detailed account will be found elsewhere in our columns.

The degrees in course were conferred upon the candidates of whom we give brief sketches as follows:

Elbert Clyde Lathrop, son of the Rev. John R. T. Lathrop, A.B., D.D., and Sarah A. Lathrop, A.B., née Zeigler, was born in Greensburg, Ind., October 6, 1885. He received the degree of Bachelor of Arts from DePauw University in 1907, and during the year 1906-1907 acted as Instructor in Chemistry at DePauw University. The following year, 1907-1908, he was a member of the Instructional Staff of the Department of Chemistry of Purdue University, Lafayette, Ind., where he also carried on research work in chemistry, and received instruction in biology. In 1908-1909 he was Consulting and Analytical Chemist for the New York Analytical Laboratory, Brooklyn, N. Y., and at the same time served as Instructor in Chemistry in the night school of Pratt Institute.

In the spring of 1909 he entered the Office of Soil Fertility Investigations, Bureau of Soils, U. S. Department of Agriculture. In 1915, on the transfer of this Office to the Bureau of Plant Industry in the same Department, he was appointed as Biochemist, which position he now holds.

In the fall of 1914 he registered with the American University as a candidate for the degree of Doctor of Philosophy, with his major subject Chemistry, and his principal minor Plant Physiology. On June 2, 1916, he received the degree of Doctor of Philosophy from the American University, being the first candidate to receive a degree from the University. The subject of his dissertation is "A Chemical Study of the Organic Nitrogen Compounds of Soils and Fertilizers."

All of Dr. Lathrop's work was done under the personal supervision of Dr. Oswald Schreiner, Ph.D., who reported on his thesis as follows: "The broad scope of the subject-matter, the quantity of the experimental work performed, the difficulties in experimentation which were overcome, the importance and significance of the results achieved and the excellence of presentation of a difficult scientific subject, are all factors which especially make this dissertation notable in complying with the high standard of quality which the American University requires."

During the past seven years Dr. Lathrop has been engaged in chemical researches dealing with the subject of Soil Fertility. His researches have thrown much light upon the question of the chemical nature of the organic matter of soils and fertilizers and the biochemical changes which take place in soils. He is the author of a number of Department Bulletins and other scientific papers on the chemistry of soils and fertilizers. In 1911 Dr. Lathrop was awarded the Longstreth Medal of Merit by the Franklin Institute of Philadelphia for "important recent researches in agricultural chemistry."

Dr. Lathrop is a member of the Beta Theta Pi Fraternity, a Fellow of the American Association for the Advancement of Science, a member of the American Chemical Society, and a member of the American Society of Agronomy.

Junius Sidney Cates, son of Henry Manley and Mary Elizabeth Cates, née Bradshaw, born August 10, 1877, at Swepsonville, N. C.; spent early life on father's plantation; received a common school education at local school; received a degree of Bachelor of Agriculture from North Carolina A. & M. College at Raleigh, 1902; received a degree of Master

of Agriculture from same institution in 1904; entered the Graduate College of Cornell University in fall of 1904, pursuing work leading to the degree of Doctor of Philosophy; before completing doctorate work accepted a position with U. S. Department of Agriculture in fall of 1905 to carry on research work in the Office of Farm Management; for seven years was head of the section of Weeds and Tillage Investigations in this Office, making many important discoveries in the economic control of America's greatest weed pests, the results of which have been published in various departmental bulletins and scientific articles; while pursuing these studies, also discovered new fundamental laws on the relation of weeds to tillage needs of crops.

Was furloughed from this Office from 1912 to 1913, inclusive, during which time was Editor-in-Chief of the *Southern Planter*, the leading and oldest agricultural journal of the South, published at Richmond, Va. In capacity as editor of this journal took a strong part in the matter of legislation bearing on agricultural development in this region and was instrumental in fighting through the Virginia Legislature such pieces of constructive legislation as the Lime Grinding Act; the Lewis Dog Law, which is now looked upon as a model for the control of "predatory dogs"; the Bonding Commission Merchant Law; the Torrens Land Registration Law, etc.

In 1914 was called back to accept a position in an executive capacity in the Office of Farm Management, having in charge Farm Organization Investigations for the Northeastern States, which position he now holds.

Registered as candidate for Doctor of Philosophy at the American University in fall of 1914, taking as major subject Agricultural Economics, principal minor Agronomy; submitted dissertation on "Some Investigations on the Weed Problem in American Agriculture," and was granted degree of Ph.D., June 2, 1916.

Dr. Cates' work was done under the personal supervision of Dr. W. J. Spillman, whose comment on his thesis was: "It seldom falls to the lot of a single individual to make as many important discoveries as were made by Mr. Cates in pursuing these studies. I feel that they are unique in their enormous economic value to the farmers of this country."

Dr. Cates is a member of Kappa Sigma and Alpha Zeta fraternities; also of numerous economic and scientific societies.

Morton Oscar Cooper was born October 23, 1888, at Manson, Iowa; spent his life on a farm until he entered the Iowa State College in 1908, from which institution he received the degree of Bachelor of Science in Agriculture in 1912, ranking second in scholarship in the College of Agriculture. He was the winner of the Armour Scholarship, donated by J. Oden Armour, and the State Fair Scholarship, donated by the State Board of Agriculture of Iowa. He represented the Iowa State College as a member of the Livestock Judging Team at Kansas City, Mo., in 1911, and at Chicago, Ill., the same year. He was appointed instructor in Animal Husbandry at Delaware College, Newark, Del., 1912, and became Scientific Assistant, Office of Farm Management, United States Department of Agriculture, 1912, which position he now holds. He is joint author of a number of bulletins published by the Department of Agriculture. He is a member of the Phi Kappa Phi and Delta Sigma Rho fraternities, and of the American Farm Management Association.

Mr. Cooper received the degree of Master of Arts from the American University, June 2, 1916. His work was done under the personal supervision of Mr. E. H. Thomson, who said of Mr. Cooper's thesis: "I believe this thesis to be an excellent contribution to the literature on the economics of livestock production in this country. Mr. Cooper has shown excellent ability in the preparation of this work, not only presenting it in clear, concise form, but interpreting the results in a broad, philosophical manner."

THE AMERICAN UNIVERSITY SECOND CONVOCATION.

Grove Amphitheatre, University Grounds.—2:15 P. M., Academic Procession.—2:30 P. M., Convocation Exercises.—5:00 P. M., Band Concert and Lawn Reception.—Friday, June Second, MCMXVI.

MORTON OSCAR COOPER

EXTENSION LECTURES.

With the second semester the American University, with the coöperation of the Bureau of Commercial Economics, introduced a new phase of extension lectures. In the Assembly Hall of the College of History every Saturday afternoon, moving-picture lectures, describing the different countries of the world and different industries, were given. These lectures increased in popularity; and two series, covering the first and second semester, have been planned for the coming academic year.

LECTURES BY DR. MITCHELL CARROLL.

On the afternoons of April 1 and 6, Dr. Carroll delivered lectures on Rome, the Eternal City, and Our American Archaeological Heritage, respectively. Both lectures were illustrated by stereopticon. The slides illustrating ancient Rome were most uncommon, and those illustrating the second lecture were a revelation of the rich archaeological heritage of America. The lecturer proved to his audiences that archaeology is anything but a dry subject.

DR. THEODORE P. ION, D. C. L., ON THE EASTERN QUESTION.

The present world-war seems destined to end the age-long Eastern Question. Dr. Ion, one of the greatest authorities on international law, and a native of Greece, lectured on the timely subject, The Eastern Question, on April 25 and 27. In the first lecture he treated his subject from its origin to the Special Treaty of 1841. In the second lecture he began with the Crimean War and carried the history down to the present war, and helped his hearers to forecast the outcome of the present struggle. International law was seen to be a very real thing as elucidated by Dr. Ion.

DR. GEORGE S. DUNCAN ON THE ANCIENT EAST.

Dr. George S. Duncan, Ph. D., of the Johns Hopkins University, and Consulting Professor of Oriental Languages and Literature of the American University, delivered his first lectures at the American University May 2 and 5. The first lecture, The Sumerians in Mesopotamia, 5000 B. C.-2000 B. C., outlined the life of the peoples in the land between the Euphrates and Tigris rivers for three thousand years. The second lecture, Archaeology and the Old Testament, 2000 B. C.-500 B. C., was a scholarly and vivid account of the sources and development of the Old Testament. Dr. Duncan not only illustrated his lectures with lantern slides but with tablets thousands of years old.

DEATH OF JOHN BROOKS HAMMOND.

The older residents of the National Capital recall John B. Hammond as a stirring and prosperous business man who thirty years ago played a vital part in the life of the city. In war times John Hammond was engaged in civilian service in aid of the army and was so closely connected with army affairs that he long had been accounted a Civil War veteran. He had indeed been admitted to membership in one of the Grand Army posts of Washington. His memories of war experiences were varied and vivid. Among his treasures were a revolver and bowie knife, taken from a Confederate soldier near Cabin John Bridge, just outside of Washington. As a business man he held an important place in the city's activities. When a great gale had twisted out of plumb the high tower of the Metropolitan Methodist Episcopal Church and the tower was in imminent danger of falling, Mr. Hammond was commissioned to save the tower which he did by a most ingenious method of mechanics.

One of the great events in Mr. Hammond's life was his association with President McKinley. Mr.

Hammond served on the McKinley Inauguration Committee and was brought into close association with the President. He was instrumental in bringing to the university the old stepping stone of Metropolitan Church on which, as our friend often was wont to remind visitors to the university, many Presidents of the United States had rested.

The last twenty years of Mr. Hammond's life were spent as the Superintendent of the Grounds and Buildings of the American University. Faithful in his services, assiduous always in his love and care for the university, John B. Hammond came to be himself at the last one of the institutions of the university. His manly, dignified frame, his kindly, genial face, with its long patriarchal beard, his old-time regard for the prerogatives of his office and his pleasant friendly speech, all gave an impression to the visitors to the university that they were glad to cherish. But now our friend has fallen. He has heard his Master's call and has laid down all earthly cares. He will not soon be forgotten. His labor was builded into the walls of the growing university, not only in a physical but also in a deeper sense. We have faith that he will continue to rejoice in our progress. His relatives, daughters and wife, have our sympathy in their bereavement. In another column reference is made to the most fitting and highly interesting memorial which the widow of Mr. Hammond has established in the university to commemorate her husband. Thus for all time John B. Hammond is to have his name linked in fitting manner with the enterprise to which he gave twenty years of his life.

JOHN B. HAMMOND COLLECTION OF AMERICANA.

Mrs. Hammond, the widow of the late John B. Hammond, for twenty years Superintendent of the Grounds and Buildings of the American University, has planned a most interesting memorial for her husband. In keeping with Mr. Hammond's long and deep interest in the university, Mrs. Hammond is making a collection of various objects which her husband had gathered connected with historic events in the nation's life. These she is forming into a memorial gift to the university in her husband's name with the idea that they shall be kept together in perpetuity and bear his name. A large and appropriate glass case is being made to house these objects in the university library. There in excellent light they will be displayed to all visitors and form a most interesting adjunct to the growing treasures of the university.

A goodly number of American weapons and firearms form the basis of the exhibition. In addition there are varied examples of ammunition. Some Indian arms recall aboriginal days. A hatchet, brick and knife from the house in which George Washington was born are preserved. A fine portrait of President McKinley adds to the interest. Captured Confederate weapons, with a reproduction of the John Brown pike of Harper's Ferry which served one Confederate cavalry force as a lance, bring back stirring times of the Civil War.

In addition there is a truly remarkable collection of Confederate money. This gathering of Confederate and old State notes with one Confederate bond is worthy of any museum in the land. A bag of ancient

coins, of which several cover examples most rare in American numismatics, heightens the historic value of this truly notable memorial to a departed friend. Four large illustrated volumes, two on the Civil War and two on our Island Possessions, enrich the collection.

CLARENCE G. TORREYSON, NEW SUPER-INTENDENT OF GROUNDS AND BUILDINGS.

Succeeding the late John B. Hammond, Clarence Gregg Torreyson has been appointed Superintendent of the Grounds and Buildings of the American University. Mr. Torreyson for twelve years was the efficient and faithful assistant of Mr. Hammond in all the work of the superintendency. The new superintendent comes to his present position, therefore, thoroughly equipped and posted in all details of the work. He has earned his promotion and will justify it in every particular.

Superintendent Torreyson will live on the grounds of the university in a house which now is being fitted up with modern improvements for his occupancy. This house of the superintendent, as it will be known, is on Nebraska Avenue in close proximity to the College of History. When all repairs are completed it will be a delightful home for our superintendent, but more, it will result in having a responsible representative of the university present to receive all visitors.

The American University Courier

Entered as second-class matter February 27, 1909, at the Post Office at Washington, D. C., under Act of July 16, 1894

Volume XXIII

Washington, D. C., September, 1916

No. 1

The Ex-Chancellor.

It is but just to Bishop Franklin Hamilton to say that during his administration the expenditures of the American University have been brought within its income and more than a million dollars added to its holdings. This alone made it possible to open the school.

But he had so many interests in hand, so many unfinished undertakings that it will be some time before he can transfer to his successor all these matters satisfactorily to himself and all concerned. His assignment to a residence in Pittsburgh will enable him to give frequent advice, attend all meetings of

BISHOP FRANKLIN HAMILTON

The election of Chancellor Franklin Hamilton to the office of Bishop of the Methodist Episcopal Church, and the election of his brother, John William Hamilton, a retired Bishop, to be his successor as Chancellor of the American University, is without a precedent in the history of the Church.

the trustees, and answer questions concerning the administration of the university, without interfering with his Episcopal duties.

The first duty of the new Chancellor will be to secure additional facilities for the opening of new departments, and to furnish additional accommodations for the increase of students. Every dollar received will be so much clear gain, and will not be needed to pay deficiencies of old indebtedness, but promote the greater usefulness of the university. The friends of the former Chancellor can make no mistake in rallying to the support of the new Chancellor, for it is "all in the family."

Recent Gifts of Money.

(The acknowledgment of sums less than five dollars is to be considered sufficient receipt therefor.)

General Fund—\$175.00, Mrs. G. F. Swift; \$150.00, W. S. Pilling; \$100.00, T. W. Smith, Mrs. Sarah Cochran, Calvert Crary, C. C. Glover, Mary E. Robinson, Wm. Price, Alex. Simpson, W. S. Corby, S. F. Bowser, Charles Gibson, J. N. Gamble, W. J. Faux; \$50.00, C. W. Fairbanks, Anna F. Bickley, Mrs. J. F. Keator, Summerfield Baldwin, C. E. Welch, John Grubbell, J. C. Letts; \$25.00, G. H. Maxwell, H. B. Felton, B. F. Leighton, C. B. Rogers, T. H. Anderson, H. O. S. Heistand, R. S. Ingraham; \$15.00, C. H. Smith; \$10.00, Z. L. White; \$1.00, Miss Isabella L. Grant, D. W. Couch, Mrs. D. W. Couch, Miss Ann Couch, E. H. Scott, A. E. Budd, Miss M. A. Alexander.

Fellowship and Scholarship Fund—\$1,750, Mrs. G. F. Swift; \$250.00, T. C. Hunter; \$50.00, W. J. Montgomery; \$40.00, J. Edgar Leaycraft; \$25.00, M. H. Masland; \$20.00, Lars A. Whitcomb; \$10.00, F. F. Thornberg; \$2.00, J. W. Rhoades.

Asbury Memorial Fund—\$100.00, C. W. Drees.

McKinley College of Government—\$4,000.00, Estate of T. D. Collins.

Bishop McCabe Lectureship Fund—\$1,000.00, Estate of T. D. Collins; \$2.00, E. L. Braun, Frank King-

don, Lester Strout; \$1.00, John Krantz, John Carson, C. H. Bryant.

Bishop Hamilton Lectureship Fund—\$1,000.00, Estate of T. D. Collins; \$8.00, C. L. Cole; \$6.00, B. W. Kramer, L. E. Watson; \$5.00, H. G. Falke, G. W. Townsend, D. D. King; \$4.00, W. H. Bowser, Fred Goodger, R. O. Phillips; \$3.00, M. G. Shuman, H. A. Reed, M. W. Fuller; \$2.50, J. A. Brewington; \$2.00, J. L. Sparklin, E. A. Cooke, D. J. Ford, Miss Sarah Lansing, E. W. Blakeman, H. L. Goodrich, H. G. McCann, O. E. Rodkey, F. L. Decker, F. A. Gould; \$1.50, E. L. Nixon; \$1.00, A. B. Mettler, T. H. Skewis, E. H. Scott, A. E. Budd, E. V. Allen, C. F. Beebe, C. H. Bryant, C. F. Butterfield, W. F. Davis, C. E. Dow, A. C. Elliott, F. K. Gamble, E. S. Gahan, John Gibson, T. F. Jones, A. J. Lockhart, J. N. Palmer, W. R. Patterson, D. B. Phelan, G. O. Richardson, T. T. Ross, C. F. Smith, O. F. Smith, H. H. Johnson, D. W. Howell, R. S. Cushman, Miss M. J. Henry, Mary E. Henry, D. F. Faulkner, I. T. Johnson, H. W. Norton, J. M. Cass, D. L. Marsh, F. M. Malcoll, C. N. Garland, J. H. Smith, S. S. Williams, Miss M. L. Monroe, Frederick Palladino, C. A. Purdy.

A Father's Benevolence Made Effective by His Son

The late Truman D. Collins, of Nebraska, Pennsylvania, was known widely for three distinct traits—his exemplification in dress and general habits of the sim-

ple life, his business acumen applied to a diversity of material interests, and his practical helpfulness in lines of Christian benevolence, especially in the promotion of missions. His decease, a few years ago, threw upon others the care of an estate of varied properties, requiring utmost diligence and sagacity for their conservation. This function has been performed faithfully and energetically by the administrator, Mr. Edward S. Collins. From the hand of this efficient executor the American University has received six thousand dollars in fulfillment of pledges made by his father; four thousand for the McKinley Memorial College of Government Fund, and one thousand each for the Bishop Hamilton and Bishop McCabe Lectureships. May the Collins tribe increase in number and in possessions!

Massachusetts Avenue to Be Improved to the District Line.

Of the large number of matters affected by the action of the recent Congress one is materially related to the American University and the region surrounding our site. That item is the appropriation for the widening and surfacing of the western part of Massachusetts avenue from Nebraska avenue to the District line. This portion of the handsome thoroughfare which traverses the District from Anacostia river on the southeast to the Maryland line on the northwest has been opened and graded for about three years, and for two years and more has been utilized by the electric trolley line which serves the public traveling to the university.

This new improvement will give fine opportunity for travel by private vehicles and on horseback through a region of picturesque beauty, and for the farther development of a vast tract, sloping to the west and north toward the Potomac and eminently fitted by nature for modest homes and more palatial villas. With other and similar extensions of streets and avenues through the suburban parts of the district and the building of additional means of rapid transit, Washington is providing the conditions for the building of homes (and, we fear, of apartments), where the benefits of air and sunshine will be enjoyed in an increasing degree for its growing population.

The New Mount Vernon Seminary.

On its beautiful and commanding site on the east side of Nebraska avenue, just north of Massachusetts avenue, ground has been broken and foundations are in progress for the new Mount Vernon Seminary. The long and honorable record of this leading institution for the education of girls and young women, located at M and Eleventh streets, northwest, is about to find its golden opportunity for expansion in its new habitat so near to the American University. The structure about to arise at a cost of about \$300,000, will form a prominent and attractive adornment to the city on the northwest heights, the topographical crown of the National Capital. From the level of the site itself a broad view opens to the eye in every direction, while from the upper stories and roof of the building a magnificent panorama taking in the city of Washington, the Virginia stretches down the Potomac to Mt. Vernon and westward to the Blue Ridge mountains, and the Sugar Loaf of western Maryland, will inspire the beholder.

In a later issue of the *Courier* we shall hope to pre-

sent our readers with a detailed description and picture of the building which is to stand as a neighbor to our own College of History. To Mrs. Somers, the venerable founder, to Mrs. Hensley, her efficient lieutenant, to the staff of teachers, to the hundreds of alumnae and to the friends of the Seminary we extend our hearty congratulations at the inception of the great enterprise, and with them all we shall rejoice when the capstone is placed on the noble pile, and join in the song of "Grace, Grace Unto It."

Calendar for Academic Year 1916-1917.

1916.

Tuesday, October 3—First Semester begins.
Thursday, November 30—Thanksgiving Day. Work suspended.

Thursday, December 21—Christmas recess begins.
Monday, December 25—Christmas Day.

1917.

Tuesday, January 2—Second semester begins.
Thursday, February 22—Washington's Birthday. Work suspended.

Thursday, April 5—Easter recess begins.

Sunday, April 8—Easter Day.

Tuesday, April 10—Work resumed.

Tuesday, May 29—Convocation Day.

More Colonial Pieces from Dr. Dowling.

Dr. Thomas Dowling again has made a notable contribution to the university in the gift of several ancient spinning wheels, both for cotton and flax. Other articles of Americana previously had been added to our growing collection by the same friendly hand. These have been put in the southwest corner on the main floor of the College of History, where the beginnings of our university museum may be seen. Dr. Dowling's method of showing and promoting a wholesome antiquarian interest in the early period of our national life is to be commended and should stimulate others to "doing likewise."

A Grand Knabe Piano Installed.

Through the kind offices of Mrs. Frank W. Collier a very fine piano has been placed in our Assembly Hall. The instrument is one of the Knabe Piano Company, a grand, of superior tone. This long established and honorable house generously has made the university an indefinite loan of this superb musical mechanism. Its attractive appearance and beautiful response to the deft touch of Professor MacWaters and other artists already have given much pleasure to many hearers. It is a highly prized acquisition to the equipment of our College of History.

Miss Jackson Gives An Interesting Letter.

Miss Cordelia Jackson, of Georgetown, has given us a manuscript letter, four pages large (letter size), paper bearing water-mark of "Taylor," written by Joseph Carnaby, from Baltimore, July 15, 1790, to "George Browning, Minister of the Gospel in Montgomery Circuit, to the care of Daniel Elliott, said County." The letter breathes the spirit of earnest, devout piety and deep interest in the work of the itinerant who, after two and a half years of service in the field, was called to his reward.

Welcome, Bishop McDowell.

Together with the other Christian institutions and agencies of Washington and vicinity we hail with delight the coming of Bishop William Fraser McDowell, the new Resident Bishop of the Washington area. After a strong and successful administration in Chicago and the neighboring region, he comes to join his labors to those of his able predecessor at the National Capital, Bishop Earl Cranston, now released from the more burdensome duties of the episcopacy. Bishop McDowell has rendered large and distinguished service to the church, not only to his own denomination, but to the general Christian public of this and of all lands. His sane optimism, his unflinching charity, his broad brotherliness, his judicial mind, and his classic utterances by pen and voice, have won for him recognition and distinction in all the higher circles of thought and life. Both by native trend and by experience he is eminently fitted to co-operate with and promote the higher Christian education as embodied in the aims of the American University. At the opening of the university in 1914 he gave eloquent and fitting expression to the ideals for which the institution stands. By a providential combination of circumstances, Bishop McDowell will have at his easy command the counsels of the two recently retired bishops, both of whom are to reside in the city. May our new Episcopal leader find in Bishops Cranston and Hamilton his Aaron and Hur!

Doctor Wedderspoon Goes to Chicago.

The united heart of clergy and laity of this city regrets the prospective departure of the Rev. William R. Wedderspoon, D. D., from the pastorate of Foundry Episcopal Church, to accept that of the Saint James Church in Chicago. In this regret the American University deeply shares. Unremitting in his labors as pastor, unsparing in his sympathy with all suffering, edifying and inspiring in his preaching of the pure word, he has greatly endeared himself to a multitude of friends who will follow him with their earnest prayers and wishes for large success in his new field.

Bishop Cranston Enjoys His Car.

This midsummer note from the Peninsular State indicates a lively program of rest on the part of one of our recently retired Bishops:

Ludington, Mich., July 25, 1916.

MY DEAR BROTHER OSBORN:

You blessed people about the American University office would have to see me fanning myself in a twenty-five mile breeze, created by the Dodge car, in order to understand what an aristocrat the generosity of my friends has made me. Such a "retirement" has not made me silly, but it has impressed me deeply with a sense of my unworthiness of it all. The gift of the car, with a winter top for bad weather, extra tires and cushion covers, and enough over to build a garage and pay a chauffeur for the summer, leaves nothing for me but to thank God and my good friends and enjoy my rest for this season at least.

I appreciate it all, and thank you and Dr. Stone, as well as the Chancellor Bishop for your part in it.

Very sincerely,

EARL CRANSTON.

A hearty God-speed to our Apostle of Reunion and may his new "Dodge" help him to speed the glorious cause to an early consummation!

Fellowships of the University.

The Fellowships which the American University has granted to graduates who have finished their undergraduate studies *cum laude*, have attracted the attention of alumni and alumnae all over the country. The applications are pouring in from universities and colleges in such numbers that the Board of Award will find their task not merely one of honor, and only a sinecure. The Trustees are pleased to recognize the merit and medals of the young men and young women who are ambitious to pursue the post-graduate courses, but they must require them to conform to the high standards according to which the fellowships are granted.

Fellows of the American University for 1916-1917.

On pages four and five of this number of the *Courier* will be found the pictures of the ten Fellows for the academic year 1916-1917. Their names, the nominating institutions, and the subjects and places of study are as follows:

| NAME. | NOMINATING INSTITUTION — SUBJECT AND PLACE OF STUDY. |
|--------------------------------|---|
| Clyde Foster Armitage..... | Boston University, School of Theology — Religious Journalism—Columbia University. |
| Eli Edward Burriss, Jr..... | University of Pennsylvania — Philosophy—University of Pennsylvania. |
| Clara Frances Chassell..... | Cornell-College—Religious Education—Columbia University. |
| Miriam Caris Gould..... | University of Pittsburgh—Psychology—Columbia University. |
| Merrill Jacob Holmes..... | Garrett Biblical Institute—Philosophy of Religion—Harvard University. |
| Clyde B. Moore..... | Clark University.—Psychology — Columbia University. |
| Raymond Frank Piper..... | Harvard University—Philosophy —Harvard University. |
| Madge De Grofft Thurlow..... | Goucher College — Physiology — Johns Hopkins University. |
| Archibald Tremayne..... | Garrett Biblical Institute—Semitics—Yale University. |
| Thos. Jackson Woolter, Jr..... | University of Georgia—Sociology —Columbia University. |

Dr. Collier's Work in Philosophy.

The regular courses in philosophy for the year as conducted by Dr. Collier will comprise the Theory of Thought, the Theory of Knowledge, and Metaphysics. The first semester should give ample time for the thorough investigation of the problems of the Theory of Thought and the Theory of Knowledge; Metaphysics will require the entire second semester.

A seminar, meeting twice a week, will also be conducted by Dr. Collier. The general subject will be the influence of speculative thinking upon the development of civilization. The method will be the historical, beginning with man where we find him in his first efforts at thinking, and following him down to the present day. Such work presupposes on the part of the investigator a general knowledge of the problems of psychology, of epistemology, of metaphysics, and of the history of philosophy.

The work will help the student to understand the interrelation of the individual and social consciousness; and it should show how personal thought, feeling, and prejudice influence the development of civilization.

CLARA F. CHASSELL

Safety First, for Money.

"Caution is the parent of Safety," is a good financial proverb, and creditable inducement for benevolence. But beneficence is not looking for safe-deposit vaults. Productive investments, safely guarded, are an evidence of prudent and worthy trusteeship.

The caretaker of all the funds given for the benefit of the American University has been the best inducement to make other gifts. The advice of the late Chaplain McCabe, in asking for money, was "Tell the people what you did with the last money they gave you and they'll give you more."

It was a wise choice, when the President of the Riggs National Bank, one of the most notable banks in the United States, was elected by the Trustees Treasurer of the University. The institution has no more devoted friend, faithful caretaker and safe counsellor in the investment of money. It is to his wise administration the University is indebted for the splendid increase of the income and safe investment of the endowments.

Small Gifts.

The story of the "first dollar" has given no little encouragement to the many friends of the University, who have not felt able to give larger sums, but who did desire to give according to their ability. While hundreds of thousands of dollars have been received from the generous laymen who have laid deep the foundations of the School, tens of thousands of dollars have been received in small gifts. Lecture foundations are almost all the result in the aggregate of many very small gifts.

Much as the Trustees appreciate the noble endowments which have been so munificently bestowed in great gifts, they still desire to encourage the giving of any sums no matter how small which express the appreciation of the work of the University by multitudes of friends. They will all be acknowledged in the columns of the COURIER.

THOS. J. WOOLTER, JR.

The Women Helpers.

The women earn more money than men, ungrateful as the world may be in their compensation. Men there are whose fear of woman's privileges and pursuits makes of her successes the "wolf at the door." Now that the women are taking the place of men in Europe, a tremor has seized the pessimist and coward and he has taken to forecasting the result of woman's work when the war is over, with the dreadful fear that having gotten her hand in, she will take so much of man's work away from him and do it so much better that the best of the money and the most of it will be hers. It behooves the men, therefore, says this ghost of prophecy, to be on their guard as to just how much of privilege they will permit the women to have. How pitiable these anachronistic misanthropists who live so persistently with their ancestors!

"Poor old Paul," so long slandered as the enemy of the cultured and progressive woman, evidently had no such fear or outlook when he exhorted the Philippians as "true-yoke fellows to help those women which la-

bored with me in the Gospel, with Clement also and with other my fellow-laborers whose names are in the book of life."

A good woman far away in Michigan has written the new Chancellor, saying, "Why not have the women help you to build the American University?" Having no scruples, he replied immediately, saying, "Please, sister, begin, begin you!" Back came the word with the next mail, "One Hundred and Twenty-five Dollars already."

The American University stands with the gallant Apostle and not only welcomes but invites the splendid help of the good women to share in all their tasks. The Chancellor, Faculty and Trustees feel the greater responsibility as if new work had been given them, and all the more obligated when they are joined by the women in their now more encouraging task. Let a woman share your task or, as Jean Paul said, "Give you a task, and you are hers heart and soul; all your care and trouble lend new charms to her for whose sake they are taken."

THE AMERICAN UNIVERSITY'S FIRST BOOK.

Lodestar and Compass.—An Adventure of the Immortal Part of Us.—Edited by Franklin Hamilton, Chancellor of the American University.

This is the first of the volumes which the American University is to issue from time to time, the purpose of which, to use the words of Bishop McDowell, is "the making of a literature which, in ample and steady stream, shall refresh the life of the Republic and the world." The book is a record of May 27, 1914, the day upon which the American University was opened. Dr. Hamilton writes the preface, the perusal of which will enable the reader easily to follow the exercises of the day. Then follow Bishop Harding's Invocation; Bishop Cranston's address, "Without Haste, Without Rest"; Bishop McDowell's "A New Chapter in the Biography of the American Scholar"; President Woodrow Wilson's classical address, "Lodestar and Compass"; Bishop J. W. Hamilton's address, "The New Learning for the New Day"; Secretary of the Navy Daniel's "Pro Deo et Patria," and Secretary of State Bryan's "But I Know a Name, a Name, a Name!" Dr. Hamilton has also incorporated his "Life Girdling" and the "Working Plan for the American University." The illustrations will be prized. The frontispiece is an excellent photograph of President Wilson making his great speech. There are good half-tones of the college of history, of the McKinley College of Government, of the speakers of the day, of the historic furniture, the sofa of Abraham Lincoln, Charles Sumner's table and chairs, the historical chair presented to the University by the Wesleyan Conference of Great Britain, of Secretary Daniels, and of Secretary Bryan speaking, of the George Washington letter, of old Fort Gaines, and of the painting from life of Francis Asbury.

We add a few comments of the press:

President Wilson, in his address formally opening the American University at Washington, closed with the following words: "So we are here setting up on this hill as upon a high pedestal once more the compass of human life with its great needle pointing steadily at the lodestar of the human spirit. Let men who wish to know come and look upon this compass and thereafter determine which way they will go!" These words suggested to Chancellor Hamilton the title for this volume, which contains the record of this historic day at the National Capital. And in those words the President finely expressed the noble ideal to which this new university is dedicated. When one has read the entire address, which has no more than thirteen hundred words, he feels that Mr. Wilson paid the university a sincere compliment in delivering this classic at its first convocation. It is worth reading for its well-nigh perfect diction, and it is worth reading for its educational ideal. It is one of those little masterpieces, once read, haunts the mind, and compels one to read it from time to time as his eyes fall upon it.

There are a good number of illustrations, some of which are of the curious which were described by the Washington correspondent of the Transcript in his interesting letter of some weeks ago. The volume is a worthy record of what in the future will be looked back upon as an important day in the history of higher education in America.—*Boston Transcript*.

Some of the loftiest and most apocalyptic utterances of human tongue in matters of education are to be found in this record of a day's doings in the opening of that great institution of Christian education. What a book is this to take a high place among the histories of the progress of Methodist culture and of Christian education!—*Western Christian Advocate*.

Chancellor Hamilton has collected the excellent addresses that were delivered in connection with the opening of the American University.—*Zion's Herald*.

The addresses are all of a high grade. They are inspiring,

They stir the blood. They move the Soul. They put the reader on a mount of vision. They make him wish he could pack his grip and start for the American University. The full-page illustrations, which illustrate the scenes of the day, enhance the value of the book.—*Central Christian Advocate*.

The new book gives an account of the opening of the American University, Washington, D. C. It contains the addresses of the distinguished speakers of the occasion—including President Wilson, Secretaries Bryan and Daniels; Bishops Cranston, Hamilton and McDowell, and of the chancellor, Franklin Hamilton. These distinguished men served as historians and prophets for the university, and every lover of higher education will eagerly seek their vision. The book and university alike are commended to Methodist readers.—*Pittsburgh Christian Advocate*.

There Are a Few Left.

The illustrated book giving account of the American University, its Opening Exercises, including the Addresses of the President of the United States, members of his Cabinet, three of the Bishops of the Methodist Episcopal Church, and other interesting information, has a wide distribution.

The remaining copies will be given away, postage prepaid, to persons who contribute one dollar a year for two consecutive years to increase the fund for the Bishop McCabe Lectureship Foundation on the Evidences and Inspiration of Christianity. Address the Chancellor of the American University, Washington, District of Columbia.

Portrait by Hamilton.

[Reprint from the Boston Transcript]

Wilbur Dean Hamilton has just put the finishing touches to his portrait of his brother, Bishop John William Hamilton. * * * The portrait is life size and virtually full length, and depicts the sitter in his academic robes of a doctor of laws, black silk with facings and sleeve bands of rich purple velvet, and a golden yellow lining to the cape. He is seated in a handsome Venetian chair upholstered with red velvet brocade; and the figure is relieved against a gray atmospheric background. The work is still in the artist's studio, in Trinity Court, Dartmouth street, and it is possible it may be seen by the Boston public the coming season, as it will soon be Mr. Hamilton's turn to have a one-man show at the guild, and there are many friends of President Hamilton here who would be glad to have an opportunity of seeing his likeness.

Of course this is a "portrait d'apparat," that is to say, a portrait of an academic officer for an academic place, and it is properly dignified in pose, expression and style; but no one who is at all familiar with Mr. Hamilton's work will make the mistake of supposing that, because of this fact, it is lacking in lifelikeness, naturalness or intimacy of interpretation. The head is very finely drawn and painted, and it is an admirable likeness, full of serious intelligence and thoughtfulness. The attitude is simple and easy and dignified; the draperies are disposed and painted with the greatest skill and art compatible with their relative importance in the scheme of the picture; they take just their rightful place in that scheme, and do not, by their appeal to the attention, usurp the position of consequence that does not belong to an accessory in a portrait. This work, then, will take rank among Mr. Hamilton's most important and most perfect portraits of men.

In Mr. Hamilton's studio may be seen a number of his recent landscapes, a selection of which may, it is hoped, be included in his coming show at the guild. It is not by any means unusual for a portrait painter to be also a highly successful painter of landscape. We have only to cite the cases of John S. Sargent and of Frederic P. Vinton. Mr. Hamilton's landscapes have qualities which are as rare as they are desirable. The picture of "Spring" which he sent to the travelling exhibition of the guild last year, and which is still on circuit somewhere out West, was made a masterpiece of delicacy and poetic distinction. There are several equally fine spring effects among the landscapes in the studio—pictures of exquisite subtlety and refinement, of genuine poetic feeling and of remarkably effective decorative character.

W. H. D.

The above criticism of Wilbur Dean Hamilton's portrait of Bishop J. W. Hamilton is copied from the

THE AMERICAN UNIVERSITY—OPEN-AIR AMPHITHEATRE WINTER VIEW

Boston Evening Transcript, and the writer is Wm. Howe Downs, one of the most eminent and able art critics of America.

Mr. Hamilton has painted portraits of many prominent persons among whom may be mentioned Justice McKenna and members of his family, F. L. Higginson, members of the Roosevelt family, Dr. W. F. Warren, of Boston University, and the late Bishop Mallalieu. Mr. Hamilton has had a number of "honorable mentions," and has received prizes and gold medals in both Europe and America. A few years ago he took first prize at Boston over the distinguished artist, John Joseph Emmeking. He also received a gold medal for a group of pictures at the Panama Exposition.

F. W. C.

Our Open-Air Amphitheatre—Winter View.

In this number of THE COURIER will be found a picture of our new amphitheatre, built last year for the purpose of open-air assembly. The public had its first sight and use of this structure on May 26, 1915, our first Convocation Day. At that time the foliage of the neighboring shrubbery and of the shapely tulip trees, which cast their shadows over the scene, added the peculiar charm of summer's dress and nature's drapery. The winter view given herewith furnishes the eye with a clearer outline vision of the place. The picture is taken from the southeast corner of the platform, which is capacious enough to seat one hundred persons. Directly in front and showing its roof, a portion of the second story, and its western pediment, is the College of History, standing about six hundred feet east of the amphitheatre. About one-half only of the seating capacity is shown; namely, the central sections. Flank-

ing these sections on the right and left are other tiers of seats, all in semicircular curves which give every hearer a distinct view of the platform.

Until our large Convocation Hall, one of our most urgent needs at present, shall have its place under the roof of the McKinley College of Government, this amphitheatre must serve for all our out-of-door functions. It is a distinct improvement over the plan of temporary seatings and platform located in the sunny area near the College of History, for the ample shade of the trees and the currents of air over the slopes render the spot a comfortable one on the hottest of days. Here on last Convocation Day the music and speaking was of an exceptionally high order. Bishop Quayle was the orator of that day.—Friday, June 24.

That First Dollar.

Many references have been made to the first dollar given to found the American University, and some credit given because it was the first money contributed. But as many a truth is spoken in just many a little thing creeps into importance through a bit of good humor. When the dollar which happened to be the first one was given, no thought of the donor included the possibility of his becoming the Chancellor in some far-off day, or indeed anything more than a bit of fun with the founder of the university.

Bishop Hurst, who had a habit of building "cloud capped towers and gorgeous palaces" in his brains, was chairman of the Program Committee of the Ecumenical Conference of Methodists to be held two or three years later in Washington. The present Chancellor of the American University was the Secretary. One of the meetings of the Committee was held at Dr. Strong's sanitarium in Saratoga Springs. During the

noon hour of one of the days of the meeting, Bishop Hurst asked Doctor Hamilton to walk with him to the postoffice. In the mail which the Bishop received was a great roll of circular letters. When the Bishop opened the circulars, he handed one of them to his brother Hamilton, saying, "This is the first call for ten millions of dollars to found a university in Washington, and as you are with me when the letters are received from the printer, I will give you the first opportunity to subscribe." Doctor Hamilton replied, "The letter is too long to read while we walk, and I will read it on the train this afternoon and respond. When the committee separated, Bishop Hurst returned to Washington, and Doctor Hamilton took the train for the west. As the latter had promised, he read the letter, and replied at once on a postal card as follows: "Dear Bishop Hurst: Since you were kind enough to give me the first opportunity to subscribe to the fund for the founding of the American University, I herewith subscribe one dollar. I do this for two reasons: First, it is within my means and I can pay the subscription. Second, I want so great an institution never to despise the day of small things. And lest you may think I am trifling, I further agree to pay the last one hundred dollars of the ten millions."

The card was handed to the treasurer of the fund, who was then the Honorable ex-Mayor of Washington, Matthew G. Emery. He sent a bill to Doctor Hamilton immediately, who sent the dollar and received in return a receipt for the money.

Art of Giving.

"As I walked by myself
I said to myself
And myself said to me,
Look out for thyself
Take care of thyself
For no one will care for thee."

Could a person plan for himself a more mistaken mission than this?—selfish, friendless, fruitless, always a failure. Selfishness is ever a barrier to friendship, and no man is so poor as the man who has no friend: it is poverty stung with satire.

All life is interdependent, and therefore altruistic. There is not a material force or an atom of matter which does not tend to find and help another. The correlation and conservation of forces is only a material form of beneficence. Man eats to live and does not live to eat, and all his normal living is benevolent. Everything that a good man is, says or does, has a sympathetic effect consciously or unconsciously upon another. The norm of his spiritual nature is cheerfully to give out and not miserly to grasp in. If he has respect unto the recompense of reward he finds his consistency begets reciprocity. "A mind that's scriptm never wants some care," and a man that hath friends has shown himself friendly.

The art of giving then, in nature's own way, is for the love of the giving, which may not be indifferent to the bounty and certainty of getting. "Give," said Diderot, "but if possible spare the poor man the shame of holding out his hand." It would be splendid benevolence, if always given in this way. If "every one loveth gifts and follows the after rewards" the recompense of such benevolence never fails of external benefit. "This communicating of a man's self to his friend works two contrary effects for it redoubleth joys and cutteth grief in halves."

It is not an unwise benevolence which, in the giving,

has some concern for the use of the gifts, after they have been bestowed; but the selfish clamor of one's feelings to hold onto them after they have been given, spoils the giving.

I was once approached in the street when I was walking with a clergyman by a distressful looking fellow, whose garments, or rather want of much of them, betrayed his character, but whose distress had not taken from him "the show of smooth civility," and he modestly asked me for ten cents. The clergyman immediately advised me that the money would be used for strong drink. I replied that he had asked for so small a sum that I would feel better myself if I gave it. When the money was given I said to the poor fellow: "Now what will you do with that money?" With a very plaintive reply, the fellow said as he held out the money in the palm of his hand, "Whose money is this now?"

The American University is receiving every day or two from some part of the country various amounts of money, so graciously and cordially given, that when the contribution is received, it makes the small amount look large, and the greater amount larger. The Lord loves a cheerful giver, and so does the American University. All small things should be "sedulously scanned," for they may be "commented on with loud emphasis." Livy said a long time ago, "It was by not despising these small things that our forefathers made the commonwealth so great."

FALL MEETING OF METHODIST EPISCOPAL BISHOPS, 1916. ART ROOM, HENNEPIN AVENUE CHURCH, MINNEAPOLIS, MINN.

The Bishops In Conference Session.

The first reports of the Chancellor and Ex-Chancellor, after their new relation, were given in the conference of Bishops, which met in the Art Room of the Hennepin Avenue Church in Minneapolis. We know of no other church edifice in the country where an Art Gallery has been provided for oil paintings by the old masters; neither is there anywhere any other layman whose resources and artistic inclinations and taste have enabled him to provide such a priceless collection as graces the walls of this church gallery. Mr. T. B. Walker, the generous donor, whose private gallery in the same city has cost millions of dollars, is assured of the grateful appreciation by not only the congregation who worship in this building, but by all visitors who are permitted to see the paintings, and they are all cordially welcomed to this as to any other part of this great Church. We are fortunate to possess a photograph of the Bishops taken during one of their sessions in this most interesting and inspiring gallery and the COURIER prints the only reproduction which has been made of the picture.

Recent Gifts of Money.

(This acknowledgment of sums less than five dollars is to be considered sufficient receipt therefor.)

General Fund.—\$573.85, Estate of Wm. Sibley; \$500, Miss Kate S. Gillespie; \$100, George Lewis; \$ 60, Interest on

bequests of Mary and Susan E. Bayard; \$50, Miss Margaret A. Blankley, Wm. C. Arrison, H. A. Houseman; \$25, H. L. McCombs, \$5, Miss Rebecca L. Gillespie.

Floyd Annuity Fund—\$2,000, Mrs. Belle A. Floyd.

Charles E. Slocum Fund—\$2,750, Policy in American Temperance Life Insurance Company.

Recent Gifts to the Library.

Dr. John S. Nollen, President of Lake Forest College, has informed the American University that its name has been placed upon the list of institutions, the libraries of which receive the published lectures of the Bross Foundation of Lake Forest College. Seven volumes have been received and placed upon our shelves.

The Bross Foundation, though but a few years old, has commanded wide attention because of the ability the lecturers have shown in discussing modern problems in relation to Christianity. The American University appreciates the courtesy of the Trustees of the Bross Foundation and President Nollen in making it a recipient of these lectures.

The New York State Board of Charities has presented the University with eighty volumes of reports and other valuable documents upon philanthropy. These volumes are of great value to students doing research work in sociology.

Valuable Furniture Given.

Mrs. J. B. Hammond has given the University a combination secretary and bookcase made of black walnut by her late husband, Mr. J. B. Hammond. This new proof of her active interest in the institution is in harmony with her previous donation of many souvenir and historical articles, constituting the Hammond Memorial Collection, to which she has recently added several interesting items.

From the Estate of the late Dr. Henry B. Deale of Washington, D. C., the University comes into possession of a very fine mahogany bookcase. For many years this bookcase has been in use at the Octagon, one of the landmarks of colonial Washington. The University is indebted to Miss Sallie B. Deale for her kind offices in this matter.

A Gift From Abroad.

A magnificent drawing room center piece of gold carved furniture, nine feet long and five feet wide, and tufted in cardinal silk plush, has been presented to the American University by Professor Samuel J. MacWatters, and may be seen in the Trustees' reception room, where are hung the fine collection of Corby paintings. This rare and exquisite piece of Italian art was brought from Rome, and gives a touch of the renaissance in its present setting, wholly in keeping with the new parlors of the university.

Inductor for Motography Outfit.

Mr. Francis Holley, Director of the Bureau of Commercial Economics of Washington, D. C., has enriched the motography outfit which he presented to the University with a Powers' Inductor. This instrument makes the pictures steadier and clearer, and also reduces the amount of current about one-half. Director Holley is determined that no one shall surpass him in interest in the American University.

Protecting the College of History Building.

The necessity of the recent renewal of the fire insurance policies of the College of History Building gave occasion for improvements to the building itself. Every effort and expense is being made to preserve this beautiful building and if possible increase its value. Competent estimators place the present value of the building at \$311,000. Experienced builders declare that it would be hopeless to-day to attempt to duplicate the woodwork in the building. Extraordinary quartered oak, no longer used for such purposes, adorns the building in all its corridors, halls and rooms. To preserve this building, so wonderfully constructed, all repairs and improvements needed are being looked after with minute care. The latest work of this character has been the removal of the old skylights on the roof of the building; in their place have been installed modern wire glass heavy skylights which will meet any test of heat or time. In order to safeguard the new construction heavy steel girders strengthening the supports have been installed and every precaution taken to protect against fire. In addition many new fire extinguishers of most recent pattern have been installed. All the windows of the building have been painted without and varnished within. The great outside doors have been repainted and varnished. No expense or care is being spared to maintain the present central building of the university plant in the best possible condition for use and preservation.

The New Trees.

When we read the Spectator beneath the shadows of the trees in "Addison's Path" we meditate on the possibilities of some similar sentimental path with like associations, in our own country. All at once, the inspiration comes to recognize that at our very doors here, on the University Heights, is both the prospect and the prophecy. What mean our wild and unkempt woods and trails but this? But the Campus must first give the promise. Neglected, possibly for sufficient reasons, our transplanted trees about the building are not worthy of the prospect, and one of our trustees now proposes to make an end of the neglect. He has said, "Here's the first money with which to begin." The National Government has accepted his challenge, and presented us with fifty young oak trees, suitable to this soil and climate. We shall follow with one hundred more, if our friends furnish the resources. The foresters are now at work clearing the ground for transplanting the trees. The du Pont Powder Company contributes the dynamite with which to loosen the roundabout ground for the roots.

To purchase the one hundred trees, convey them and enough of their native soil to the Campus, and plant them professionally, we should have five dollars for each tree. For every friend who will contribute this amount

THREE DECEASED TRUSTEES

JUSTICE THOMAS H. ANDERSON

BISHOP ALPHEUS W. WILSON

MR. BRAINARD H. WARNER

for a tree, we shall give it the name the contributor may choose to commemorate and label it with a copper stencil attached to carry the distinction and commemoration.

Remarkable Flora of Our Site.

The wooded part of the University acres consists of more than thirty different kinds of forest trees and more than a half dozen shrubs and plants. The following list could be enlarged:

Varieties of Trees, Vines, Shrubs and Plants on the American University Grounds:

- | | |
|---------------------|---------------------------|
| Trees: | 20. Silver Maple. |
| 1. Louisiana Pecan. | 21. Peach. |
| 2. American Elm. | 22. Persimmon. |
| 3. Lotus. | 23. Norway Maple. |
| 4. Slippery Elm. | 24. Linden. |
| 5. Dog Wood. | 25. Mulberry. |
| 6. Tulip. | 26. Arbor Vite. |
| 7. Sassafras. | 27. Pyramidal. |
| 8. Wild Cherry. | 28. Golden Riten Spore. |
| 9. Cedar. | 29. Silver Riten Spore. |
| 10. Yellow Pine. | 30. Norway Spruce. |
| 11. White Oak. | 31. Pine. |
| 12. Iron Wood. | Vines, Shrubs and Plants: |
| 13. Spice Wood. | 1. Wild Grape. |
| 14. Sycamore. | 2. Elderberry. |
| 15. Cut Paper. | 3. English Ivy. |
| 16. Red Oak. | 4. Lilac. |
| 17. White Oak. | 5. Wild Strawberry. |
| 18. Gum Tree. | 6. Sumac. |
| 19. White Ash. | 7. Periwinkle. |

Annual Meeting of Trustees.

The first meeting of the Board of Trustees of the American University with the new Chancellor on December 6, was one of the most interesting and profitable ever held. There was a large attendance and the wives of the Trustees were present at the luncheon.

The Chancellor reviewed briefly the financial condition of the University, stating that nearly \$30,000 had been received since his election, \$10,000 of which was new donations. A number of recommendations were adopted looking to the improvement of the grounds, planting of trees and laying out of the lawns. New standing committees were appointed, the vacancies in the Board of Award were filled, and plans suggested for University Extension. The subject of the Fellowships was referred to the Executive Committee.

Interesting and fitting memorial tributes were paid to the Right Reverend Alphacus W. Wilson and Justice Thomas H. Anderson. The Right Reverend William F. McDowell, the Right Reverend Collins Denny and Mr. Summerfield Baldwin, Jr., were elected Trustees.

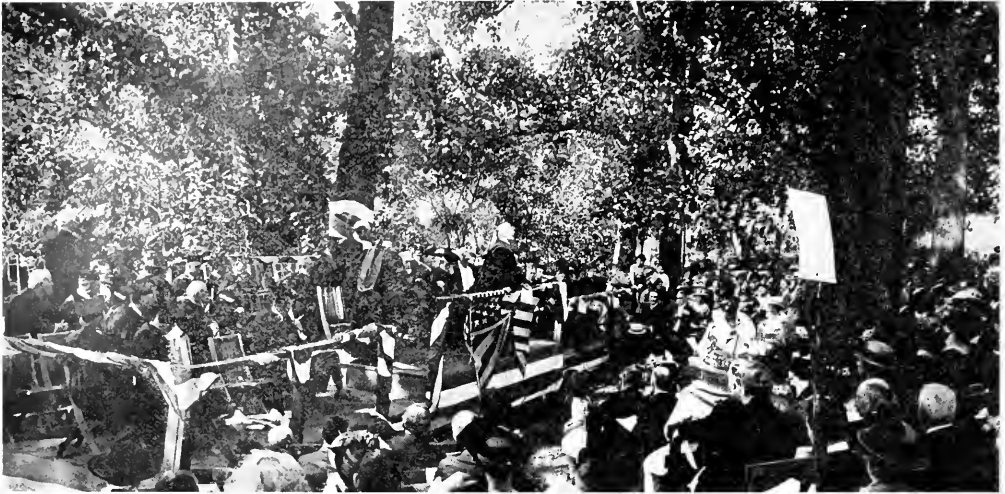

Lectures on Browning.

Professor Samuel J. MacWatters delivered during December a course of lectures on Browning and his poetry. The lectures were: Browning, the Man; Abt Vogler, the Mount of Transfiguration; The Grammarian's Funeral, the Renaissance; Andrea del Sarto, Faultless, but Soulless. Later, Prof. MacWatters is to give a course on Shakespeare.

Visual Instruction.

The University Extension lectures by visual instruction given in co-operation with the Bureau of Commercial Economics of Washington, D. C., are rapidly growing. The lectures at the University have been well attended, and of such a high order that they have commanded the attention of the scientists in the Government Bureaus. Delegations of scientists from these Bureaus have attended some of the lectures.

The work is now being extended to the churches and educational and philanthropic clubs of the District of Columbia, and has awakened inquiry in other educational institutions as far away as California.

SECOND CONVOCATION. CHANCELLOR FRANKLIN HAMILTON ANNOUNCING ACADEMIC AWARDS

"Servant of God, Well Done!"

When the Vice-Chancellor of the American University came home to die his "glorious warfare" was past. He had fought a good fight, kept the faith: there could be no denial to him of a crown of life. The Christian Church was united in the award. With the assurance of the great Apostle he was crowned at last.

There are men too large in their abilities and achievements to be confined within the pale of a single communion. Alpheus W. Wilson, like Saul among the prophets, from his shoulders upward, higher than any of the people, was among all our prophets and preachers of righteousness, a "mount cast against a perverse and crooked generation." The University honored itself in honoring him. He was the first named by his great Church more than forty years ago to make peace with the brethren of the North. And his last service was again as Chairman of the Commission to promote the organic union of all Methodists. It may be said of him, as Gladstone said in the Preface to Poems of Arthur Hallam, "It has pleased God that in his death as well as in his life and nature, he should be marked beyond ordinary men. When much time has elapsed, when most bereavements will be forgotten, he will still be remembered, and his place I fear will be felt still vacant: singularly as his mind was calculated by its native tendencies to work powerfully for good, in an age full of import to the nature and destinies of man."

Death of a Notable Trustee.

It is inevitable that all men must die; but we are never ready to have our friends die. And it is impossible to discern the Providence which permits good and faithful workmen to be cut off in the midst of their usefulness. It nevertheless so frequently occurs, that it has become a widely accepted adage that "death loves a shining mark."

Justice Thomas H. Anderson left the June meeting of the Board of Trustees of the American University in seemingly excellent health. So soon after-

ward was he carried to his burial, at less than three score years of age, his friends were not only shocked to learn of his death, but in their blinded judgments were not willing to have it so. This we know, however, good men never die; what "seems so is transition;" their works do follow them.

Whether as teacher in his youth, lawyer in his vocation, diplomat by appointment of the President of the United States, Justice in the Supreme Court of the District of Columbia, he was the well-equipped man of eminent ability, unsullied reputation, and unquestionable Christian probity. As Lecturer in the University, active, devoted, painstaking, and constant in his presence in all meetings, as Trustee, he was so invaluable to the institution, that he will be long missed and tenderly remembered by all who have been associated with him. The memory of Justice Anderson will endure.

Brainard H. Warner.

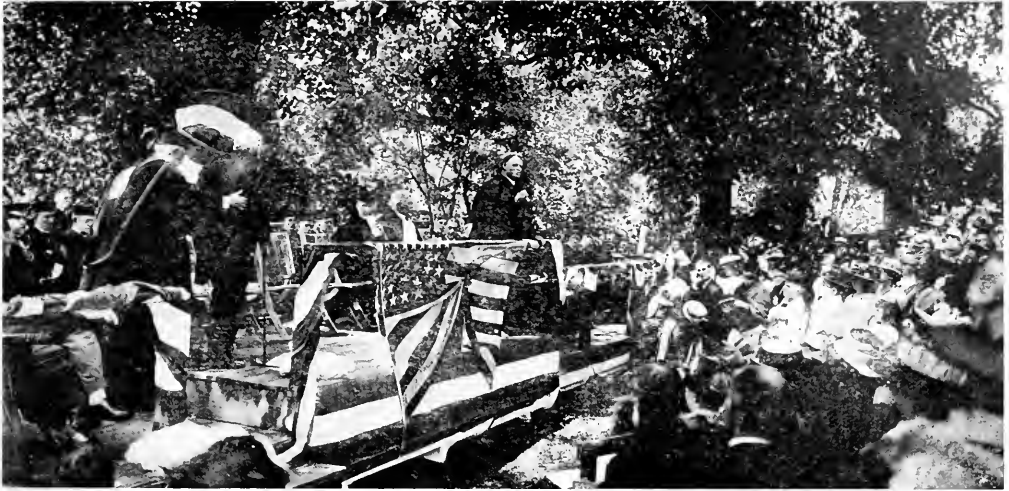

One of the three of our Trustees called during 1916 to the activities of the spirit world was Mr. Brainard H. Warner, long and well-known for his energetic participation in the civic, philanthropic and religious work of Washington. The formal action of this fellow Trustee appeared in the June number of the COURIER. His picture on page 3 of this issue presents the genial face which often brought cheer to his many friends.

BISHOP ALPHÆUS W. WILSON.

By Rev. Charles W. Baldwin, D.D.

Our Vice-Chancellor, Alpheus Waters Wilson, a Bishop of the Methodist Episcopal Church, South, died at his residence in Baltimore Tuesday, November 21, 1916. He was born in the same city February 5, 1834, and was therefore within three months of being eighty-three years of age when he entered into rest.

Bishop Wilson's father, Norval Wilson, was a mighty preacher and a member of the old Baltimore Conference. The son was admitted to the same Conference in 1853 and was one of a class of 35, the largest on record. He was educated at Columbian College (now George Washington University) and received the degree of Doctor of Divinity from Randolph-Macon College in 1875, and from

SECOND CONVOCATION, BISHOP ALPHEUS W. WILSON'S ARRIVAL AT PLATFORM

Victoria University, Ontario, in 1911. The degree of Doctor of Laws was conferred upon him by both Central College and Washington and Lee University.

At the close of our Civil War Bishop Wilson, in sympathy with the Southern States, with a majority of the members of the old Baltimore Conference, formed the Baltimore Conference of the Methodist Episcopal Church, South. He gave his untiring energies and splendid intellectual and moral powers to the work of God in communion with that church, and lived to see it grow from a weak and shattered condition till it became one of the commanding religious bodies of our nation.

His great abilities, native and acquired, gave him leadership in his Church, so that after repeated elections to the General Conference he was chosen Missionary Secretary in 1878 and Bishop in 1882. In the visitation of Foreign Missions and other work of the Church, he made frequent tours around the world, being in China during the "Boxer Rebellion." In 1907 he was associated with Bishop Cranston of the Methodist Episcopal Church and the representative of Canadian Methodism, in the organization of the native self-governing Methodist Church of Japan, a work requiring a high order of statesmanship and brought to a happy and successful completion.

Early in the history of the American University, at the urgent request of its founder and first Chancellor, Bishop John F. Hurst, Bishop Wilson consented to become a trustee, and later in 1902 he was elected to the post of Vice-Chancellor. Thus was welded one link at least of that chain which is destined to bind into one mighty Christian Church all the scattered parts of Methodism throughout the world. He was faithful as a member of this Board and as an officer of the University.

As one of the "Joint Commission on the Unification of Methodism," Bishop Wilson had been appointed to preach the first opening sermon at the meeting of that body on December 28, 1916, in Baltimore.

For many years his health was very precarious, and those nearest to him were expecting a sudden break-down of his vital powers. From a delightful visit to the Virginia Conference at Richmond, he returned to his home in Baltimore on Monday, November 19, at 5 P. M., and the next morning at 8 o'clock he was borne into the presence of his Lord.

"Servant of God, well done!
Rest from thy loved employ,
The battle fought, the victory won,
Enter thy Master's joy.

"The voice at midnight came;
He started up to hear;
A mort'ly arrow pierced his frame;
He fell; but felt no fear.

"Tranquil amid alarms,
It found him on the field,
A veteran, slumbering on his arms,
Beneath his red-cross shield.

"His sword was in his hand,
Still warm with recent fight,
Ready that moment at command,
Through rock and steel to smite.

"The pains of death are past,
Labor and sorrow cease;
And, life's long warfare closed at last,
His soul is found in peace.

"Soldier of Christ, well done!
Praise be thy new employ;
And while eternal ages run,
Rest in thy Savior's joy."

Adopted by Board of Trustees December 6, 1916.

JUSTICE THOMAS H. ANDERSON.

By Bishop Earl Cranston.

When we were last together, at our June session, Justice Thomas H. Anderson was with us apparently in good health, and no one of his associates in this board harbored the thought that his work was so nearly done. To-day we miss his cordial greeting and genial presence, but shall only begin to realize what we have lost, what the University has lost by his unlooked-for removal from our councils. He was one of our most earnest and enthusiastic trustees, just as he was seemingly indispensable in every sphere of his life-long activities.

On Saturday night, September 30, in Denver, Colorado, after a very serious surgical operation twelve days before, he entered into his rest, being in his 59th year.

Teacher, lawyer, diplomat and judge, he was always faithful to duty, clean in thought, clean in conduct, approved of men, and so at the end was unafraid of death and God.

In brief, Justice Anderson's career was as follows: Born in Belmont County, Ohio, June 6, 1858, he was educated in the public and select schools of that county, and at Mt. Union College, Ohio, which institution, in his later life, conferred upon him the honorary Degree of Doctor of Laws. After teaching a few years, he entered the profession of the law and won success. He came to Washington in 1893. His clear vision of political issues and his power in public speech brought him into the campaigns of 1896 and 1900, but prior to that time he had held the office of U. S. Attorney for the District of Columbia, and had served as Envoy Extraordinary and Minister Plenipotentiary to Bolivia. In 1901 he was ap-

pointed by President McKinley a Justice in the Supreme Court of the District, in recognition of his excellent service as District Attorney. His poise, his urbanity, his patience, his industry, no less than his judicial fidelity and accuracy, have been highly commended by the published tributes of the Washington Bar Association.

Justice Anderson was a devout Christian, and officer and trusted leader in Metropolitan Methodist Church of this city, where he is sincerely mourned and greatly missed. Besides his church, he had numerous affiliations, social and literary, and his influence was everywhere wholesome and exalting. He became a member of this board in 1901 and has been one of the most faithful, helpful, loyal supports of this institution.

This minute for our record would not be complete without mention in the same connection of the special service being rendered to the institution by Mrs. Anderson, organizer and leader of the Woman's Guild of the American University—a relation which gives to her a double claim on our sympathetic consideration in this day of her unpeakable sorrow. The two had been in the happiest association since their marriage in 1879, thirty-seven years ago. We stand by her side, gazing into the world beyond, weeping and wondering but seeing clearly the trail of light that marked his going and guides us whither he has gone.

Adopted by Board of Trustees December 6, 1916.

Two More Convocation Scenes.

On pages 4 and 5 will be found two more of the numerous views caught by our artist at our last Convocation, held June 2, 1916. The one on the left represents the moment when Chancellor (now Bishop) Franklin Hamilton was announcing the first academic honors and distinctions conferred by the American University. The one on the right shows the venerable figure of the lately translated Bishop Alpheus W. Wilson approaching his seat upon the platform under the courteous guidance of the Chancellor. Bishop Quayle is delivering his inspiring address on John Milton, the typical scholar in political action.

Our Paris Boulevard.

Congress is certainly bent on carrying out the most liberal designs of that French officer of the American Revolution who had determined after the close of the War, to remain in this country, and among many other works of marvelous improvement, build here a city whose towns and terraces with domes and dormitories should out-city any other city since Cain built the first one. In obedience to the recent appropriation of the late session of Congress the great steam shovel is at work on the lengthening and widening of Massachusetts Avenue to the District line. It has started at our corner of Nebraska Avenue, and is to run along the whole distance of the north side of our grounds. This one hundred and sixty feet of width of Avenue is greater than any other in Washington, except Pennsylvania Avenue, and will be lined with all manner of pretentious palaces.

The grinding of the teeth of the mastodon shovel as it cuts up the hill, boulders, trees, and all, can be heard in our lecture rooms, and no one objects; for the purpose of it exacts toleration, gives an exhilaration to the imagination which runs ahead of it, and sees the lengthened and widened Avenue leveled, graded, oiled, or asphalted, and populated with Fords, Dodges, Franklins, Buicks, Cadillacs, and Pierce Arrows filled with folks who all point to the American University as they fly by and far along.

Credit to Zion's Herald.

When it was too late to correct it we noticed in the last number of THE COURIER that credit was not given

to Zion's Herald for the very fine picture of Bishop Franklin Hamilton, which graced the front cover of the paper. It is a pleasure to express appreciation of this generosity so characteristic of the editors of our vigorous New England contemporary.

Doctor Baldwin's Semi-Centennial Address.

The intense session of the Baltimore Conference, held in Foundry Church, Washington, D. C., was marked by the delivery of a semi-centennial address by Doctor Charles W. Baldwin, who has been Secretary of the Board of Trustees of the American University for twenty-five years. The entire address is full of apt and valuable historical statements, wrought out in the spirit of faith and lofty enthusiasm for the many varieties of Christian activity. In his discriminating references to the educational progress with the bounds of the Conference, he says of the American University:

Methodist Bishops came to Washington, looked on and went away. Wealthy and scholarly laymen came, looked on and passed by on the other side. Of John Fletcher Hurst it may be said, "He came, he saw, he conquered," and lo! the American University. As with the eye of an expert real estate man, he bought for \$100,000 ninety-three acres of land incomparably well located. The day the last dollar was paid he turned to me—(I was then Secretary of the University)—and said: "I am as sure of the success of the university as if I this moment saw the buildings up and professors and students at work." In truth that is just what he did see, and if you will make a trip to our grounds you will see in substance what he saw by faith twenty-five years ago, two splendid buildings, with students and professors coming and going. What it now is, only faintly foretells what it shall be under a succession of such chancellors as Hurst, McCabe and Hamilton.

Wanted! The Stars and Stripes.

The new Chancellor of the American University is a Yankee by adoption, and as such, by choice, as well as necessity, has practiced a respectable economy. He does not want to use any of the university money, which is all the while earning more money, to purchase what he is confident the many friends of the school will be pleased to donate and donate cheerfully. He has long had the habit of asking for any good cause whatever it may need to promote its interests, believing that he himself has the authority of the New Testament for saying, "He that asketh, receiveth."

Just now, the occasion offers for him to ask for a little something new.

Old friends years ago donated a majestic flagpole, long rope and a large standard United States flag which floats over the university campus. It was this symbol of patriotism which gave to the University its college colors, the badge of red, white and blue.

This campus flag, "Whose broad stripes and bright stars" have been "so gallantly streaming" for several years, is "still there," but the weird and shrill wind "as it fitfully blows" "thro' the perilous fight," has come over the seas and wrathfully unravelled not a few of "the bars," and their pendent cords or threads call more for a new flag than the repair of the old one. Who shall give us that new one? Betsy Ross would have made us a new one, but she is dead. The caretaker tells us TWENTY-FIVE DOLLARS will buy another one made of the best woolen bunting, as large as this one. Until the new one comes the old one is "still there," and it shall "*never touch the ground.*"

Table Talk.

(The American University practices rigid economy. Instead of buying and paying from the current expense account we print under this head a number of things that are needed, and ask the friends of the University to donate them. We place copper plate on the gifts, bearing the name of the donor or in memory of such person as he may designate.)

We want a push-cart, to be used on the campus.

We must have the McKinley Memorial College of Government finished.

We desire a complete set of Hurst's History of Methodism for the Library.

The City of Washington is the thought of a single mind one hundred years ago.

We need a lounge in the office in case of illness, or for the rest of wearied workers.

The Librarian has asked for an India paper copy of the revised Century Dictionary in one volume.

If George Washington was the Father of His Country, Major Pierre Charles L'Enfant was the Father of Washington, D. C.

The teacher of philosophy wants a complete set of Hastings' Bible Dictionary and a set of Hastings' Dictionary of Christ and the Gospels.

The caretaker of the grounds and property has expressed a wish for some selected fruit trees to be planted in his garden near his house.

Professor MacWatters has in preparation, a Grand March, and Hymn for the university, with words and music, which will appear next spring.

The Trustees will be grateful for enough money to build a garage for the large touring car we are expecting a friend of the institution to donate.

The Boy Scouts would like fifty or more coffee sacks or gunny bags for carrying kindred soil found in the woods adjoining the campus with which to plant the trees.

If some one would present the University with a Ford Runabout for the use of the Chancellor, Faculty and Trustees, it would enable them to extend more courtesies to visitors than is possible now.

The Lecturers would be grateful if some one or more persons would donate a couple hundred or any number of chairs for the Assembly Hall, so that the persons who are compelled to stand could be seated on special occasions.

We have found, in coming to the city, no more interesting account of the very early history of Washington as it was planned for the future than in the very entertaining and instructive book entitled, "With Americans of Past and Present Days," by the French Ambassador, Mr. J. J. Jusserand.

Raymond F. Piper, one of the latest elected Fellows of the American University, who, according to the demand of the Fellowship Fund has been pursuing his studies in Harvard University, has vindicated his claim to the appointment by having been elected to the chair of philosophy in Syracuse University. This is the second instance of such a promotion, the first having been

that of Frank Blair Hanson, who is an instructor in the Washington University of St. Louis.

A letter written in a distant city to her son in Boston, was sent to the Chancellor of the University recently. The letter was written by a lady seventy-nine years old. It contained the following sentences, "It is a perfect shame that the Protestants of America are not awake to the necessity of having some representative university in Washington. I am astonished to find intelligent people with no knowledge of what Romanism is doing in Washington."

Little by little the spectacles of elderly people are loaned to their sons and daughters as they unwittingly grow older.

The Annuities.

"There is that scattereth and yet increaseth, and there is that withholdeth more than is meet, but it tendeth to poverty." The vindication of annuities is found in this Scripture. The law of entail is no longer the law of inheritance. What we earn by the sweat of the face is in our names only for a season. Every dollar that has ever been earned has had to be given up; as it has been so it will be. He only is business-wise, and Christ-wise, and has made a surty of a better testament, who can say, as he brings his reckoning to judgment, Lord, thou deliverdest unto me five talents, behold I have gained beside them five talents more.

The investment of the ten talents requires as much sagacity and security as the investment of the five talents. If the liabilities are great in trade they are not in annuities. We desire to thank the annuitants who have entrusted their savings to the Trustees of the American University since the last issue of the COURIER. The University is now in position to give better rates of interest than the banks, and the annuitants are secured against all anxiety and care.

Why Washington is the Best Possible Location for The American University.

In the House of Representatives, Mr. Fess again has presented his bill providing for the establishment of a national university. We enter upon no argument for or against such proposition. Discussion of the bill, however, is bringing into the foreground certain important facts which are of utmost moment. The discussion is reflecting with clearness the vantage point which the National Capital, itself, holds as the natural location for a great university. Long ago, in a message to Congress, President Washington, speaking of the city, which was to carry on his fame, said: "You will consider it as the capital of a great nation, advancing with unexampled rapidity in arts, in commerce, in wealth and in population." Again, in a letter to the Commissioners of the Federal District, written January 28, 1795, General Washington said, "I have greatly wished to see a plan adopted by which the arts, science and belles lettres should be taught * * * The Federal City, from its centrality and the advantages which it must have over any other place in the United States, ought to be preferred as a proper site for such a university." We do not need to refer to the effort, which all know and approve, to make this city "a monument of American achievement in the greatest communal arts, that shall endure in fame, if not in fact, so long as the human race shall continue to build cities." There is no doubt that after the lapse of years we shall have in our Capital City the most magnificent exhibition of perfect city planning in existence. But what we now have in mind is rather the thought that what here is gathered constitutes unique advantage and opportunity for university work. Chancellor Brown, of New York University, says that the peculiar province of a university at the Capital will be the "utilization for governmental and educational purposes of the Library of Congress, the Census Office, the Geological Survey, the Bureau of Standards, the Naval Observatories, and probably the Scientific Offices of the Department of Agriculture."

Dr. Brown is emphasizing more particularly the scientific side of the opportunities at Washington, and he sees clearly the breadth of present opportunity and the immense future utility for a university at Washington to put on a scientific basis the great mass of work of the highest importance which is essentially scientific in character. But other educators, who are familiar with the National Capital, see the problem in even wider aspects. Ex-President William H. Taft, for example, believes that a university in Washington need not be intended primarily to teach but rather to direct teaching. This, we might add in passing, is one of the foremost and underlying motives of the research work which the American University at present is conducting. In an editorial published some time ago in the Boston Evening Transcript the further suggestion was made, in commenting upon Mr. Taft's thought,—that we ought not to be so interested in attractive announcements for curricula and the fine brick exteriors of school buildings as in some more effective machinery for investigation and control. To this end an active working university is vital.

A former report by Representative Fess explaining his measure when offered a year ago, calls attention to the Congressional Library, America's greatest collection of books, housed in the world's most beautiful building. He declares that Washington long ago had come to be one of the greatest scientific centers of the earth. At this point perhaps we cannot do better than to quote the words of one who has given such serious study to the whole problem. "Here," says Mr. Fess, "are assembled the most remarkable collection in the way of scientific material known to the scientific world. Here the various departments of scientific investigation, headed by the world's best experts, aided by a group of trained workers, with separate laboratories and experimental facilities, run up into the hundreds. Here also are domiciled thirty-four associations devoted to the investigation of truth in various spheres. These make Washington attractive to the scholar of all countries. Here telegraphy was effected. Research along lines of climate, meteorology, etc., was conducted by leaders of science. Other important governmental agencies had their beginnings here. In view of such results already attained what is the possibility of a national university? Even to-day there exists in the Capital the university, only awaiting organization, housing and research students. Probably in no one place in the world is there such a rare and enormous aggregation of material for laboratory use as in Washington. No university could gather such laboratory facilities."

Thus we might continue, but we refrain. This constantly recurring proposition to establish a national university at Washington only brings out more clearly the wisdom of strengthening the American University which already we have established and which auspiciously has entered upon a career which only centuries can measure.

"Our Next Door Neighbor."

It is not mere flattery to be sought for as good company. It is simply a tribute to one's intrinsic worth or the good neighborhood in which one has been fortunate enough to be located.

Mount Vernon Seminary has removed to our next door, and put out a friendly hand toward us. We feel greatly complimented. We were invited to the coming, and we found unusually good society there ourselves. The Nation's Secretary of State graced the occasion by planting the Corner Stone of the New Seminary building. The mistress of ceremonies, Mrs. Hensley, who had succeeded to the administration of the great school, presided with as much composure and spoke with as much good literary taste, as does the President of the United States himself.

Under such interesting and highly honorable auspices with which to begin how else could the building rise than gracefully in its handsome, most becoming brick architecture, story after story as line upon line repeats itself with each successive sun!

By the way, what a remarkable woman that Mrs. Somers has been! Long, long ago, we knew her brilliant and eloquent brother who left this life, all too early for the greater honors which were awaiting him here.

He, Bishop Simpson, and the Reverend William Morley L'Anson preached the dedicatory sermons at the opening of the then new Metropolitan Church. Great as he was in himself, it was honor enough for him to be the brother of such a sister. She has been not only like Arnold at Rugby, the maker and "head-master" of the cultured and charming school so praiseworthy in the Nation's Capital, but like Napoleon's minister of finance she has had both a head and hand for banking, or that looming edifice would not now stand out so like a big block of artistic building, that had cost a half million dollars. The old schoolgirls who come to the dedication of the new building, no doubt will drink the toast proposed by "Old Brooke" to the boys at Rugby—"the dear old schoolhouse—the best house of the best school in England" or America. But think what the new building will be when it "keeps company" with us! We, certainly, shall leave at least our cards—the whole Convocation of us, shall do so—at the door of this noble edifice after the long line of beautiful and brilliant young misses have followed their provost preceptors and pretty much the whole town into the inviting and open doors of the New Mount Vernon Seminary.

JUDGE LEIGHTON'S LETTER TO PRESIDENT WILSON AND THE REPLY

THE AMERICAN UNIVERSITY
Washington, D. C.

April 30, 1917.

To His Excellency,

Woodrow Wilson, President of the United States.

SIR: In behalf of the Board of Trustees of the American University, located in the District of Columbia, I am authorized to extend to the United States Government the use of the ninety-two acres of land lying within the District and composing the campus of the University, together with the use of the College of History Building containing twenty-one large and commodious rooms, and also the McKinley Auditorium, not quite completed, which could be made available as a barracks, or for such purpose as the Government may desire.

The campus may be used either for a camping ground for troops, for gardening and raising products

for the Army, or for such other purpose as you may elect.

There is a bountiful supply of city water on the premises, and the grounds are easily accessible by means of the Washington City trolley service.

The character of the land is such as would make it available as an aviation ground.

Respectfully,

B. F. LEIGHTON,

President, Board of Trustees, American University.

THE WHITE HOUSE
Washington

(Personal)

May 1, 1917.

My dear Judge Leighton:

The President asks me to make cordial acknowledgment of your letter of April 30th, and to tell you

and the members of the Board of Trustees of the American University that he deeply appreciates the generous and patriotic offer which you make. He is bringing your letter to the attention of the Secretary of War.

With an expression of the President's warmest thanks, believe me to be

Sincerely yours,

J. P. TUMULTY,

Secretary to the President.

Hon. B. F. Leighton,
President Board of Trustees,
The American University,
Washington, D. C.

Third Convocation Day Thursday, May 31.

The regular meeting of the Board of Trustees of the American University will occur on the forenoon of Convocation Day, May 31st, at 10:30 o'clock.

Convocation Day this year occurs during the last week in May. Wednesday, the usual time, being Memorial Day, the Convocation exercises will take place on Thursday, May 31st, at 2:30 P. M., in the Grove Amphitheatre on the University grounds. Ex-Governor Hiram W. Johnson, United States Senator from California, will speak.

Trustees of the American University.

We present in this number of the COURIER the portraits of the Trustees of the American University. No more distinguished individuals compose the corporate body of any other educational institution. In the number will be seen a former President and a former Vice-President of the United States, two members of the President's Cabinet, an ex-governor of a State, two former Members of Congress, a vice-president of the Pennsylvania Railroad, five bank presidents, a number of bank directors, a publisher, seven manufacturers, capitalists, merchants and lawyers, an army officer, eight bishops, seven other clergymen and three noble women. They represent several religious denominations and States as far north as Massachusetts, as far west as Nebraska and as far south as North Carolina.

Recent Gifts of Money.

(This acknowledgment of sums less than five dollars is to be considered sufficient receipt therefor.)

GENERAL FUND—\$500, W. S. Pilling; \$400, J. R. Peters; \$25.00, Monticello Chapter, D. A. R., District of Columbia, anonymous; \$20.00, Charles Varley, Jr.; \$10.00, G. C. Coon, D. B. McClure, G. H. Spencer; \$5.00, Miss Sallie B. Deale; \$2.00, E. A. Douglass; \$1.00, Amanda Rogers.

BISHOP HAMILTON LECTURESHIP FUND.—\$50.00, Henry W. Walker; \$10.00, E. G. Wesley; \$9.95, Mary M. Wardwell; \$3.00, K. F. Richardson, F. C. MacSorley, Luther Pilling, Dillon Bronson; \$3.00, V. E. Hills; \$2.00, Wm. Moyle, W. C. Baker, W. P. Holman, Wm. Wood, W. E. Baker, W. H. Varney, E. H. Collins, J. A. Russell, Mrs. J. S. Bell, C. W. Simpson, C. M. Starkweather; \$1.00, B. G. Lipsky, F. K. Ganible, F. S. Graham, D. F. Faulkner, D. B. Phelan, C. N. Garland, J. E. Carter, F. Palladino, F. L. Decker, D. W. Howell, F. M. Sawyer, R. S. Cushman, S. A. Carney, E. C. Love, Joseph Cooper, J. M. Cass, Mrs. Eliza G. Hall.

FELLOWSHIP AND SCHOLARSHIP FUND.—\$250.00, T. C. Hunter; \$20.00, L. A. Whitcomb; \$10.00, E. L. Fodick.

BISHOP MCCABE LECTURESHIP FUND.—\$100.00, A. J. Nast; \$10.00 Bishop W. F. Oldham; \$1.00, Mrs. G. E. Bartlet.

CHANCELLOR'S HOUSE FUND.—\$1,000.00 Mrs. G. F. Swift; \$500.00, Summerfield Baldwin; \$25.00, H. B. Williams, Mrs. A. A. Soule, C. R. Bargdill; \$10.00, B. F. String; \$5.00, James Law, Mrs. M. M. Cleaver, Cash, W. A. Lilley, W. L. Lynn,

I. S. Felton, C. B. Felton, G. D. Benn, J. F. McAnally, R. A. Illk, T. W. Grose; \$3.00, L. A. Washburn; \$2.00, J. F. Lancaster, S. K. Moore, O. H. Hubbard, Lewis Campbell, A. W. Kauffman; \$1.00 J. H. Smith, S. B. Goff, A. J. White, E. M. Pace, P. L. Flanagan, S. Sargent, Alfonso Dare, A. H. Lucas, J. W. Clark, J. E. Rossell, W. S. Condle, W. R. Cloughly, W. R. Conard, W. F. Beckett, F. S. Miner, J. K. Asay, W. B. Wolcott, W. E. Cranston, H. B. Platt, T. A. Brandt, W. H. Heisler, C. P. Sayrs, B. H. Sharp, W. C. Catlett, Charles Repp, H. I. Branson, A. M. McNutt, S. A. Noon, W. M. Keller, S. J. Colgan, W. W. Lance, W. A. Mant, F. N. Lynch, C. C. Kennedy, I. N. Kalb, Jefferson Williams, C. R. Booth, Mrs. W. F. Aull, E. A. Blockewich, Anna Butler, J. A. Spencer, L. H. Bunyan, Mrs. Albert Norris, B. M. Neill, A. D. Geist, H. B. Shider, J. B. Mackay, H. E. Walbey, George Ganl, J. J. Hunt, Wm. Powick, Arthur Oakes, Cornelius Hudson, Ernest Bowden, J. D. C. Hanna, Wm. Bamford, E. P. Moon, C. S. Harper, C. W. Matthews, C. E. Hodges, Wm. Brown, S. M. Beane, E. M. Mitchell, J. S. Altman, J. C. Baker, S. T. Walker, Jesse Swank, A. H. Flagg, Charles Fulkerson, D. W. Nichols, E. M. Stevens, L. W. McGarvey, S. B. Evans, Mrs. C. W. Karns, S. H. Engle, W. A. Hlouck, Hugh Strain, J. W. Henninger, A. D. Moon, D. F. Helms, C. R. Morrison, A. A. Heinlein, Mack White, P. G. Batty, E. R. Leach, R. K. Stephenson, H. L. Quigg, J. R. Bicking, J. S. Whitaker, W. L. White, Ivanhoe Willis, J. J. Bunting, J. A. Leach, C. E. Poole, W. G. Harris, T. E. James, The Streeters, W. I. Ward, C. S. Hatch, Mrs. John S. Bell, G. G. Scrivener, W. D. Woodward, Wm. Balcke, T. S. Mitchell, J. Gislser, R. C. Jones.

Samuel L. Beiler.

The death of Dr. Samuel L. Beiler on February 11, 1917, removes a distinguished pastor, preacher, teacher and administrator from the labors of earth to the activities of the unseen and spiritual world. From 1893 to 1898 he was Vice-Chancellor of the American University, and served with special diligence and success in the planning and erection of the College of History. A preacher of rare ability, his sermons abide in a permanent impress on his hearers through his fine combination of clear exegesis with fervent spirituality. He gave himself on call to educational work for about fifteen years in Washington, in Boston and in Los Angeles; but his first love was for the pastorate and the edification of the Church through the engrafted word. His heart was large and warm. His friends are legion. His memory is precious.

× The American University in the Service of the Nation.

We are a nation at war, with all its far-reaching consequences. The President has asked Congress for a first appropriation of almost four billion dollars and is mobilizing all available resources. Experience among the warring nations has shown above all other things the tremendous forces which are controlled and operated by scientific research and by scientific control, (1) in the industries which manufacture destructive means of warfare, (2) in the industries which supply the commissary, both of the military and civil population, (3) in the industries which supply medical products for the army, (4) in the control of sanitary conditions so that the occurrence of ravaging diseases among the fighting forces is almost unknown, (5) in the control of agricultural products and the food situation generally, and (6) in other fields and industries in which the lay mind would hardly suspect that science was the controlling factor. Nor must it for a moment be supposed that this importance of scientific control has sprung up over night as the result of the war, but rather that the war torch has burned the veil and brought science into the light so that even the

man in the street could grasp its tremendous import even though unable to realize its manifold activity.

Science was in the service of mankind at peace, its faithful, though unrequited servitor; with mankind at war, it girded its loins and fights with its human masters for their very existence and freedom. Being immortal it cannot die, but gains strength and virility through exercise and application, so that it becomes a giant, though still obedient to its masters in the greater peace to come.

Not all can be masters of this genie disclosed by the torch of war, ever ready to serve those who know how to rub the lamp, ever ready to destroy those that know not how. The "Cave of the lamp" is the Institution of Learning, be it college, institute or university; the lamp is the lamp of knowledge, which ever burns for those who strive to know the laws of nature. The heritage of the lamp belongs to the university and to the nation looks for succor in this the hour of trial. The universities of the land are meeting the situation squarely, for science in America has been no "slacker," and scientific research has been nobly fostered by our universities and by our people, and the Government maintains here at Washington the largest research organization in the world. That this research conducted by the Federal Government is mainly in the sciences as applied to the nation's economic life, is not generally known or appreciated, for the work which the Government can do to improve the collective welfare of the people is of necessity material, and therefore founded upon and fostered by scientific research. In this field our Government has no equal. At this time there are not less than three thousand distinct and separate lines of research being carried on by scientists in Washington, among whom are numbered many of international fame.

The American University was founded to utilize, participate in, and augment this fount of knowledge, to the end that this enormous accumulation of results of research might be available to graduate students of the sciences and itself contribute to the welfare of the nation. This conception is lofty and big and the University in fulfilling this aim must adequately meet its exceptional opportunities. Science belongs more to the laboratory than to the lecture hall; it can be expounded in the latter, but can be mastered only by research. In order that the University may utilize the material and men at hand in fulfilling its obligations, it must have well equipped laboratories of research. It is a matter of regret that the University is not thus equipped for bearing its full share of responsibility in rubbing the lamp of science in this the nation's crisis, but it proposes to remedy this situation at once, to meet if possible the present demands of the war, and surely those of the future peace. Plans for such an enterprise on the part of the American University have been formulated and perfected by a group of Washington scientists in cooperation with the university authorities, and the University, realizing the importance of the moment, has decided to take immediate and continued steps toward their early realization. Although involving a very considerable fund for a building and endowment, the American University hopes to be able to announce at a not distant date that wealthy and patriotic friends have seen this glorious opportunity for immediate and continued service to the nation.

Prof. F. J. Turner, on Using Government Educational Resources.

The following is taken from the report in The Washington Post of Prof. Turner's address on the necessity of using the resources at Washington for educational purposes, thus indorsing the idea which the American University has held from its founding by Bishop J. F. Hurst:

The establishment of a Harvard unit in Washington, in line with the proposal to make Washington a great university educational center, was urged by Prof. F. J. Turner, of Harvard, at the thirty-fourth annual dinner of the Washington Harvard Club last night at Rauscher's.

Prof. Turner suggested that the unit be composed of Harvard professors on leave of absence, and that they be accompanied here by traveling students, to be changed from time to time. This unit would be able to avail itself of the great number of laboratories, the libraries and other educational features of the city as well as to render all possible services to the government.

"Harvard," Prof. Turner said, "is fast developing the idea of the national university, and is changing to meet the new demands of a country undergoing the progressive changes of its time." He urged, however, that the endowment be increased to meet the new demands.

A Criminal Use of Our Name.

A yellow postal card, eight by six and a half inches, with the caption, AMERICAN UNIVERSITY BULLETIN, reached the Washington correspondents of the different papers on the morning of February 13. Mr. W. E. Brigham, the alert and able Washington correspondent of the Boston Transcript, telephoned the American University to discover what it knew of this card bearing its name. Upon being informed that the University had nothing to do with a card attacking the President of the United States and Members of Congress, and that in indecent language, Mr. Brigham telegraphed the following item to The Transcript:

Washington, Feb. 13.—Washington is being flooded with postal cards, of an appropriate yellow color, denouncing war and urging the recipients to write or wire your congressman today that 116,000,000 patriotic Americans want peace. These are being issued as the American University bulletin. Dr. Frank Collier, of the American University, today repudiated these cards absolutely. "We have nothing to do with them," said Dr. Collier. "We know nothing about them. You know where we stand on patriotic issues."

The cards are sent out from New York and bear the postmark of the Pennsylvania terminal station. They state on their face that 6,500,000 of them have been issued. They are unsigned and no clue to their authorship has been given except the misleading one referred to. As the American University is situated in Washington and no authorized statement representing it could be issued from any other place, the denial of Dr. Collier may be accepted as final and official.

The cards declare among other things that "Wall Street gold diggers will soon sink one of Mr. Morgan's or Mr. Rockefeller's ships and then the President will have an excuse for war. Every intelligent citizen is in favor of and should demand of Congress a referendum vote on war."

The obverse side of the card contains another attack on "Wall street gamblers." * * * * *

W. E. B.

Dr. Collier got into communication with the city editors of all the Washington papers and the Washington manager of the Associated Press repudiating any connection whatever with this so-called bulletin. He also saw Mr. J. J. Southerland, of the Solicitor's office of the Post Office Department, who investigated the matter and had the cards excluded from the mails. On March 9 The Washington Star published the following:

The Post Office Department has barred from the mails a postal card, numbers of which were mailed in New York, issued in connection with the pacifist movement. A statement

on the card says that 6,500,000 of them were issued. The card is headed "American University Bulletin," but officials of the American University here say that it had nothing to do with the card nor was it issued by the university.

The department took the view that the subject matter on the card was in violation of section 211 of the criminal code, which prohibits anything tending to incite arson, murder, anarchy or assassination, and section 212, prohibiting the use of the mails to matter bearing on the outside cover or on a card anything detrimental to the character of any one. The sections carry a penalty of \$5,000 fine, imprisonment for five years or both. The department officials do not know who mailed the cards, nor have they any information as to the exact number.

The American University appreciates the aid of the following members of its Board of Trustees in its endeavor to give public denial to any connection with this postal card: Mr. Gilbert H. Grosvenor, Mr. John C. Letts, Mr. C. C. Glover, and Mr. B. F. Leighton.

Dr. MacWatters on Shakespeare.

Prof. Samuel J. MacWatters, Litt. D., delivered three lectures on Shakespeare in the Assembly Hall of the College of History on the afternoons of Tuesday, Wednesday and Thursday of the first week in April. His subjects were The Three Periods, The Ideal, and Love and Friendship. The audiences which greeted him amply proved that Dr. MacWatters is one of the most popular lecturers at the University.

Dr. Peritz's Lectures on the Bible.

Prof. Ismar J. Peritz, Ph.D., who holds the chairs of Semitics and English Bible at Syracuse University, delivered the course of lectures on the Bible January 30 to February 2, inclusive. The subjects of the four lectures were: Jewish Customs, Ancient and Modern; Palestine, Ancient and Modern; Jerusalem, Ancient and Modern; and Babylonian Art and Biblical Imagery. These lectures were well attended, and Dr. Peritz brought to his audiences the latest results of investigation in this field. The lectures were illustrated with stereopticon slides, some of which were from pictures made by Dr. Peritz himself, and they are very rare.

Dr. Oberholser Lectures on Birds.

Just when the birds were returning north for the mating season, Dr. Harry C. Oberholser, Ph.D., Ornithologist of the United States Department of Agriculture, began his course of lectures on Bird Life. The opening lecture was given Tuesday, March 20, on Pleasure and Profit in Bird Study. Friday, March 23, the doctor spoke on Birds About Washington. This was the largest attended lecture ever held in the Assembly Hall of the College of History, due, no doubt,

to the popularity of both the lecturer and his subject. The Mysteries of Bird Migration was the subject of the lecture Tuesday, March 27; and it was a revelation of the mysterious movements of our feathered friends. The closing lecture was given Friday, March 30, on the Home Life of Wild Birds. These lectures were all illustrated with stereopticon slides. Many expressed the desire for Dr. Oberholser to give a course next year.

University Extension Lectures.

The American University, in harmony with the democratic tendency of modern education, gives much attention to its extension work. The greatest progress in extension work this year has been in visual instruction at the Saturday afternoon lectures at the University. With the cooperation of Director Francis Holley and Dean A. Maris Boggs, of the Bureau of Commercial Economics, the motion-picture lectures on Saturday afternoon have been remarkable in the wide field covered and in high quality of the pictures.

The official films of the governments of France, Argentina, Australia, South Africa, Canada, and Italy gave views of the topography, national parks, natural resources; agricultural, industrial, and commercial progress, and daily life of the peoples. Some of these

films are wonderful as works of art, and all of them are of large educational value. Similar films picturing the development of the different States, notably New York, Pennsylvania, Minnesota, Wisconsin, Dakota, and Montana, have been shown.

One of the most remarkable lectures of the course was the one describing the reclaiming of vast tracts of waste lands by the Reclamation Service of the United States Government. The Government has put the human element into this film, which makes it as delightful as it is informing.

Other subjects included the different phases of agriculture, from plowing with dynamite to stock farming and the production of sugar; many kinds of manufacturing, from the making of matches to the production of books and newspapers; modern methods of forestry, of fishers, of steel construction as in skyscrapers, mining, transportation, and commerce. Exceedingly interesting was the film on fire prevention, and were those which showed the welfare work as carried on by some of the great industrial concerns.

Reception by the Woman's Guild.

On the afternoon of February 28th the Woman's Guild gave a very successful reception in the Assembly Hall of the College of History. Dr. MacWatters gave

a rendition of Shakespeare's *Midsummer Night's Dream*, with music, the latter being furnished by Miss Josephine C. Collier, of Boston. The afternoon was in charge of Mrs. John C. Letts, acting president of the Guild, and a committee consisting of Mrs. Frank W. Collier, Mrs. Wm. S. Corby, and Mrs. Gilbert H. Grosvenor, who were much gratified that the Hall was filled in spite of the very inclement weather.

Our Fellows Getting Together.

New York, March 27, 1917.

DR. FRANK W. COLLIER,
The American University,
Washington, D. C.

DEAR MR. COLLIER: The Fellows of the American University pursuing studies in New York City have been enjoying a delightful evening at the home of Miss Miriam Gould, and we wish that you could hear the many kind things that we have been saying about the University. You would be interested also to know what we have been telling each other about our work.

We are writing to you now to ask your opinion concerning the desirability of an organization among the Fellows of the University. The purpose of the organization would be to further in any way possible the interests of the American University and to assist the future Fellows who may take work in the cities where we shall live.

Will you kindly tell us just what would be the best thing for us to undertake, how to proceed, and whatever other suggestions you may feel are necessary? It will give us pleasure to cooperate with you along the lines that you desire.

We have communicated with Miss Thurlow, of Baltimore, and Mr. Tremayne, of New Haven, and they are also in sympathy with the plan. Will it be advisable to form an organization including Fellows in other cities, as well as those who come to New York?

Cordially yours,

T. J. WOOFER, JR., CLYDE F. ARMITAGE, CLARA F. CHASSELL, CLYDE B. MOORE, MIRIAM C. GOULD.

Miss Chassell, One of Our Fellows, Honored.

We are pleased to report for the second time this year that a Fellow of the American University has been appointed to an important position. This time it is Miss Clara Frances Chassell, who has been appointed psychologist in the Horace Mann School connected with the Teachers' College of Columbia University. Such appointments are eloquent testimony to the care and wisdom of the Board of Award in selecting the Fellows of the American University. They are also proof that the fellowship fund is a wise investment.

Archaeology, Agriculture and Textile Art.

The idea of the university involves the idea that all knowledge is related. Yet archaeological research, one would think, would seek agriculture as its last place for justification. The following account, however, tells us that the claim is made that archaeological research is the means of doubling the corn belt and adding much to the textile art. This work of the American Museum of Natural History is paralleled by that done by the American University as illustrated by Dr. J. S. Cates and Mr. M. O. Cooper who pre-

sented dissertations last year which unite the highest research work with the practical production of food supply. See COURIER, June, 1916.

(From the New York Evening Post)

In an interview concerning the research work under his direction, Dr. Clark Wissler, of the Department of Anthropology of the American Museum of Natural History, gave out several important facts which again forcibly indicate that the influence of the Museum through the work which it is undertaking has become of national importance.

In considering the requirements of his department to carry on the field work and explorations for the ensuing year, Dr. Wissler informed the officials of the museum that during the past ten years \$76,970 had been expended in field work alone, and upon being interrogated whether the expenditure of so large a sum had been worth while, he replied as follows:

"In part answer to these questions, I would call your attention to two great movements in this country that have received their impetus through the museum's field researches in anthropology, and would cite as the first instance that of the discovery of a new Indian corn.

One of our field men, Dr. Gilbert L. Wilson, was delegated to collect material and study the agriculture of the Mandan Indians, who lived far up in the Dakotas. They had established their villages in the locality long before Columbus was born, and one of their agricultural pursuits was the raising of maize. In all of the great States of the Dakotas, Montana and Wyoming, the farmers of today were unable to raise corn because of the shortness of the seasons, but investigations proved that the Mandans did successfully raise it, and to Dr. Wilson was given the problem, 'Ascertain how the Indians did it.' He found that there were a few old women who still had the precious seed and knew how to raise the corn. Had the investigation been longer delayed, in a few years these old women would have been dead and the secret lost. Through the Museum's publications the news was spread, professional agriculturists became busy, and the name of the American Museum has been ringing throughout the great Northwest.

The Dakota Farmer, the greatest farming paper of this country, states in a recent issue of its publication, 'that we have doubled the corn belt, and will add billions upon billions of dollars to the national wealth.' Think of it, billions upon billions that would have been lost to the nation if we had not spent a paltry \$76,970 for field work, of which sum less than \$3,000 went into this one project.

"The next great movement is the interest which the museum authorities have been able to arouse in the American manufacturer of textiles—that from its great collections it has been possible to institute the new American decorative art. What started this great movement? The answer is the work of a member of our research staff, M. D. C. Crawford, a textile expert, who has given his time and services gratuitously. But the \$76,970 expended in field collecting made his work possible. Every one of our field men before starting on his expedition has been instructed to gather authentic type designs from our fast vanishing Indian tribes. On the contrary other museums did not so instruct their collectors, but sent them after what they called 'rare things.' The result is that nowhere other than in the American Museum is it possible to find a workable collection in native art. You ask 'Why workable?' and the answer is because our men studied the art in the field, they made contributions to science, and the collections stand for something real. It was this real work that rescued the right things from oblivion.

"Who can estimate the capital that the great textile and other industries will invest in this movement? Inquire of the leaders of these industries where the thing started and their answer is 'in the American Museum of Natural History.' These are the two most striking results of our recent research work. There are others, but we feel that these two important finds are profitable beyond estimation in dollars because they affect and reach the lives and well-being of our people and the nation at large."

Table Talk.

(The American University practices rigid economy. Instead of buying and paying from the current expense account we print under this head a number of things that are needed, and ask the friends of the University to donate them. We place copper plate on the

gifts, bearing the name of the donor or in memory of such person as he may designate.)

Ask and it shall be given.

A rug, please, for the ladies' parlor.

There is nothing succeeds like success.

Will some one, please, present us with a large pulpit Bible for our Chapel?

The American University never had a more promising outlook than during the present month.

Nearly everything asked for in this column in the last edition of the COURIER has been given.

The splendid quadrangle of buildings in which is to be housed the Mount Vernon Seminary is fast approaching completion.

The University gave to the District of Columbia nearly or quite six acres of ground for the extension of Massachusetts Avenue.

If some one will give us five hundred dollars to furnish our laboratory, we have the promise of volunteer instructors from the Government.

For fifty dollars the University could macadamize the roadway for automobiles from Nebraska Avenue to the door of the College of History.

The distribution of Fellowships for the next year will require the study of applications from all directions and from both coasts in this country.

Some one forgot in sending things asked for in the last issue of the COURIER the India paper volume of the Century Dictionary. It only seems necessary to speak of it.

We would like to have for one of our lecture rooms the latest and most comprehensive reference Atlas, sufficiently large to show the cities and towns in the war countries.

So long as our friends continue not only to wish us well, but add to our improvements, the University grounds and buildings will be made to look more and more attractive.

We have been advised if we would open a commercial department of the American University we could have a thousand students. But friends forget that the University is a post-graduate school.

One hundred copies of the large size Methodist Hymnal for use in our Assembly Hall would make a very gracious gift, and we would be grateful for the same number of Episcopalian Hymnals.

To help provide some little against the high cost of living, if some good friend will furnish us some seed corn and seed potatoes, we will utilize some open spaces on the University grounds for gardening.

The Epworth League of the Highland Church in Boston, of which the Rev. Dr. George H. Spencer is pastor, sends the American University ten dollars toward the purchase of the "runabout machine."

The proposition has been made to erect a memorial building on the University grounds to commemorate one of the noblest men of the last century, whose patriotism and devotion are worthy of the honor.

A colored brother says he would like very much to present the University with an automobile, but he finds he is not able to do so. He very cheerfully encloses a dollar, however, to buy for the machine a spark plug.

We are pleased to know that the illustrated lectures given before the University during the year have been so highly appreciated by the general public. The courses of lectures planned for next year will furnish a number of attractions.

The University is having the benefit of instruction in Patristics during the present year. Dr. George S. Duncan, of Johns Hopkins University, has conducted this department. No name is more representative of the scholarship of this country.

It is a matter of regret that the University cannot matriculate all the students who desire the benefit of instruction. But the institution set for itself a very high standard in its foundation, and only graduates of well accredited schools can be admitted.

The Library has been supplied with Webster's New International Dictionary, Hurst's seven volumes of the History of Methodism, and Hastings' Bible Dictionary. Enough money has been given to buy a pushcart, and a start has been made toward a runabout automobile.

It is interesting to look over the Secretary's shoulder as he opens the American University mail. Nearly every morning comes a letter or letters with a check, money order or pledge to help some department of the institution. These sums now have run into the thousands.

The American University has in view because of the suggestion of a friend one of the best private libraries in the United States. The choice books in the collection have been selected with the greatest care during the long life of the owner and include some very rare editions.

Now that we have money for the spark plug for an automobile, some one promises to keep us in gasoline for a month. Would it not be well for three or four friends to give us a wheel apiece? It is likely that we may have to assemble the machine, and we shall need at least four wheels.

The American University receives invaluable service from its counselling professors in the Government departments. More and more are they becoming interested in the work of the University. No other university in the country enjoys such opportunities for prosecuting research in all the sciences.

Will not our readers help us to plant some fruit trees on the lawn and about the home of our caretaker? We would like the best quality of grafted trees. Give us, please, six cherry trees, four plum trees, four pear trees, six peach trees, and ten apple trees. To prepare the ground by dynamiting, bring the trees from Missouri and plant them will require three dollars a tree. We will acknowledge the favors and print the names of the donors in the next number of the COURIER.

When gifts for endowment bulk large it is easy to find encouragement widespread. But such gifts overwhelm the beneficiaries in such manner as to lead them to forget the constant running rivulets of smaller contributions, at least to be sufficiently mindful of them and grateful for them. The one comes like the cloud-burst against the hills, the other like the brook that speeds itself into the broad waters of the measureless merger.

The call in the COURIER for a large United States flag for the University campus was responded to promptly by the Daughters of the American Revolution, who gave twenty-five dollars for this purpose. This gift comes from the Monticello Chapter, D. A. R. of the District of Columbia. At the same time a friend who does not desire to be known gave us twenty-five dollars for the same purpose. This will enable us to secure another and suitable flag for the walls of or desk in the Assembly Hall. A vote of thanks by

the Board of Trustees cordially acknowledges the receipt of these generous gifts.

The excavations required to secure a satisfactory grade in extending Massachusetts Avenue made it necessary to move back from the right of way to preserve them certain tall ornamental forest trees. One very graceful cedar more than forty feet high was successfully transplanted nearly a hundred feet from where it grew. A body of earth in which the roots were embedded fully thirty feet in circumference and deep enough to cover the extension of the roots was carried with it without being loosened. This responsible work was done by the firm of the Bureau of Foresters and Tree Surgeons.

Dictionaries.

The coming and going of dictionaries like that of encyclopedias, is a movement of the calendar. Think of the coming and going of Murray. It was so long in coming, it certainly should be long in going. The transporting of munitions, or some troublesome embargo, like the cost of it—whole library as it is—hinders common-folk in this country, in getting hold of it.

If the volubility of American speech continues to expand, the dictionaries, like encyclopedias, would seem to need "annuals" or even monthlies. But the passing of such books like Omar-Khayyam's endless procession, appears to be the fate of them all; they die of the publisher's plague. We, who were in private life, were set by the ears a few years ago, when we were told we must make Worcester the standard. But on came the Century and the "Standard" itself. Now, Webster only is new every morning and fresh every evening. This latest has the field. Give it room, it speaks as one having authority and not as the scribes. It is as indispensable on the university desk as that other, "the one book."

Rescue of a Mulberry Tree.

There was a deep depression in the land abutting Massachusetts Avenue, near Nebraska Avenue. In the widening of Massachusetts Avenue from the American University grounds to the District line it was decided to use some of the superfluous earth to fill up this cavity and thus remove a very great danger to which those passing by were exposed. In this cavity stood a very fine mulberry tree, and it was threatened with destruction. Upon calling the attention of the owner, Mr. C. C. Glover, to this fact, he gladly presented the tree to the University. Mr. L. F. Smith, of the Bureau of Foresters and Tree Surgeons, was successful in removing the tree to the University grounds. At this writing it shows every sign of life, the buds beginning to burst.

Walks About the University.

When Thoreau was asked if he had ever traveled abroad, he replied, "Yes, in Concord." Washington has been called "The Beautiful," but its beauties are not yet all known. Many of them are waiting to be discovered or revealed.

The writer recently took a stroll through the glen down the decline at the rear of the hundred acres of the university grounds, some day to be called one of the most picturesque spots for surrounding campus in

the vales and fields for manly sport to be seen in connection with any great school at home or abroad.

He found two sparkling streams of water about five hundred yards apart which may yet give some student poet, with Wordsworth's "Insight into To-day," inspiration to write as blood-warm as did he. The springs send forth two gurgling brooks whose wooing of each other over the divide, for two or three furlongs, end in a wedding which, with a little environment of masonry, could make as attractive a companion of meditative minds as the little river at Cambridge, England. The wanderer sat down by the double brook, now one, and chattered with the rippling water until he heard distinctly the same response which came to Tennyson as an idyl when by the side of another similar scenic brook, he heard these enchanting strains:

"I come from haunts of coot and hern,
I make a sudden sally,
And sparkle out among the fern
To bicker down a valley.

'Till last by Philip's farm I flow,
To join the brimming river,
For men may come and men may go,
But I go on forever."

COLONEL AND STAFF OF SIXTH ENGINEERS

Andre Tardieu.

The American University, at its Convocation on May 31, conferred the degree of Doctor of Civil Law upon M. André Tardieu, the distinguished gentleman who is now French High Commissioner to the United States. After receiving the best training the schools of France could offer, young Tardieu began to prepare himself for the diplomatic service. Upon the completion of his professional course he was sent to the French Embassy at Berlin and later to Constantinople. Later he entered the field of journalism, becoming a member of the editorial staff of the *Figaro*, and he was at the outbreak of the war foreign editor of *Le Temps*.

For some years previous to the war he vigorously advocated the three years' service bill, which has done so much to prepare France for the great assault she received in 1914. And when the war actually came he asked to be sent to the front. He was assigned to the staff of General Foch and later to that of Marshal Joffre. But this did not satisfy him, so he requested to be sent to the firing line. He was placed

DR. ANDRÉ TARDIEU

in command of a company of foot chasseurs, who are known as the most daring and the fiercest fighters of the French army, whom the Germans call the "blue devils." With his "blue devils" he went into the trenches, and when they brought him out, more dead than alive, he had been mentioned twice in army orders, and was a wearer of the Cross of War. He was so weak from his wounds that he was ordered to rest for two months.

He is the author of a number of books, some upon the United States. He is now in this country and probably will be to the close of the war, as High Commissioner from France. He is known in France as the "coming man," and because he is impatient of red tape and has no patience with those who waste words, the French say, "He knows how to work American fashion." Those who know French politics say he is the coming Prime Minister, and they expect he will be the next President of France. Our readers, we are sure, will be pleased to look into the fine face of this great Frenchman, the first foreign recipient of the American University's diploma.

Raising of Flag

Salutation of the Flag by Sixth Regiment Engineers,
U. S. A.

1. Processional.....The Church's One Foundation

2. Invocation.....The Right Rev. Alfred Harding

3. Music

4. Prayer.....The Right Rev. William F. McDowell

5. America.....S. F. Smith

(Singing by All the People, Standing)

6. Introduction of Speaker

The Rt. Rev. Earl Cranston.

7. Address.....The Hon. Joseph G. Cannon.

8. Music

9. Address.....The Hon. Hiram W. Johnson.

10. Music

11. Conferring of Degrees:

Joshua John Skinner, Doctor of Philosophy.

*Dissertation—Soil Aldehydes: A Scientific
Study of a New Class of Soil Constituents*

*Unfavorable to Crops, Their Occurrence,
Properties and Elimination in Practical Agri-
culture.*

Benjamin Francis Andrews, Master of Arts.

*Dissertation—The Land Grant of July 2, 1862,
and the Colleges Established Under Its Pro-
visions.*

Claudine Elizabeth Clements, Master of Arts.

*Dissertation—The Development of the
Church's Organization from Clement of
Rome to Cyprian.*

12. Star Spangled Banner.....Francis Scott Key

13. Assignment of Fellowships

14. Battle Hymn of the Republic—Julia Ward Howe

15. Benediction.....The Rev. John R. Edwards, D.D.

16. Retreat.....Sixth Regiment Engineers, U. S. A.

American University Hymn.

Dedicated to Bishop Franklin Hamilton.

Words and Music by Samuel J. MacWatters, Litt. D.

1 Above Columbia's lofty dome
High walls of marble stand,
Resplendently they proudly shine,
A tower of Freedom's land.
This gift of love from lowly men
Whose deeds in song we laud,
Hath builded here a beacon-light
To point the way to God.

2 Light of the World, Incarnate One,
Let this Thy temple be,
Where love and truth go hand-in-hand
In sov'reign majesty.
Here ardent souls shall seek and find
The key to hidden thought,
And men shall sit at Wisdom's feet
To learn what God hath wrought.

3 Come, Holy Spirit, lead us on
The Pearl of Price to find,
And send us forth to live and learn
The secrets of God's mind.
Increase our faith when doubt assails,
Dispel all gloom and fear,
That Truth may rise triumphantly
And crown our efforts here.

4 Lord God of Hosts, whose boundless love
Encircles all with light,
Vouchsafe to come and reign with us
And rule in power and might.
Endow our school with righteousness,
Make it Thine own abode,
Till all the world shall come to know
The true and Christ-like God.

Our Third Convocation, May 31, 1917.

Convocation exercises at the American University this year were held amid patriotic surroundings. The campus of the university, extended to the United States for such purposes as might be required, is now an army camp covered with brown-colored tents and alive with hundreds of men in khaki. The whole furnished a picturesque background for the academic procession and the program marked by patriotic utterances. The Daughters of the American Revolution, on Convocation Day, presented the university with a large standard United States flag. Mrs. Guernsey, the national president-general, who is a sister of Bishop Charles Bayard Mitchell, of the Methodist Episcopal Church, being introduced by Bishop John W. Hamilton, chancellor of the university, and Mrs. John B. Hammond, of Washington, making the address of presentation. Bishop Franklin Hamilton responded in behalf of the university, the flag being raised by the soldiers of the regiment encamped on the grounds. Several bishops were in attendance, among them Bishop Earl Cranston, Bishop W. F. McDowell, Bishop Collins Denny, and Bishop Harding, of the Protestant Episcopal Church. An interesting international incident was the conferring of the degree of doctor of civil law on André Tardieu, French High Commissioner, who was accompanied by the French Embassy. Stirring addresses were delivered by United States Senator Hiram W. Johnson of Cali-

forma and Congressman Joseph G. Cannon of Illinois. Rev. Dr. Lucius C. Clark of Hamline Church, Washington, was the chief marshal. Chancellor Hamilton's efforts on behalf of the university have been attended with such success that \$16,000 was reported by the treasurer as having been raised during the past six months, while the president of the trustees opened before the Convocation a letter just received and drew from it a draft for \$50,000. Some two or three thousand persons were in attendance upon the exercises, many from a distance.

Recent Gifts of Money.

(Acknowledgment of sums less than \$5.00 is to be regarded as sufficient receipt therefor.)

General Fund.—\$50, Hiram W. Johnson, Joseph G. Cannon; \$25, Mrs. G. H. Maxwell; \$5, R. C. M. Hastings; \$3, J. W. Hamilton; \$1, H. L. Sibley, A. H. Nazarian.

Hart A. Massey Memorial Fund.—\$50,000, Hart A. Massey Estate.

Bruce Hughes Prize Fund.—\$950, Estate of Bruce Hughes.

Giffin Scholarship Fund.—\$260, Arabella Giffin.

Mary Barnes Devor Scholarship Fund.—\$500, Mary F. Devor.

McCabe Lectureship Fund.—\$100, Joseph F. Berry, C. E. Welch; \$60, Wm. F. Oldham; \$10, W. I. Haven; \$2, N. R. Pearson; \$1, E. L. Baum.

Bishop Hamilton Lectureship Fund.—\$10, C. E. Hamilton; \$6, W. C. B. Moore; \$5, F. W. Lincoln, Mrs. M. A. Bailey; \$4, Timothy Edwards, A. J. Hayes, J. F. Long; \$3, W. A. Rice, L. W. Staples; \$2, C. M. Fenton, W. C. Snow, J. R. Chaffee, J. W. Heard, John Koehler, R. W. Duell, O. A. Emerson, Mr. and Mrs. H. McK. Powell, W. H. Moseley, O. E. Rodkey \$1, W. F. Grandy, R. W. Wilcox, Sarah Lensing, A. F. Reimer, J. R. Fretts, F. C. Brayton, C. E. Luce, G. R. Carver.

Chancellor's House Fund.—\$50, J. L. Alcock, Franklin Hamilton; \$38.50, G. W. Taylor; \$25, W. D. Starkey, Dillon Bronson, P. A. Crow; \$15, C. M. Thompson; \$10, J. R. T. Lathrop, L. W. Layfield, Gervaise Roughton; \$5, B. E. Edgell, M. E. Sanders, J. E. Holmes, D. F. Pierce, C. H. Atkins, W. S. Jones, W. Pettigill, C. W. Baldwin, A. S. Flanagan, B. M. Kent, W. H. Hughes, F. A. Everett, J. C. MacDonald, J. F. Black, W. B. Slutz, C. W. Flesher, C. E. Goodwin, E. J. Winder, W. O. Hurst, J. H. Funk, W. H. Crawford, Daniel Westfall, Joseph Van Sieckel, H. P. Magill, W. C. Strohmeier, W. B. Fleming, P. H. Murdick, A. S. M. Hopkins, O. J. Shoup, R. B. Cuthbert, E. W. Jones, C. H. Bagley, C. E. Allen, J. F. Jose, J. B. Risk, J. F. Murray; \$3, H. H. Barr, A. M. LEVI SMITH

Action of the Board of Trustees on the Death of Levi Smith.

Whereas, It has pleased our Heavenly Father in His all-wise providence to call from earthly labors to the activities and rewards of the heavenly life our associate and brother, Mr. Levi Smith, of Warren, Pennsylvania, therefore,

Resolved—First, That we hereby record our high estimate of the personal qualities of Mr. Smith as manifested in his long and useful life, and especially in his connection with this Board during the last thirteen years.

Resolved—Second, That we express our appreciation of the interest he constantly has shown in the success of the American University and of the generous bequest left for its endowment.

Resolved—Third, That we hereby convey to his widow and surviving children our sympathy in the great loss they have so suddenly sustained, and our congratulations upon the beautiful and enduring heritage they possess in his good name and Christian character.

(Signed)

CHARLES W. BALDWIN,
Secretary Board of Trustees.

× Meeting of the Trustees.

It would be a significant meeting at any time when the forty-five distinguished gentlemen who compose the Board of Trustees of the American University were in session. But at no time have so many interests come before the Board as at the meeting held on the recent Convocation Day. Not only did the Treasurer report more money received than in any recent meeting, but the Executive Committee asked the approval by the Board of their proffer to the United States Government of the use of the University Grounds and the McKinley Building for war purposes. This involved the creation of a military camp with the erection of acres upon acres of barracks, and the transfer of a great department of the Bureau of Mines to

SIXTH REGIMENT UNITED STATES ENGINEERS

the Ohio Building requiring altogether the expenditure of a hundred thousand dollars and more.

Dr. Schrimmer of the Government Bureau of Plant Industry outlined to the Trustees the founding of a scientific department in the University which was received with much favor.

The granting of the Fellowships and the conferring of degrees, described in another column was an interesting feature of the meeting.

An appropriation was made to cover the cost of the new roof on the College of History Building and the investment of the funds in the Treasury was referred to the Finance Committee.

The death of Mr. Levi Smith one of the Trustees was announced by the Chancellor, after the calling of the roll. An appropriate tribute was paid to his memory, and a Committee appointed to prepare a suitable minute for the records.

The attendance of so many members who came from so great distances, and the interest they show in the promotion of every department of the institution is most gratifying.

University Hymn and March.

The American University hymn, words and music, and the American University march, written by Dr. Samuel J. MacWatters, were used for the first time on Convocation Day. We hope to reproduce the music of both in some later issue of the COURIER. The words of the hymn appear in this number.

Professor MacWatters Honored.

West Virginia Wesleyan College, at its commencement last June, honored Professor Samuel J. MacWatters with the degree Doctor of Literature.

Woman's Guild of American University.

The Woman's Guild of the American University is moving steadily on in its course as a distinctive and helpful ally to the University movement. At its last election the following officers were chosen: President, Mrs. John C. Letts; Honorary President, Mrs. Thomas H. Anderson; Vice-Presidents, Mrs. John A. Logan, Mrs. W. F. McDowell, Mrs. B. F. Leighton, Mrs. A. B. Duvall, Mrs. C. C. McLean, Mrs. W. T. Galliher, Mrs. Lucius C. Clark, Mrs. James E. Gilbert,

ENGINEER OFFICERS' RESERVE CORPS

CAMP AMERICAN UNIVERSITY, WASHINGTON, D. C. JUNE, 1917

S. CAMP AMERICAN UNIVERSITY, JUNE, 1917

Mrs. E. D. Huntley and Mrs. Perry S. Heath; Recording Secretary, Miss Elisabeth F. Pierce; Corresponding Secretary, Mrs. Gordon Slarrow; Treasurer, Mrs. W. M. Hamay.

Welcome! Men in Khaki.

(Tune: *Glory, Glory, Halleluhah*)

1 Welcome, men in khaki, to our home upon the hill,
Welcome to our Blue Ridge air, yes, breathe it to your ill.
Come, pitch your tents and barracks and then swing into your drill

At Camp American 'Varsity.

Breezy, breezy, Camp American 'Varsity.

Breezy, breezy, Camp American 'Varsity.

Breezy, breezy, Camp American 'Varsity.

That grand old spot—Fort Gaines.*

2 Our tulip trees speak welcome shade, our soil is iron red,
And red in showers it runs like blood beneath your soldier tread,
Our marble walls are snowy white, our skies are blue o'erhead

*The Engineer Officers' Reserve Corps is camped on the site of Fort Gaines, whose earthworks, still partly visible on the crest of the hill, were thrown up by the Pennsylvania Reserves during the Civil War

At Camp American 'Varsity,
Jolly, jolly, Camp American 'Varsity,
Jolly, jolly, Camp American 'Varsity,
Jolly, jolly, Camp American 'Varsity,
That grand old spot—Fort Gaines.

3 Let bugle, fife and drum unite their martial note to fling,
And echoing o'er Potomac's flood let Freedom's toeshin ring;
Severely train to fight afar and when in fair France sing

Of Camp American 'Varsity.

Lovely, lovely, Camp American 'Varsity,

Lovely, lovely, Camp American 'Varsity,

Lovely, lovely, Camp American 'Varsity,

That grand old spot—Fort Gaines.

4 Come, engineers and foresters, and join our loyal school,
The Allies of true liberty their world-wide issues pool;
For Love has called her warriors out and Right the earth shall rule,

O Camp American 'Varsity.

Glorious, glorious, Camp American 'Varsity,

Glorious, glorious, Camp American 'Varsity,

Glorious, glorious, Camp American 'Varsity,

That grand old spot—Fort Gaines.

ALBERT OSBORN.

CAMP AMERICAN UNIVERSITY, JUNE, 1917

"Overhead Charges."

If the American University had no repairs to make, no insurance to pay, no betterment assessments to meet, and no material improvements to provide, several new departments of instruction could be opened. If the Chancellor, like Mark Hopkins, sitting on one end of the log, and the student, like young Garfield, at the other, constituted the University, our school could call either for a much larger faculty or a longer log for the many students to ride tandem.

But the city wants thousands here and thousands there for sidewalks and sewers, taxes and "temporalities," ad libitum.

And now comes the demand for an entire new roof for the College of History. The rain coming through a dozen holes falling on the just and unjust, alike, over books, papers, files and fifty other things, emphasizes the demand, in a rather dampening sort of a way. With bids for the work running as high as nearly six thousand dollars, it was vexing to see the salaries of three or four professors given up to such a sordid end.

But "theirs not to reason why"

It's a roof or open sky.

The same thing has happened to the Library of Congress. Much as we felt sure the copper roof was best and would last longest, it is honey-combed in this climate like Congress itself.

But as the old copper was being stripped from the building and rolled to the ground, we called the junk man and sold it for enough plus only one hundred and fifty dollars to pay for the new slate roof.

The Massey Fellowship Fund.

The bequest of fifty thousand dollars, of the late Hart A. Massey of Toronto, Canada, has been paid since the last issue of THE COURIER.

It creates a Memorial Fund in the interest of the American University Fellowships, the income of which is to be distributed by the Board of Award, the first preference being given to the alumni of universities and colleges in Canada, but subject to the administration of the Board of Trustees of the American University.

The New Catalogue.

The work on the new catalogue is being advanced, and it is expected that it will be ready for distribution in the fall. It will be a biennial number, covering the academic years of 1916-1917 and 1917-1918.

Fellows of the American University, 1917-1918.

On May 31, Convocation Day, the following assignments of Fellowships for the ensuing year were made:

| NAME | Institution

New Trees upon the Campus.

Through the generous provision of Mr. William S. Pilling of Philadelphia, Vice-President of our Board of Trustees, about 200 young trees have been planted during the past spring upon parts of our campus near the College of History and the house of our superintendent. One hundred of these are sturdy pin oaks, one of the cleanest and most symmetrical of the many trees that adorn the streets and parks of Washington. About 70 are fruit trees, including varieties of apple, pear, peach, plum and cherry. The rather light foliage of the present season is a promise of a more abundant and attractive growth in the near future. Changing a familiar line to suit the situation, our exhortation now is—

"Soldier, spare those trees."

Camp American University.

(Reprint from Boston Transcript.)

Beautiful Grounds on the Highest Ridge of the District of Columbia—Commodious Rooms for Office and School Purposes—Training Ground for the Reserve Officers' Engineer Corps—1,400 Men of This Corps and 700 Reserve Officers of the Line There—Foresters Coming—The Courtly Chief Officers—Fine Morale and Discipline of the Men—War Films Placed at Their Disposal by the British Government—"The Serious Look."

Washington, July 10.

The young volunteer soldier who is sent to Camp American University need not regret that he did not go to Plattsburg; for with all the prestige that the first training camp for training officers has gained, the Washington institution is regarded by Army officers, stationed there as more desirable from most points of view. The American University, the great Methodist institution of which the church is so proud, reached the height of patriotism when it offered its beautiful grounds to the free use of the United States Army. This tract is situated on the highest ridge of the District of Columbia, in the extreme western part of the city, and the land is owned by the university and Charles C. Glover, president of the Riggs National Bank, who also is a faithful trustee of the institution. Soon after Congress declared war on Germany the authorities of the university offered the buildings and grounds unreservedly to the Government. The offer was accepted and later it was determined to use the premises as a training camp for the Engineer Officers' Reserve Corps. Ninety-two acres of land lying within the District, including an immense amphitheater, compose the campus of the university, and within the College of History building are twenty-one commodious rooms available for office and school purposes. In addition, Mr. Glover has placed much of his spacious country estate across the street from the university at the disposal of the Government.

Where Thousands Are in Training.

From the roof of the great College of History building one sees a marvelous panorama, which, beginning its sweep with a complete view of the Capital, marches majestically across the broad Potomac and over the hills of Fort Myer and Arlington to the distant west where the evening sun settles itself for the night back of the Blue Ridge Mountains, with Old Sugar Loaf, fifty miles to the westward, standing sentinel of the range. The Sixth Regiment of United States Engineers, Officers' Reserve Corps, consisting of some 1,400 men, now occupies the grounds where also 700 reserve officers are training. Later the regiment of Foresters now being formed, numbering 700 men, will be trained at Camp American University, and, incidentally, about 100 scientists will be sandwiched in for special instruction. South of the College of History is the mess house of officers and men, and the company kitchens extend to the attractive cottage of Superintendent of Grounds Torreyson, affectionately known to the soldier boys as "Dad." The tents of the Sixth Regiment and the barracks of Officers' Reserve Corps constitute the main portion of the camp, and west of the McKinley Building is the knoll known as Sycamore Hill, where is the corral, with its army mules, horses and wagons. Flourishing gardens are scattered about also, and the men employ their

CAMP OF SIXTH ENGINEERS. Seen from top of McKinley Building.

Our Military Camp.

No one who has not visited Camp American University can have any adequate conception of the magnitude of the work which the United States Army is putting into the construction of the military city which invests the campus and covers the broad acres of the University grounds. We have here a kodak picture taken from the top of the McKinley Memorial Building which simply shows a portion of the khaki tents—the pioneers of the more permanent habitations for the coming thousands of soldiers—that were the first homes of the Sixth Regiment United States Engineers. In the distance can be seen a few of the wooden kitchens, dining halls and other domestic structures. But the other three-score permanent barracks, including reading rooms, hospital, postoffice, boot and shoe shop, tailor shop, camp exchange and numerous other buildings, will require long moving films to exhibit the panorama. The picture shows in the center the west front and south end of our College of History.

Table Talk.

War! War!! War!!!

The American University is back of the trenches. The Government calls the campus "Camp American University."

This number of THE COURIER is not only the Convocation number, but a war number.

A hundred carpenters are at work on the new barracks.

The army regulations treat all comers and goers alike. The Chancellor of the University must have a pass from the street in going into his own office when he meets the man with the gun.

The entertainments which the Young Men's Christian Association and the Masons give for the soldiers in the Auditorium in the Grove every Thursday night under electric lights are Mid-Summer Night's Dreams.

It is interesting to see an army canteen in camp running with ice cream, lemonade and soft drinks just as satisfactorily to high-class young men as when it was used for brainstormers in low-class men.

The Young Men's Christian Association has a new

spare time working on them. From this vantage point one can look about and see the men at their tasks, which include some work of the most strenuous character.

Morale Is of the Best.

The three chief officers of the camp are Colonel Henry Jervey, Major Warren T. Hammum and the indispensable adjutant, Captain John W. Stewart, by general consent three of the most courtly gentlemen to be found anywhere. The food is good, discipline is perfect and the morale of the camp is of the best, as Chancellor John W. Hamilton and Dr. Frank W. Collier, dean of the university, are glad to testify. The officers have been glad to co-operate with the work of the Y. M. C. A. and offered to furnish the carpenters to erect a recreation building for the use of the men if the Y. M. C. A. would supply the lumber. This was done, and now the 2,000 men assembled at Camp American University have a comfortable place for religious services, for reading and rest and for entertainment.

Shown Pictures of Actual Warfare.

A moving picture machine has been installed which can project pictures upon a screen in the building, or, by merely turning it around, upon a screen on the lawn when the weather is too warm indoors. The International Y. M. C. A. furnishes films, but in addition Director Francis Holley, of the Bureau of Commercial Economics, keeps the camp supplied with educational films of the highest order. Among these are some showing the manual of arms, drilling, and different varieties of warfare in actual practice. The British and French governments have placed their official war films at the disposal of the Army, and much actual fighting is shown on the screen. The films depict, for example, the firing of such great 16-inch guns as destroyed the forts at Liege; the wonderfully effective French 75, the destructive one-man machine guns, Zeppelins in action, airplanes battling in the "central blue," railway batteries, British tanks in action, and the submerging and the destruction of submarines. Upon the constructive side the benevolent work of the Red Cross may be seen also.

Lectures in Natural Amphitheater.

One gets an idea of the school feature in the modern army in visiting the great natural amphitheater, where, in a grove of magnificent tulip trees, Major Hammum lectures to his class of about 1,000, and Major Hodges, chief instructor of the training camp, to his class of 700. Theoretical work of this character is supplemented by actual practice in trench construction, bomb throwing, bridge building and the firing of mortars. The McKinley building is an immense unfinished structure, complete as to roof and its towering circular walls, and this the Government has taken over for a series of experiments apparently not directly connected with the work of the camp.

Learning the "Serious Look."

The men all wear a serious look. "Every man here is a volunteer," said one of them in explanation. "They did not enter the service to have a good time or to better their positions. In fact, most of them gave up better positions than they will have in the military service. They entered this service as a patriotic duty, and what you interpret as an evidence of regret is simply a serious consciousness of their sense of duty."

W. E. B.

building in the midst of the American University Camp which would cost \$5,000 anywhere else. The association furnished the lumber; the soldiers put up the building.

The round race course for cavalry practice and the straight run, with its watted framework, for hurdle jumping, would attract no small company when the exercises are on, if it were not for the sentries at the gates.

The University Summer School is now on the campus. If the students pass their examinations and graduate they respectively all come out lieutenants, captains, colonels or brigadiers—that is, if the Government takes a hand.

Once a week in the Auditorium in the grove the Y. M. C. A. provides a sane and singularly attractive entertainment for the soldiers. The grove is beautifully illuminated with electric lights, and the stage has footlights equal to the best. It is open to the public and with the soldiers three and four thousand attend.

There is one man who has right of way over the Camp, past all sentries whether he goes with his hat or coat on or off. He is the Superintendent of the Grounds and caretaker of the buildings. Mr. Torreyson is very popular with the soldiers, whom they have dubbed "Dad" for short.

In grateful appreciation of the loan of the University grounds to the Army and Navy, the soldiers and sailors in training on the campus have devoted a part of their time to clearing out the undergrowth in the University forest, and in giving to the wildwood a tidy and attractive appearance. "Thank you." So say we all.

The three secretaries of the Young Men's Christian Association, Messrs. Bryant, Hardy and Cranston, were all built before the war and before they were born for their task. They are all good mixers and popular. They love to serve. They furnish a hundred men at a time stationery and tables on which to write their letters.

It is transforming indeed when the gas company carries its big main a long mile to reach the camp, the electric light company swings its hundred lamps to illumine the forest, and the water department pours its gushing streams through a hundred barracks and tents, just after a whole new city has been built in a dozen days.

The letter to the Boston Transcript written by the brilliant Washington correspondent, Mr. W. E. Brigham, and which we have transferred to our columns, is not only well written, but pays such tribute to the efforts of the Trustees of the American University to assist the Government in its time of peril that it is sincerely appreciated.

The University is most fortunate in the men who preside over the Headquarters of the Encampment, and direct the movements of the regiments. The Trustees of the University could not be more considerate and careful for the property than Colonel Jersey, Major Hamm and Captain Stewart. The many improvements they have made to add to the tidiness and attractions of the Camp are sincerely appreciated.

That was a fine showing both of substance and form when Colonel Henry Jersey led more than 2,000 men in review before Secretary of War Baker, Brigadier General W. A. Black, Chief of Engineers, and Major General Tasker M. Bliss, Acting Chief of

Staff, on Tuesday morning, July 24. The review took place on the Seventeenth street side of the State, War and Navy building. The troops included the full regiment, Sixth United States Engineers, and several hundred from the Engineer Officers' Reserve Corps.

Animated Pictorial History of the World War.

Through the courtesy of Mr. Francis Holley, director we are able to make the first and important announcement that the Bureau of Commercial Economics, Department of Public Instruction, has been commissioned to compile a complete "Animated Pictorial History of the World War," to be released after the war, and the first of the negatives to arrive are those from the London Records Office. The negatives of all the Allied nations will be deposited for safe keeping with the Bureau, and prints from them will be made with titles and sub-titles, in the language of the country addressed.

The "animated" history will be in all of the State Universities, and the Universities of the Allied nations for distribution in educational institutions to audiences admitted free. The selection of the subjects and the arrangements of the series will be under a corps composed of staff officers of the armies and navies of the Allied nations.

MCKINLEY MEMORIAL BUILDING, AMERICAN UNIVERSITY, IN PROCESS OF COMPLETION.

McKinley Memorial Building.

The United States Government has made the unfinished McKinley Memorial Building of the University fire-proof in placing reinforced concrete floors in four stories of the marble edifice. The University granted the use of the building to the army and navy without charge during the war. The improvements which have been made in the building to render it available for its purposes have cost the Government far less than the expense of erecting a new building, and no money has been wasted, for the University would have made much the same improvements in finishing the building.

The World War and University Work.

Abraham Lincoln, in the midst of our great Civil War, said "It is no fault in others that the Methodist Church sends more soldiers to the field, more nurses to the hospitals, and more prayers to heaven than any." So in the present world war, it is no fault of other colleges and universities that they cannot be used by the United States Government to the extent that the grounds and buildings of the American University are being used. Over four hundred colleges and universities have reported to the Bureau of Education at Washington what each is doing to help the National Government to bring the war to a triumphant end. After stating its work, every one closed the account with the offer of its entire plant whenever the Government needs it.

The American University is very young, now in its fourth academic year. Hence it has yet no very large faculty of scientists nor a large body of students upon which the Government may call for service; but it has spacious grounds and commodious buildings at the National Capital, and, like the noble four hundred before

mentioned, it offered its entire plant to the National Government. The offer was made last April, a few days after President Wilson declared the country in a state of war; and now four departments of the Government are occupying its grounds and buildings—the War, Interior, Post Office, and Agricultural Departments.

The American University accepts this high opportunity to serve the Nation in this great crisis as a proud privilege. It has surrendered space which it needs. And this it is glad to do. If it had offered only what it did not need the offer would have been entirely devoid of virtue. Even now there is no occasion for boasting; the American University has but done its duty, and in so doing it has honored its noble name. Circumstances, arising out of its war service, has compelled a modification and readjustment, for the period of the war, of its academic work. This is a statement of fact, not a complaint.

No disturbance worth mentioning of the research work done by students in the laboratories and bureaus of the National Government has occurred. Almost the same may be said of classes in the College of History.

The Saturday afternoon motion picture extension lectures in the Assembly Hall of the College of History have been suspended until the close of the war. Perhaps it is more accurate to say they have been extended; for, under the indefatigable zeal of Mr. Francis Holley, Director of Visual Instruction, these lectures have been given at over forty centers in Washington, and this field of patriotic instruction has been increased a thousand-fold.

The courses of lectures delivered from time to time at the University and open to the public must be reduced to a minimum. Sentinels challenge every person who enters the grounds and buildings; even the officers of the University must show their passes. This neces-

sary precaution and numerous other exigencies make the holding of these courses of lectures most difficult. Hence but few can be given until the close of the war.

Temporarily the work is retarded. But on the grounds and in the buildings of the American University history is being made. Here the first Forestry Regiment of the United States Army, now in France, was organized; here the first Camouflage Company was organized; here the first Gas and Flame Regiment is being organized; and here a new kind of military experimental work is being conducted which a wise loyalty suggests that the future historian rather than the present chronicler should appraise.

Recent Gifts to Our Library.

Judge H. L. Sibley, of Marietta, Ohio, has presented the University Library with some fifty volumes of standard works on economics, jurisprudence, theology, science, and history.

The Bureau of Commercial Economics has enriched our war library by sending fifteen books and pamphlets, most in French. We continue to be indebted to Prof. W. Macneile Dixon for numerous books upon the war.

Dr. W. L. McDowell, of the Baltimore Conference, has presented the University Library with about twenty volumes, some of which are very rare.

Several hundred useful volumes have been donated by Rev. Dr. Hiles C. Pardoe, of Altoona, Pa., among which is a fine set of the Century Dictionary, first edition, in six volumes.

From the library of the late George Harrison McGrew, D.D., rector of Grace Episcopal Church, Silver Spring, Md., through the kind offices of Mrs. McGrew, *nee* Julia Lore, have come two hundred or more volumes and pamphlets. Among them is a collection of publications in the languages of India, Persia, Hindi, Urdu and others, gathered by Dr. McGrew during his missionary life in India; several volumes of the Sacred Books of the East, edited by Max Mueller, and many other scholarly works, the literary tools of a master workman such as Dr. McGrew was known to be. At a low estimate of their financial value, they would be appraised at from \$200 to \$250.

In answer to our call for a large Bible suited to chapel use, we have had responses with four copies—one from Mrs. Hannay and Mrs. Cox, the daughters of our former treasurer, Hon. Matthew G. Emery; another from Mrs. Laura V. Frisby, daughter of Mrs. Elizabeth Ebert; a third from the Rev. Hiles C. Pardoe, of the Central Pennsylvania Conference, and still another from Rev. D. O. Sanborn, of the Wisconsin Conference.

Y. M. C. A. Work Among the Soldiers.

By Donald B. Atwell.

One of the most remarkable and far-reaching of the movements which have developed with the great war is the work of the Young Men's Christian Associations of North America among the soldiers and sailors. Army Association work has become a recognized part of the organization of every army of every great nation now in arms. While the work is aided by the Y. M. C. A. forces all over the world, it is the Association in the United States and Canada which is directly responsible for the vast Association army scattered over the globe with the fighting men of the different nations.

The work abroad is in many respects distinctly different from the work among the soldiers in training in the

United States. Across the Atlantic the secretaries are on the firing line of Association work and have to deal with conditions which demand other methods than the comparatively sheltered camps over here. Work among the prisoners of war formed a large part of the foreign activity of the Y. M. C. A. until last year. Actual work in the trenches and at the rest camps in France and England requires a great many men now, and the need of secretaries as the American troops go over increases by leaps and bounds. France and Russia alone will need eleven hundred men this winter, and the latest development is the request of the Italian government, backed by the ecclesiastical authorities, for a complete Association force with the Italian army. This will mean four hundred more men in the spring.

More interesting even than the overseas service of the Y. M. C. A. is the great work among the camps and cantonments for our own soldier boys in this country. There are three principal phases to this work:—religious, educational and physical or recreational. Of course, the religious side of the work is the one of prime importance, and the other kinds of activity are carried on with the purpose of rounding out and aiding the spiritual side. Some people have criticised the Association for its stress of the religious work, but this is more of a compliment than a fault to those who understand the true aims of the Young Men's Christian Association.

Bible classes, helpful speakers and personal work by the secretaries form the largest part of the strictly spiritual work in the camps. Classes in French, talks on hygiene and kindred subjects, instructive motion pictures and classes for military training of various kinds make up the educational end of an army secretary's duties. Games and athletic meets, movies at regular intervals throughout the week, plays by talent from nearby cities, musical concerts of all sorts and games among the men furnish a recreational life that is a vast help in the cantonments. The paper and envelopes, which have become so familiar over the country, are provided free to enlisted men with the reminder now and then that mother is waiting for a letter at home. Many simple wants of the men are supplied through the "Y" office. The libraries of books and magazines which form a very important part of every building occupied by the Y. M. C. A. are highly appreciated by the men, to judge from the number seen reading in them.

Together with the regular army chaplains and the Roman Catholic priests who are at work in every camp, the Association often holds joint meetings. At other places the different religious representatives have held services in succession in the Y. M. C. A. buildings, all on the same Sunday morning. The co-operation between the chaplains and the secretaries has made possible very effective religious work among large numbers of enlisted men.

In a very real way the Association has become a clearing-house for the activities of the churches and service committees of cities in the vicinity of the camps. The great power of the Association in army work seems to rest in the united force of so many denominations working for a great purpose on completely non-denominational lines. The effect of this work after the war only faintly can be imagined. A more vital hold on the mass of the American nation will be gained through the simple service of army secretaries than many decades of preaching from pulpits could possibly gain.

Y. M. C. A. Work at Camp American University.

By Secretary Bryant.

The following is a week's program of the Army Y. M. C. A. for the men in camp, announced at the beginning of the week:

Sunday—On Sunday morning at 8:30 church service is held, usually addressed by a pastor from the community, with special music by the soldiers' choir, and other features of attraction. These services are generally attended by about 75 men. However, the attendance as a rule would be larger were the camp situated further from neighboring churches, which a large percentage of the men attend.

Sunday afternoon is given over to writing or reading, with both Victrola and piano almost constantly in use.

ELMER P. HARDY

C. B. A. BRYANT

WM. KNOWLES COOPER

EARL CRANSTON

GENERAL SECRETARY COOPER AND THREE ASSISTANT Y. M. C. A. SECRETARIES AT CAMP AMERICAN UNIVERSITY

At 6:15 on Sunday evening a delegation of men gather at the Y. M. C. A. building, under the leadership of the secretaries, to attend a specially arranged Sunday evening church party at one of the large downtown churches of Washington. Special cars are secured to carry the delegation from the doors of the camp to the nearest point from the church. As high as 225 men have accompanied the secretaries. The church to which the party is invited provides, after the short attractive church service with sermon, or in some cases a regular young people's meeting, light refreshments and an opportunity of meeting the people of the church. These occasions prove most worth-while, for it gives the men, at the close of a lonely Sunday away from home, an opportunity to enjoy wholesome, homelike environment which is made possible through the congenial presence of the ladies. The secretaries have gone so far as to promise each man in the delegation who would leave a vacant chair at his side during the social period that they would see that such vacant chair was filled with a lady—it mattered not whether it would be one old enough to be a grandmother, as the soldier was most appreciative for the wholesomeness of the company. At the close the entire group of people, both soldiers and civilians, gather around the piano and have a most enthusiastic sing of Gospel songs. These occasions prove most beneficial, and aid the men to make wholesome friendships, as many of the good people have invited the men into their homes, and out for other events, thus giving them the same privileges they had in civilian life, and aiding them to be men true to themselves.

Monday—On Monday evening a program after 8 o'clock in the Y. M. C. A. building is given. All programs on week nights are held after 8 o'clock, thus giving the men an opportunity of writing letters. A Young People's society of one of the churches who have entertained our Sunday evening delegations, under the leadership of one of the motherly ladies of the church, provides a program of songs and recitations during the change of reels, and after the pictures aid in a sing around the piano, thus bringing into camp, under the most wholesome circumstances, twenty or thirty young ladies, cheering the camp life through the entertainment program. The above mentioned church parties have a reaction upon the church itself, by bringing its own church people into more active service than perhaps anything else which the church has provided within recent years.

Tuesday—On Tuesday evening a program of boxing and wrestling is carried on for the men, boxing bouts being conducted between volunteers of different companies. On a few of these occasions a colonel of one of the regiments stationed in the camp acted as time-keeper. The moving picture screen has been many times spattered with the claret of bleeding noses, but never under any conditions except those of the army does such friendly relationship in boxing exist. The men go into this sport for all they are worth and show the best that is in them, but when the bouts are over those participating remain the best of friends.

Wednesday—On Wednesday evening a program of moving pictures is again provided.

Thursday—On Thursday evening an entertainment, con-

sisting of eight or ten numbers of both professional and amateur talent from the city of Washington, is given. These programs are provided for the Y. M. C. A. in camp through the efforts of the District War Service Commission. Each week a most splendid entertainment is given.

Friday—On Friday evening at 7 o'clock the Camp Bible Classes, conducted by pastors from neighboring churches, are held. At 8 o'clock a lecture of a religious nature by some strong leader is given. As a general rule the attendance for this weekday lecture is larger than that for the Sunday morning church service.

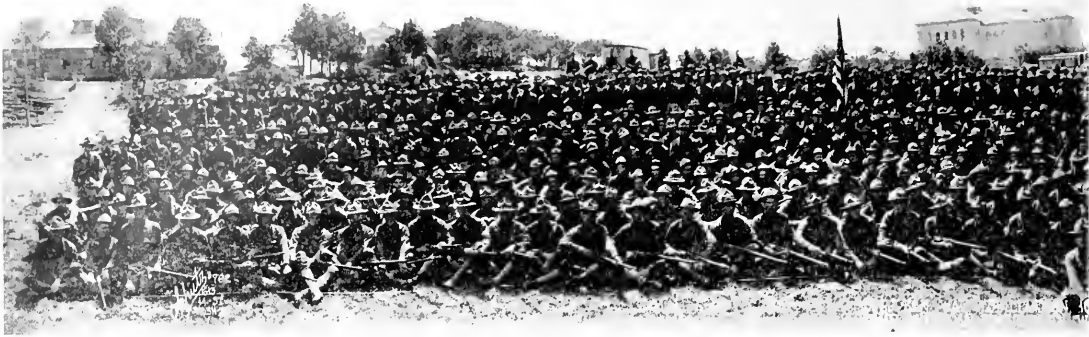

Saturday—Saturday evening moving pictures are provided for the men in camp, also a delegation leaves the Y. M. C. A. building under the leadership of the secretaries, with special street cars, for downtown churches that have especially invited our group of men for a social evening. These social occasions consist of games and other attractive features, and lead to the most wholesome friendships.

Oftentimes before the social at the church the men in such delegations go down to the city Y. M. C. A. for a swim, and afterward in military order to the church to which they are invited. The churches thus aid greatly the secretary in the camp to become more closely acquainted with the men themselves, and open up great opportunities for personal contact and conference.

Many times the men in the camp provide very interesting entertainments for themselves. Twice minstrel shows have been given by the different regiments. On Thursday evenings some of the churches send automobiles to the camp for bringing men who desire to attend communion service at their church. These automobiles are provided on Sunday especially for the reason that men would be unable to return to camp in time for the noonday mess.

Many of the men have been so appreciative of the work of the Association in the camp that they have expressed their appreciation in the form of contributions. One company in the Officers Reserve Training Camp upon breaking camp gave to the Y. M. C. A. its Victrola and records. Another company gave to the Association the balance of its mess fund, consisting of some \$30.00. One Sergeant, being so taken up with the Association work and so appreciative for the algebra which one of the secretaries taught him, left as a token of his appreciation a contribution of \$10.00. Another man, appreciating the way that the Association had taken up his time in camp, and being mindful of past courtesies of other Y. M. C. A.'s, left as a contribution upon leaving for France \$5.88, stating that it was all the money that he could possibly spare until next pay day, thus accounting for the odd number of cents, which is quite unusual in making a contribution.

The co-operation of the churches and other agencies gives the secretaries in the work an opportunity of becoming practically acquainted with every man in a regiment situated in camp at least five weeks. The secretaries stood out upon the road to give farewell as the men were leaving for France, and were privileged in shaking hands with practically every man upon the right-hand side of the regiment as they marched past, and waved good-bye

TENTH REGIMENT UNITED STATES ENGINEERS OF

to all the rest. As one of the secretaries said, he did not recall seeing a face of any man whom he had not, in some way or other, served during his stay in camp.

On Saturday afternoon between 5 o'clock and Sunday morning at 8 o'clock, on the day before two regiments left Camp American University for France, 10,000 sheets of paper were used for letters and 3,000 pieces of mail were sent out from our building. One hundred and forty dollars' worth of stamps were purchased on Sunday morning of the day the men left camp, the Association being the clearing-house for all men sending home packages and unnecessary articles of clothing, both by parcel post and express, and many were the little requests of taking care of unfinished business and interests of many of the soldiers. The men seemed to place the greatest confidence in the Association secretaries, and whenever they have anything they desire done which they are unable to do themselves, they just take it for granted the Association will care for it for them.

The Association at its building provides and has for sale at cost little necessary articles which help for the convenience of the men, and are not handled by the post exchange, such as films, cameras, photographs, mailing tubes and mailing tags; and has a regular banking system for the cashing of checks. It also handles the issuing of money orders, encouraging the men to send their money home rather than spending it promiscuously

and thus adding to their problem in camp life. A drinking fountain near the desk furnishes the best ice water in the camp and sometimes 30 or 40 men are in line waiting their turn.

The secretaries of the Y. M. C. A. live with the men in camp, are in uniform, and share their hardships and their joys. Thus they become a part of the camp itself, and have an opportunity of knowing the personal desires and necessities of the men.

Activities at Camp American University.

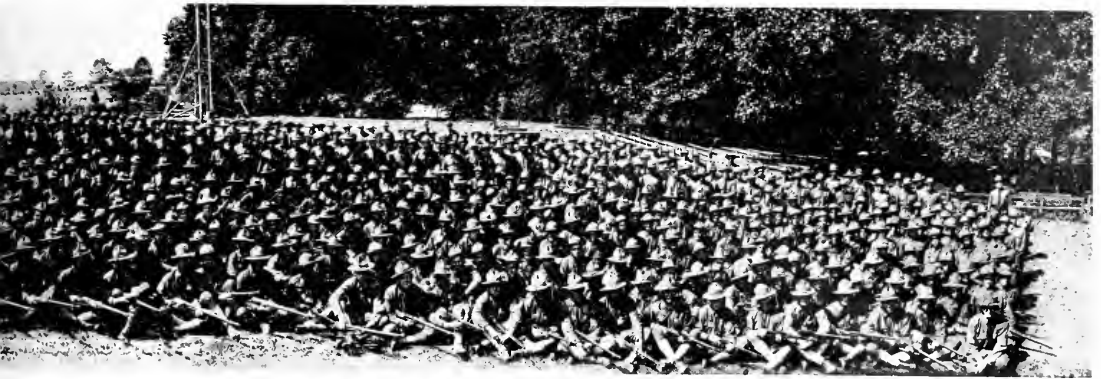

Dr. Collier, our Director of Research, in the following report to the Committee on Education of the Advisory Commission of the Council of National Defense, has given an excellent resume of the activities of the military and scientific bodies that have been at work on our grounds the past three or four months.

ACTION IN SPECIAL REFERENCE TO THE WAR.

Immediately after the declaration of war, April, 1917, the American University offered its grounds, consisting of ninety-two acres of woods and fields, and its two buildings, one completed and the other with inte-

COMPANY F, TWENTY-FIFTH UNITED STATES ENGINEERS (FIRST

ENGINEERS—CAMP AMERICAN UNIVERSITY, AUGUST, 1917.

Photograph by Schut

rior unfinished, free from rent to the Government; this offer was accepted, and the Sixth Engineers, at that time a battalion of six companies, was camped on the campus between the two buildings while being expanded to a full regiment.

At commencement, when the honorary degree of D. C. L. was conferred on the High Commissioner from France, Andre Tardieu, the full regiment had been recruited and was undergoing the intensive training for foreign service.

Camp American University has since been occupied by the Second and Tenth Engineer Regiments, two corps of Reserve Engineer Officers, and at present contains the Twentieth, Twenty-fifth and Thirtieth Engineers and the First Camouflage Company, regarding which a most interesting account appears in the Boston Transcript of September 29, and the Literary Digest of October 13. Besides the Engineers there are located here several departments of the Bureau of Mines, which are engaged in experiments of scientific aids to the troops; aeroplane experi-

ments are also under way, the Engineers and other military branches aiding in a practical manner the work of the Bureau of Mines.

The main building has been given over to the Bureau of Mines and the officers of the army for laboratories and offices, with the exception of nine rooms retained by the University for administration purposes and for the few classes that can be held.

The interior of the McKinley building is being completed and equipped by the Government for its own use.

Besides these buildings the War Department has constructed some 60 temporary buildings for laboratories, barracks, offices, and other purposes; a drill field replaces the former campus, and the outdoor sylvan theater is used for officers' school. A basket-ball field and several baseball diamonds, built by the soldiers, occupy other portions of the grounds, while on the extreme border appears rough ground, which on closer examination shows itself to be a series of trenches and "No Man's Land," cut by shell holes and craters,

CAMOUFLAGE COMPANY—CAMP AMERICAN UNIVERSITY, OCTOBER, 1917.

Photograph by Schut

where the experimental bombs are constantly being exploded.

The change from a wooded and grass-covered expanse with the white marble fronts of University buildings showing through the green of the trees, to a busy and bustling tent and board city of several thousand soldiers, before whose onslaught every particle of grass has been turned to well-trodden dirt and clay, is startling and incongruous.

The sound of bugles, sharp orders, and the tramp of feet replaces the calm of university halls. But over all, from the tall University flag-pole floats, as it always has, the starry flag. The American University is doing its duty, first in peace, now in war, and when peace returns, once more the scholarly duties will replace the martial trappings.

Perhaps its spirit is no greater than many other institutions; its opportunity has been larger.

FRANK W. COLLIER,
Director of Research.

Notice to Candidates for Degrees.

Many inquiries come to the Registrar to learn the conditions under which a degree may be earned in absentia. The answer has always been that the American University does not grant degrees for work done in absentia. Some reputable universities, in certain cases, give undergraduate degrees for work done in absentia. This policy may be satisfactory in undergraduate work when properly managed; but the American University confines itself to graduate work, and it has never seemed possible to be loyal to the highest standards of graduate work if degrees were granted for work done in absentia. Hence the policy of the American University is to recognize only work done in residence. Of course, graduate work done in residence at a university of undoubted standing may be accepted by the American University as counting toward a degree.

All candidates for degrees, by vote of the Board of Award, are required to place in the hands of the Board of Award seven copies either of the theses on which they are to be examined or of a comprehensive abstract of the theses on or before April 1 preceding convocation day.

How Our Grounds and Buildings Are Protected.

Headquarters, 20th Engineers (Forestry), Camp American University, D. C., September 11, 1917.
(Extract General Order No. 10.)

1. This camp will be known as "Camp American University."

2. **Private Property.**—The property on which the camp is located is private property, the use of which has been extended to the Government for military purposes without compensation.

3. Members of the command are instructed to exercise special care to do no damage to buildings or grounds, and are cautioned not to trespass upon or damage this or any other property. Attention is called to articles of war No. 89 and 105.

4. **Smoking** inside the University Building is prohibited.

5. **Timber** will be cut on the ground only after approval at Regimental Headquarters. An officer, or non-commissioned officer, will be responsible that when permission is granted, the timber is cut according to instructions received.

6. **Young Trees** will be protected against injury. Attaching of lines or other use of trees is prohibited. Company commanders will carry out these provisions in their company areas.

University Extension—Visual Instruction.

By FRANCIS HOLLEY, *Director of Visual Instruction.*

There was established at the University at the opening semester 1915-1916 a department of University Extension to employ visual aid in the teaching of trade, industry, commerce, geography and agriculture by the use of motion pictures, and the work was carried on throughout the academic year each Saturday afternoon, attended largely by teachers, Government officials, and those interested in educational and governmental pursuits.

These courses were given in the College of History Building. There were established by the University Extension, Division of Visual Instruction, centers in the District of Columbia, as follows:

Table Talk.

What more can the American University do for the United States Government that it has not done?

More than 500 copies of the July issue of *The Courier* were bought by the soldiers.

The Washington Railway & Electric Company promises us now a nice shelter station shortly at the corner of Macomb street and Wisconsin avenue.

Professor MacWatters will continue to give to churches, lyceums, lecture committees and other organizations the opportunity to secure his Drama of Saint Paul, as well as a number of his popular lectures, under the auspices of the University Extension Department.

We make our best hope to the new Mount Vernon Seminary as it opens its new doors, which brings more girls to our doors than we have boys. Mrs. Somers, always a friend of the University, had a sagacity on the side, which guarantees one of the most sightly seminaries in the whole country.

ART AND CAMOUFLAGE.

CAMOUFLEURS FOR THE AMERICAN ARMY

An Organization Being Trained in the Fine Arts of Ambush at American University—Pershing's Request for Such Experts—Hiding Troops and Guns and Material of War from the Enemy—Major Evarts Tracy in Command.

(Reprint from Boston Evening Transcript.)

Washington, Sept. 28.

Of the novel units which are being organized for the first time in the military history of the United States, probably the company of "camoufleurs" now in training at Camp American University will create the greatest popular interest; partly because it is composed of the leading artists, sculptors and architects in the country, but more from the unique task which the "camoufleurs" have set themselves. Camouflage is not a new military term developed by the war. On the contrary, it is an old slang word of the French stage, intended to be descriptive of the makeup of the actors. In its military sense, in which it is now popularly known, the term refers to the art of so concealing or disguising an object that the enemy cannot recognize it for what it is. A peaceful rock is discovered when too late to be a death-dealing gun. A mound of earth heaped above a trench shows no sign of human occupancy, when the incautious enemy learns to his cost that the seeming mound was a row of invisible helmets with a rifleman behind each. A hedge conceals a regiment, and the onrushing German finds death lurking behind the cleverly contrived nest of shrubbery whose secret even his aeroplanes and his cameras had failed to reveal.

Artists Called to Organize.

It is not surprising that the fascination of outwitting the enemy by means of brush, color and ingenious design should appeal to the artistic sense of our painters, sculptors and engineers. It was this appeal which caused Barry Faulkner, the artist, and Sherry E. Fry, the sculptor, on an evening some months ago, to call together in New York as many of their artist friends as they could assemble with the idea of organizing and offering to the Government the services of the artists of America to aid the American troops in France to ambush the Germans. Camouflage, by the way, is only another name for ambush. It was first employed by the American Indian; perhaps not consciously, but with such instinctive naturalness that the Indian of history always appears to have been merged with the rock and the forest in which he fought. Opinion is divided as to whether the Indian realized the effectiveness of his own scheme of costume colors. However that may be, ambush always has been more than half the art of the fighting Indian, and the modern camouflage was his natural resort. When the white man came with the shotgun the Indian at first had the advantage, for he so blended with the landscape that the superior marksman could not distinguish him, and the bow and arrow won many bloody triumphs over the gun. In the day of the short-range musket with which our early armies were equipped the necessity of concealment was as great as in the days of the pioneer, and the woodsmen who fought in the Continental Army and who picked off the British in 1812 had learned better than to expose themselves to the enemy in red coats. Then came the long-range rifle, and the art of concealment and disguise became less servicable. With the invention of the aeroplane, however, the need of ingenious devices for hiding troops and equipment from the enemy again became vital, and the French developed it until it ranks with the best of their military achievements.

Pershing Wanted Camoufleurs.

It was knowledge of this need and of the new problems injected into the science of war by the aeroplane that drew these artists together in New York. Nineteen responded to the first call and it was determined to start an organization of some kind and inquire of the Government if the idea was worth developing. Fortunately, about this time General John J. Pershing went to France in command of the American expedition and it was not long before,

without inquiry of any kind from this side of the water, he began to cable back requests that a company of camoufleurs be sent to France. Thus with simultaneous enterprise and patriotism the commanding general was demanding and the American artists were organizing a branch of the service which appears destined to play an important part in the activities of the American troops on the battle front.

Major Evarts Tracy in Command.

The company began to grow and is still growing. Evarts Tracy, one of the leading architects of New York, had taken all the courses at Plattsburg and received a commission as major in the Officers Reserve Corps. He entered with enthusiasm into the idea of organizing the artists and became the moving spirit of the enterprise. He was made and is now commander of the company, although he is not with his men at Camp American University. Majors ordinarily command battalions, not companies; and it is no secret that the rapidly growing Company A, Twenty-fifth United States Engineers, in time will become a battalion. Every day recruits are coming in, and the list reads like the catalogue of the Paris Salon.

Under a Capable Commander.

To make a long story short, a large company of artists, sculptors, architects, civil engineers and others who have won fame with brush and chisel—and many of them much money with their brains and skill—are now drilling and experimenting at Camp American University. They must be soldiers also, as well as artists, for no one who goes upon a foreign battlefield in the uniform of the United States is permitted to be there until he has learned how to take care of himself. The company is under the capable command of Captain Martin Nixon-Miller, U. S. R., from whom they get daily a grueling course in military instruction. Captain Nixon-Miller was for more than seven years a member of the Pennsylvania National Guard. He is a civil engineer by profession and served as assistant engineer under Goethals on the Panama Canal. He erected a million-dollar plant in Pottstown, Pa., not long ago, and after three attempts to secure his services, finally entered the Government service, and recently has had charge of a million dollars' worth of property and construction at the Frankford Arsenal. Incidentally, it was Captain Nixon-Miller who, as a Government agent, uncovered the garbage scandals of the reform administration in Philadelphia. The men in his command are good sports and are taking their medicine cheerfully, but they are doing something besides experiment with paint brushes and baled hay.

Lieutenant Homer Saint Gaudens.

A first lieutenant of the company is Homer Saint Gaudens, son of perhaps the greatest of American sculptors and himself a stage director of note, as witness his remarkable work with Maude Adams in the preparation and production of the wonderful effects and illusions in "Peter Pan" and a "Kiss for Cinderella." Second in command is Lieutenant Wilfred S. Conrow, the landscape painter. Both are graduates of Plattsburg, and so far highly successful with the task they have in hand.

Studied with Abbott H. Thayer.

It might appear invidious to mention the distinguished professional men who compose this unusual company, but it seems appropriate to make special mention of Barry Faulkner, the New York artist, if only because he is a pupil of Abbott H. Thayer, the great figure painter, who early in life made a study of animals and discovered the law of the protective coloration of the animal kingdom. It was Thayer who first dared to differ with Darwin upon this subject, the British scientist having attributed the coloration to sex influence, while Thayer, combining the faculty of visualizing and noting the actual aspect of things in their relation to one another with his knowledge of the animal world, proclaimed that nature's gift of color to her children of the forest enabled them to disappear quickly from the sight of their enemies. That the truth was stated by both writers now is generally acknowledged. Mr. Faulkner is a devout disciple of his master, but in his most intimate studies with Mr. Thayer he could never have dreamed that the theory of an artist in relation to the dress of birds and animals would some day contribute to the success of American arms.

Saturday Post Man a Rookie.

The company bristles with men of the highest standing in their profession. Fry is a pupil of MacMonnies, Lorado Taft and other distinguished sculptors, and, like Faulkner and Harry Thrasher, the painter, has taken the Prix du Rome. Among their comrades are Sutter, Tubising, Dewar and Nell, the painters. Twig Smith, who has been painting the exquisite scenes of the Hawaiian Islands, has come back and enlisted. Sanger, Hoyt, Foster and Comstock are listed among the architects. All are young men, but they come from the best offices in the United States and many already have made names for themselves. Leslie Thrasher, who draws the striking frontispieces for the Saturday Evening Post, is a rookie in the awkward squad. Men of this stamp are appearing at the camp every day, and enlistments are coming in so fast that Major Tracy has had his hands full dealing with them. The spirit of the command is an inspiration to the layman.

Practicing the Art of Concealment.

While the achievements of the French in camouflage are well known, and the American organization is in its infancy, it has been worth much to the men to know that General Pershing really is eager for their services. Half their day is given to experiments in their own peculiar line, and they are confident that the problems they will be called upon to solve are relatively simple. The art of concealment has most to fear from the cameras of the enemy, for many an object which appears innocent to the eye is remorselessly exposed by the lens and the plate. Knowing this, the men are conducting a series of experiments in coloration which are carefully being tested out photographically. An artificial green which would deceive a naturalist at a few hundred yards might show black under the merciless gaze of the camera, and the artists already have mastered a secret of fooling the lens. They have invented a grass which can be turned out in quantities by a machine and used as a covering, and they have learned so to color it that it will defy detection. One of their first experiments was upon an humble latrine, which they so disguised that at enemy distance it was invisible. They have taken to the trenches, and already have discovered a method whereby a rifleman equipped with a proper helmet can be so concealed that a whole regiment might slowly arise from their places to fire without the enemy noting a particle of change in the appearance of the background. The sniper or sharpshooter is one of the most useful soldiers on the battlefield, and uniforms are being devised which will be indistinguishable from tree or landscape. A fake road is being planned, at the end of which will be placed dummy cannon, while the real cannon are concealed hundreds of yards away. One of the arts of camouflage is to make certain that the object to be concealed contains all the color values of its backgrounds, and the artists know that if one color is omitted the object at once becomes very noticeable.

Will Finish Training in France.

The men are working in conjunction with the Signal Corps of the army at Fort Myer, and their experiments will be tested out thoroughly with aeroplanes and cameras. It is not pretended that the major part of the training can be undertaken in this country or that these professional men, however high their standing, can teach the French. It has been demonstrated already, however, in the month in which the first increment has been in training, that the company can acquire certain general principles which will prove useful in whatever work they may undertake in the future. The combination of artists and architects is a valuable one, for while the colorations of the group are necessary, the designs of the other are equally important. The men have no doubt, and, in fact, the Government has no doubt, that the American camoufleurs will prove their utility on the battlefield and that their work will result in the saving of thousands of soldier lives. The finishing touches must be put on in France, but at Camp American University the groundwork is being laid for a service which is wholly unique in character and demanding as much of patriotism, self-sacrifice and daring as any that Americans on the European battlefield will perform.

W. E. B.

Alumni Notes.

Miss Claudine E. Clements has accepted the position of teacher of history in the National Cathedral School for Girls at Washington, D. C.

Mr. Clyde F. Armitage is now with the Federal Council of the Churches of Christ of America, and is stationed at the Washington office, where he is now editing the Federal Council Year Book.

Mr. Raymond F. Piper is teaching philosophy at Syracuse University.

Miss Clara F. Chassell holds the position of psychologist in the Horace Mann School of the Teachers' College of Columbia University.

Mr. Frank B. Hanson is teaching zoology at the Washington University, St. Louis, Mo.

Prof. Henry F. Lutz is teaching philosophy at Bethany College, Bethany, W. Va.

It gives us great pleasure to learn that Mr. Clyde B. Moore, one of our Fellows of 1916-1917, who took studies in psychology and education the past year in Columbia University, has been chosen as professor of education at the State Normal School at La Crosse, Wis., and will enter upon his duties this coming fall.

This old farm house, after standing for more than a century, was taken down to make way for extension of Massachusetts avenue

The Annual Meeting of Trustees.

The meetings of the Trustees of the University have come to be not only very important, but intensely interesting events. The annual meeting was attended by gentlemen, some of them from a great distance, who were compelled to come aside from important personal business, and many other exacting duties connected with other corporations, to concern themselves with University matters. The Chancellor is not only grateful for the large attendance at the meeting, but he is greatly indebted to the Trustees for their prompt response to the call to the meeting, and the attention given to every detail of the business to be transacted.

The painful announcement of the death of Mr. Arthur Dixon, of Chicago, one of the Trustees, prompted a tender and fitting tribute to his memory by the Chancellor and the President of the Board of Trustees. He had been associated with the University as a Trustee for many years.

The business of the meeting was given over very largely to the consideration of the relation of the University property to the Army and Interior Department of the United States Government. The suggestions by the several members of the board led to careful inspection of all the new buildings erected by the Government and the changes made in University buildings now occupied by the Army and the Bureau of Mines.

Approval was given to the action of the Chancellor and Executive Committee in permitting the Interior Department to occupy the entire McKinley or Ohio Building; this will require the laying of the floor in

the large auditorium, which is now in process of completion. In the College of History Building nearly or quite thirty rooms were granted to the Bureau of Mines. This requires some of the exercises and functions of the University to find rooms elsewhere. Recitations in one of the departments are provided for in the home of one of the professors, and a number of the churches of different denominations have generously proffered the use of their lecture rooms for Dr. MacWatters' lectures.

The Treasurer reported nearly or quite \$20,000 received since the semi-annual meeting.

The Rev. Dr. J. Franklin Knotts was elected assistant to the Chancellor.

The degree of Doctor of Literature, when confirmed by the Board of Award, was conferred on Mrs. Elizabeth Jane Somers, founder of Mount Vernon Seminary.

Plans were approved for the erection of an additional University building when a sufficient additional amount to the subscriptions already made has been secured.

A luncheon was served in the library to the Trustees and their wives. Mrs. Frank W. Collier acted as hostess.

The Rev. J. Franklin Knotts, D.D., Assistant to the Chancellor.

The new member of our Faculty comes from New England. We count ourselves most fortunate in securing a Christian teacher and preacher so representative of the younger generation and newer education.

His phenomenal success in the pastorate relates him closely to all the preachers and churches. His fine presence, good voice and excellent abilities give him an opportunity on the platform and in the pulpit to represent the University with a worthy acceptability. His affability will make him a welcome visitor wherever he may go. His financial ability manifested in the various enterprises of the several pastorates he has served make him a trustworthy advocate of the moneyed interests and business affairs of the University.

Dr. Knotts was born in Greensboro, Pa., was graduated with honors from Mount Union College in Ohio, later from Boston University with the degree of S. T. B. His alma mater conferred the degree of Doctor of Divinity in 1915. He was married to Miss Rosella Mercer, a brilliant and accomplished lady, in 1900. After having been licensed to preach he united with the New England Conference and was ordained

J. FRANKLIN KNOTTS, D. D.
Assistant to the Chancellor

by the present Chancellor of the American University. He served three pastorates in the conference, the second being the Mother Church of New England Methodism. In the church he leaves in coming to the University he was instrumental in adding 800 members to its fellowship. His success was not in any one direction. It is not extravagant to say in matters of reform there was no more prominent citizen in either of the two great cities of Lynn and Somerville when he was pastor, respectively, in each of them. He is now the only clergyman of his denomination who is a member of the Massachusetts State Convention for the revision of the Constitution. He receives a cordial welcome to the University and to a home in Washington.

Arthur Dixon.

The death of Mr. Arthur Dixon in his 81st year, at his Chicago home, on October 26, 1917, was fittingly announced at the recent meeting of the Trustees of the American University. Mr. Dixon had been a member of the Board for eighteen years. He was a vigorous, active and loyal member of the First Methodist Episcopal Church of Chicago for more than fifty years, and was long the superintendent of that Sunday school. He was president of the Dixon Transfer Company. In this position and in many other ways he gave evidence of sterling business qualities and politi-

MR. ARTHUR DIXON

cal sagacity in the great metropolis of the West. His Christian integrity and loyalty to the faith were manifest through his long career. The influences of his marked personality touched and molded thousands for good, and will be cherished in the hearts and memories of those who came under their power.

To the surviving widow and her six sons and five daughters we extend our deep sympathy, together with our sincere congratulations upon the rich inheritance of a good name and a noble life left to each of the sorrowing group.

Lectures by Dr. Carroll.

The Secretary of the Archaeological Institute of America, Prof. Mitchell Carroll, Ph. D., delivered two scholarly and timely lectures in the assembly hall of the College of History on the afternoons of October 29 and 30. The first, "The Story of Prehistoric Man in Europe," was a resumé of the latest evidences of the evolution of man and his civilization. The second, entitled "Greece, the Battle Ground of Orient and Occident from Homer to Venizelos," told the long story of the struggle between East and West from the beginning to the present hour.

Prof. MacWatters Teaching French to the Soldiers and Lecturing.

A class in French has been formed among the soldiers of Camp American University in preparation for their work "over there," and Prof. MacWatters is giving them instruction. He has recently given two lectures in Parkersburg, W. Va., and is soon to deliver a series of lectures on Tennyson and Browning at the West Virginia Wesleyan College at Buckhannon.

Miss Boggs Honored.

Miss A. W. Maris Boggs, Dean of the Bureau of Commercial Economy, and student in the American University, making a thorough investigation in visual education, has recently received some flattering recognition of her work. She has been proposed for membership in the Royal Geographical Society of England. She was also asked by the Belgian Minister of Education to join with the Baroness Moncheur, wife of the High Commissioner of the Belgian Mission to the United States in 1917, in translating Leon de Paeuw's "La Re-education Professionnelle des Soldats Mutiles et Estrophies." The author of this work is in charge of schools for the professional re-education of Belgian cripples, and chief of the civil cabinet of the Belgian Minister of War. This is a very important work, the first of its kind to be published in this country, and will prove valuable in planning for the re-education of wounded and maimed American soldiers. The translation has been completed. The United States War Department has had a few hundred copies mimeographed for its use, and the work is soon to be issued by an American publishing house.

Lectures on Science.

The experiment station of the Bureau of Mines at the American University is revealing a wonderfully rapid growth. Mr. George A. Burrell, assistant to Director Van H. Manning, of the Bureau of Mines, and in charge of gas investigations, and technical head of the station, has planned the following course of lectures by distinguished scientists for the large body of scientific workers at the station. The lectures are intended to aid the men in their laboratory work. Some have been delivered. The assembly hall has been taxed to its utmost to accommodate the large audiences. The course is as follows:

- Major S. M. Ankl, of the British Army, November 16—"German Gas Warfare."
- Dr. W. D. Bancroft, Cornell University, January 4—"Colloid Chemistry."
- Dr. Yardell Henderson, Yale University, January 11—"Physiological Problems."
- Dr. John Johnston, American Zinc, Lead & Smelting Co., January 18—"Material Needed in Gas Warfare."
- Dr. W. D. Bancroft, Cornell University, February 1—"How to Attack a Research Problem."
- Dr. C. L. Alsberg, Bureau of Chemistry, Department of Agriculture, February 8—"Food Chemistry."
- Dr. A. L. Day, Geophysical Laboratory, February 15—"Optical Glass."

The American University in the West.

We are grateful for the appreciation of the little we are trying to do for the United States Government as we find it expressed in the papers and magazines of the country. Frequent visits are made to our campus and buildings by newspaper men from every part of the country to report what is being done here to help win the war.

A recent visit made by the Rev. Dr. Claudius B. Spencer to our institution is generously described and illustrated in the columns of the Central Christian Advocate of Kansas City, Mo. The photographs were taken by himself. We hope by his courtesy to reproduce one or more than a half dozen which appeared in his paper.

Our Big School.

It is not given to many universities to have an attendance of 15,000 students. And the Faculty has commensurate proportions. If the war has taken from the post-graduate schools and the higher classes in the universities and colleges many of their students, they should find their compensation somewhere. The American University has been more fortunate, but not more patriotic than the other great schools throughout the country. The location and the campus of nearly 100 acres afforded the Army and Navy opportunities for such training of the soldiers as could not be secured anywhere else near to Washington. So every available space will probably be used before the war is over. Thirty or forty acres are now under permanent barracks. Here was trained the first Camouflage Regiment in the United States, the first Gas and Flame Regiment, and one of the largest Forestry Regiments.

There is now in one of the University buildings the largest laboratory in this or any other country, having more than 100 chemists employed. New buildings are being erected every day in some part of the University grounds. The University itself is uniting with the Army and Navy in the construction work, for all this work will be left to the University when the Government no longer has use for it. Whoever, therefore, helps the University in this work helps the Army to win the war. We have believed that the pictures of *Our Big School* which THE COURIER presents in each issue are of wide and permanent interest.

Our Gas and Flame Students.

We gave in the last issue of THE COURIER a reproduction of a fine photograph of the Camouflage Regiment. The accounts of this original regiment, first of its kind in this country, were many and various; they were published in newspapers and magazines all over the country. The son of St. Gaudens, the sculptor, was so prominently connected with the regiment that we miss him now that he has gone to somewhere off in elsewhere. As the Gas and Flame Regiment takes its departure we have thought that our readers would wish also to see the picture of the men constituting that famous association of splendid soldiers, whose courage no danger can frighten and whose nerve no enemy can conquer. It seems like the commencement day when they go away.

Our Military Alumni.

The American University has graduated 10,000 students since war was declared, but they were all in the military department of the University. The campus has been one vast military academy. The undergraduates drill on the college parade, study their manual in the barracks, and go to Belvoir for battle practice.

One camouflage company has graduated, one gas and flame, and thousands of civil engineers. Our military alumni are now scattered somewhere on the high seas, somewhere in England and somewhere in France. It stirs one's blood when the sound of the bugle calls to arms and the splendid pageant moves down the avenue with martial music and scenic departure.

GAS AND FLAME REGIMENT, 30TH ENGINEERS, CAMP AMERICAN UNIVERSITY

part for France. On the particular occasion of this picture the Y. M. C. A. of Camp American University broke the world's record in that they served lunch to eighteen hundred men in twenty-three minutes.

Globe-Girdling Freedom's Guard.

America, to other lands
 Thy gifts have e'er been great,
 Lo, Europe's armored, clashing bands
 Thy coming now await.
 Thy ships, thine arms, thy bread, thy men,
 Are parts of one vast whole;
 Globe-girdling freedom's guard, again
 Thou givest—heart and soul.

ALBERT OSBORN.

Table Talk

Massachusetts avenue runs to the District line now. Shall we celebrate?

We are hoping to have an eminent lecturer from London in our course before the University this year.

Congress held back a number of years the opening of the University by refusing to make grants for extending Massachusetts avenue.

All the Bishops elected before the last two classes and some of these subscribed one hundred dollars each toward the respective lecture foundations.

The first soldiers on the campus are all gone. We will have to make our acquaintances all over again. What a time we will have to pass the new sentries at the gate!

The American University has a military department now. If the students pass their "exams," the United States Government gives them their diplomas, which carry good salaries with them.

All applicants for fellowships should remember that their credentials as well as applications must be in the possession of the Board of Award not later than the first day of April, 1918.

No more cordial reception could be given the Chancellor of the University than was extended to him by the several fall conferences he was able to visit, and over which he had presided during his Episcopal superintendency.

Some of the subscribers to the McKinley Memorial Building delayed in making their payments, while the work on the building was at a standstill. Now the sound of the hammer is on every floor. Every dollar now helps.

By far the greater number of shade trees and fruit trees planted in the spring have made a verdant beginning. The unresponsive others, like the "sinful fig tree," will be supplanted by the "allies," which the foresters will commandeer.

Every dollar promised the University during these days of constant building and improvement is equivalent to two dollars if the builders were to be called back after all their stagings have been taken down and teams and tools taken away.

Notwithstanding the depletion by the conscription of the young men of the higher schools of learning, who were soon to finish their course throughout the country, the University has applications for about the same number of students as last year.

Dr. Thomas Dowling, of Wilmington, Del., has presented the University Museum with a spoon mold brought to this country in colonial times by the Huguenots; also a medallion of Ferdinando II, made of lava from the eruption of Vesuvius in 1859.

Nearly every available space of the University grounds is now covered with the many tents and barracks, stores, shops and the buildings erected by the army camp. Even the ravines in the grove have been utilized for schools of bridge-building and other accessories needed in making difficult ascents.

The University has taken advantage of the presence of the Government contractors to get them at the University's expense to build such foundations in the basement floor of the McKinley Memorial Building as will be certain to hold up the steel columns and girders of the great floor of the main hall, with its galleries. The Auditorium when finished will seat from 1,500 to 2,000 persons.

We are pleased to note the interest taken in the fellowships granted by the University. Applications came in this year from China, India, Italy and most of the States in the United States. We are advised already that applications will come this year from Canada, Mexico, probably, and South America. The Board of Award made grants in the recent distribution as far away as Italy and the State of Washington.

It is often asked why has the University not completed some more of its projected buildings. It is readily answered because it had to build its approaches. Thousands of dollars were contributed to build streets. Then to induce the surface railroad to lay its tracks to the University and equip it with rolling stock, the University had to raise many thousands of dollars to build the roadbed. Now it is not an uncommon day business to register one thousand passengers carried to and from the University in the eighteen hours during which the cars run, and as large and comfortable cars run over the line as through any part of the city.

When the regiment of Civil Engineers came to the campus with only their tents, the officers were permitted to occupy seventeen rooms in the College of History building for offices, master chambers and post office.

The University has been bringing the city this way ever since it purchased its site. Mr. Cleveland, who purchased an adjoining estate during his Presidency, divided and subdivided the "old plantation" into city lots, and made "his million," "so they say." But whether it was a million or more or less, there is Cleveland Park now, and Congressmen congregate there to spend more time than they do at the Capitol, except in "war time"—they reside there.

For every dollar contributed toward the finishing of the McKinley Memorial Building we have another dollar promised.

The soldiers stationed on the University grounds are not only self-respecting gentlemen, but not a few of them are brilliant students from many of the colleges in both the North and the South.

Has anything been left out in the University Camp? There is the soldier's hotel, post-office, shoe-shop, tailorshop, store, hospital, blacksmith shop, stable, delicatessen, playhouse, school and church.

The amateur soldiers are getting down to the fact that it is a man's business and not a woman's to wash dishes. Does not the Bible say: "I will wipe Jerusalem as a man wipeth a dish, wiping it and turning it upside down"?

It was a beautiful expression of interest which the Young Men's Christian Association manifested in the welfare of the soldiers when they built that comely, commodious and attractive meeting house in the centre of the Camp. That Secretary Cooper, as one of the soldiers said the other day, "is all wool and a yard wide." If all his appointments are as appropriate and successful as the assignments of Brothers Bryant, Cranston and Hardy to the Superintendency of the Camp Building, he had episcopal timber in him and it has already been through the planing mill.

The young men who are in training for the Army in the American University Camp are beginning to learn something of the rigors of their task. Passing a row of them the other day, when they were digging a ditch for a water main and thus taking first lessons in digging trenches, one of them who was blistering his hands in swinging a heavy pick and in covering himself with a plentiful perspiration, said to me: "How is this for a typewriter, who never knew anything of this business?" Another said: "I have a mind to have my picture taken, as I am throwing full shovels of earth up out of this ditch and send it to my father just to let him know I can work when I have to."

GAS AND FLAME MEN

ANOTHER SPECIAL AMERICAN REGIMENT.

Only Red-Blooded Men Wanted for the Organization That Will Combat Germany on Its Own Terms of Frightfulness—What the Engineers at American University Are Doing—Capable Officers in Charge—Volunteers Wanted—How to Enlist.

(Reprint from The Boston Transcript.)

Washington, Oct. 26.

"Only keen, red-blooded men, who are desirous of seeing active service, are wanted for this regiment"—so announces Major E. J. Atkinson, Corps of Engineers, upon whom has been placed the duty of organizing the "Hell Fire" regiment with which to fight the Germans. Officially the new regiment will not bear this striking title, although it is known officially as the "Gas and Flame" Battalion of the Thirtieth Engineers at Camp American University. Like the celebrated camouflage battalion, it is being organized on the cabled request of Lieutenant General John J. Pershing for a body of men to do pioneer work in the front line trenches in Flanders. The Germans violated all the laws of war and humanity with their introduction of searing flames and poison gases into the trenches of the Allies, and now American genius and patriotism are relied upon to beat the Hun at his own game. For reasons which will be suggested later, army officers are confident that this can be done.

Capable Officers in Charge.

Major Atkinson, who is forming the unique battalion, is an officer of the Regular Army, a graduate of West Point and Cornell, who has specialized in electrical and mechanical engineering. For eighteen months he worked under Sibert on the locks of the Gatun Dam, and is thoroughly familiar with that wonderful piece of engineering, which will carry the name of Sibert forever as high as that of any other man that was associated in the Panama Canal enterprise. The major also has been director of electrical and mechanical engineering in the Engineer School of the Army, and thus is in every way fitted to conduct the operations which will require a thorough working knowledge of mechanical technique. The Thirtieth Engineers when they reach France will be in command of Colonel Ainos A. Fries, a regular officer of the Corps of Engineers and now attached to the National Army in France. Colonel Fries is given in official documents the formal title of "chief of the gas service," and from the small beginning now being made here in Washington and in which the patriotic chemists and mechanics of the United States are now invited to get in on the ground floor will develop an organization whose exploits, it is safe to predict, will rival those of any force employed against the barbarians of Germany.

Government Wants Volunteers.

The Government is calling for volunteers for the gas and flame battalion. The immediate need is of 250 privates, 30 chemists, 12 interpreters who speak French, 12 electrical experts, 24 mechanical experts, 12 explosive experts, 10 gas experts, 6 blacksmiths, 10 steam engineers, 8 carpenters, 8 gas engineers, 6 plumbers, 8 pipe fitters, 32 chauffeurs, 12 cooks, 8 clerks, 2 mess sergeants and 2 supply sergeants. All men must first enlist as privates at \$33 a month and expenses. Men with the necessary experience may be assigned to special duty and given non-commissioned ranks at rates of pay ranging from \$42.20 to \$96 a month and expenses, which include food, clothing, medical attendance and transportation. Those who enlist will be eligible immediately for promotion. Many of the non-commissioned places will be filled almost immediately upon entrance to the service, and opportunities for commission will develop with service. As it is hoped to make this a volunteer organization, men of the qualifications already stated, including also automobile repair men, need not be of the prescribed age for the selective draft, but may be anywhere between 18 and 40 years of age. The privilege of enlistment will be lost by men already called by a local board in the draft, but men will be drafted from the selected army to fill the ranks of the gas and flame regiment if necessary, and presumably drafted men of the classes named above who would like to be among the pioneers in the latest development of modern warfare would be given preference in making the selection.

Real Chance for Active Service.

The "Hell Fire" battalion offers a real chance for men to perform active service on the battle front. They will go to France earlier than men in many other commands, and they will be at the head of the great offensive which supposedly will open in the spring. They often will be the vanguard of the attacking forces, supported by the whole power of the great military organization behind them, with its thousands of cannon, and its hundreds of thousands of rifles. The faith expressed by Army officers of the ability of the United States to teach the Germans the war game in the use of their own hellish weapons is based not so much upon the possible superiority of American over German chemists as on the inventiveness of the American mind in the designing of apparatus for the projection of gases and of flames, and, above all, upon the inexhaustible resources of the United States which will enable the American troops to make use of an equipment immeasurably better than the Germans can command. The time has gone by for any ethical discussion as to the propriety of using gas and flames against the enemy. The Germans started the fiendish practice and are keeping it up. The American preference would incline toward the use of a gas that would stupefy and not kill or poison, but the Germans have set the pace and the practical officers of the Army realize that their fire must be fought with hotter fire.

How to Enlist for the "Hell Fire."

Recruits for the gas and flame regiment should apply for enlistment at the Regular Army recruiting stations within their military districts, but they will be sent at once to the American University Camp at Washington, one of the most desirable in the country during most seasons of the year, although at present lacking much to be desired in the way of heating facilities. For months one of the great buildings of the university has been given over exclusively to the making of experiments in gas and flame warfare under the direction of the Bureau of Mines. The best chemists available have been employed in research work in connection with these experiments, and some of the results obtained are said to be wonderful. Not only have the Army authorities been provided with complete information concerning the chemistry and appliances used by both the German and the Allied armies, but they have been conducting independent investigations whose results are said to excel in deadly efficiency anything hitherto employed in Europe. The American chemists and designers not only are confident that already they have matched the effectiveness of the Germans in the use of these new instrumentalities of war, but they believe that new inventions are being and can be developed which will make the gas and flame regiment of the United States the terror of the battlefield. Armament is powerless if the men to operate it are gassed in their tracks or are shriveled up in flames. Something more powerful to offset the satanic devices of the Hun must be supplied. The Allies are now looking to America to beat the Germans at their own game, and America now calls upon her chemists and her mechanics to accomplish this result.

Gas Devices Being Tested.

At Camp American University the "Hell Fire" battalion will be on the spot where these secret inventions are being tested. This is the greatest engineering camp in the country, and, in fact, is developing the novelties which will be features of the American campaign. The men will be given military drill of the most thorough character, for almost above all others they must be good soldiers when they begin their deadly work. But here in America they will have the opportunity of testing and, in fact, of designing many of the devices which will be used later in the field, so the course of instruction on this side of the water will prove of fascinating interest to every man in the command. Army officers realize the difficulty of securing volunteers from the skilled classes which will be represented in the gas and flame regiment, particularly as some of the men who otherwise would be available are now engaged in plants which are turning out war supplies. But the men must be got or the United States will fall in a vitally important branch of offensive warfare. The men will be secured—there need be no doubt of that; the only question is whether they will volunteer for this novel and highly important service or be drafted.

Recent Gifts of Money.

Acknowledgment in this column of sums less than \$5.00 is to be regarded sufficient receipt therefor.

Chancellor's House Fund.—\$25, Mrs. A. A. Sowle; \$8, Lloyd East; \$5, L. E. Baldwin, H. P. Johnson, C. J. Whitlatch, J. H. Howard, G. W. Pender, W. E. Marvin, E. M. Antrim, J. W. R. Sunwalt, Mary L. Calloway, N. La Marche; \$4, J. W. McIntyre; \$3, T. K. Fornear, J. W. Searles, J. H. Lancaster; \$2, B. F. Newman, D. F. Carder, J. P. Burris, F. Mittlefehlt, Frank McCamie, J. M. Chhatti, J. G. A Lincoln Medal.

A subscription of a dollar to the Building Fund of the university can secure a Lincoln medal as a souvenir and receipt for the subscription. Some time ago the university had struck from dies a number of these attractive Lincoln medals, bearing on one side the bas-relief of the great emancipator, and on the other side the seal of the American University. The medal is made of attractive white silver-like metal and is a fitting emblem of the Americanism which is one of the foundation stones of our enterprise. A large number of these medals already have been given out to helpers of the university. A few, however, still remain awaiting those who will join us in the new forward movement to give national influence and importance to our work. In sending the dollar to the university write plainly the name and the address and specify that the money is for the Building Fund.

A Poem by Robert Browning—Now First Published.

Dr. Samuel J. MacWatters is the proud and envied possessor of an old and beautifully embossed portfolio presented to him by Mrs. Robert Barrett Browning, daughter-in-law of the great poet, Robert Browning, in token of his love for and appreciation of the poet as manifested in the University Extension Lectures and addresses which have attracted the attention of the Washington public during the past few seasons. This rare gift from the only surviving member of the Browning family is given in recognition of Dr. MacWatters' understanding and faithful presentation of the poet's life and works at the Capital. The donor, after hearing the lecturer and listening to the rendition of some of his musical compositions, remarked: "Only a man with such music in his soul could properly interpret Robert Browning."

The portfolio was long carried and constantly used by Robert Browning for his private correspondence, and is somewhat discolored from time and service; yet, because of this, all the more precious to the honored recipient. It was doubtless a gift from his wife, and was in use for a time before Mrs. Browning's decease. During this period the figure of the locust, with the face of a man and the crown upon its head (see Revelation 9:7, "On their heads were as it were crowns like gold, and their faces were as the faces of men"), resting upon a globe, was drawn by the hand of the poet. After Mrs. Browning passed from earth, Mr. Browning reversed the portfolio, wrote the polyglot stanza, and on the opposite page placed the reprint of his wife's poem, "How do I Love Thee?" one of her beautiful "Sonnets from the Portuguese." The original stanza, an antiphonal response to the sonnet of love, and penned by the poet's own hand, is herewith reproduced (see page 1), and given to students and admirers of Browning, a contribution²² from the depths of his soul, and hitherto unknown. It is published for the first time in this issue of THE COURIER.

How do I Love Thee?

Let me count the ways,

I love thee to the depth, and breadth, and height
 My soul can reach, when feeling out of sight
 For the ends of Being and Ideal Grace.
 I love thee to the level of every day's
 Most quiet need, by sun and candlelight.
 I love thee freely, as men strive for Right;
 I love thee purely, as they turn from Praise;
 I love thee with the passion put to use
 In my old griefs, and with my childhood's faith;
 I love thee with a love I seemed to lose
 With my lost saints; I love thee with the breath,
 Smiles, tears, of all my life!—and, if God choose,
 I shall but love thee better after death.

ELIZABETH BARRETT BROWNING.

The unpublished poem:

She Shall Speak to Me.

She shall speak to me, in places lone,
 With a low and holy tone.
 Ay! When I have lit my lamp at night,
 She shall be present with my sprite;
 And I will say, whate'er it be,
 Every word she telleth me.

ROBERT BROWNING.

The Hebrew, Latin and Italian lines accompanying the stanza and the Greek and Hebrew inscriptions

beneath and near the figure shown above it, furnish the students of Browning new and interesting problems of interpretation, especially those relating to his personality and the ties that bound together the souls of Robert Browning and Elizabeth Barrett. Their harmony of thought and unity of spirit survive the separation of death, and find immortal expression in the three complets now first brought to light.

TRANSLATIONS, WITH NOTES.

Hebrew above the stanza—THE POSSESSION ETERNAL.

Latin below the stanza, from Vergil, Aeneid, I, 83: ABSENT (SHE) BOTH HEARS AND SEES (HIM) ABSENT.

This sentence was used by Browning in 1887 in the dedication of his book, "Parleyings with Certain People of Importance in Their Day," to the memory of his nephew, J. Miland, who had died the previous year. By the omission of *illum* (him) from the Latin the poet has given a mutual or rather a doubled function to the word *absent*, which thus equally applies either to her or to him.

Italian below the Latin—FOR THE DAY.

An epitome of the four-tongued threnody might be ventured: Hebrew—Love, the Eternal Treasure; English—Personal Communion; Latin—Distance Non-existent; Italian—A Daily Portion.

Hebrew obliquely above and to the right of the figure:

TO THE PLACE (of, in construction).

Greek below the figure, from Euripides, Medea, 110: UPSTREAM THE HEADWATERS OF THE SACRED RIVERS FLOW.

This sentence is the first line of the first strophe of one of the choruses of the drama, introducing a passage presaging a sea-change in the attitude of the world toward woman. Gilbert Murray's free rendering is:

"Back streams the wave on the ever-running river."

Murray's translation of the entire strophe is:

Back streams the wave on the ever-running river;
 Life, life is changed and the laws of it o'ertrud,
 Man shall be the slave, the affrighted, the low-liver!
 Man hath forgotten God.

And woman, yea, woman, shall be terrible in story;
 The tales, too, mesemeth, shall be other than of yore,
 For a fear there is that cometh out of Woman and a glory,
 And the hard-hating voices shall encompass her no more.

Every literary and symbolic feature of the portfolio is an invitation, nay, more, a challenge to their best endeavor at interpretation by those who have been most successful in following the flight of Browning's singing soul through the moral and spiritual universe of his published poetry. Who accepts?

In subsequent numbers of THE COURIER other exceedingly valuable mementoes of the Brownings will be presented.

A. O.

Professor Samuel J. MacWatters, Litt. D.

University Extension Lectures.

For three years Dr. Samuel J. MacWatters, Litt. D., has been with us in the Department of Literature, and has won his way into popular favor at the University and in the hearts of Washingtonians through his scholarly presentation of lofty themes from the masterpieces of English literature. He has appeared before

all the leading schools, colleges, clubs and societies of the Capital and vicinity, and has won the plaudits of his hearers through the mastery of his subject. "Dr. MacWatters is endowed with a dignified and striking personality, and a rich voice of unusual compass and power. From his subject it is evident that his bent is toward the poets who treated of the deeper things of the human spirit—in fact, the philosophical and religious poets. He gives the great poets an opportunity to speak for themselves, not smothering them with commentary; his expositions have the marks of reality; scholarship is in evidence, but learning does not crush out life; and the fine personality of the man is inseparable from his work." (Press).

Dr. MacWatters is well known to the musical world as a composer of sacred song classics, and many of his compositions have been heard in Washington during the past year. For our last Convocation he composed a grand march for thirty-four different instruments which was pronounced "a work of high merit"; also, our American University Hymn (words and music), that bids fair to rank as first among the many fine songs of our American colleges and universities throughout the land. Last spring he wrote the words and music of a State song for West Virginia, "The Glory of the West Virginia Hills," and Governor Cornwell was so impressed with the sentiment and music as to wish it published in every school and college textbook in the State.

Dr. MacWatters has deservedly won his laurels as poet, musician and litterateur, and as a member of our faculty through his attainments has reflected honor on our American University.

At present, owing to our being crowded out of our quarters by the Government, Dr. MacWatters is giving lectures on literature at the different churches in the city in the interests of the American University, and large audiences are attending the series.

No Sacrifice Too Great.

Arise, brave sons, from shore to shore,
And in your freedom boast!
Old Glory stands for all that's best,
The flag that we love most.
To her allegiance bold we swear
With all our manhood true,—
To hold no sacrifice too great
For our Red, White and Blue.

S. J. MACWATTERS.

March 31 Latest Date for Receiving Applications for Fellowships.

A number of the members of the Board of Award occupy responsible positions in charge of departments in the United States Government service, and others

SIXTH BATTALION - HEADQUARTERS, AND COMPANIES D, E, AND F, TWENTIETH ENGINEERS (FORESTERS), CAMP WAS A PART OF THE 2,172 ON BOARD THE T

reside at a distance from Washington, and they have unanimously decided that all applications must be received in time to be considered at one and the same meeting. Both time and expense are involved in the several meetings which it is necessary to have to pass upon the great number of applications that are received.

It was unanimously agreed at the last meeting of the board that all applications for fellowships for the ensuing year must be received by the Registrar of the University on or before the 31st day of March.

Billy Sunday at the University.

An invitation was extended to Mr. Sunday during his meetings in Washington by the Chancellor to visit the University and address the students, faculty and employees of the Bureau of Mines. Mrs. Sunday and Mr. Rodeheaver came with him. The assembly room was filled to the doors. He has addressed no more interested audience than he found in the hundreds of chemists and soldiers who were present. He held their undivided attention for the hour, using the story of Edward Everett Hale, "Man Without a Country," to illustrate his subject. He was never more simple, impressive and commanding before the multitudes in the great Tabernacle. He left an excellent spirit, and both he and Mrs. Sunday greeted every person in the audience, taking each one by the hand as they left the room.

Mr. Rodeheaver delighted the congregation with his musical selections, both instrumental and vocal. He led the audience in patriotic hymns, when everyone rose and sang with the spirit of the Army and Navy.

Readjustment of University Work.

As was anticipated in the October number of THE COURIER, the pressure for room by the Experiment Station of the Bureau of Mines has compelled the holding of the Extension Lectures outside the University grounds.

Chancellor Hamilton asked some of the churches of Washington to allow their auditoriums to be used for these lectures. Every church asked cordially offered to help. So Dr. Samuel J. MacWatters has delivered

lectures on English literature to larger and appreciative audiences at the Church of the Covenant, Presbyterian, and the Foundry, Metropolitan, Hamline, Tennallytown and Petworth Methodist Churches.

Dr. George S. Duncan is also holding his classes in Old Testament work outside the University grounds.

Dr. Collier still holds his classes in philosophy in the College of History.

The moving picture extension lectures, formerly held Saturday afternoons in the assembly hall of the College of History, are being held in about forty centers in the District of Columbia. These lectures are in charge of our director of visual instruction, Francis Holley.

The Bureau of Mines has installed in the assembly hall of the College of History a motion picture machine. This is for the use of the 500 employees of the Experiment Station. The films are furnished by the courtesy of the Bureau of Commercial Economics. The lectures will be under the supervision of Mr. A. G. McChesney, chief clerk of the Experiment Station, and Mr. Francis Holley, our director of visual instruction.

Table Talk.

The Bureau of Mines is still erecting new buildings. We still pay a high rate of interest on annuities. Come and see us.

Our equipment grows day after day.

The stranger that asked "Who was Robert Brownning?" had never heard of the American University.

The first meeting of the Board of Award for this year was held on the evening of April 24.

Dr. MacWatters has received a number of applications for admission to his classes next year.

There will be a candidate for a degree before the Board of Award from Dr. Collier's class.

Convocation Day this year will be Wednesday, June 5.

The Board of Trustees will meet on the morning of Convocation Day.

Every man in the American University has bought a Liberty Bond.

One Liberty Bond given to the University secures four times the amount from helpers in Washington.

Pa. Log. sp. by a. c. c.

AMERICAN UNIVERSITY, JANUARY, 1-18, MAJOR B. F. WADE, COMMANDING. THIS BATTALION, NUMBERING 750 MEN
 TA, TORPEDOED OFF THE COAST OF IRELAND.

We are getting in our winter coal. There is already one hundred tons in the outdoor bin.

The Army is building and macadamizing new roads wherever an approach to the camp is needed.

The University Extension Lectures constantly increase in attendance.

The American flag, high over all, seen from a distance, locates the University.

We have been promised a valuable library by a professor in one of the Western universities.

Why not a unification, at least in conferences, of all the Methodist colleges and universities both North and South?

Mr. Homer Rodheaver will sail for France this summer. He has invited Dr. MacWatters to accompany him and together speak to the men in the trenches.

Colonel Mitchell, who has been the commanding officer of the University Camp for several months, has been taken to Georgia and he is succeeded by Lieutenant Colonel Marek.

Let it be known now for every dollar that is given the American University toward the completion of the McKinley building four dollars more is furnished in Washington.

The Rev. J. Franklin Knotts, D. D., the Chancellor's assistant, represented the University at the recent sessions of the several New England Conferences.

The Baltimore and Newark Conferences, at their recent sessions, each contributed \$100 and more toward the completion of the McKinley Building.

Mrs. Hensley, with the faculty and students of Mount Vernon Seminary, visited the University recently to see Dr. MacWatters' exhibition of the Robert Browning collection.

Mr. Glover has been fortunate in securing for the Government without cost large properties contiguous to the University campus for additional experiment stations.

Washington is the exciting center of the invention, discovery and experiment of the new kinds of munitions, and hitherto unknown means and methods of warfare.

From this time forward the development of resources for carrying on the war will be hurried from Washington with a precision and celerity which were probably impossible six months ago.

The Government laboratory on the University campus is to be enlarged for an additional force of expert chemists and their assistants to the number of nearly or quite 300, making in all that are employed in the several buildings more than 1,000 persons.

Many interested persons who have been temporarily in the city have visited the University during the winter, and expressed their deep appreciation of the gratuitous work being done for the Government by the institution.

The women of Washington, whether in work for the hospitals, Red Cross or more direct provision for the Army and Navy, have furnished an example to the whole country worthy of the noble work to be done.

The American University, without reference to inconvenience or even expense, has made every possible effort in the arrangement of lectures and adjustment of recitations to accommodate the institution to the requests and needs of the United States Government.

Some of the soldiers lost from the Tuscania went direct to the transport from the American University camp. After the loss of the ill-fated steamer pathetic telegrams of inquiry came to the Chancellor of the University from as far away as California.

The University is greatly indebted to the Church of the Covenant and the Foundry, Metropolitan and Hamline Churches for the gratuitous use of their assembly rooms during the winter and spring for the University Extension Lectures by Dr. MacWatters.

If some wealthy patron of learning would endow the laboratory of the Bureau of Mines within the McKinley building and which is now so adequately equipped by the United States Government, the University would be able to continue after the war the most elaborate school of chemistry to be found in this or any other country.

We have missed the familiar faces of Secretaries Bryant, Cranston and Hardy, who were in charge of the Young Men's Christian Association work on the American University campus. Secretary Cranston enlisted and has been in training for a number of weeks in one of the army camps; Mr. Bryant has been given charge of the larger work in the Tabernacle in the city, and Mr. Hardy has also been transferred to the work in the city.

A number of temporary buildings have been erected by the Bureau of Mines on the University campus, all of which, with the McKinley building and 20 acres of the grounds, are now enclosed with a high barbed-wire fence.

One of the magazines, in speaking of the crowded condition in the city, says: "War-swollen Washington hasn't room to stretch. Naturally, a pleasant, overgrown village of about 350,000 population, she has grown into a congested city of more than 400,000 without adding to her physical girth."

The University postoffice has at least a dozen assistants to receive and distribute the mail every day. A city of 10,000 inhabitants employs no more clerks. The Government has been granted the use of three large rooms in the College of History building for the needs of the postoffice.

The Bureau of Mines, which is sharing in the use of the rooms in the College of History, takes pride in keeping everything in and about the premises tidy and attractive. A landscape gardener has been engaged to recover the lawn, which was necessarily overrun by the army wagons during the winter.

Mr. Geo. A. Burrell, assistant director of the Bureau of Mines; Mr. Lawson Stone, superintendent, and Mr. A. G. McChesney, chief clerk, have been exceedingly helpful to the Chancellor of the University in keeping in repair and making improvements in the interior of the College of History.

Notwithstanding the relinquishment of so many rooms in the College of History of the University to accommodate the War Department, the University has been able to continue its instruction in the departments of philosophy and patristics, with the lectures in English literature, besides the free tuition in French given to the soldiers.

Mr. P. M. Anderson, architect of the Bureau of Mines, who has given direction in all the improvements made in the buildings of the University for the use of the Government, and in the erection of the dozen or more temporary buildings, has in every instance freely associated with him the authorities of the University, and has shown himself exceedingly polite and kind in complying with wishes of the executive committee as to the nature of the work and location of the buildings.

Dr. Samuel J. MacWatters has received recently from a member of the family of Robert Browning, in addition to the poet's portfolio, the most interesting and probably the largest collection that can be found in this country of manuscripts, photographs, books and keepsakes, with other treasures which belonged to both Mr. and Mrs. Browning. In the collection is a large Italian marble representation of Hope by the poet's son, Robert Barrett Browning, who was a successful sculptor. The collection will be on exhibition in the College of History.

The American atmosphere is the great element in the education and assimilation of all the immigrant populations:—

"Over our manhood bend the skies;

Against our fallen and traitor lives

The great winds utter prophecies;

With our faint hearts the mountain strives;

Its arms outstretched, the druid wood

Waits with its benedicté;

And to our age's drowsy blood

Still shouts the inspiring sea."

The committee designated to convey to the President the resolutions adopted by the loyal Americans who were born in Germany or descended from German ancestry visited the University during their stay in Washington. A letter since received from Mr. W. A. Bruhl, of Cincinnati, a prominent member of the delegation, expresses his appreciation of his visit to the University as follows:

Especially do I remember with great pleasure my visit to the American University. I wish that all German Methodism, as well as the entire Methodist Church, might have some insight and comprehend just what you are accomplishing. I can assure you that I will do everything in my power to have it known in the German Methodist Church, and some day when the demands are not as great as they are at the present time, I expect to do my "bit" to assist you in the splendid work.

Mr. C. C. Glover, president of the Riggs National Bank and treasurer of the University, could not be more considerate of the material interests of the University if it were his own property. When the entire campus of the University was found to be inadequate for the uses of the Army, because of the increased number of soldiers coming and going, he gave over large tracts of land for the additional tents and parade ground. He gave building sites also for the erection of more Army buildings, and permitted macadamized roads to be built through the open fields. His unselfish devotion of time to the frequent calls of the University and in responding promptly to the demands of the Army on the campus could not be expected of any one having so many business cares, as well numberless social and official duties. He asks nothing and receives nothing from the Government for the occupancy of his property. We know no man in the District of Columbia who is willing to give so gratuitously of his service to assist both the Army and Navy in their vast preparatory undertakings.

The University Neighbors the Seminary.

When the founder of the American University was gathering about him friends to promote his great undertaking he was attracted to the Mount Vernon Seminary, whose founder had the similar experience of creating a great institution out of ideals and nerves. The founder of the seminary could not refuse, when entreated, to help, as she had been helped. Sympathy always persuades company. She could only say, as William Langland wrote hundreds of years ago: "Amoche man as me thoughte and lyke to my selve." She consented to accept appointment on the Board of Trustees of property, which had not yet parted company with the patrons who were expected to give. She thus became the first Trustee, who was a woman, of the University, which consisted of an option on a country farm.

Both schools came on and prospered, but the exacting duties of each took the entire time of both founders for more than an eighth of a century. The founder of the University had been succeeded by another and still another. But neither school lost interest in the other.

The University had been located on its farm on the hill "delectable to behold." There was then only one thing for the Seminary to do—find a suitable site on the same steep climbing hill, just over the way. And now, with their first love, a long-time interest in each other, they knew not how to keep their distance. And

MOUNT VERNON SEMINARY—OPEN COURT—EAST FRONT.

just as "A sailor courted a farmer's daughter, that lived conveyment to the Isle of Man," the opportunity and advantage of both schools determined they should go on together.

A formal union was arranged, with becoming ceremony, for the evening of March 27, 1918, in the assembly room of the Seminary. The program provided by the Trustees of the University and the Board of Award, together with the principal and faculty of the Seminary, included in the exchange of courtesies the conferring of the well-earned and worthily bestowed degree of Doctor of Literature upon the founder of the Seminary, Mrs. Elizabeth Jane Somers, by the Chancellor of the University.

Judge Leighton was present to represent the Board of Trustees of the University, of which he is the president. Drs. True, Claxton, Rosa, and Collier and Mr. Osborn represented the Board of Award. Mrs. A. G. Hensley, the present principal, with all the teachers and young ladies of the Seminary, were present. The selections of excellent vocal and instrumental music were very happily rendered by the school. After the address by Dr. True, president of the Board of Award, the honorary degree, in a few appropriate words, was conferred upon the distinguished lady by the Chancellor. In responding graciously to the honor conferred, the new doctor gave a brief account of the founding of the two schools, and her election to membership in the Board of Trustees of the University. The exercises concluded with a reception in the parlors, after which refreshments were served by the Seminary.

The prosperity of our neighbors henceforth is our own.

Mrs. Elizabeth Jane Somers.

It is a faithful saying that some great men and some great women create great achievements; it is alike worthy of acceptance that many men and many women become great through their achievements. There have been multitudes of men and women who might have been great if they had known the day of their visitation, and had attempted achievement. We were taught this long years ago in the poet's elegy in a country churchyard:

"Some village Hampden that with dauntless breast
The little tyrant of his fields withstood,

Some mute inglorious Milton here may rest,

Some Cromwell guiltless of his country's blood."

Genius, they tell us, is higher than talent; more

MRS. ELIZABETH J. SOMERS

spontaneous, less dependent upon instruction, less amenable to training, but talent often becomes genius by grasp of vision and opportunity, and genius is thus shown to be only talent in a higher degree. "A genius for hard work," said Harriet Beecher Stowe, "is the best kind of genius." Values rise in price in their ratio to their quest and pursuit. Nothing in this world comes easy that comes to stay.

It is undoubtedly true that the vast services and unquestioned abilities of some persons illustrate a noble origin. But even then their "genius is not a single power, but a combination of great powers"—some faculty to start with; then vision, opportunities, tireless industry, increasing knowledge and skill, and indomitable perseverance and endurance.

The founder of Mount Vernon Seminary was fortunate in her family. Her father, the Rev. Augustus Eddy, a pioneer Methodist preacher of quality, bequeathed elements of distinction to all his house. Of two sons, one, the Rev. John R. Eddy, was distinguished for his patriotism; as a chaplain in the army of the Civil War, he was killed in the first battle after he was commissioned; and another, the Rev. Dr. Thomas M. Eddy, built the Mount Vernon Place Church during his pastorate in Baltimore; was the brilliant editor of the Northwestern Christian Advocate at Chicago during the Civil War, afterward the eloquent missionary secretary, who was certain of the highest office in the gift of his church if he had lived but a little longer.

Mrs. Somers came to Washington when there was no school of the higher grade for girls in the city. What schools there had been for Protestant young women had been put out of commission by the war. She had been fortunate in having been trained in and graduated from the first and for a time the only college for women in this country. Mrs. Rutherford B.

Hayes was educated in this same school—the Wesleyan Female College of Cincinnati.

The opportunity as founder came in her consenting to tutor the daughters of Dr. Bliss, who was then in charge of the Government hospitals in Washington. Her vision was equal to her opportunity, and the name of the school ever after to be linked with her own was incorporated in her mind long before the application for the incorporation of the Seminary was made to the State. Then began the climb which at length, nearly fifty years away, has located the costly structure of old English architecture on the attractive lawn, with nature's own evergreen background on these delectable Olympian heights.

Mrs. G. W. F. Swartzell, who, with her husband, a Trustee of the American University, resides in Washington, bears the distinction of being the first graduate of the Mount Vernon Seminary. The long line of distinguished graduates since who can be found in all lands, far more than the beautiful grounds and buildings, worthy monument as they are of the economy and thrift of the good woman, shall honor her fair name in the annals of great schools for long years to come.

The Men at the Helm.

They are mistaken who think the Congress of the United States is not taking the strife of the world seriously. The visitor who sits in the galleries will find many tired and careworn men in both houses striving late and early to provide every facility and comfort for the Army and Navy, to win in this war. To charge that they are merely playing for some political vantage in their speeches and legislation is to play the German in imagination and libel. The American people are honored in as God-fearing, loyal and devoted statesmen as can be found in any other walk of life and service of the country. Let us think and speak well of them.

We Pay Higher Rates of Interest.

The American University has exceptional opportunities for the investment of annuity funds. There are five bank presidents and several bank directors on the Board of Trustees, and very fortunate and well secured investments have been made during the present year. It is no little relief to have no anxiety as to the security of life investments, and the names of the members of the Executive Committee is a satisfactory guarantee that safety as well as unusual returns is assured. Any communication address to Mr. C. C. Glover, president of the Riggs National Bank, and Treasurer of the University, will receive prompt attention.

Then and Now.

There was some solicitude concerning the University because it was closing in opening its doors. If such anxious friends could look in on us now and see what obstacles have been removed they would be convinced that haste often makes waste. It was not known that the site of the University when it was purchased was a farm in the country, without approach except through what were often called "farmers' lanes." Now the city is coming this way for "city lots are staked for sale above old Indian graves." The University campus is worth at prices now offered for the building of homes between two and three millions of dollars.

FRANKLIN HAMILTON

Born 1866—Died 1918.

Aspiring high, inspiring deep,
Thine earthly stage finds early end.
Our lonely hearts thy going weep,
Thine impress on our lives, a friend!
Strong heart, with pulses ever true,
Clear brain and will of firm decision,
The fruitage of thy years—too few—
Abides and shines, O Man of Vision.

A. O.

F. H.

"I have arrived safely overseas,"
Yes, lad, God bless you, we rejoice.
Your message comes home as a voice
Borne hither by the ocean breeze.

For days your father waited, prayed,
This longed-for message to receive.
Now it has come, but we must grieve,
In loneliness our hearts are staid.

Safely overseas he now has passed
Into a land of peaceful life,
While you must face that awesome strife
And we must miss him to the last.

God keep us all! God bring us all
To holy victory for the right!
God hold us firm and give us might
To follow at our Captain's call.

Then dangers past, and warfare o'er,
Seas safely crossed and triumph won,
Our Pilot, welcoming us home,
Will guide us to that Farther Shore.

MARY MACKIE HAMILTON.

For days the father had waited, longing for the message to tell of his soldier boy's safe arrival overseas. The postal card came the morning after the father had passed on into the Eternal Life.

His going was one of

*"The great escapings of ecstatic souls,
Who in a rush of too long prisoned flame,
Their radiant faces upward, burn away
This dark of the body, issuing on a world
Beyond our mortal."*

Franklin Hamilton.

By BISHOP EARL CRANSTON.

At the annual meeting of 1908 the Rev. Franklin Elmer Ellsworth Hamilton, Ph.D., of Boston, was unanimously called by this Board to the Chancellorship of the University. He was then 42 years of age. A graduate of Harvard, class orator and commencement speaker for his class, with credits for extensive post-graduate work in Boston University and in Europe, his scholastic equipment for the headship of the University was beyond question. Sixteen years in Boston pastorates after two years teaching at the Chattanooga University had tested and seasoned his intellectual training and proved his ability in both administrative and platform work as well as his aptitude for pedagogic service.

The Board was well aware at the time of Dr. Hamilton's election that the peculiar requirements of this Chancellorship at that juncture could not be met by any ordinary man. The situation demanded an almost impossible type of man—a combination or composite including not only scholarship of high order, the finished, persuasive style of the successful modern preacher, the diplomatic skill of the up-to-date church administrator—exactions most difficult to satisfy—but added to these, to make all these indispensable factors effective under prevailing conditions, the crisis called for a Chancellor thoroughly poised temperamentally. Our new Chancellor brought with his rich

FRANKLIN HAMILTON
August 9, 1866—May 5, 1918

and varied intellectual readiness a healthy soul exercised in that rarest of temperamental virtues—an amiable insensibility toward ungracious criticism such as the unthinking or hostile often aim at the object of one's intelligent devotion and consecrated endeavor. He came to his task fully advised as to the unfriendly attitude of some influential educators in his own church toward the University. He knew he would meet their open antagonism in the field of financial effort. He knew also that some of his best personal friends outside the circle of locally focalized educational interests would bemoan his apparently sacrificial espousal of an enterprise that seemed foredoomed to slow death by the process of complimentary strangulation—a kindly intentioned method applied in the voting of sympathetic and cheering resolutions which benevolently serve as an anaesthetic, but are rarely effective in easing up the cords that are cutting off the oxygen. A man must be of a brave heart who knowing the hazard yet stakes his future on a venture so full of difficulty. Dr. Hamilton knew and yet he came.

Under such circumstances a weak man would have summoned the Board to a pretentious program which would have been a trumpet challenge to all adversaries. But Chancellor Hamilton came without pretense of skill or special wisdom. He brought no set program of campaign. He proposed no spectacular methods. He just came and went quietly about the drudgery of his office, first acquainting himself with

every detail of the University's affairs and interests. His business instinct took quick account of essential values. He saw the need of keeping the Board constantly advised as to the condition of its trust, to the least item. He established close and confidential relations with his advisers and relied so fully on their judgment that from first to last the administration was harmonious. Indeed, it became presently a sort of spiritual partnership in which the members of the Board, though of various denominations, lost track of their ecclesiastical pedigree in a spirit of direct service to Jesus Christ and their country.

Not one breath of useless lamentation did the new Chancellor waste over the chronic inertia that had been for years the comment of the unfriendly and the disappointment of the friends of the University. He quietly garnered every hopeful utterance and was cordial to every friendly expression of interest in its welfare. He made no catalogue of adversaries, nor did he seek to identify anybody as such, but as if oblivious to all adverse influence he suavely smiled his way into every bellicose group or camp without apology for his presence, accepting good wishes for active cooperation, and even apathetic neutrality as loyalty. Who could fight such a man? Winning new friends for his cause, silencing old enemies and making no new ones, he largely succeeded in creating a new atmosphere for the University, especially in the church.

Out of this atmosphere emerged in due time a practicable program for the opening of classes for instruction. The Board was quick to apprehend the breadth of spirit and the practical wisdom in which the plan was conceived, and though the beginning was necessarily modest and the program altogether unspectacular every trustee rejoiced that the day so long delayed had come at last. If any man among them, used to conducting large affairs in his own name, felt a sense of disproportion between so large a project and so unpretentious a beginning, he probably recalled his own "day of little things," and was big enough to see that what was lacking in display was more than made up by the educational value and prophecy of the principle underlying the program thus inaugurated. That must be a sleepy soul that does not thrill with the outlook for such a broadening and spiritualizing of denominational vision and effort as this working ideal presents just when a God-less intellectualism is revealing the hopelessness of a world without Christ. The American University is demonstrating—by compulsion, if you please, but it may be by providential compulsion—the most economical administration of endowment funds. It is challenging the waste of millions through the multiplying of large, expensive and half-equipped teaching centers and faculties, while accepting for itself the function of introducing the best graduates from our average colleges to the most eminent specialists and most complete equipments to be found in any desired line of training. It is rendering a Christian service in a reverent spirit. Its friends will multiply and its resources increase as God may will.

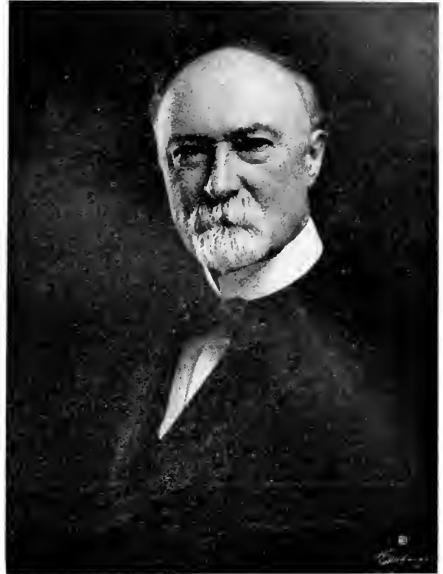

Such was Chancellor Hamilton's victory of magnanimity over adverse conditions. He demonstrated that there is in Christian diplomacy the highest type of strategy. The fruits of the victory are as yet in their flowering, but the diplomas of the University will bear the imprint of his spirit for generations yet unborn.

After eight years of increasingly useful service as Chancellor, the church claimed her honored son for her highest office. Elected bishop in May, 1916, he was assigned to the area of which the great city of Pittsburgh was made the center. Most heartily welcomed by pastors and people, his relations were cordial and his service increasingly effective from the auspicious beginning to the sudden cutting off of his administration. Here again his rare temperamental traits gave him both access and conquest. His gentleness made him great in every function of his sacred office. Under every test he was the Christian gentleman. Bluster and bravado could not beat down his shield of kindness. His armor was proof even against the unseemly threats that a bishop must sometimes face. There as here he deemed it not weakness but wisdom to counsel with his partners in responsibility. There as here they gave trust for trust and affection for affection. In the midst of his plans and labors he was suddenly translated. He had made most generous provision for the entertainment of his colleagues in his residence city, but he sickened and faded away, leaving his guests in mourning and his churches stunned and leaderless. So rapid was the march of his disease that even his brother and foster-father, our present Chancellor, was not permitted to see him. The most eminent physicians fought off death for days, alternating between hope and dread of defeat. His last public service was on the Tuesday evening before the Sunday that set him free from wearying toil. The world that does not reveal itself to mortal vision, though it is so near as to envelop us in its loving ministries, has received him out of sight. He knows its language, he understands its fundamental law, he is schooled in its spiritual activities, and it will not take long for such a soul to become acclimated to the spirit life and ready for his part in the thrilling employments of the Christ-born men who are alive forevermore. It is a vast army, an innumerable company—it may be of yet unperfected spirits, but—moving ever toward the goal visioned in the perfect Christ. What an array of consecrated and obedient energy the Father has garnered from the reaping of his conquered vassal, Death! And this much we do know of the Divine order, however inscrutable its workings, that it knows no waste of energy. Yes, our brother will be busy, but never again will he be weary or sick of heart or brain.

So we comfort ourselves, and so would we comfort the bereaved family—the wife, his loving, faithful minister to the end; the son in France, honoring his name and country; the son and daughter at home, but none the less desolate. May God give them courage and consolation. Of the two surviving brothers, the elder, Bishop John W. Hamilton, held to Franklin, the youngest, a peculiarly tender relationship. He was as a father to the orphaned lad, and brother to the matured man. It was a good providence that in taking our first Chancellor Hamilton for the bishopric gave us from the same office and dignity, as his successor, our present Chancellor, who, besides his own eminent ability and fitness to serve us at that critical juncture and through these trying years, was specially equipped with an intimate knowledge of all the University's affairs and of his brother's plans, with which he has been entirely sympathetic. Hence there was no break in the continuity of administration, no jarring changes, no tinge of jealousy. Out of a long and varied ex-

CHARLES WARREN FAIRBANKS

TRIBUTES FROM NEAR AND FAR.

perience in executive work our Bishop-Chancellor has been able to broaden and strengthen the foundations laid during the stressful years of his brother's incumbency. His service which has been a task of love now takes on the sacredness of memorial devotion. To him we tender our united and individual sympathy in his own personal bereavement, having already yielded to his leadership our entire confidence. Venerable in years, but with soul still aflame and with your intellectual powers as yet untouched by age, except for their enrichment, we would have you feel, Bishop Hamilton, that you are now the doubly anointed and doubly endeared Chancellor and custodian of this institution in which so many hopes are centered and such great ideals exemplified. We mourn with you as we adopt this special tribute to your beloved predecessor; we rejoice with you as together we look through the shining doorway by which he passes to a higher service. And now with you we gird ourselves anew for the divine task that still fills his heart as well as yours and ours—the hastening of the undisputed reign of our God and His Christ.

TRIBUTES FROM MEMBERS OF THE BOARD OF TRUSTEES.

My acquaintance with your brother, Bishop Franklin Hamilton, commenced when he became Chancellor of the American University. He brought to the difficult task of building a new university great natural ability, a mind enriched by the culture of the schools and by travel, and trained by writing. He had great executive ability, tireless energy, and was a natural leader of men. In his social relations, he was most gracious and happy;—an ideal man and a man of ideals. "None knew him but to love him."

B. F. LEIGHTON, *President.*

I knew no man whom I held in higher esteem. He was an admirable Christian gentleman. He was a man of great gifts, eminently successful in the administration of business affairs, and greatly beloved by all who were associated with him.

CHARLES C. GLOVER, *Treasurer.*

Immediately following the death of Bishop Franklin Hamilton there came to his family telegrams and letters of sympathy and resolutions adopted by preachers' meetings from all parts of this country and from many foreign lands. The many years the bishop was connected with the University as Chancellor warrants the publication of some of these tributes, but the space is so limited only selections can be made, and these will be taken from different parts of the United States and the world. Following is a telegram from the Methodist Episcopal Church, South:

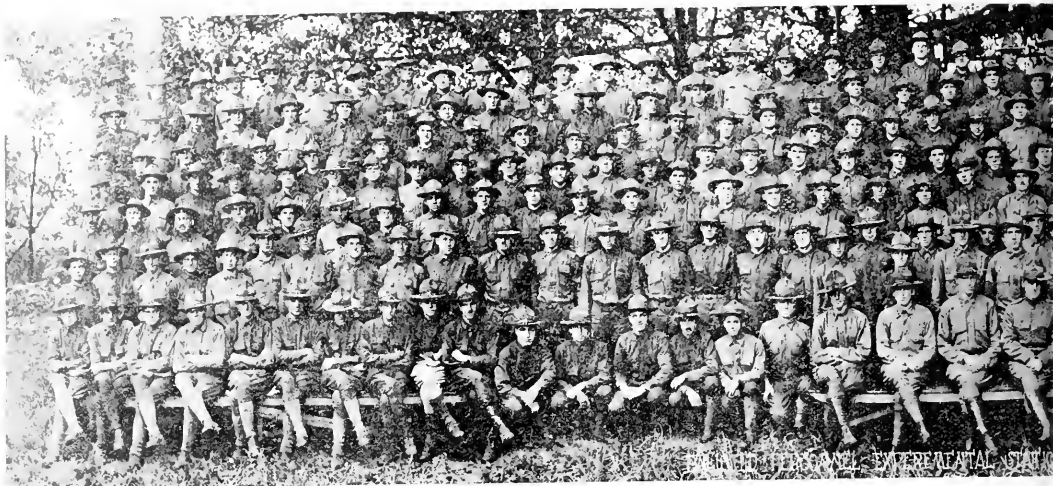

The General Conference of the Methodist Episcopal Church, South, here in session in Atlanta, Georgia, desires to express to you and the great church you represent their profound sympathy in the death of your distinguished brother, Bishop Franklin Hamilton.

A. J. WATKINS, *Secretary.*

Resolutions were adopted by the preachers' meeting in New York, Portland, Me., Boston, Troy and Albany, Philadelphia, Baltimore, Washington, Buffalo, Pittsburgh, Cincinnati, Cleveland, Detroit, Chicago, Minneapolis, San Francisco, Los Angeles and others. The colored preachers' meetings in Washington and Philadelphia sent very tender expressions of sympathy.

The Rev. Dr. Melville B. Chapman, who was chairman of the committee appointed by the New York preachers' meeting, had been a life-long friend of the Bishop, and knew him most intimately. He wrote as follows:

I venture to assure you of my personal grief and the sense of irreparable loss I feel. Not in my time has the church been so devastated by a single death. When we consider not merely what he wrought, but what he promised to do for the church and the world; when we consider the affluence of his mind, the urgency of his purpose, the thrill and thrall of his leadership, his fertility and force of initiation, the catholicity of his interest and sympathy, the charm

ENLISTED PERSONNEL, EXPERIMENTAL STATION, AMERICAN UNIVERSITY, WASHINGTON, D. C., MAY THIRTEEN HUNDRED

of his engaging and gracious personality; when we think not merely of what he did, but of what he was, then we begin to realize the calamity which has befallen the church and beggared the world.

Bishop M. C. Harris writes from Seoul, in Korea: What a grief and deep sense of loss to the church! What a fine start he had made—so fine in the pulpit and on the platform, so brotherly and good to his preachers! How wise and far-seeing in the future! Our Pittsburgh area had come to look on him with such pride and hope. What a brother!

Sir Robert Perks, Baronet, sends this message from London, England:

I am deeply grieved to learn the sad news of the sudden and premature death of your brother, the gifted bishop. What a message the tidings of the loss of a brilliant young life cut short has for those of us who are yet spared to work while it is day!

The Rev. A. J. Ashe says: He spent his first Sunday with me in Pittsburgh. No man for years has so impressed me as did he. He was indeed a good man and a great preacher. To me he was one of the greatest preachers I ever heard.

The Rev. Horace M. Conaway, who prepared a memorial for the Jamestown district meeting at which the bishop had expected to be present, said in his address:

The first Conference over which he was to preside was our Eric Conference. Our expectations were large. He came not as a stranger to us, for his duties as Chancellor of the American University had brought him to our homes, our churches and our sessions of Conference. We had been attracted to him by his gentlemanly ways, his courteous approach, his broad vision, his charming and forceful messages, his devotion to great causes. But now he was to come nearer to us; was to have more authority over us. * * * We were soon led to say he is a man of worthy spirit for a bishop. The words of that eminent statesman, biographer and historian, the Honorable James Bryce, concerning an archbishop of England, fitly apply to our lamented Bishop Hamilton: "He knew how to be dignified without assumption, firm without vehemence, prudent without timidity, judicious without coldness."

The testimony is uniformly the same as to his administration in the conferences, whether in his own area, in Porto Rico, or in Idaho.

The Rev. J. D. Gillilan writes from Boise:

We Idahoans are plunged into grief inexpressible at the sudden going of your magnificent brother. No presiding officer (and we remember you were here) ever gave us so delightful a session as Franklin did last year.

But it is as a friend the multitudes of letters refer to him and speak of the great loss the writers have sustained. If it were as a friend in the home, then Mrs. J. Frank Robinson writes from Rock Island, Ill.:

The bishop was in my home at one time, so I always felt I knew him as a dear, kind friend. I cannot understand why our dear Lord calls so many of our great men from their usefulness when our church needs them so much.

The personal friends have cabled, telegraphed and written Mrs. Hamilton from overseas and overlaid with the same tender messages as have been spoken by her nearest friends. The Rev. John Thompson, Superintendent of City Missions in Chicago, said:

I was shocked at dear Bishop Franklin's going home—so young, so strong, so noble. I loved him and admired his work for years.

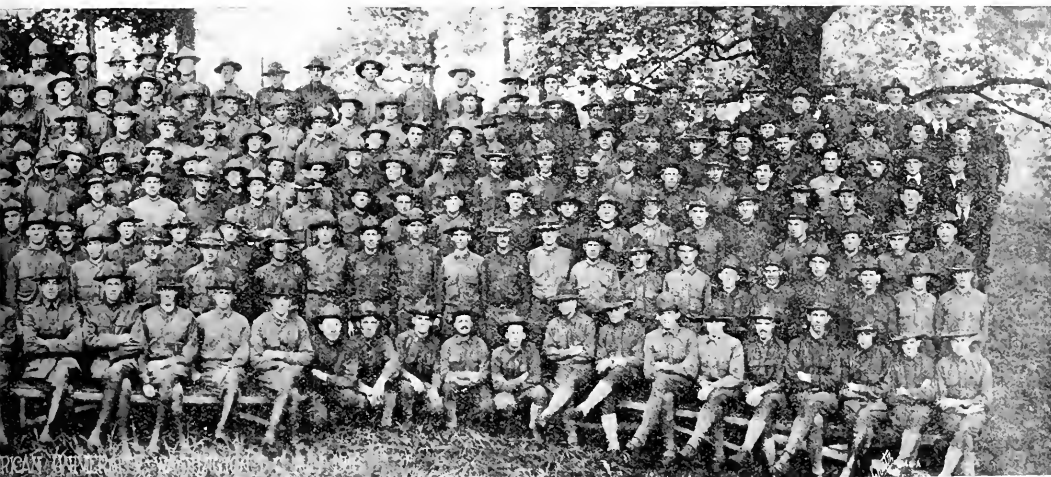

The preachers were no closer to him than the laymen. Mr. Joseph S. Ulland, of Fergus Falls, wrote the Chancellor:

The sudden death of my dear friend and brother, Franklin Hamilton, was a great shock to us. He and I were great friends. I loved him dearly and was very much interested in his work.

TRIBUTES FROM THE PITTSBURGH PAPERS.

It comes to few persons in public life to receive such tributes of universal esteem as have appeared in the papers in foreign countries as well as in all parts of this country. A few extracts from the editorials of the Pittsburgh daily papers are here given:

The death of the Rev. Dr. Franklin Hamilton, Bishop of the Methodist Episcopal Church for the Pittsburgh District, after a few days' illness from pneumonia, is a bereavement from which local Methodism and the Pittsburgh clergy at large will be slow to recover. * * * Here we wish to express the sense of what every thoughtful Pittsburgher must feel—a profound regret that Bishop Hamilton's career among us had to be cut short, and a deep sympathy for his family and church. Friends of Bishop Hamilton said he was born a scholastic. Under his rule here by his efficiency in adminis-

MAJOR W. CATESBY JONES COMMANDING. BESIDES THESE THERE ARE FIFTY OFFICERS AND ABOUT 750 MEN EMPLOYED.

Photograph by Schut-

trative methods, by his knowledge of finance, emphasized by his constructive faculties, personal magnetism and common sense, it is said that Methodism in the Pittsburgh District has taken leaps and bounds.—*Gazette-Times*.

During his brief period of residence here Bishop Hamilton made his impress upon the community. His reputation as scholar and orator had preceded him, but the memory of him which will abide longest with his comparatively few acquaintances, all of whom quickly became friends, will be that of a genuine, whole-souled man among men, fit leader for such a distinctively militant and evangelistic denomination. * * * Not merely American Methodism, but the church of Christ throughout the land, suffers a severe loss in the death of Bishop Hamilton in the prime of his intellectual and physical powers.—*Chronicle-Telegraph*.

His charming personality, his unceasing zeal in his church work, which, overtaxing his strength, was responsible for his untimely demise, had won him the esteem of his people in the Methodist Episcopal Church and the respect of his co-laborers in other denominations. He brought to his duties exceptional ability and attainments, his scholastic accomplishments being supplemented by wide travel and knowledge of the world.—*Dispatch*.

His passing away is a loss to the entire community. His scholarly attainments, his beautiful Christian courtesy, the modesty with which he bore his great natural gifts, were an inspiration to all with whom he came in contact. The great Christian body which he served will receive the sincere condolences of his sister communions.—*Press*.

In the two years of his official residence in this city he had created for himself a sphere of influence and a circle of personal friends well worth the envy of a lifelong resident. His modesty of demeanor and courtesy on all occasions bespoke the greatness of the man even more truly than the scholarly attainments that had made his name of more than national note long before his all too brief sojourn in Pittsburgh. His loss to the great Christian army in which he held high rank will be no greater than to the community which has come in so brief a time to know and love him.—*Post*.

BISHOP VINCENT'S LETTER.

The following letter was received by the Chancellor from the venerable Senior Bishop, who is in the 87th year of his age:

DEAR HAMILTON:

A brother—dead! Sacred memories spring up—one's heart beats more rapidly and tears come—and all the faith one ever had in the eternal verities is confirmed; and God's promises,

one after another, give comfort and inspire new resolves. And Heaven seems nearer, and the departed one dearer and the "Comforter" a REALITY.

He was a noble fellow—that brother of yours!
I sympathize with you in your grief—but I congratulate you on your well-based belief in the risen Christ and the everlasting life, and the celestial *reunion!* Accept this blending of sympathy and congratulation. Affectionately yours,
JOHN H. VINCENT.

Charles Warren Fairbanks.

Wisdom is again justified of her children. Penury and poverty of privilege cannot restrain a poor but wise child. He is better off than an old and foolish king. Palaces are for custom-made kings; cabins for self-made kings.

Many are the honors which have come to American cabins since our fathers in the cabin of the Mayflower drew up a civil compact. Both men whom we commemorate in this number of THE COURIER were each born in a cabin. But there is much in where the cabin is situated. The cabins in which both these men were born were providentially located in the State of Ohio. "That is the way to the stars."

Charles Warren Fairbanks made full proof of his calling from the cabin on the farm to the first place in the Senate of the United States. There was no juggling with his opportunities. He worked his way; he earned all that came to him.

The country school was no more essential to him than the Ohio Wesleyan University. The little time in journalism opened the door to all the world about him. The study of the law gave him his leading opportunity; his practice of the law led all the avenues of business to his door. His advocacy of other men for positions of responsibility and trust naturally contributed to his own promotion. Twice a member of the Senate of the United States, twice nominated for the Vice-Presidency of the United States, and once elected, there was only one other honor above him, and he would have received that if the names at the top of the ticket had been reversed.

Every man carries with him some secret of his success. With Mr. Fairbanks it was first and foremost his unflinching integrity. "Subtlety may deceive you," said Cromwell, "integrity never will." This was made known to the whole world when he came off best with the Vatican at the time he was in Rome, and again when he endured in silence the aspersions of his "friends," whose table manners came home later to humiliate them.

Only to those who were permitted to enjoy the cordial welcome to his hospitable home was it given to know how much the eminent husband was indebted to the charming wife for the many honors which were bestowed upon him. It is more than surmised that the great house in Washington and the more modest one in Indianapolis, with the unselfish, unaffected and captivating courtesies of their queenly hostess, had not a little to do with both State and national elections.

To all these gifts and graces it will be readily admitted that Mr. Fairbanks added enough of what Burns called "prudent, cautious self-control" to make him successful as a politician.

His unswerving loyalty to his church, so modestly and consistently shown on all occasions, was reciprocated in the highest honors which the church could confer.

John Beaver Polsgrove.

The death of the Rev. John B. Polsgrove, at Chattanooga, Tenn., on June 27, removes from the ranks of God's workmen one of the most faithful and earnest souls. His active ministry in the Baltimore and Central Pennsylvania Conferences covered thirty-five years, and after surrendering the pastorate on account of impaired health he served as field agent of the American University for fourteen years. He leaves behind him a fragrant memory of high ideals and of Christian character. His funeral was held in Carlisle, Pa., and interment was made at Lock Haven.

June Meeting of the Trustees.

There was an unusual interest in the meeting of the Board of Trustees June 5. The constantly increasing demands of the War Department for help in so many directions in Europe had led the Bureau of Mines to ask for not only more room in the College of History, but the privilege to erect a large permanent building on the Quadrangle of the University. A special call was given to the Trustees to be present, and the attendance was correspondingly large.

The early part of the meeting was devoted to memorial exercises for the late Chancellor, Bishop Franklin Hamilton. A carefully prepared and excellent commemorative address was presented by Bishop Earl Cranston, who had been associated with the Chancellor during the most of his presidency in the University. As the death of the Hon. Charles W. Fairbanks, a Trustee of the University, and former Vice-President of the United States, had occurred the day before, the announcement of his death was made by the president, Judge Leighton, a telegram of sympathy with the family was sent at once and a committee appointed to prepare a minute for the records.

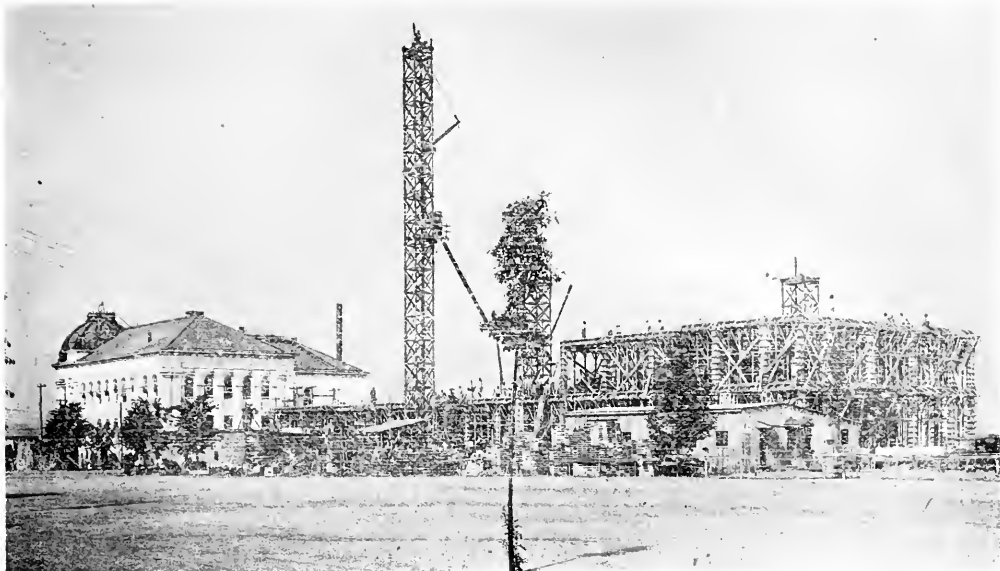

After careful consideration and discussion, there was given approval of the action by the executive committee consenting to the erection of the permanent building by the Government on the campus.

Mr. John W. Sparks, of Philadelphia, and Mr. George W. Dixon, of Chicago, were elected Trustees. Dr. A. C. True, of the Educational Bureau of the Government's Department of Agriculture, and chairman of the Board of Award, addressed the Trustees in the interest of a more systematic and scholarly relation of the Board of Award to the University, and closer relation of the University to the several departments of instruction asking for their students' scholastic degrees. A committee, consisting of the Chancellor, Bishops McDowell and Denny, was appointed, to whom all the matters in Dr. True's address are referred.

Ten scholarships were awarded and five degrees were conferred.

The time for the meeting having expired, all unfinished business was referred to the executive committee.

The usual luncheon, under the direction of Mrs. Collier, was given the Trustees, their wives, and all the persons on the program of the convocation exercises which followed in the auditorium under the trees.

MCKINLEY MEMORIAL BUILDING

NEW BUILDING FOR WAR GAS SERVICE IN PROCESS OF ERECTION

Dr. Martin's Library.

In another column of THE COURIER we have given a sketch of the great mathematician, Doctor Artemas Martin. For more than a half century he has been engaged as a specialist in noticing the progress made in natural science. He has collected a library of tens of thousands of volumes. He has a copy of every arithmetic published in the United States, and a copy of one printed before America was discovered, in 1484. Against one of the walls of his house stands a whole row of bookcases, in which are classified nothing but books on Integral and Differential Calculus. The doctor has been an omnivorous reader, and his great library includes many miscellaneous books of great value. In the list are hundreds of foreign publications, some of which have very expensive bindings. He has been exceedingly methodical in his expenditures, and his calculation shows the books which fill three stories of the house that is given up to the library alone—no one residing in the building—have cost him more than \$10,000.

This valuable collection, which certainly cannot be duplicated in this country, has just been presented to the American University.

Artemas Martin, M.A., Ph.D., LL.D.

When eccentricity, without the aid of the schools, discovers or creates a genius whose intellectual status towers above that of most of the school men, the secret must be looked for more in the mental fiber and impulses of the man than in any favor of his surroundings. Hidden away in Government Departments in Washington can be found occasional instances of such men of mark, unknown to the other men associated with them in their daily employments. The editor of THE COURIER has been introduced recently to a man

employed in the Coast and Geodetic Survey of the Department of Commerce whose routine duties there have had nothing to do with his eminence achieved outside of the hours of service for the Government.

His home in one of the quiet streets of the city is a museum of surprises. From his "den" he has touched the gratitude of the universities, until they have honored him with such scholastic degrees as only come to those honored alumni long years after their graduation and in distinguished service. Never having crossed the seas, this man's contributions on the most abstruse topics, mathematical solution of difficult problems, are printed in the Oxford and Cambridge volumes of the higher mathematics.

This quiet and secluded scholar is known about his official duties as simply "Doctor Martin," but at Yale University, which gave him the degree of Master of Arts, and in Oxford University he is known as Artemas Martin, M.A., Ph.D., LL.D.

The eccentricity in his case is all along through his life. He never went to school until he was fourteen years old. Though he had learned to read and write at home, he knew nothing of arithmetic. He was born in Steuben County, New York, August 3, 1835. Removed with his parents to Venango County, Pa., he had his first opportunity in the schools, with the exception of two winters in the district schools. But his opportunities in Pennsylvania consisted only of a short time in the Franklin Select School, to which he walked two and a half miles morning and night, and two and one-half months in the Franklin Academy. Here he either acquired the taste or gave rein to his bent for mathematics. And beginning with algebra he has gone over the top. He hoed and chopped all the while on a farm until the discovery of oil gave him employment in drilling wells. He worked at puzzles in the newspapers, riddled the "Riddler Column" of the

All applicants for fellowships for 1919-1920 would do well to make their applications as early as possible. Blanks may be had by written request to the Registrar. Applications must be received on or before March 31, 1919.

Philadelphia Saturday Evening Post until he was a regular contributor of twenty years. From one periodical to another, growing more scientific all the while, his distinction came on until he was elected professor of Mathematics in a Western institution. This he declined.

In 1893 he became the editor of *The Mathematical Messenger* and *The Mathematical Visitor*, "two of the best mathematical periodicals published in America." "The typographical work of these journals is said to be the finest in America." The best mathematicians from all over the world contribute to these journals. The marvel of it all is the editor sets the type and prints the magazine himself.

The old gentleman is a member of mathematical societies in all parts of the land, never having been married, sitting in the midst of one of the most remarkable private libraries in the country, consisting of all kinds of high-priced volumes, with mathematics so high up as to have nothing above it—these books filling a three-story house, with shelves on all the walls and in piles on all the floors.

Table Talk.

A number of persons have applied for admission to the University the coming year.

The Board of Award had a half-dozen meetings this year to give every attention needed to the applications for fellowships.

To accommodate more chemists and their assistants in the College of History, the Government is laying a floor in the unfinished attic story.

A part of the college campus which is occupied by the engineers who are in training has been designated Camp Leach.

The War Department has taken over from the Interior Department the plant of the Bureau of Mines on the University campus, and it is now called the War Department Gas Service.

The new permanent building on the Quadrangle, which would have cost the University more than a quarter of a million dollars, is being hurried forwards by the War Department, employing 200 workmen.

Professor MacWatters has been invited to address the Browning Society in New York City and give an account of the Browning portfolio and the hitherto unpublished poem.

The increasing number of soldiers and workmen on the University campus has led the Young Men's Christian Association to erect an addition to their building, which will enable the secretaries to accommodate now nearly 1,000 persons.

No. 1

PROSPICE

Fear death?—to feel the frog in my throat,
The mist in my face,
When the snows begin, and the blasts denote
I am nearing the place,
The power of the night, the press of the storm,
The post of the foe;
Where he stands, the Arch Fear in a visible form,
Yet the strong man must go:
For the journey is done and the summit attained,
And the barriers fall,
Tho' a battle's to fight ere the guerdon be gained,
The reward of it all.
I was ever a fighter, so—one fight more,
The best and the last!

I would hate that death bandaged my eyes, and forbore,
And bade me creep past,
No! let me taste the whole of it, fare like my peers,
The heroes of old,
Bear the brunt, in a minute pay glad life's arrears
Of pain, darkness and cold,
For sudden the worst turns the best to the brave,
The black minute's at end,
And the elements' rage, the fiend-voices that rave,
Shall dwindle, shall blend,
Shall change, shall become first a peace out of pain,
Then a light, then thy breast,
O thou soul of my soul! I shall clasp thee again,
And with God be the rest!

Robert Browning.

NEVER SAY OF ME THAT I AM DEAD.—ROBERT BROWNING.

*His brave, strong face illumines Rezzonico:
Calm of God's peace, Love's glorious overflow,
Faith's lustrous triumph o'er man's final foe,
Effulgent Soul, Life's radiant afterglow.—A. O.*

Browning the Immortal.

On the evening of the 12th of December, 1889, in the Palazzo Rezzonico on the Grand Canal, Venice, Robert Browning's spirit joined the choir-invisible just as the great bell of San Marco struck 10. The end was peaceful, and each stroke of the hour seemed to repeat his lines:

"Life is done,
Time ends, Eternity's begun."

Present at his bedside were his only son and his daughter-in-law, Mrs. Robert Barrett Browning, the latter, now a resident of Washington, devoting her life and interests to the Serbian cause with great zeal and devotion.

Our present number contains reprints of the body lying in state in the grand sala of the Palace, with the casket under its purple pall, and wreaths of violets and choice flowers surmounted by a large cross of lilies of the valley and white roses (Mrs. Robert Browning's favorite flowers), awaiting the hour when a fleet of gondolas shall form the funeral procession and escort the remains across the lagoons to their temporary resting place in the chapel of St. Michele in the Campo Santo; and a portrait of Robert Browning in "the sleep that knows no waking." The peaceful calm and divine illumination that lingers, like a halo about the features of the sleeping poet, would indicate that he had been permitted to see the Vision Beautiful, and was again in the presence of Her, of whom he sang:

O lyric Love, half angel and half bird * * * *
And all a wonder, and a wild desire,—
Boldest of hearts that ever braved the sun,
Can thy soul know change? * * * *
Hail, then, and hearken from the realms of help! * * *
Despite the distance and the dark,
What was, again may be; * * *
Thither where eyes, that cannot reach, yet yearn
For all hope, all sustainment, all reward * * * *
In those thy realms of help, that heaven thy home.

No; love which, on earth, amid all the shows of it,
Has ever been seen the sole good of life in it,
The love, ever growing there, spite of the strife in it,
Shall arise, made perfect, from death's repose of it.
And I shall behold Thee, face to face,
O God, and in Thy light retrace
How in all I loved here, still wast Thou!

Browning's conception of life was such as to necessitate a greater scope than the present experiences in a probationary realm can afford; and death was but the bursting of the chrysalis into the new and larger life:

I go to prove my soul!
I see my way as birds their trackless way,
I shall arrive! What time, what circuit first,
I ask not: but unless God send His hail
Or blistering firehalls, sleet or stifling snow,
In some time, His good time, I shall arrive:
He guides me and the bird. In His good time

"Death is life," says Browning; "never say of me that I am dead"; as though challenging the world to his belief in Eternity, God and Soul.

In "Pauline" rings a triumphant note of faith in God, and a radiant hope of the immortal life and the soul's unending development:

Sun-treader, I believe in God, and truth and love; * * *
* * * but chiefly when I die. * * *
All in whom this wakes pleasant thoughts of me,
Know my last state is happy—free from doubt
Or touch of fear.

Speaking of death, Browning remarked to a friend: "Death, death! It is this harping on death I despise so much: this idle and often cowardly as well as ignorant harping! Why should we not change, like everything else? In fiction, in poetry, in so much of both, French as well as English, and, I am told, in American art and literature, the shadow of death—call it what you will, despair, negation, indifference—is upon us. But what fools talk thus! Why, amico mio, you know as well as I that death is life, just as our daily, our momentarily dying body is none the less alive and ever recruiting new forces of existence. Without death, which is our crapelike, churchyardly word for change, for growth, there could be no prolongation of that which we call life. Pshaw! it is foolish to argue upon such a thing even. For myself, I deny death as an end of everything. *Never say of me that I am dead.*"

His was "a surpassing Spirit" that winged its way to the City that hath foundations, whose builder and maker is God; and while passing through the blue we hear him singing his last words to the world:

Speed, fight on, fare ever There as here!

In the autumn following Mrs. Browning's death, he wrote the poem "Prospect." In it—he will fight his last fight with the Arch Fear for the reward of it all, knowing darkness, pain and cold

Shall change, shall become first a peace out of pain,
Then a light, then thy breast,
O thou soul of my soul! I shall clasp thee again,
And with God be the rest.

On the last day of October, 1889, Westminster Abbey with great pomp and ceremony received the remains of Robert Browning and laid them to rest in front of Chaucer's tomb, near Dryden's monument. The committal service was entirely choral, and Mrs. Browning's poem, "He Giveth His Beloved Sleep," was set to music composed for the occasion and sung by the vested choir of the abbey.

Thou art gone from us—years go by—and spring
Gladdens, and the young earth is beautiful,
Yet thy songs come not—other bards arise,
But none like thee—they stand—thy majesties,
Like mighty works which tell some Spirit there
Hath sat regardless of neglect and scorn,
Till, its long task completed, it hath risen
And left us, never to return.

Fourth Convocation Story.

The fourth convocation of the American University, like every other thing worth while in Washington, D. C., this year, was held in the midst of an atmosphere charged with the spirit of the great war for civilization. Wednesday, June 5, was the auspicious day.

The War Department gave orders that the United States Engineers' Band, under the leadership of F. J. Weber, should be at the service of the university for the convocation exercises. The academic procession formed in the Hall of History, and, led by the band, marched to the amphitheater in the grove where the exercises were held.

Bishop J. W. Hamilton, Chancellor of the University, presided. Upon the platform were the Trustees of the University, the Board of Award, the candidates for degrees, the speaker of the day, the Honorable Champ Clark, and the band. The Rev. H. D. Mitchell,

ROBERT BROWNING LYING IN STATE, REZZONICO PALACE, VENICE.

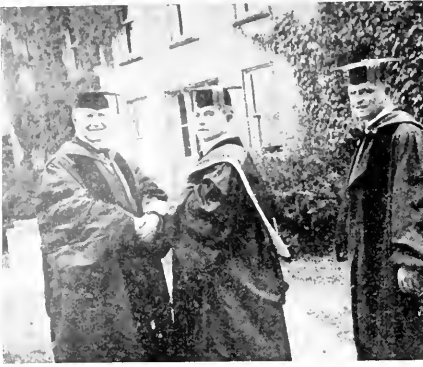

chief marshal, with 13 pastors from the churches as aids, saw that the people from Washington and the soldiers from the camp were comfortably seated. The invocation was offered by Bishop W. F. McDowell, resident bishop of Washington, and the convocation prayer by the Rev. W. E. Burnett, pastor of Foundry M. E. Church. Responsive reading was led by the Rev. J. R. Edwards, District Superintendent of the Washington District of the Baltimore Conference. Then Dr. H. D. Mitchell led the assembly in singing "America." It was an inspiring experience to join in the singing of this best of national hymns with the Engineers' Band in service uniform and a large number of soldiers, who are preparing to sail for the battlefields of France as part of the assembly. A stanza of Great Britain's national hymn was also sung, and the two-stanza international hymn, "Two Empires by the Sea," which in words of poetic fire tell of the liberty-loving spirit of Great Britain and America, now having its fullest expression in the present world conflict.

Bishop Earl Cranston introduced the speaker, the Honorable Champ Clark, Speaker of the House of Representatives, and said he was going to try to do it without referring to the war. Bishop Cranston spoke very appropriately and wittily, but he did not succeed in omitting reference to the war. Mr. Clark

began his address by saying he intended to be different from almost all speakers today, in that he was not going to say anything about the war. He, however, was far from successful in this matter. For an hour Mr. Clark held the attention of his audience and delighted them with his wisdom and homely humor, and drew from his apparently inexhaustible store of stories of outstanding personalities in American history. In part of his address Mr. Clark spoke directly to the soldiers present, and as he told from his own experience in his own inimitable way how he had learned that the great things needful for the American citizen and soldier to know are the Bible, the Declaration of Independence and the Constitution of the United States, both the soldiers and citizens present manifested their approval by their applause.

Chancellor Hamilton then conferred degrees, four Doctors of Philosophy and one Doctor of Civil Law. The audience arose and sang "The Star Spangled Banner," after which Dr. A. C. True presented the list of those who had won fellowships. The names appear in the June issue.

The exercises closed with the singing of the "Battle Hymn of the Republic," and the benediction was pronounced by the Rev. Harry M. Canter, District Superintendent of the M. E. Church, South.

Recent Gifts of Money.

Acknowledgment of sums less than \$5.00 is to be considered sufficient receipt therefor.

General Fund—\$4,500, Artemas Martin (on annuity).

Chancellor's House Fund—\$1,016, W. E. Stone; \$6.00, J. W. Campbell; \$5.00, R. B. Cuthbert, J. B. Risk, S. P. Crummett, J. H. Howard, Abner Clarke, F. B. Ward, Norman La Marche, C. H. Bagley; \$4.00, C. H. Stocking, T. R. Courtice, H. A. Ellis; \$3.00, J. W. Campbell, W. F. Seitter, L. Z. Robinson, H. H. Barr; \$2.00, James Torbet, E. E. Whittaker, H. G. Pearce, F. H. Townsend, D. T. Wilson, Joe Bell, W. H. Thompson, J. M. Rohde, J. P. Burns, A. R. Johns; \$1.00, J. C. White, C. C. Campbell, J. S. Altman, F. N. Lynch, D. J. Colean, W. M. Keller, D. V. Gowdy, C. C. Kennedy, I. N. Kalb, G. W. Flagg, Wm. Balleck, C. J. Stueckemann, E. H. Warner, F. S. Eitelgeorge, N. E. Hulbert, J. B. Goss, J. C. Baker, Eugene Weiffenbach, H. R. DeBra, C. E. Wakefield, Roland Woodhams, Wm. Richards, Wade Smith, R. D. Freeman, W. F. Kendrick, J. B. Neff, W. P. Lindsay.

Bishop Hamilton Lecture Fund—\$50.00, E. J. Brooker; \$8.00, I. L. Seager; \$6.00, C. C. Becker; \$5.00, G. L. Hardesty, Mrs. A. M. Bullock; \$4.00, D. C. Bayless, G. W. Koser, Walter Firth, John Deddow, F. E. Bacon, J. S. Potts; \$3.00, A. W. Brown, M. L. Eversz; \$2.00, G. K. Flack, O. E. Rodkey; \$1.00, H. K. Riffe, E. S. Gahan, E. C. Woodruff, W. T. Hartley, C. W. Jaycox, H. G. Ellbie, D. L. Marsh.

McKinley Memorial Hall Fund—\$5.00, H. B. Westervelt; \$1.00, Mrs. A. B. Tressler.

Franklin Hamilton Memorial Fund—By, J. Franklin Knotts: \$100, Wm. Gisriel; \$25.00, J. T. Lord; \$20.00, J. B. Risk; \$15.00, G. B. Hamilton; \$5.00, J. F. Murray, J. V. Wright, R. C. Wolf, O. A. Emerson, S. K. Arbutnot, J. H. Hess, C. E. Leatherby, Archibald Moore, J. E. Scott, G. A. Neeld, N. L. Brown; \$2.00, F. A. Gould, L. I. Lord, L. O. Douds, J. C. McMinn, H. J. Metheuy; \$1.00, J. S. Potts, V. A. Nanna, P. S. Strader, Richard Aspinwall, C. E. Bissell, F. H. Black, J. O. Bolton, L. B. Bowers, E. L. Daniel, J. L. Marquess, J. D. Mays, F. E. Price, J. B. Rupert, C. W. Stephen, Mrs. L. H. Welday, J. B. Workman.

Four Thousand Five Hundred Dollars.

As it is announced in another column of THE COURIER, annuities continue to come to the American University. Since the last issue of THE COURIER four thousand five hundred dollars has been received from Dr. Artemas Martin, of Washington, D. C. All our annuitants, even in these times, are satisfied with the rate of interest we are able to pay. We invest our securities in first mortgages in this city, where the rates are as high as in Western cities.

With deep regret we announce the death of Dr. Martin at Garfield Hospital in this city, after a brief illness. His valuable library of about 10,000 volumes, recently given by him to the American University, will help carry forward the useful career of this distinguished mathematician.

Notable Tributes to Franklin Hamilton.

From an able article on "The Church in the Present Crisis," in the Pittsburgh Christian Advocate, by Dr. Joseph B. Risk, we take the following fine tribute to our former Chancellor:

At this time in these strenuous days how we miss our leader! The loss to the church in the Pittsburgh area in the death of Bishop Franklin Hamilton cannot be fully estimated. It was our privilege to spend the day with him at the dedication of our church at Midland. We shall never forget that day. The people from the section around gathered to hear the message from the lips of the eloquent bishop. He was in a great mood of spiritual exaltation and his sermon made credible to us the traditions of Matthew Simpson's oratory.

It was a great day. The memories of it come thick and fast. Not only the sermon in the sanctuary but the brilliancy of his conversation and the charm of his manner abide with us. We had never seen him in such a radiant mood as on that day. How shall we characterize him—our own great bishop, our own Bishop Franklin Hamilton? Shall we characterize him thus? A finished scholar; an orator of classic type; able to sway the multitude and to gratify and delight the thinker; a cosmopolite who had seen many nations and had assimilated the best in the thought and literature of all lands; a personality so beautiful and compelling and withal so winsome and attractive that to be in his presence was uplifting and inspiring. Our own Bishop Franklin Hamilton, the true, the great democrat, opposed to the death, on the one hand, to Bolshevism and on the other hand, to autocracy and imperialism.

As we think of him as he appeared to us on that day at Midland we would use to describe him accurately almost without the change of a word the characterization given by our great poet of the Anglo-Saxon race who in this description proves that "He was not for an age but for all time." Here, in Shakespeare's words, is conveyed the impression then made on our minds:

"We shall not look upon his like again.

He only in a general honest thought held to the common good of all,

His life was gentle and the elements so mixed in him

That nature might stand up and say

"To all the world, This is a man."

AN APPRECIATION BY NEW ENGLAND LAYMEN.

The committee appointed by the Stewards of Boston District to prepare an Appreciation of Bishop Franklin Hamilton report as follows:

The departure from earth of the immortal spirit of Franklin Hamilton, Bishop of the Methodist Episcopal Church, on the 5th day of this present month of May, 1918, was a most unexpected surprise and distressing shock to a large company of sincere and admiring friends throughout our entire connection. Only recently entered on what it was hoped and believed would be a long career of episcopal usefulness, the announcement of his sudden death at the swift hands of dread pneumonia became the occasion of widespread expressions of disappointment and sorrow.

In connection with the whole church and more especially because of his relation to the Boston District do we lament his early removal from the field of visible service. A large part of his life was passed in this immediate vicinity. Here he came when a boy to secure an education. The best which Boston and Cambridge had to give was placed at his disposal. For years he preached in pulpits in this metropolitan area, and as a pastor shepherded the souls of many parishioners who will forever hold him in loving remembrance. His voice and features became well known in all our denominational gatherings. When called to the Capital of the country to take charge of the American University his home was still with us.

Now that he has been translated to the Unseen World it is here that deep and genuine sadness is felt by a numerous company who had high regard for him. It is particularly fitting that this group of representatives from the Methodist Churches of Greater Boston record its appreciation of his character and career.

To us he was in many ways an ideal of what a Christian man and preacher of the Gospel should be. Unselfish in his desire to be of service to needy interests, unsparring of his time and strength, chaste in thought, speech and action, simple and direct in the presentation of the truth as he saw it, dignified in bearing, yet lovable to all, he was a worthy representative of his Lord. Enriched in heart and mind by wide experience in travel, he gave unstintingly of his resources for the enjoyment and profit of all. In the ministry of the Word he brought comfort and inspiration to all who listened to him. To sit at his feet was to be taught in the deep things of the Spirit. Many will yet rise up and call him blessed.

We are told that in the last days of his illness he waited longingly for a message from across the ocean that his boy had made a safe voyage. The cablegram came after his own spirit had set sail on that other sea whose distant shore is beyond the stars. It was tenderly placed in his still hand. With Dr. Conner, who reported the incident, we are entirely persuaded that a message now awaits all the friends of this chief pastor, and that if it were to be put into human speech it would read after this fashion: "Safely arrived overseas," and signed "Franklin Hamilton."

In this conviction we comfort our bereaved but expectant hearts.

MARGARET A. NICHOLS.
EUGENE L. FOLSOM.
GEO. H. CARTER.
WILLIS P. ODELL.
W. H. H. BRYANT.

Government School on University Campus and Chief Director.

There has been no greater or more efficient development in discovery and invention in this or any other country than in the Chemical Warfare Service, of the United States Army located on the campus of the American University. It is here called a school, for in no other scholastic or industrial institution has there been mere profound research by learned men aided by numberless ambitious and intense students, both having been selected from the universities or colleges of the several States and national industries, in "actually trying out gases on an artillery scale after they have been studied by this research organization."

When Germany, in violation of all international law—all law inter-terrestrial, inter-gehennal—introduced poisonous gases as a weapon of miscalled human warfare, the genius of a American mind was put to its wits for the creation of counter "chemical warfare devices" as a matter of repugnant reprisal—fighting Apollyon with Apollyon. Here at the university, the center of such incomparable ingenuity, we soon had nearly a hundred structures and processes on the grounds for the manufacture of counter-gases, aeroplane gas bombs, signal lights, smoke-screens to screen merchant ships from enemy submarines, gas shells, incendiary shells, gas bombs of all sorts, trench projectors for firing gas bombs, flaming guns, etc., etc.

No eulogy would be extravagant in giving credit to Mr. Van H. Manning, Director of the Bureau of Mines, for the rapid achievements of his department in this new undertaking, making possible such ready accumulation of infernal munitions as have not been matched by German resources and skill.

And Mr. Manning was equally sagacious in his selection of men to whom he entrusted the several departments of the Bureau of Mines. This has been steadily

COLONEL GEORGE A. BURRELL.

recognized by the War Department, since the transfer to this department of this branch of the service. He selected the best informed practical scientist and expert in his line to be found in this country, Mr. George A. Burrell, to be director of War Gas Investigations. He had been well known for a number of years as a leading authority in both natural and industrial gases. Mr. Burrell was fortunate, like so many other public men recently assigned to positions of high trust and great responsibilities, in having been born in Ohio, and in Cleveland, the largest city of that State. He received his technical training in the Ohio State University, and when he left the institution in 1903 it was to accept a position with the Fuel Testing Laboratory of the U. S. Geological Survey at the Louisiana Purchase Exposition in St. Louis. In 1907 the laboratories were removed to Pittsburgh, the work enlarged, and called the Technology Branch of the U. S. Geological Survey. The investigations pursued by Mr. Burrell covered the entire range of mine and industrial gases. The main contributions found in the technical journals of which he is the writer indicate the wide range of subjects of which he is the recognized authority. His *alma mater* has conferred on him the scholastic and honorary degree of Chemical Engineer. When called to the administration of the Research Division in the Chemical Warfare Service he was commissioned by the United States Government colonel in the army. It is no small responsibility to have the charge of two thousand chemists, including their assistants, now on the campus of the American University. This eminent representative of this great branch of the War Department has his office across the hall from the Chancellor of the University, in the College of History. He is yet in the prime of life, a gentleman of dignified bearing, courtly manners, but possessing a thoroughly democratic spirit.

The editor has presumed the readers of THE COURIER would be pleased to have a reproduction of a war photograph of the colonel.

HOME OF GENERAL PERSHING.

Gen. Pershing's Boyhood Home.

Gen. John J. Pershing, commander of the American Expeditionary Forces in France, will have some peculiar interest in the terms of peace made by the allies after the last battle is fought. He is a direct descendant of French Huguenots of Alsace; the great-great-grandfather of the general who was Frederick Pershing, was born in Alsace in 1724, about three-quarters of a mile from the River Rhine.

The Pershing family were leading members of the Methodist Episcopal Church. The General's father was the superintendent of the Sunday school in LaCade, Missouri. The records of the church in the little village show that John Joseph united with the church there May 26, 1872. He never severed his relation to the church there until recently, when it was severed by his confirmation in France in the Protestant Episcopal Church by his friend from the Philippines, Bishop Brent, who came that way on his return to this country. Gen. Pershing's wife was a communicant in the Protestant Episcopal Church.

The British Educational Mission.

The educators in and about Washington were given the privilege of meeting the Educational Mission from Great Britain at the evening reception given at the Washington Hotel. About two hundred persons sat down to the banquet. It was on the invitation of the Council of National Defense the British Government had sent to the United States the distinguished mission to inquire into the best means of procuring closer co-operation between British and American educational institutions, to the end, greatly desired on both sides, of making increasingly firm the bonds of sympathy and understanding that now unite the English-speaking world.

The members of the mission are Dr. Arthur Everett Shipley, Vice-Chancellor of the University of Cambridge, Master of Christ's College, and reader in Zoology; Sir Henry Miers, Vice-Chancellor of the University of Manchester and professor of Crystallography; the Rev. Edward Mewburn Walker, fellow, senior tutor and librarian of Queen's College, member of the Hebdomadal Council, Oxford University; Sir Henry Jones, professor of Moral Philosophy, University of Glasgow; Dr. John Joly, professor of Geology and Mineralogy, Trinity College, Dublin; Miss Caroline Spurgeon, professor of English Literature, Bedford College, University of London, and Miss Rose Sidgwick, lecturer on Ancient History, University of Birmingham.

Notice to Applicants for Fellowships.

Notwithstanding the continuance of the war the American University will be able to grant a number of fellowships for the academic year 1919-1920, ranging from \$300 to \$1,000.

Two fellowships of \$1,000 each must be granted, according to the Massey foundation, to applicants from Canada. But in case there are no such applicants they may be granted to other candidates. The Swift Foundation is confined to applicants who are graduates of Garrett Biblical Institute, and who are recommended by that institution. No foreign fellowships will be granted until the close of the war.

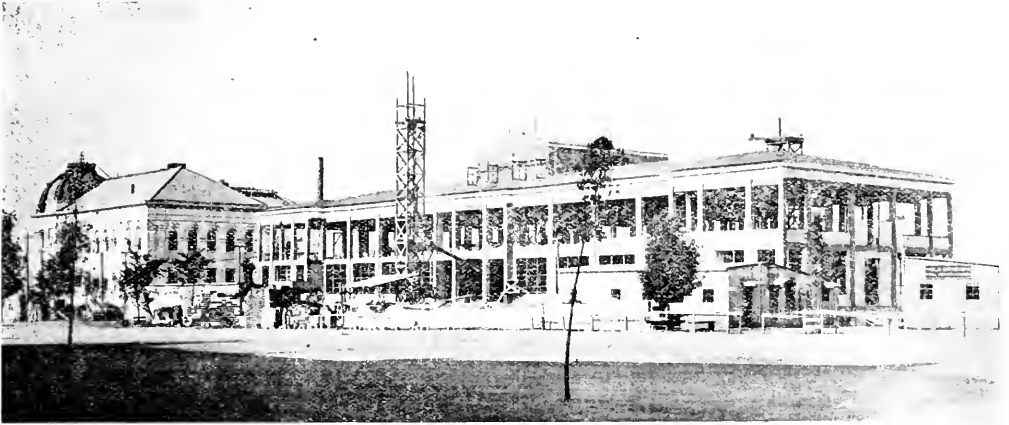

All applications for fellowships must be in the hands of the Director of Research not later than March 31, 1919. An earlier date, however, is to be preferred. Candidates will have preference, other things being equal, who submit a definite plan and outline of contemplated research.

FRANK W. COLLIER,
Director of Research.

Wherein the American Army Excels the German.

When the United States declared war on Germany the German leaders in both the civil and military government entertained themselves and the German people with stigmatizing the American soldier and comforting themselves with vainglorious sneers of the American Government, declaring no adequate army could be created or, if created, transported to Europe. In this instance, as of all those who think more highly of themselves than they ought to think, "pride goeth before destruction and a haughty spirit before a fall." What a fall of temperature to say the least there has been! Little wonder that the German soldiers ran from Zeebrugge crying as they ran: "The Americans, the Americans are coming!" At no time since have they withstood with unbroken ranks the on-marching of the terrifying "Yanks."

Wherefore this deadfall of the mercury? It is not because of the paucity of numbers, shortage of bread or lack of munitions—not altogether the tremulous morale of the German army or wholly the shattered courage of the German soldier. But there are other reasons and enough of them to foretell the downfall of the Kaiser's kingdom. The tune has gone out of *Deutschland uber alles*, and the running away is too imperative just now to wait for the Victrola. The Russians drank vodka, the Japanese milk. The Germans drink beer and captured champagne and wine; the Americans coffee and water. The Americans know what they are doing; the rank and file of the Germans do not. Of the first engineers on the American University campus 85 per cent were alumni of universities or colleges. Bernhardi in his much-talked-about book laments that so many of the young men admitted to the German army knew nothing of Bismarck. Every correspondent of the American newspapers writes of the religious character and exemplary demeanor of the American armies, and the favorable impression they have made on all the people they have met. As to the "development by war of the noblest virtues of man" in the German army, some account is given in the report of a battle published in the *Janer'sche Tageblatt*, October 8, 1914, the article being entitled, "A Day of Honor for Our Regiment, September 24, 1914." The account is as follows: "Now it is down with the enemy. *And we will give them no quarter.* * * *

NEW BUILDING FOR CHEMICAL WARFARE SERVICE AS IN OCTOBER, 1918. MCKINLEY MEMORIAL BUILDING AT LEFT.

*We knock down or bayonet the wounded. * * **
Tender-hearted souls are so kind to the French wounded that they finish them with a bullet, but others give them as many thrusts and blows as they can." We recall the honor awarded the author of the Poem of Hate.

There remains after guns are stacked and swords are sheathed more of a problem, which is to be found contagiously abroad in the minds and hearts of the Central Powers than their armies have even given us, whether in their treatment of our prisoners or our patients in their hospitals. It is the study of revenge—how can their hatred be overcome. "It is nobler to convert souls than to conquer kingdoms." The first problem in life is to unite one's self with something we have not met with in battle with the Germans, Turks, Austrians or Bulgarians. Their right and might are the same. By their education or need of it, shall we simply say they have been misled? If one can find grace sufficient to speak so charitably of such tuition or lack of it as to call it fanaticism, then it is indisputable "religion caricatured." "Fanaticism makes man a wild beast." Can we ever rise above such reversion to type? Go to Borneo for experience and example. Can we ever hope for even the first step to a cure which is to be willing to be cured? But Lord Shaftsbury said, "The first step toward a cure is a knowledge of the disorder." But there are some who prefer to die rather than to know. If educate we must, and educate the world atmosphere well, I fear we must begin in the nursery and go on at the school. It may have to be the method of Dr. Howe for Laura Bridgman over again. "Tis hard! But that which we are not permitted to correct is rendered lighter by patience." Education is a better safeguard of liberty than a standing army. Imperative as it is, it will be found, "Our universities cure men of doing things by halves, be the things mental or muscular." We must get men and nations to converse with what is above them. Nations, like individuals, must be newborn of heaven. The secret of man's nature lies in his religion. And this alone will teach our enemies to be our friends.

Table Talk.

The Government has added a fire-escape to the McKinley or Ohio Building.

It should be encouraging to donors to know that for every dollar they give, five more are added to it.

The addition to the number of students in the American University requires the institution to open a number of additional departments.

The new secretaries of the Young Men's Christian Association are a busy and enterprising group. Their new building "is twins."

The Gas Service of the War Department has 1,700 persons employed in and around the University buildings.

There is no thought of discontinuing instruction in the University. The classes that cannot be accommodated in the College of History will be given instruction in the city.

The Government has built 70 buildings for laboratory purposes on the University campus. These, with nearly or quite 40 acres of barracks built by the Army for soldiers, make a small city.

In trying to accommodate the Government with additional offices, the Chancellor gave up his office and the Registrar did likewise. So also did Professor MacWatters.

In changing rooms in the College of History, the faculty of the University were able to get the adjoining rooms of numbers 7, 8 and 9, which are connecting rooms.

With the great number of applicants for fellowships, it is unavoidable that some must be disappointed. Last year we were only able to give eight; this year we have given ten. We can only say, Try again.

The frequent inquiries lead us to say again, the American University has not leased, rented or thought of asking the Government to pay for the use of the property which serves to help win the war.

The April number of THE UNIVERSITY COURIER has been received with great favor in England, and the request comes to allow the reprint of the hitherto unpublished poem of Robert Browning, with the use of the portfolio.

An old soldier in the University camp, commenting on the daring and driving of the American boys at the recent battle of the Marne, said:

" 'Tis not 'training' to the soldier's fate,
But 'git and git' that makes men great."

Students in the research departments of the United States Government under the tuition of the counseling professors of the University can matriculate as students in the institution and receive degrees after satisfactorily completing the curriculum.

To accommodate the War Department with its increasing demands for more room, the University has consented to the removal of its library from the rooms on the first floor to the attic rooms of the College of History.

Pelmanism is having an increasing interest in England as a system of mental discipline. It receives the unqualified endorsement of Sir William Robertson Nicoll, M. A., LL. D., and a number of prominent educators in Great Britain.

The revolution in Germany after the war will be more educational than political. It will be a new spirit for a new age. The old school of force goes down with the defeat of the Huns. The master spirit of the Western World will open a new school at Potsdam. Tuition free.

The Faculty and Trustees of the American University sympathize deeply with Major-General W. L. Sibert in the sudden and unexpected death of his wife. General Sibert is the commanding officer of the War Department in charge of the Chemical Warfare Service on the campus of the University.

The Civil Engineers, during their training in the University camp, are never idle. The commanding officer directs their employment when they are not "off on a hike" or receiving instructions in the drill, in building roads over the campus or in grading the grounds about the new buildings.

The Chemical Warfare Service publishes an enterprising little paper entitled *The Retort*. It is a publicity bulletin, giving such information as does not need to be censored. It furnishes also the several chemists with such technical communication as they desire to make one with another.

What was the University campus when war was declared is now a war city of nearly 2,000 Government employees, occupying nearly one hundred new buildings; these, with the barracks of the soldiers, cover nearly all the ground except the grove of native forest trees.

Some of the soldiers who received their training in the American University Camp were in the battle of the Marne, and with all the others not only stood their ground against the drive of the Germans, but turned them back again to the river and made prisoners of many hundreds of them.

The uniform courtesy of the Government officials occupying the University building is no more marked than their close watch in keeping the rooms cleaned and the halls tidy, "swept and garnished," and the grounds and walks around the College of History so well looked after by the gardener as to be in good taste, and with more rain, the making of a good lawn.

When the chemists and their assistants in the different offices of the University buildings receive their pay, they give the odd cents to help care for the destitute children of the Allies. Mrs. Collier, who has

a box placed in the front hall of the College of History to receive these pennies, has collected not a few dollars from the hundreds of cents. Major Jones and Captain Fuhrman have greatly aided.

The Educational Commission from Great Britain was given a brilliant reception and banquet at the Hotel Washington by the Carnegie Endowment for International Peace, a department of the Carnegie Institution of Washington. One of the vice-chancellors in his post-prandial speech gave an English boy's account of the analysis of water. When being examined on his study of First Things he was asked, What are the constituent elements of water, he replied promptly: "Oxygen and Cambriden."

The Right Rev. Dr. Hiraiwa, Bishop of the United Methodist Churches of Japan, who is on a mission to this country, during his short stay in Washington visited the University in company with Bishop and Mrs. McDowell and Dr. Edwards, Superintendent of the Washington District. He expressed no little surprise over the "great preparedness" seen on the University campus and in the several buildings of the institution. He gives every assurance of the most friendly relations existing between Japan and this country.

THEODORE ROOSEVELT
Trustee of the American University since 1900
1858-1919

Theodore Roosevelt.

Theodore Roosevelt by death has escaped from death. As Charles Kingsley said of Perseus: "If he had not been of the race of the Immortals he would have perished." His immortality in this life inter-

ests this world far more than his immortality in the life to come. In the future life all men are immortal. But how few men here! France has only forty members of the French Academy that she ventures to call The Immortals. England called only

the Yorkshire "76 foot" Immortals. There is an old book in the Congressional Library which sums up human history in the "World's One Hundred Men."

There is no other such figure as this ex-President in all American history, and when the next book of the "World's Second Hundred Men" is written Theodore Roosevelt will be found in the list.

The Roosevelt who is Immortal is the very same Roosevelt who was mortal. "Oliver Cromwell dead two hundred years ago does yet speak, nay, perhaps now first begins to speak." We care hereafter to have the man here that we walked with and talked with there. The world will ask less for when he was born and when he died than for what he was and what he did while he lived. There are men whose achievements only intoxicate them, and when they die they are dead. But what was crowded into the sixty years that belonged in seventy of the life of Roosevelt, when the world was going dead wrong, is what makes his life worth while now. He was always at the front; riding down the line.

He was transcendently human. He had had his full growth, and stood on his feet in perfect stature. There was nothing atrophied about him. He had his bountiful powers constantly in restless exercise. What seemed impulsive in him was simply the speed of his motor.

He was the great Commoner of his time, but never commonplace. Born high enough up to have no one above him, he went about jostling men in the street. He leveled dignities at one blow. A company of venerable bishops called upon him at one time to interest him in some moral reform. The spokesman began by saying: "Mr. President, we believe you want to do right—" Roosevelt interrupted him instantly by saying: "By George, I intend to do right!"

Tempted in all points, as we are, he never intended to sin. He was honest straight through. The basis of his high thinking was his perfect honesty. His conscience was one needed for his age, and he made his age to know it. In his forcible demands nothing short of the most rigorous accuracy could satisfy his conscientious regard for truth. He was so transparent there was no one who could fail to see his faults. At white heat they were well lighted up, and when the freezing was extremely low the resulting ice portrayed them as in the mirror. For this reason his honorable foes have been among the first to bring charitable tributes to his memory.

He defended in forcible terms the integrity of the home, and for an example, his family would take him anywhere. In this fact inheres the essence of his patriotism. He will be long remembered for his denunciation of the home-breaker, and he never veered his words for the sake of the present company. When he attacked wrong in the home or the state he went where there was most of it; Paris, for instance, or California; and London, in criticism of administration in Egypt.

Passionately ambitious, it was this that carried him into adventure in the wilds, into letters, politics, science and government. But there was largely this element in his ambition—what he saw other men neglected to do or to do well, he wanted immediately to do himself.

So devotedly and pre-eminently American, his patriotism, a genuine love of country, ran into all that

he was and all that he did. He was all he was of choice; first in peace, but when forced into it, zealously in war to have peace. It is significant that his last words were to help the world to be rid of war.

The courage, resolution, honor, sincerity and Christian integrity of his manhood shall preserve his name in all generations. "'Tis Jehovah's plan that only manhood ever makes the man."

Bishop Franklin Hamilton.

By Bishop Quayle.

(During the memorial service at the Board of Foreign Missions this tribute to Bishop Franklin Hamilton was read by Bishop Quayle.)

Bishop Franklin Hamilton has changed his residence. He now dwells in the Kingdom of God in the City called New Jerusalem. His assignment was not made by the General Conference nor by the Board of Bishops, but by the Bishop and Shepherd of his soul.

The Bishops were in session, guests of his and the Methodism of Pittsburgh, but he could not come to bid them welcome. He was holding an interview with the Chief Shepherd. His courtesy, untaught, inbred, should have flowered in that hour of his brethren coming to his residential city. We all know how gracious a host he would have been, how refined and unaffected his words of welcome would have been. Now, these words of brotherly welcome are yet to be spoken. I doubt not they will be uttered later when we shall, one by one, please God, arrive in the City where our brother has out-hasted us in arriving. He will not forget us in his residence in the Glad Continent where he has now landed.

We are all apprised how real is the loss Methodism sustains in the death of his brain and big purpose. He was beginning a new administration. He had held many places of taxing responsibility and each one honorably and well. Nowhere had he failed. He was honor student in Harvard, was class orator by the election of his class, was university orator by the election of its faculty at the 250th anniversary of Harvard University and on that occasion spoke on the same platform with James Russell Lowell and you may see the orations of both in the memorial volume of that distinguished event. He studied in Europe. Though he had been student in Germany, unlike most of those Americans, he was not unaware of the German character, for from the first hour of the German breaking out on civilization he spoke stern words of condemnation of the chief atrocity of human history. He was master of a trained mind and lover of high things and an unobtrusive specimen of a cultivated American gentleman and Christian.

I cannot well speak of him seeing I loved him. My heart is blurred with tears on this and every remembrance of him. He came to the Episcopacy trained for that service as few occupants of that position have been trained. How he invaded the new business is well known to such as had a mind to noble beginnings. It makes a body's heart tender as spring with first violets to recall, as I recall, how he had taken up his residence in the hearts as well as in the esteem and plaudits of his brother ministers and laymen in the Pittsburgh region.

He was American in his heart. He cared for the human race as Jesus taught him. He loved the black man, though truth to say, he was not responsible for that, seeing his distinguished brother, Bishop John W. Hamilton, had fathered him and brothered him, and no better friend to the black man has appeared since Livingstone and Lincoln than John W. Hamilton. And it is fitting that Franklin Hamilton's soldier son in Europe, whose safe landing was the last received earthly telegram his eyes scanned and which was holden in his dead fond hand at his burial, Hamilton chose to be an officer in a black regiment.

I saw Franklin last after this wise. Before leaving Pittsburgh on my Master's business I called at the family residence, was admitted by the brave, beautiful widow who had so recently been a wife, was let into his room alone where my friend and your friend lay like a recumbent statue so strong and manly and as if asleep, and I said softly, "Friend, brother," but he was fast asleep and I did not waken him, but softly said, "I will see you an-

GEORGE S. DUNCAN

other morning," and passed out, into the sunshine blurred with my tears.

And our brother is out on that landscape without the city where the leaves never will have autumnal tints nor come to withering but where all the winds that blow are winds of spring and where the Shepherd of Souls leads His flock out in pastures infinite, where they are shepherded by the Voice of God.

A friend of mine, a minister, was at his soldier son's death bed, when the boy sleepily said, "Kiss me good-night, Daddy, kiss me goodnight," and his father leaned over and kissed his boy on the face and softly, tearfully replied, "Goodnight, son." But his Heavenly Father kissed the soldier boy awake in the morning. So was Franklin Hamilton kissed asleep by the wife of his heart, but kissed awake by the Lord of his life, and dwells with much smiling in the Everlasting Day.

TRIBUTE FROM THE METHODIST SOCIAL UNION OF BOSTON.

One has said that we are not so much in need of men as we are in need of a man. Bishop Franklin Hamilton was a man.

We are not yet far enough away from him to appreciate his true worth. The most that we can do is to leave on record that we deeply feel our loss in the death of Franklin Hamilton, but we thank our Heavenly Father for having sent such a soul into our midst, and that we have known this great man, and could say our friend. Time alone will be able to give him his true place in the Christian Church.

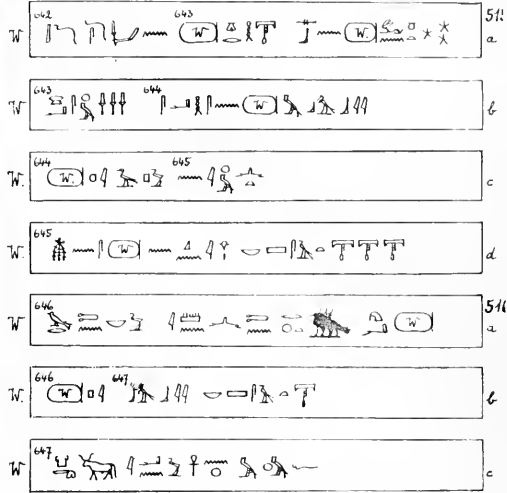

Here was a brilliant human presence, distinguishable, honorable and lovable. A beautiful human soul. He does not need our praise. The main thing is that we have known him, loved him, and that he belonged to us.

Franklin Hamilton, you have left us, but you are not forgotten.

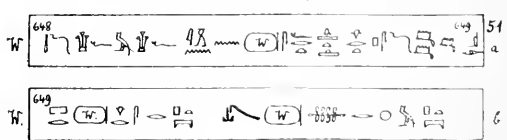

We extend our sympathy to the ever-faithful wife and his dear children and to his brother, Bishop J. W. Hamilton.

To Dr. George S. DUNCAN, Ph. D., we are indebted for the privilege of reading these earliest recorded thoughts of men.

OPENING THE TOMBS OF THE PHARAOHS.
The Accurate Text of an Egyptian Bible Brought Forth
Which Must Be Regarded as the Oldest
Religious Book in the World.

By FRANK W. COLLIER
Director of Research in the American University,
Washington, D. C.

(Reprint from Boston Transcript.)

Our Bible is a very ancient book. But its oldest teachings do not claim to be earlier than Abraham, the father of the Hebrew people, and the earliest possible date for Abraham is 2100 B. C. About forty years ago there was discovered a collection of sacred texts, or Bible, which contained the Gospel, or Good News (for, like the Christian revelation, it professes to be good news), as understood by the pharaohs of ancient Egypt, and some of these texts preceded Abraham as much as Abraham did the birth of Christ, or they were as far in time from Abraham as the Four Gospels are from us; in short, they were written 6000 years ago. They were cut into stone in the most ancient Egyptian characters, and are now, by grace of the labors of a great Orientalist, to be read in English—the first language into which they have been translated.

About fourteen miles south of Cairo, Egypt, on the west bank of the Nile, bordering on the Libyan desert, is the village of Sakkara. It is near the site of Memphis, which was the largest city of ancient Egypt, and until about 1600

EASTERN FRONT OF THE
From water tower of "Westover"

R. C. the seat of government. Sakkara was the necropolis, or royal cemetery of Memphis. It is filled with tombs of pharaohs from the third dynasty, 3000 B. C., to the twenty-sixth dynasty, 525 B. C. The sands of centuries, driven by the west winds from the desert, were piled up until these tombs were completely covered, the only trace being mounds appearing on the surface. About 1880, Egyptologists, such as Mariette, Maspero, Petrie and Quibell, began to dig through these mounds. Many tombs and pyramids were thus discovered and opened.

Opening the Tombs of the Pharaohs.

Among the pyramids opened were those of the fifth and sixth dynasty pharaohs, 2665-2475 B. C., Unis, Tety, Pepy I, Mernere, and Pepy II. Upon entering these pyramids the eyes of the archaeologists were delighted with a most remarkable discovery—the great stone walls were covered with texts in the most ancient hieroglyphic writing. It was proved later that these texts consisted of prayers, hymns, incantations, magical formulae, lists of offerings, and descriptions of the Egyptian heaven and the life therein. These inscriptions were to be used by the dead pharaoh to insure his progress to and happiness in the next world. Thus, while different in purpose, these inscriptions may be likened to the custom of Christians carrying upon their tombstones such Biblical passages as, "He giveth his beloved sleep," "I know that my Redeemer liveth," "I am the resurrection and the life."

The Oldest Religious Book in the World.

The inner walls of these pyramids were extensive, and thus there was space for thousands of lines; to be exact, seven thousand and forty. But as the same texts occur in each of the five pyramids it is evident that we have, if not the entire oldest Egyptian Bible, at least the bulk of it. This repetition is also very fortunate in that it makes possible the restoration of an obliterated text in one pyramid to be restored by the perfect copy of the same text in another pyramid. Thus we are able to get a pretty accurate text of the oldest Egyptian Bible, which must be regarded as the oldest religious book in the world, and, in fact, the oldest book of any kind. These texts, however, are of different dates, just as the documents which make up our Bible are of different dates. They are the growth of many centuries, undoubtedly being very old when inscribed upon the walls of the pyramid-tombs of the pharaohs of the fifth and sixth dynasties, the latest pharaoh of which having died 2475 B. C. Historical references in the inscriptions prove that some of the texts go back to a period as early as 4000 B. C., if not earlier.

After the Egyptologists had dug their way into these pyramids, discovered the inscriptions and photographed them, they found they could not translate them. It is true that Maspero from 1882-1892 tried to translate them into French, but his results are inaccurate and unreliable, due to faulty texts and the fact that Egyptology was in its infancy. Even now there are many unknown words and obscure references which can only be understood as Egyptology progresses. Some of the inscriptions are magical forms without meaning even to the priests, and were mere sounds, the repetition of which was to inspire awe, wonder, and reverence for the unknown and mysterious.

Dr. Duncan's Difficult Task and Accomplishment.

Dr. George S. Duncan, Ph. D., a thorough scholar who has a passion for teaching, and who delights to bring the results of accurate scholarship to the largest possible number of human beings, is the man to whom we are indebted for the privilege of reading these earliest recorded thoughts of men. Dr. Duncan when he began some years ago the translating of these inscriptions imposed upon himself a very difficult and tedious task. But he was well equipped for the work. He is a graduate of Williams College and a post-graduate of Princeton, Johns Hopkins, Oxford, and Berlin; and is connected with the departments of Egyptology and Assyriology in * * * the American University at Washington, D. C.

Dr. Duncan expects his work will be ready for the press. * * * * * We have seen the work in manuscript, and have permission to present here a few of these translated inscriptions so that scholars and cultured persons in general, as well as students of human thought and of comparative religion in particular, may get an idea of the rich field opened up to them by the labors of this painstaking Orientalist. The numbers refer to sections in Dr. Duncan's work.

The future world is a glorified form of the present world with trees, reeds, flowers, fields, lakes and rivers:

King Unis has come to the pools which are in the region of the floods at the great inundation, to the place of peace with green fields in the horizon. 508.

The tower of King Unis is planted in the field of reeds. 130.

They give to this King Tety the tree of life whereof they live. 1216.

This King Pepy is on the way to the field of life. 1280.

Thou hast gone up into the lake of life. 1979.

The Journey to the Next World.

The journey to the next world is described:

The two rafts of the sky are placed for King Unis that he may ferry over therewith to the horizon in company of Re. 337.

Mayest thou ferry him over in this ferryboat in which you ferry over the gods. 384.

Thou findest Re standing there, he comes to thee, he seizes thy arm, he leads thee into the double palace of the sky, he places thee upon the throne of Osiris. 757.

The door of heaven is opened for the dead king after repeating the following prayer:

Men fall, their name is not, seize thou King Tety by the arm, take thou King Tety to the sky that he die not or earth among men. 604.

Heaven as Pictured in the Inscriptions.

Heaven in these inscriptions seems to be an aristocratic place, only the life of the gods and the pharaohs is described:

King Unis is with you, O gods, you are with King Unis, O gods. 377.

King Unis lives with you, O gods, you live with King Unis, O gods.

The face of God appears to King Unis, thus King Unis sits upon the great throne at the side of God. 391.

The gods are they

Who support themselves on their golden sceptres, Who anoint themselves with fine quality oil, who clothe them-

AMERICAN UNIVERSITY
Portrait of Mr. Charles C. Glover

Photograph by Schutt.

selves with red linen. Who live upon fig cakes, who drink wine. 1511.

The dead pharaoh becomes a god:

Re has confirmed to King Neferkere that he become divine. 2056.

Nut has caused that thou art a god. 25.

King Unis has come that you may see him become a great god. 272.

King Unis is a god older than the oldest. 408.

Ceremonial purification is necessary for dwelling in heaven:

Hail, King Pepy, thou art pure, thy ka is pure, thy soul is pure among the glorified, thy soul is pure among the gods. 839.

Horus purifies thee in heaven. 841.

The Belief in a Resurrection.

The belief in a resurrection of the body is affirmed in numerous inscriptions:

She (the goddess Nut) unites for thee thy bones, she unites for thee thy members. She places for thee thy heart in thy body. 835.

Thy head is placed for thee, thy head is fastened for thee to the bones. 9.

O Tety, lit yourself up after you have received your head, pull together thy bones, shake off thy dust. 735.

Horus has united for thee thy members, he has joined thee together. 635.

Horus has pressed for thee thy mouth, he has adjusted for thee thy mouth to thy bones. 644.

Thou hast received thy head, thou hast embraced thy bones, thou hast collected thy members, thou shakest off the dust from thy flesh. 654.

The Egyptian Heaven.

The Egyptian heaven was a mecca for epicures; there was plenty to eat and drink, and in great variety:

Sit down to thy thousands of bread, thy thousands of beer, thy thousands of oxen, thy thousands of geese, thy thousands of everything in which the god lives. 2027.

Roasted are thy ribs coming from the slaughter house. 214.

That thou mayest eat the shank, and that thou mayest chew the cutlet in thy mouth, and that thou mayest feed upon the ribs. 736.

That land into which King Unis goes King Unis does not thirst in it, King Unis does not hunger in it forever. 382.

Get thee up to this thy bread which cannot dry up, and to thy beer, which cannot become stale. 859.

Receive for yourself this thy fresh bread, this thy fresh beer. 870.

The pharaoh reigns in heaven:

Thou arise, O King Tety, in thy royal hood, thy hand seizes the sceptre, thy fist grasps the mace. 731.

Those sittest upon thy costly throne. 865.

Yet he acts as secretary to the gods:

King Unis is the scribe of the gods behind the temple of Re.

King Unis opens Re's chest of papers, King Unis breaks open Re's edicts.

King Unis seals Re's decrees, King Unis despatches Re's messengers who do not become tired, King Unis does that which Re says to him. 490.

The pharaoh is also a farmer in the Egyptian heaven: He raises barley, he raises spelt. 761.

Relating to Death and Immortality.

The most remarkable of all these inscriptions are those relating to death and immortality. Death is compared to a sleep and rest:

Though thou sleepest, thou wakest again. Though thou diest, thou livest again. 1975.

King Unis rests from life in the West. 306.

And immortality is taught all through the inscriptions in the most explicit terms:

Hail, King Unis! Thou didst not depart dead, thou didst depart living. 134.

But King Tety does not die, he has become a glorious one in the horizon, he abides in continuity. 350.

The lifetime of King Unis is eternity, his boundary is eternity. 412.

Thou hast departed that thou mightest live. 833.

The glorious part goes to the sky, the corpse goes to the earth. 474.

They summon this King Pepy to life and to satisfaction forever. 1190.

The Belief in a Number of Gods.

Monotheism, the belief that there is but one God, is not found in these inscriptions; but there is a tendency towards henotheism, the belief in a number of gods, one of which is supreme. The most important gods named are Re, Spu, Tefnet, Geb, Nut, Osiris, Isis, Nephthys, Horus, and Set. Re, the sun god, is supreme, and Set is the god of darkness corresponding to our devil. Little is said, however, of this Egyptian Satan, and nothing of an Egyptian hell; for the inscriptions have to do wholly with the pharaoh, and hence with a strictly royal heaven.

Six Thousand Years Ago.

The foregoing quotations give us an idea of the contents of the oldest book in existence, parts of which carry us back six thousand years, when a highly developed civilization flourished on the banks of the Nile. Dr. Duncan has made it possible for moderns for the first time to read the gospel according to Pharaoh; and while there is no little chaff here, there are some golden grains of the finest wheat, reminding us of that fundamental Christian teaching, too often overlooked, that God has never left Himself without witness.

Annual Meeting of Trustees.

The signing of the mistice occasioned entirely new relations of the United States Government to the American University. The Bureau of Mines and the War Department had expended nearly or quite two millions of dollars in barracks, laboratories and other buildings on the campus. Many questions had arisen in the minds of the Government officials concerning the further use of these buildings. Rumors of a desire to purchase or lease parts of the grounds on which these buildings were erected brought together a large attendance of Trustees at the annual meeting, and much time was

given to the discussion of these new relations and certain propositions of the Government, after which the whole matter was referred to the Executive Committee.

The Treasurer reported twenty two thousand dollars received during the six months since the last meeting.

Mr. John L. Aleock, of Baltimore, was elected a Trustee to fill the vacancy in the Board. The vacancy in the Board of Award was filled by the election of Lieutenant Colonel C. Vincent Massey, of Toronto. The Reverend Albert Osborn was elected to fill the vacancy in the Secretaryship of the University. Mr. Charles J. Bell was elected a member of the Executive Committee. The following were elected counselling members of the Faculty: Albert Hutchinson Putney, Counselling Professor of Law; Charles Callam Tansill, Associate Counselling Professor of History and Political Science; and Paul Dyer Merica, Associate Counselling Professor of Physics. The Standing Committees were re-elected with little change.

The usual luncheon was served when the Trustees had adjourned. Mrs. Frank W. Collier acted as hostess representing the University.

Recent Gifts of Money.

(Acknowledgment of sums less than five dollars is to be regarded sufficient receipt therefor.)

Chancellor's House Fund—\$100.00, R. V. Watt; \$25.00, Mrs. A. A. Sowle; \$10.00, C. E. Goodwin, G. H. Myers, J. R. T. Lathrop; \$7.00, J. W. Fawcett; \$5.00, C. W. Fleisher, J. F. Black, I. E. American University Fellowships.

The report of Doctor Collier, who classifies the applications, gives the following summary of applications for fellowships and the number of fellowships awarded by the American University since the opening of the institution four years ago.

The total number of applications to the present time is one hundred and forty-four. There were twenty-seven the first year, fifty-one the second, and forty-seven the third. Then came the decimations by the war, and there were only nineteen the fourth and last year. The recommendations of the applicants have come respectively from fifty-seven different colleges and universities. Twenty-seven different institutions were named in the applications as the colleges or universities which afforded the research students the special privileges they desired for the prosecution of their post-graduate studies. The applications came, respectively, from thirty of the different States in the United States, the Dominion of Canada, Italy and India.

There have been thirty-three fellowships awarded. The successful fellows were recommended respectively by seventeen different colleges and universities, and they pursued their studies in nine different universities. Twenty-two of the fellows, or two-thirds of the number, were men and one-third were women. They represented the States and countries as follows: Georgia, Illinois, Iowa, Maryland, Massachusetts, New Jersey, New York, Pennsylvania, District of Columbia, and Dominion of Canada. Five fellowships were awarded the first year, ten the second, eight the third and ten the fourth. The amount of money given to each of the fellows varied from three hundred to one thousand dollars.

NOTICE TO APPLICANTS FOR FELLOWSHIPS.

The American University will grant a number of fellowships for the academic year 1919-1920, ranging from \$300 to \$1,000.

Two fellowships of \$1,000 each must be granted, according to the Massey Foundation, to applicants from Canada. But in case there are no such applicants they may be granted to other candidates. The Swift Foundation is confined to applicants who are graduates of Garrett Biblical Institute, and who are recommended by that institution. No foreign fellowships will be granted until the close of the war.

Candidates for fellowships should apply to the Registrar of the University as soon as possible for application blanks, fill them out and return them to the Director of Research not later than March 31, 1919. An earlier date, however, is to be preferred. Candidates will have preference, other things being equal, who submit a definite plan and outline of contemplated research. A photograph of the applicant is requested.

QUALIFICATIONS FOR DEGREES.

1. Only persons who have taken the undergraduate degree are considered as candidates for a graduate degree.

LIEUTENANT-COLONEL WILDER D. BANCROFT

2. The Degree of Doctor of Philosophy requires one major and two minors with three years of graduate study as a minimum.

3. The Master's Degree requires at least one major and one minor with one year of graduate study as a minimum.

4. Resident work pursued at a reputable university may be recognized by the American University, but at least one year's residence in Washington will be required of a candidate for a degree. Before a degree is granted the candidate must meet the following requirements:

(1) A thesis in typewritten form by March 31 (at least five copies).

(2) A written statement by the candidate on his work in each subject pursued.

(3) An oral examination of the candidate by members of the Board of Award.

FRANK W. COLLIER,
Director of Research.

Letters from General Sibert and Colonel Burrell.

War Department
CHEMICAL WARFARE SERVICE, N. A.
Washington, D. C.

December 31, 1918.

Bishop J. W. Hamilton,
American University,
Washington, D. C.

Dear Sir:

On behalf of the Chemical Warfare Service, I want to express my appreciation of the excellent service the American University has rendered in connection with our work. You have been generous and unselfish in every particular in placing the facilities of the American University at our disposal and helping us in every way within your power to carry on the work. I feel that the credit for any good results which came out of the Research Division toward winning this war must be shared with the American University.

Cordially yours,
(Signed) WM. L. SIBERT,
Major General, U. S. Army,
Director, Chemical Warfare Service.

War Department
AMERICAN UNIVERSITY EXPERIMENT STATION
Chemical Warfare Service, U. S. A.
Washington, D. C.

December 30th, 1918.

Office of the Chief
Research Division,
Bishop J. W. Hamilton,
American University,
Washington, D. C.
Dear Bishop Hamilton:

At this time, the wind-up of the activities of the Research Division, Chemical Warfare Service, I want to express to you my appreciation of your many kind favors during the progress of our work. The American University helped in a very real way to win the war and any credit which is due the Research Division, Chemical Warfare Service, must be shared by the American University. Personally, I can say that I have met few people with whom it was so easy to cooperate.

Cordially yours,
(Signed) G. A. BURRELL,
Colonel, C. W. S., U. S. A.,
Chief, Research Division.

The New Chief.

"If honour calls, where'er she points the way,
The sons of honour follow and obey."

—Churchill.

Colonel Burrell has been promoted in his salary, by resigning his position in the Army to take up the business he left when he enlisted. There was no small vacancy created when he resigned as Head of the Research Division, Chemical Warfare Service, and left the door open to his office in the College of History of the American University. But while men may come and men may go, the work goes on forever. It simply requires one man to succeed another. The predecessor transmits the trust, whatever of importance he may have given to it or taken from it, to his successor. "Hereditary honors are a noble and a splendid treasure to descendants."

The Government was ready with Lieutenant Colonel Wilder Dwight Bancroft to succeed Colonel Burrell, and to commit to him such responsibility

as the armistice did not remove. The care for all the property and such departments of labor as were to be continued were given over to his charge. And doubtless if the Chemical Warfare Service is to be discontinued, Colonel Bancroft will remain to close up the business and dispose of the Government property.

Doctor Bancroft not only had proved his capability for the new position since coming to the Service, but he came to the employ of the Government with a prestige which warranted his receiving commission at once as Lieutenant Colonel.

He came of good New England stock and was born in Middletown, Rhode Island. Graduated from Harvard, he received his degree of Doctor of Philosophy at Leipzig. Having spent some years in Germany, he came back to this country to rise rapidly in his profession, assistant professor, editor of the *Physical Chemical Journal*, president of the American Chemical Society, while full professor for many years in Cornell University.

Gracious in his manners, readily approachable even by strangers, accommodating to all alike, he is popular with the persons associated with him in the Department, as well as with the officers of the University.

Table Talk.

Colonel Roosevelt had been a Trustee of the American University for more than a dozen years.

The bestowing of fellowships by the University is not affected by the war. There were ten allotted this year, and applications are coming in for next year, assuring us that there will still be competition.

Colonel A. B. Lamb, who is in charge of the Research Department of Chemical Defense, has shown his sympathy with the plan of the University in a very practical way.

Major S. F. E. Fuhrman, who has the watch care of Camp Leach and who is a major in the Quartermaster's Corps, has Sergeant Smith with five or six quartermasters associated with him and ten military policemen.

Mr. William E. Brigham, the Washington correspondent of the *Boston Transcript*, has a most interesting and instructive paper on the American-made gas in connection with the Service on the American University campus, which appears in the *Transcript* January 11.

There are about four hundred chemists, soldiers and workmen left on the University campus, under the direction of Colonel Bancroft. The chief executive officer in charge of the American University Experiment Station and who succeeded Major Levering is Captain D. L. Williams, who is exceedingly popular with all the men.

Major W. Catesby Jones, commanding the First Battalion of the Research Division, has had his office for many months in the library of the College of History. Like many members of the first families of Virginia, his distinction is natural and secured on merit; he commands with no vociferous orders and conceals his honors with modesty.

Professor Samuel J. MacWatters, Litt. D., has been unable to render the University any service during the fall and winter. On his way from his country home in Massachusetts to Washington, he

was overtaken by the influenza in New York and utterly disabled for weeks. When able to travel he hurried to Florida, where his recovery is assured. He expects to deliver lectures in Daytona and Miami before he returns.

Colonel Burrell, who has been the commanding officer of the Chemical Warfare Service at the University, has resigned and returned to his civil vocation. The praise which has been awarded him on every hand was justly due him. His association with the officers of the University has left only memory of the most cordial relations. As Ruskin said of a gentleman his first characteristic was "finesse of nature," and with a firmness characteristic of the commanding officer, he was a "gentleman who made no noise."

American University Chemists.

"The chemists went to work at the American University, and from a charcoal that would let chloropierin through a gas mask in one minute they developed a laboratory charcoal that would stand it off for twelve hundred minutes or twenty hours. In fact, they became so expert they would not consider for use any laboratory charcoal unless it ran at least eight hundred minutes or nearly fourteen hours."—*William E. Brigham in Boston Transcript.*

**Grow old along with me!
The best is yet to be,
The last of life, for which the first was made;
Our times are in His hand
Who saith "A whole I planned,
Youth shows but half; trust God; sea all nor be afraid!"**

ROBERT BROWNING AND HIS SON BARRETT
From photograph taken in Venice, 1889

Robert Browning and Christianity.

The reprint of Robert Browning and his son Barrett, taken at the Rezzonico Palace, in Venice, only a few weeks prior to the great poet's death in December, 1889, will be of special interest to students and lovers of England's greatest poet since Shakespeare. The poet champion of almost four-score years, with his brow and countenance wrapt in silent glory, wears an expression of calm resignation, as though awaiting the

summons to the new and larger life, with a hope and trust expressed in his lines:

"Old age, calm expanded, broad with the haughty breadth of the universe,
Old age, flowing free with the delicious nearby freedom of death."

"Oh, such a life as he resolved to live, when he had gathered all books had to give!", is shown in the turbulent period of the nineteenth century when the materialism and agnosticism of his day had produced skepticism and doubt in matters of religion,—confusion and uncertainty in the ethical life; and the interests of religion had suffered at the hands of her iconoclasts.

The whole world was startled with the statement of new discoveries and the shock of new theories. Blind, purposeless necessity ruled the world, and the purpose of life was to be realized in sensual pleasure; and the end of life was to sink back into the darkness whence we came. The whole effect was to produce contention and uncertainty, strife and unbelief.

Against this dark and hopeless background, came Robert Browning with the strength of the right arm of a blacksmith and the grip of a giant, to espouse the cause of revealed religion, and present the subject of—human life, its meaning, destiny and man's relation to the Infinite. He faced forces that were rapidly destroying the faith of the fathers and weakening the strength of believers, and met them with an enthusiasm that was magnificently contagious! He met the scepticism and doubt of his time with a triumphant faith in historical Christianity, and awakened the world to new meaning of life, and of man's relation to God. Through a conviction, born of intuition and faith, he declared to the world that philosophy was incompetent, and that love is supreme; that Jesus Christ, Incarnated Son of God, is the hope of the world, and that uttermost need of humanity is met in Him. He challenged men to—"Strive, and hold cheap the strain; learn, nor account the pang; dare and never grudge the throe! Trust God; see all nor be afraid!"

The world was his church, and the world's conquering Christ, his creed. He may seem to disregard the forms and dogmas of Christianity, yet, in character, life and works, he adhered strictly to the essentials, and through his writings has fused a new energy and triumph to vitalize the whole.

Browning's Gospel is essentially one of love. He lays stress upon the incidents of the development of a soul and considers little else worth while.

"God! Thou art love! I build my faith on that!"
"The truth in God's breast
Lies trace for trace upon ours impressed;
Though He is so bright, and we so dim,
We are made in His image to witness Him."

"For God above
Is great to grant, as mighty to make,
And creates the love to reward the love."

"For the loving worm within its clod
Were diviner than a loveless God
Amid his works."

In "The Death in the Desert," the aged St. John sets forth the love of God manifested to the world in the person of Jesus Christ, the Divine Son of God:

"Such was love's way, to rise it stoops,
Life, with all it yields of joy and woe,
And hope and fear, 'till love
Is just the choice of the prize of learning love."

Browning had such a high estimate of Jesus, that he looked upon Him as the "good Paragon," "the Crystal Christ,"

"Who trod,
Very man and very God,
This earth in weakness, shame and pain."

"No one ever plucked
A rag even from the body of the Lord
To wear and mock with, but despite himself
He looked the greater and was better."

"I say the acknowledgment of God in Christ,
Accepted by thy reason, solves for thee
All questions in the earth and out of it."

"To have to do with nothing but the true,
The good, the eternal—and these, not alone
In the main current of the general life,
But small experiences of every day,
Concerns of the particular hearth and home:
To learn not only by a comet's rush
But a rose's birth, not by the grandeur, God—
But the comfort Christ."

"What think ye of Christ, friend, when all's done and said?
Like you this Christianity or not?
It may be false, but would you have it true?
Has it your vote to be so if it can?"

"O Thou pale form! * * *
Oft have I stood by Thee,—
Have I been keeping lonely watch with Thee
In the damp night by weeping Olivet,
Or leaning on thy bosom, proudly less,
Or dying with Thee on the lonely cross,
Or witnessing Thy bursting from the tomb."

His faith in the Christian religion is well expressed in a letter to a friend: "I know all that may be said against it on the ground of history, of reason, of even moral sense. But I am none the less convinced that the life and death of Christ, as Christians apprehend them, supply something which humanity requires, and that it is true for them.

The evidence of divine power is everywhere about us; not so the evidence of divine love. That love could only reveal itself to the human heart, through some supreme act of human tenderness and devotion; the fact or fancy of Christ's cross or passion, could alone supply such a revelation."

"If Christ, as thou affirmest, be of men,
Mere man, the first and best but nothing more,—
Account him, for reward of what he was,
Now and forever, wretchedest of all.
Forsee: him-self, conceived of life as love,
Conceived of love as what must enter in,
Fill up, make one with his, each soul he loved:
Thus much for man's joy, all men's joy for Him.
See it, for every finger of thy hands
There's he not found, that day the world shall end,
Hundreds of souls, each holding by Christ's word
That he will grow incorporate with all,
Groom for each bride! Can a mere man do this?
Yet Christ saith, this he lived and died to do;
Call Christ, then, the illimitable God."

With the great problems of human life and destiny, he "never dreamed, though right were worsted, wrong

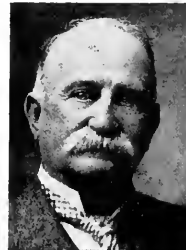

would triumph;" and waged war like a hero,—and the glorious in man, in God, and Jesus Christ, and the eternal hereafter, were the trophies of his conflict.

Today, as we look upon his last portrait in life, we can almost hear the Master Poet repeating the lines he transcribed from his wife's Testament, some years after her death: "Thus I believe, thus I affirm, thus I am certain it is, that from this life I shall pass to another better, there, where that lady lives of whom my soul was enamored."

S. J. MACWATERS, Litt. D.

Fifth Annual Convocation.

The Fifth Annual Convocation of the American University will be held in the Grove Auditorium on the University grounds on Wednesday, June 4, at 2:30 P. M. The Convocation address will be made by Chaplain Thomas Tiplady, of England, who rendered signal service in France during the world war and has written the two strong books, "The Cross at the Front" and "The Soul of the Soldier." The Trustees of the University will meet the same day at 10:30 A. M. The Secretary of the Navy, the Hon. Josephus Daniels, will deliver the address at the ceremony of the Planting of the Peace Memorial Tree. The Rev. Dr. Howard F. Downs, pastor of Waugh Methodist Episcopal Church, will serve as chief marshal.

THOMAS W. SMITH

Thomas W. Smith.

There is no defense against death in high places or low. Men must lay down responsibilities no matter how embarrassing to their trusts or grievous to their friends. The University shares in the losses which death has occasioned so frequently that recently scarcely a number of the COURIER appears in which there is not a notice of the death of a Trustee.

Thomas W. Smith, who died in Washington March 1, 1919, had been a Trustee of the American University for twenty years, serving on both the executive and building committees. He was born at Gordonsville, Lancaster County, Penn., Jan. 1, 1846. He received his education in the public schools and at the Columbia (Penn.) Institute.

For fifty years he was active in the civil and business affairs of the District of Columbia. He was President of T. W. Smith Lumber Company, and had been President of the National Capital Bank, of the Board of Trade, and East Washington Citizens' Association. His wife and four daughters survive him.

A Christian Woman's Use of Wealth. Phoebe Apperson Hearst.

When we recall the long history of dependence and subordination through which women have passed, their presence, influence and achievements are all magnified manifold in our civilization. And the legislation of men against women's rights and uses of property is humiliated and demeaned by the numerous instances of ability, sagacity and worldly wisdom manifested by noble, successful and honored women in our time.

California calls the attention of the whole country to one of the most conspicuous instances of vigilant, well-guarded and discreet management of business interests with philanthropic disbursement that stands out illustriously to the repute of eminent women.

Phoebe Apperson Hearst, the good lady who furnished this illustration of so honored a career, has given to the world not only the exemplary and distinguished use of her great wealth, but she leaves a son who is one of the most prominent and successful business men of his generation. Mrs. Hearst was born in Missouri December 3, 1842, and was married to George Hearst in 1862. He began as a school teacher, but he invested his savings in mines and came to great wealth. He was elected a United States Senator from California, and Mr. and Mrs. Hearst were residents of Washington during his term of office. Dying in 1891 he left his great fortune to his wife. During the nearly thirty years after his death Mrs. Hearst was simply an almoner of bountiful gifts, as the "wind scatters golden leaves." While the University of California was the principal beneficiary, it would take the Angel of the Covenant to trace all her favors and charities. In Washington, in addition to other beneficence, she maintained a School for the Training of Kindergarten Teachers, gave \$10,000 toward the building of the College of History of the American University, and \$250,000 for the National Cathedral School for Girls.

It has often been said that Mrs. Hearst was the richest woman in California, and that was said in reference to her gifts of money. But far and away from riches in money was her wealth of excellent spirit. She loved the higher and nobler qualities of life. Her graces were faith, hope and charity. She was a queenly woman who was not born to die.

Professor MacWatters' Lectures.

Professor MacWatters suffered a serious illness during the past winter in New York, where he was seized with influenza. A convalescence, followed by a sojourn at Daytona Beach, Fla., rapidly passed to a thorough recovery, and before returning north he delighted audiences in several Florida cities with some of his rare discourses. Later he gave a series of lectures at West Virginia Wesleyan College. During the past month he delivered two lectures in Foundry Methodist Episcopal Church on "Browning and the Christian Faith," and "England's Poet Laureate." He also spoke on Browning at the Mt. Vernon Seminary, and gave his "Drama of St. Paul" at the Harlem Park Methodist Episcopal Church, Baltimore.

Joint Occupation of the University Campus.

The Government, which had erected through its Interior Department and War Department before the armistice was signed more than one hundred buildings

on the grounds of the American University, desires to continue the use of many of these buildings for experiment stations by the Nitrate Division and Bureau of Mines. Otherwise the two departments which have been occupying the grounds would vacate the premises on July 1.

The University is Still Open.

We have been frequently asked, Has the occupation of the University grounds and buildings by the United States Government closed the school? It would seem so to the persons who drive by the institution. At one time nearly or quite three hundred of the war workers in the Gas Service had signed applications to matriculate in the University as post-graduate students. But the school was no more fortunate in retaining them than the many colleges which suffered financially in the loss of the S. A. T. C.

While the class rooms in the College of History building have been occupied by the Government offices, recitations have had to be taken to the homes of the instructors, or elsewhere in the city. The Extension Lectures have also been given in the city, several of the churches continuing to open their doors for this purpose.

Notwithstanding the inconvenience, instruction has been given by Dr. Duncan in Assyriology, Egyptology and Church History; Dr. Collier in Philosophy; Dr. Putney in International and Canon Law; Dr. Merica in Physics; Dr. Schreiner in Agricultural Chemistry, and Dr. Tansill in English History.

The New Order.

With the first of July the Chemical Warfare Service on the campus of the American University will disappear. The soldiers, except the guard of the barracks, have been gone more than a month from the part of the University grounds known as Camp Leach. The click of the vocal typewriter and the scratch of the clerical pen by men in uniform will be heard no more in the College of History, when one clear call is heard at the end of June for them to doff their monotonous garb and go home.

The solitude of the lonely vacancies will be broken in the McKinley Building by the invasion of the Nitrate Division, which for a time is coming to discover and invent for the farmer, to help nature duplicate the productive power of the soil. Fertility is the crying need of the farmer.

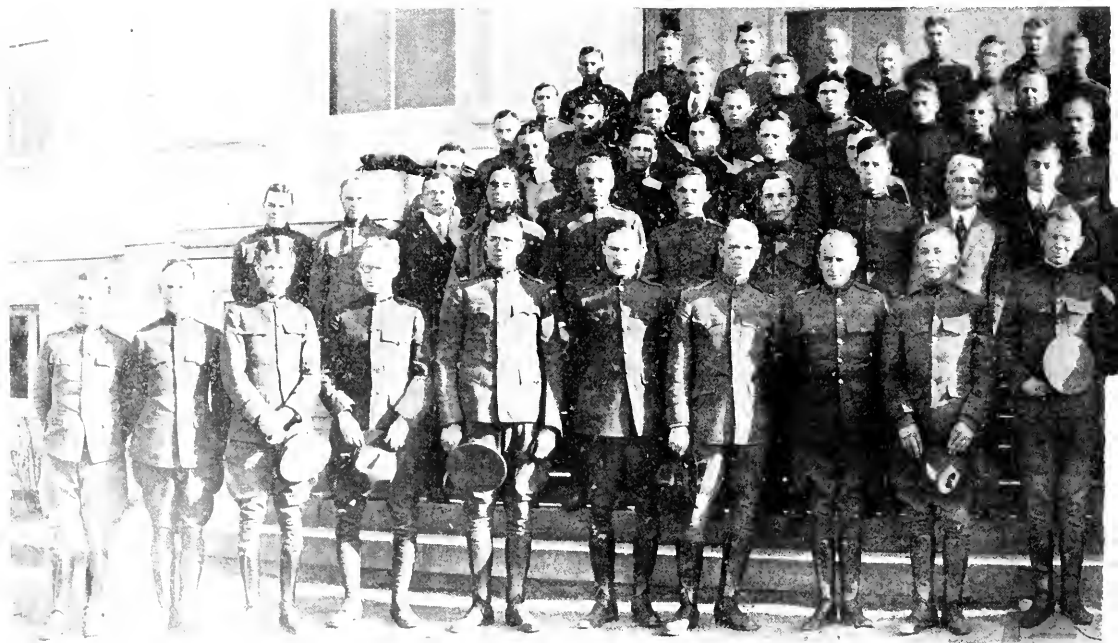

University Notes.

Dr. George S. Duncan, Counseling Professor of Oriental Languages and Literature, has been very busy this semester. In addition to his class room work, he has been doing outside lecturing. At the Y. M. C. A., the Y. W. C. A., the Presbyterian Ministers' Association, the Fortnightly Club, and the Twentieth Century Club in Washington, at Camp Humphreys, Va., and before The Archaeological Society of Richmond, Va., he has been delivering lectures on "Pre-historic Man," "Early Historic Man in Mesopotamia," "Monuments and the Old Testament," "Ancient Palestine," and "Egyptian Archaeology."

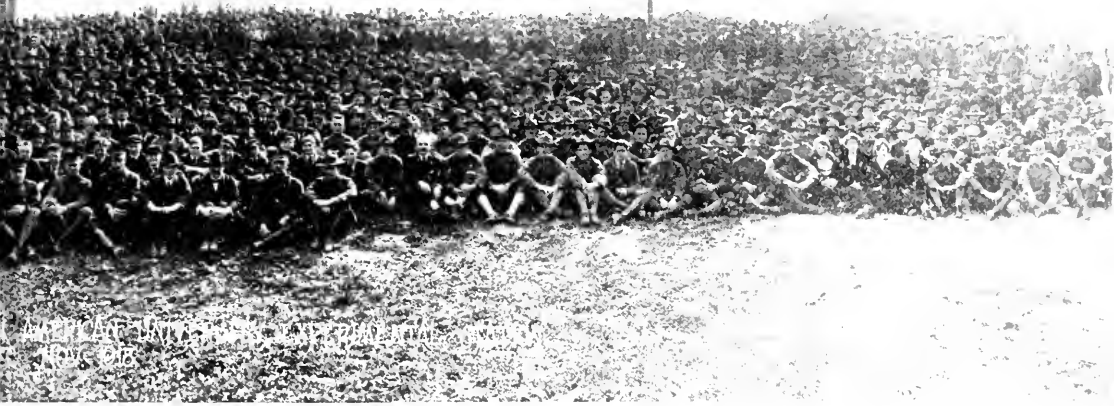

At the annual meeting of the American Oriental Society, held March 19-21, at the University of Pennsylv-

nia, and presided over by Dr. James H. Breasted of the University of Chicago. Dr. Duncan read a paper "The Future Life in the Oldest Egyptian Texts." Yale University is issuing in twenty-six volumes the Library of Ancient Semitic Inscriptions." Dr. Albert T. Clay, Professor of Assyriology and Babylonian Literature in Yale University, is the General Editor of this new series. He has asked Dr. Duncan to prepare the volume on Assyrian Contract Documents. Dr. Duncan is to have two years to complete the work. The American Oriental Society has taken steps to establish in Washington a School of Modern Oriental Languages. Such an institution is greatly needed by young members of the diplomatic service, missionaries, and students of religion. F. W. C.

Asbury Memorial Fund—\$25.00, J. H. Roberts (for Charles Clark).

An Interesting and Valuable Manuscript.

Hon. Elijah W. Halford, who was President Benjamin Harrison's private secretary, has presented to the American University the original letter in pencil from President Harrison to Bishop Hurst, which was read at the first public meeting in promotion of the University, held in Metropolitan Methodist Episcopal Church in November, 1889. The letter in full follows:

My Dear Bishop:

I regret that I am to be absent from the city on Monday evening and shall therefore be unable to fulfill my purpose to attend the meeting to be held that evening to promote the movement so wisely and so auspiciously inaugurated by the Methodist Episcopal Church of the United States to found at the National Capital a great University. This movement I hope will receive the effective support and sympathy, not only of all the members of your great church, but of all patriotic people. Such an institution to serve its proper purpose, to save it from the jealousies and competitions of other educational enterprises in the States should be so organized as to perfect their unfinished work—it must be a National University with a strong emphasis on both words. With the assurance of a deep interest in your enterprise and the most cordial wishes for its perfect and early success, I am,

Very sincerely yours,

(Signed,) BENJAMIN HARRISON.

Some Bolshevists' Definition of Bolshevism.

You shall not have more money than I have—yes, even if you have "earned" it.

You shall not have a better house than I have if you build it.

You shall divide with me on my demand whatever you have over and above what I have.

If you do not deliver of your surplus on my demand you shall meet without buckler my sword.

Violence, then?—do I believe in it? Certainly; it is the only way to deal with the capitalist. Killing is not murder to win or defend bolshevism.

Do I favor dictatorship? Assuredly; there is no other way for the proletariat when in the minority to get and keep control.

I am for revolution to overthrow all the present forms of government.

I am for the confiscation of the property of the rich to pay for the cost of government.

Government should compel the marriage of all marriageable persons. The family is what the government makes it. Women should be nationalized.

Bolshevism has no place in its "system" for Christianity and the New Testament.

From Bethlehem to Versailles—1919.

From Bethlehem's manger and from Calvary's cross He comes alike through gain and seeming loss To put the rule of wrong to open shame, And on all peoples' banners write His name, Through broken clouds of war in sunny France Behold, the standards of our King's advance, The nations join in league of potent peace That war's wild jargon everywhere must cease, For this the world hath waited, toiled and suffered long: The government shall be upon His shoulder strong.

—Albert Osborn.

Working for a Reign of Terror.

"It is a literal fact that in view of our airplane and gas development, including incendiary and other devices perfected here, by the spring of 1919 Germany would have been burned off the earth had she continued the war—a fit retribution, most Americans would say, for the savages who began the war."—William E. Brigham in *Boston Transcript*, on *Chemical War Service at American University*.

A Hundred Million Dollar Collection.

Before the next issue of the COURIER the Methodist Episcopal Church will have taken an Anniversary Collection of one hundred million dollars. When the amount was first announced the eyes of the near-sighted Methodists bulged out until they were stone-blind. Instantly they divided themselves into two joint-stock companies of propers with which to start off in the dark. One of them styled themselves "Can't-be-doners" and the other "No-need-of-sters." But the leaders in the Church said we celebrate the silver, golden and diamond weddings in the family; we will celebrate the Centenary of the Missionary Society which is soon to be here. And as we are pleased to congratulate the happy couples with some appreciation in suitable gifts of our loving relation to them, so we shall show our appreciation of what has been done over the earth by a hundred years of devotion and sacrifice.

Organization has shown what 1,199,367 church members and their friends are able to do. It is seen that 1,199,367 can be subtracted from the total membership, as children and the poor in Christian and pagan lands, and the remaining 3,000,000 by giving only fifteen cents a week will pay one hundred and seventeen millions.

The near-sighted Methodists have been attending prayer-meetings, and they have recovered their sight.

The whole body of Methodists will go over the top with a whoop.

"'Tis A Great Change For Me."

Said an old friend standing on the roof of the American University, "I was present at the breaking of the ground for this building nearly twenty-five years ago. But I would not know the place now. 'Tis a great change for me." Certainly, Washington is coming this way now. Yonder is Cleveland Park where President Cleveland bought the suburban farm and homestead, now a part of the city in which millions of dollars have been invested in beautiful homes. How much of these millions went to the pocket of the President, it is too late to ask him now. Hard by is the well chosen site of the New Cathedral, and some of the buildings started where it is estimated four millions are to be expended to finish the noble structure. There, too, is the St. Alban's Boys' Episcopal School, and the National Cathedral School for Girls. Out this way, by the persistent efforts of the friends of the University, has come this incomparable Avenue, one hundred and sixty feet wide, the whole length of it. It has been finished now to the university grounds, and as stated elsewhere, has begun its continuous journey to the Maryland line. The two splendid marble buildings of the University look diagonally across the Avenue a few hundred yards to the Mount Vernon Seminary on the same plateau, and the palatial country house with broad expanse of gardens and lawns belonging to Mr. C. C. Glover, president of the Riggs National Bank, looks the University straight in the face. The former United States Senator from West Virginia made us neighbor with his stately winter residence on the south, very soon after he came to represent his State at Washington. Across the valley our way from the great Wisconsin thoroughfare a new brick and stone dwelling with pretentious drives about it, sets the sample of buildings we are to have on the Massachusetts Avenue Extension. With the many

courtesies which the president of the trolley railway, Mr. Clarence P. King, has already extended to us, and the many more which he assures us are to follow, the ready approach to this Paradise of the Capital is secure. Still latest, coming closer for a new site, we have heard one of the residents grown up nearby say of the little chapel over the divide,—

"There is a little church in the valley by the wildwood,
No lovelier place in the dale;
No spot so dear to my childhood,
As the little brown church in the vale."
Our neighbors do us appreciative honor.

Table Talk.

Paderewski calls the red uprising a "war against the toothbrush."

There are twenty-five applications for Fellowships in the University this year.

Every week brings in additional books for our library.

When it is not money we are receiving, it is books, curios, souvenirs, houses and lands.

The Reverend Jay Benson Hamilton, D.D., of New York City, has donated his library to the American University.

The American University has paid with profit to the institution as high as twelve per cent on an annuity.

It is now 29 years since the site for the University was purchased. The value of the ground has increased ten-fold.

The University is most grateful for the wide circle of contributors who keep the living stream of shekels running.

We must soon have a new building for books. We have had to fill the attic with shelves to find room for the libraries which pour into the University.

The old farmer who turns over his farm to the University on the annuity plan and receives his installment quarterly is independent and with nothing to trouble him.

The University is under great obligation to the counseling professors who have given such generous service in promoting unselfishly the interests of the school.

The schools, like the business interests of the country, are awaiting with much solicitude the final outcome of the deliberations of the twenty-six nations sitting in the Peace Conference in Paris.

It may have been the protection of the soldiers which occasioned the movement against the saloon, but it is the sober sense of forty-five states, thus far, that has determined to protect the youth at home.

The chemists and their assistants since the signing of the armistice have suddenly dropped from the highest number employed at one time of quite 2,000 to less than 200.

Since the discharge of the soldiers in the training camp on that part of the University grounds known as Camp Leach, a guard of a dozen soldiers from the barracks in the city has been kept on the campus to prevent fires and safeguard the goods in storage.

Will some good friend please donate the University a copy of this year's American "Who's Who?" And will some other good friend, Englishman or American, donate the University a copy of the latest English "Who's Who?"

If the weather were to be inopportune on Convocation Day the two Y. M. C. A. buildings adjoining the open air Auditorium would be at the disposal of the University, and 1,500 to 2,000 persons could be crowded into the two buildings.

The University has secured the only public address to be given in Washington by Chaplain Tiplady of England, whose thrilling accounts of the thick of the battle has sold tens of thousands of his books in Europe and America.

It could be readily discovered that something has happened since the barracks on the University grounds, where from 50,000 to 70,000 soldiers have been in training, have been as suddenly deserted as if shelled by the boche.

The war has not taken away all the University students, nor left the institution in quite the midnote condition of a number of the colleges from which the S. A. T. C. have gone. We have students in at least five departments.

We gratefully acknowledge the donation of a number of valuable books from Mrs. M. J. Hunt. They have been treasured many years in her family because of the association in an early itinerant's library.

Since the University has been compelled to find rooms in the city for some of its work, because of the occupancy of the University buildings by the Government, it would be a great saving to the faculty if some kind friend would donate an automobile.

Now that the Army with the Chemical Warfare Service has gone, or the remnant of which will soon be gone, the question very naturally arises what shall the University do with the more than one hundred and fifty buildings left on the campus.

The Trustees of the University sincerely appreciate the grateful acknowledgement of Secretary Baker and all the official representatives of his Department of the gratuitous use of the grounds and buildings of the institution.

The vacated buildings of the Young Men's Christian Association on the University campus, now that the soldiers are gone, resemble the empty churches in Hawaii when the American Board withdrew their missionaries and left the nation to mission themselves.

No organizations or institutions will be more affected by the wave of prohibition which is sweeping over the nation than the schools of higher learning. The influence of Harvard University secured many years ago absolute prohibition in the city of Cambridge.

The sudden ending of the war, by the Central Powers seeking the armistice, upset all matters in the schools of this country. Military training lost its endowment, or subsidy rather, so that many universities and colleges became financially embarrassed.

The long list of contributors to the several funds of the American University which is published in each new issue of the COURIER represents every section of the United States. The interest in so promising a Protestant institution at the Capital is an evidence of the loyalty and patriotism of the subscribers.

An expert accountant employed by the Trustees has examined the books of the University, bringing the audit down to date. No errors were found and a certified statement is furnished approving the accounts of

both the bookkeeper and treasurer. Two such examinations have been made, which taken together cover the entire history of the institution.

The "permanent building" which the Government agreed to erect on the campus of the University and which it was to occupy for two years after the war, still is unfinished after the expenditure of more than two hundred thousand dollars. The building was to be occupied for a laboratory by the Chemical Warfare Service, and was to be fireproof, being constructed of steel, hollow tile, cement and white-faced brick.

The University is indebted to the Rev. Clement W. Miner, District Superintendent of the Clarion District in the Erie Conference, for a copy of the "Report on the Birds of Pennsylvania," prepared by Dr. B. H. Warren, who was the ornithologist of the Pennsylvania State Board of Agriculture. The book is illustrated by 100 colored plates and has long been out of print.

A portrait of the late Bishop Hurst, former president of Drew Theological Seminary and first Chancellor of the American University, was recently placed in the National Methodist portrait gallery, 150 Fifth avenue, New York, by his son, Hon. Carlton Bailey Hurst, Consul-General of the United States at Barcelona, Spain. It was painted by Senor Sanchez de la Pena.

FIFTH ANNUAL CONVOCATION—PLATFORM—CHANCELLOR HAMILTON SPEAKING, AT HIS LEFT ON FRONT SEAT
CHAPLAIN TIPLADY, SECRETARY DANIELS, DR. S. H. GREENE, AND DR. F. J. PRETTYMAN

Fifth Annual Convocation at the American University.

In the twenty-nine years of the history of the American University, several days stand out as epochal, each marking a distinct step of progress. Some of these are: January 25, 1890, the purchase of the site by John F. Hurst; May 28, 1891, first charter from the District of Columbia; February 24, 1893, second and enlarged charter from the Congress; February 1, 1898, College of History completed, and December 11, 1912, the adoption of the "Working Plan" developed by Chancellor Franklin Hamilton. To this list now must be added June 4, 1919, the date of the meeting of the Board of Trustees and of the Fifth Annual Convocation.

The new advance and expansion of the work of the University was inaugurated by the Trustees by the adoption of a financial and educational program for the next five years. The Trustees themselves liberally subscribed to the nucleus of the fund necessary to its accomplishment. The plan contemplates a large increase both in the teaching force and in the numbers of the student body, and had been wrought out through the labors of special committees made up jointly of members of the Board of Trustees and of the Board of Award. The meeting of the Trustees was large and enthusiastic.

Though the heat was excessive, the exercises of the Convocation were unusually attractive and satisfying.

At 2 o'clock, under the leadership of chief marshal, the Rev. Howard F. Downs, pastor of Waugh Methodist Episcopal Church, the academic procession, headed by the U. S. Marine Band, sixty-three in number, moved from the College of History to the Grove Amphitheater, where the stately tulip trees cast their welcome shade and the light breezes brought refreshment.

Chancellor John W. Hamilton presided with easy dignity and apposite pleasantry. The divine blessing was invoked by the Rev. Dr. Samuel H. Greene, the long-time pastor of Calvary Baptist Church, and prayer was offered by the Rev. Dr. Herbert F. Randolph, Foundry Church's new pastor, who led us into the presence of God. The Rev. Dr. Forrest J. Prettyman, chaplain of the Senate, led the responsive reading of the second Psalm. Chaplain Thomas Tiplady of the British army held the attention of all for forty minutes as, out of his rich experience at the front, he opened both mind and heart in the unity of purpose and spirit that binds together all the English-speaking peoples of the world in the interest of the whole race. His utterances awakened hearty applause. His Christian patriotism shone in his face. A selection by the band here followed—marvelously sweet.

The Secretary of the Navy, the Hon. Josephus Daniels, delivered an address of power and point, putting great emphasis on the spirit of the American Army and Navy as shown in the world war. He spoke from his conviction deepened by his recent trip to Europe. The trinity of culture, patriotism and Christianity, he

said, is the foundation of American government and institutions.

The degree of doctor of philosophy was conferred upon Frank Blair Hanson and Gilbert Owen Nations, whose theses respectively were "The Ontogeny and Phylogeny of the Sternum" and "The Legal Status of the Pope in the Family of Nations." Ten fellowships were awarded for 1919-1920, as follows:

| Names. | Nominating Institution. | Subject. | Place of Study. |
|------------------------|-------------------------|------------------------------------|---------------------|
| Kathryn Laura Behrens | Goucher College | American History | Johns Hopkins Univ. |
| Alexander Brady | Univ. of Toronto | Modern History | Oxford Univ. |
| Henry Chung | Univ. of Nebraska | Recent History of Korea | Univ. of Nebraska |
| Elmer Guy Cutshall | Garrett Biblical Inst. | Philosophy and Systematic Theology | Columbia Univ. |
| Warren Spencer Dudley | Simpson College | Religions Education | Columbia Univ. |
| Evangeline Harris | Univ. of Toronto | Classics | Oxford Univ. |
| Frederic B. Knight | Boston Univ. | Educational Administration | Harvard Univ. |
| Norman Clyde Nicholson | Johns Hopkins Univ. | Tuberculosis | Johns Hopkins Univ. |
| John Franklin Reed | Univ. of Toronto | Philosophy of Religion | Edinburgh Univ. |
| Irl Goldwin Whitchurch | Garrett Biblical Inst. | Philosophy | Columbia Univ. |

The exercises closed on the quadrangle fronting the College of History with the ceremony of the Planting of the Peace Memorial Tree. Lieut. Col. Wilder D. Bancroft, commanding officer of the Chemical Warfare Service and grandson of the historian, George Bancroft, presented the tree on behalf of the War Department, and the acceptance by the Trustees was voiced by Secretary Daniels. The Star-Spangled Banner, the Battle Hymn of the Republic and the Doxology were sung at the tree planting, and the Rev. Dr. John R. Edwards dismissed the people with the benediction.

June Meeting of Trustees.

The meeting of the Trustees of the University in June was one of the most interesting and encouraging in the history of the institution. There was an unusually large attendance. The committee on nominations presented a list of candidates for the vacancies in the Board of Trustees which commanded instant approval, and the following were the persons unanimously elected: E. B. Rosa, A. C. True, William Knowles Cooper, P. M. Anderson and A. C. Christie.

The absence of Bishop Cranston, who had been injured by a fall, was noted and the Secretary was instructed to write him a letter of sympathy. A vote of thanks was given the Reverend J. Benson Hamilton, D. D., of New York and Professor Hicks of Cincinnati University for valuable donations of books.

The report of the executive committee granting the use of the McKinley Memorial Building to the United States Government for a year from the first of July to be occupied by the Nitrate Division was approved. The fellowships announced on another page were awarded and the two degrees recommended by the Board of Award to be conferred were voted. John C. Letts was added to the executive committee.

The general plan of the two additional departments outlined elsewhere was authorized and more than \$25,000 pledged toward carrying it forward when satisfactory provision could be made for the undertaking. The executive committee was given full power in the premises.

The luncheon following the meeting of the Trustees, to which a large number of guests was invited, was served, with Mrs. F. W. Collier acting as hostess. The Convocation exercises then followed in the auditorium in the grove.

University Expansion.

The University has just closed the fifth year since it was opened. Four of the years have been among the most critical in the history of the colleges and universities of the country. Whole departments have been closed in many of them, and in some instances the schools themselves. How could it have been otherwise when the war was waged so largely by the students?

The last two years have utterly handicapped the work of the American University, making it impossible to conduct recitations or give lectures in the University building, as the Government had possession of the entire campus and nearly all the rooms in the buildings. But with all the embarrassments, the institution has managed with instruction and lectures given in the homes of the professors and the churches in the city to graduate and confer degrees upon thirteen persons. As the University is a post graduate institution, the number of students as in all other such schools, particularly in beginning, is limited.

The American University has always laid particular emphasis on the work that may be done by students in the different Government bureaus, laboratories and other departments. In the recent meeting of the Trustees, provision was made to extend this work by employing five additional counselling professors, making ten in all.

Looking to the expanding of the University by an increase of the number of departments, the Trustees authorized the opening of a School of Diplomacy as soon as provision could be made for its accommodation. For the convenience of the employees of the Government who were seeking such instruction and who must take the time after business hours to attend the lectures, it was proposed to open the school in a building near the center of the city.

The plan for the school with the class of students to be instructed and the curricula to be arranged is as follows:

SCHOOL OF DIPLOMACY.

1. Candidates for the Diplomatic Service.
2. Candidates for the Consular Service.
3. The Staff of the Pan American Union.
4. Agents for the Department of Commerce at home and abroad.
5. Agents of the Bureau of Markets, Department of Agriculture.
6. Persons intending to go abroad for commercial purposes.
7. Persons at home interested in foreign trade.
8. Lawyers desiring to specialize in International Law.
9. Foreign Missionaries.

Entrance Requirements.

A candidate for a degree must hold a Bachelor's degree from an approved institution; but a limited number of special students may be admitted.

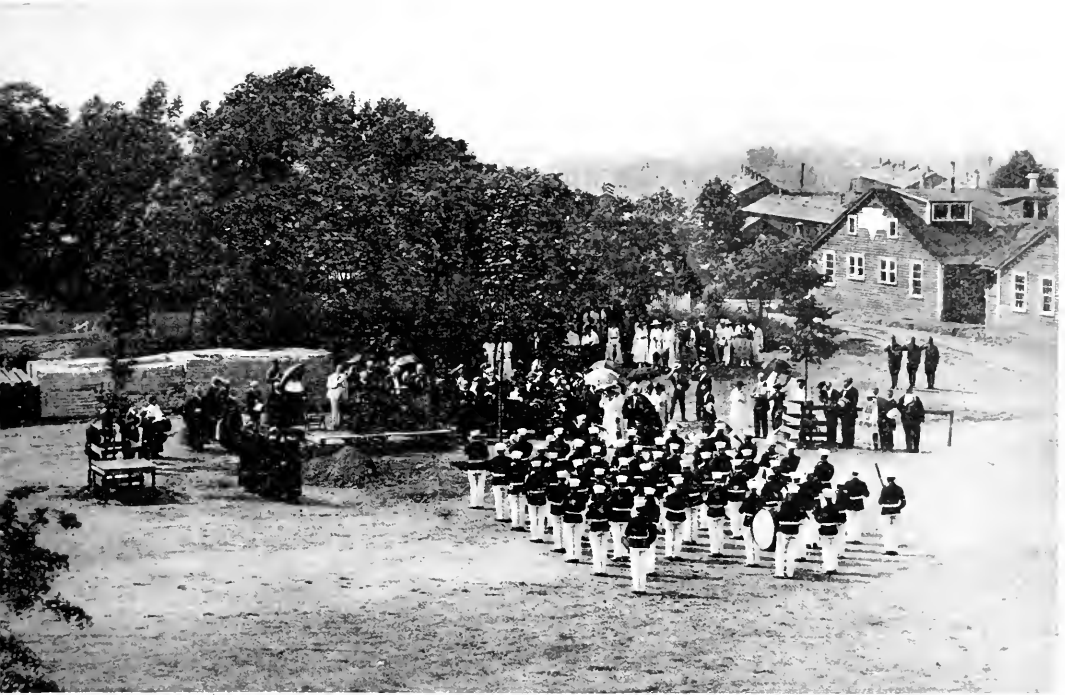

Tuition.

Tuition would be \$120 a year for two semesters of sixteen weeks each. Special students, \$5 per semester hour.

Degrees.

A.M. in Diplomacy or LL.M. in Diplomacy at completion of the course.

Ph.D. in Diplomacy or D.C.L. in Diplomacy after an additional year's research with a satisfactory thesis.

CONVOCATION DAY—PLANTING THE PEACE MEMORIAL TREE ON QUADRANGLE
 CHANCELLOR HAMILTON SPEAKING—Y. M. C. A. HUTS AT RIGHT

Subjects of Courses.

1. International Law.
2. Commercial Law.
3. Comparative Constitutional Law.
4. Latin American Constitutional and Commercial Law.
5. Admiralty Law.
6. Roman Law.
7. Laws of European Countries.
8. Legal History.
9. United States Constitutional History.
10. Modern History Beginning with 1848.
11. History of Diplomacy.
12. Diplomatic Usages.
13. Natural Resources of the United States.
14. Commercial Geography.
15. Political Economy.
16. Lectures on Customs, Races, Religions, etc., of Foreign Countries.

Provision was also made as follows for a

SCHOOL OF BUSINESS ADMINISTRATION.

Entrance Requirements.

A candidate for a degree must hold a Bachelor's degree from an approved institution; but a limited number of well qualified special students may be admitted.

Tuition.

Tuition would be \$120 a year of two semesters of sixteen weeks each. Special students, \$5 per semester hour.

Degrees.

A.M. in Business Administration at the completion of the course.

Ph.D. in Business Administration after an additional year's research with a satisfactory thesis.

Subjects of Courses.

1. Economics.
2. Accounting.
3. Cost Accounting.
4. Auditing.
5. Money and Banking.
6. Banking Problems.
7. Financial Organization and Management.
8. Investment.
9. Foreign Exchange.
10. Foreign Trade Organizations and Methods.
11. Foreign Trade Problems.
12. Railroad and Inland Water Transportation.
13. Ocean Transportation.
14. Markets and Marketing.
15. Advertising and Salesmanship.
17. Statistics.
18. Business Statistics.
19. Business Organization and Management.
20. Business Law.
21. Law of Business Associations.
22. Personal Insurance.
23. Property Insurance.
24. Principles of Public Finance and National Problems of Taxation and Budgets.
25. Labor Problems.
26. American Government.
27. Psychology of Business.

Recent Gifts of Money.

(Acknowledgment of sums less than five dollars is to be regarded as sufficient receipt therefor.)

McKinley Memorial Hall Fund—\$5,000, estate of Mrs. P. L. Bennett; \$25.00, J. C. Howard, T. J. Brooks; \$10.00, Miss H. G. Peabody, B. L. Barton; \$5.00, Miss Mary M. Copes, W. J. Jeandrow, A. E. Piper, W. A. Brown, R. M. Moore; \$4.00, J. E. Evans, T. H. Willis; \$2.10, F. S.

Conger; \$2.00, E. C. Powers, C. D. Taylor, B. W. Meeks, T. M. West, L. T. Higgins, G. B. Hunter, Mrs. F. M. Hildebrandt, Gustin Welch; \$1.00, C. M. Yost, Miss Emma Webb, Mrs. J. H. Perry, J. C. Nicholson, Mrs. Anna Poucher, C. E. Ely, U. S. Wright, unknown friend, Mrs. A. L. Lewis, F. L. Pond, O. P. Henderson, K. K. Quimby, G. H. Carter, C. F. Bonn, B. S. Latshaw, J. W. Ryder, R. D. Stanley, Miss A. J. Blackmar, Wilbert Westcott, W. M. Denniston, Mrs. L. R. George, R. N. Smith, Herbert Preston, E. B. Rowe, I. A. Terrill, E. L. Hutchens, G. H. Cooley, Mrs. W. E. Davis, L. A. General Fund—\$11.00, S. J. MacWatters; \$5.00, T. J. Davis; \$1.25, Mrs. C. A. Baxter.

Library Notes.

The library of the late Dr. Artemas Martin, donated by him to the American University a year ago, a few months before his decease, has been brought from its long habitat on Columbia Street and placed in one of the large rooms of the College of History. Its rich variety of content, especially in the line of mathematics, will find a fruitful field of usefulness when finally classified and placed for reference. It numbers about ten thousand volumes, besides a large collection of pamphlets and journals.

We have lately received the library of the late Rev. Henry Warren Hicks of the Detroit Conference, through the thoughtful generosity of Mrs. Hicks and their son, Professor Frederick C. Hicks of Cincinnati. It contains about 600 volumes of carefully chosen works.

The Rev. Dr. J. Benson Hamilton of New York City has recently given to the American University a total of about four hundred choice books from his collection, thus enlarging and enriching the literary deposits of the University.

Our library now numbers about forty thousand bound volumes and an equal number of pamphlets. These are already clamoring for more space and suitable housing.

Personals.

Colonel G. A. Burrell, who was in command of the Chemical Warfare Service at the American University during the war and who was so helpful to the institution in many ways, is now the President of the Island Refining Corporation with the general office in the Equitable Building in New York City.

Chaplain Tiplady of the British Army, who spoke at the University Convocation, concludes his mission to this country at the Northfield Conference. He sails for England in September.

Acknowledgment.

The American University is constantly receiving courtesies from the Riggs National Bank, the American Security and Trust Company and the American National Bank of Washington, the Penn National Bank of Philadelphia, the First National Bank and the International Trust Company of Boston. All such favors show and warrant the credit for which the University is grateful and determined always to merit.

Good Investments.

We have received inquiries to know how it was possible for the University to pay the interest the Trustees have paid and are able to pay on annuities. Every case will satisfactorily explain itself as it has satisfied the annuitants. The Secretary and Treasurer will be pleased to respond promptly to all inquiries. We have paid annuitants for satisfactory values in properties turned over to us.

Cost of the Public Schools.

The writer can recall an address by a converted native of Africa delivered in Boston more than forty years ago in which the speaker said he could remember when there were no missionaries in Africa and therefore no roads or bridges. Be it said to the credit of the United States, if the taxes are heavy, the money goes more for highways and schools than for any other objects; it is so in times of peace.

New York City spends about \$42,000,000 annually on its schools, Chicago spends about \$17,000,000 and Philadelphia spent last year \$11,800,787. It cost Philadelphia in 1917 for the instruction of each pupil, \$37.63; last year, \$40.15.

Masquerading as Frederick the Great.

Von Bernhardt is at it again. He is trying his pen at "the old trick of stirring up another war. He compares, to this end, the increasing population of Germany with the combined diminished populations of France and England." Then he banks his prophecy of ultimate German conquest on the same old hate which he says will do the rest. He is a vanquished souvenir of "the old school" and that "school does not keep" any more.

School for Foreigners in Washington.

Representatives of practically every European nation are enrolled in the public night school for foreigners, which opened recently at old Central High School, 7th and O streets. Twenty-five students are enrolled in the classes for naturalization. Classes will be held every Monday and Wednesday night. At the close of the school semester public commencement exercises will be held, and the graduates will be certified to the bureau of naturalization of the Department of Labor for admission to American citizenship.

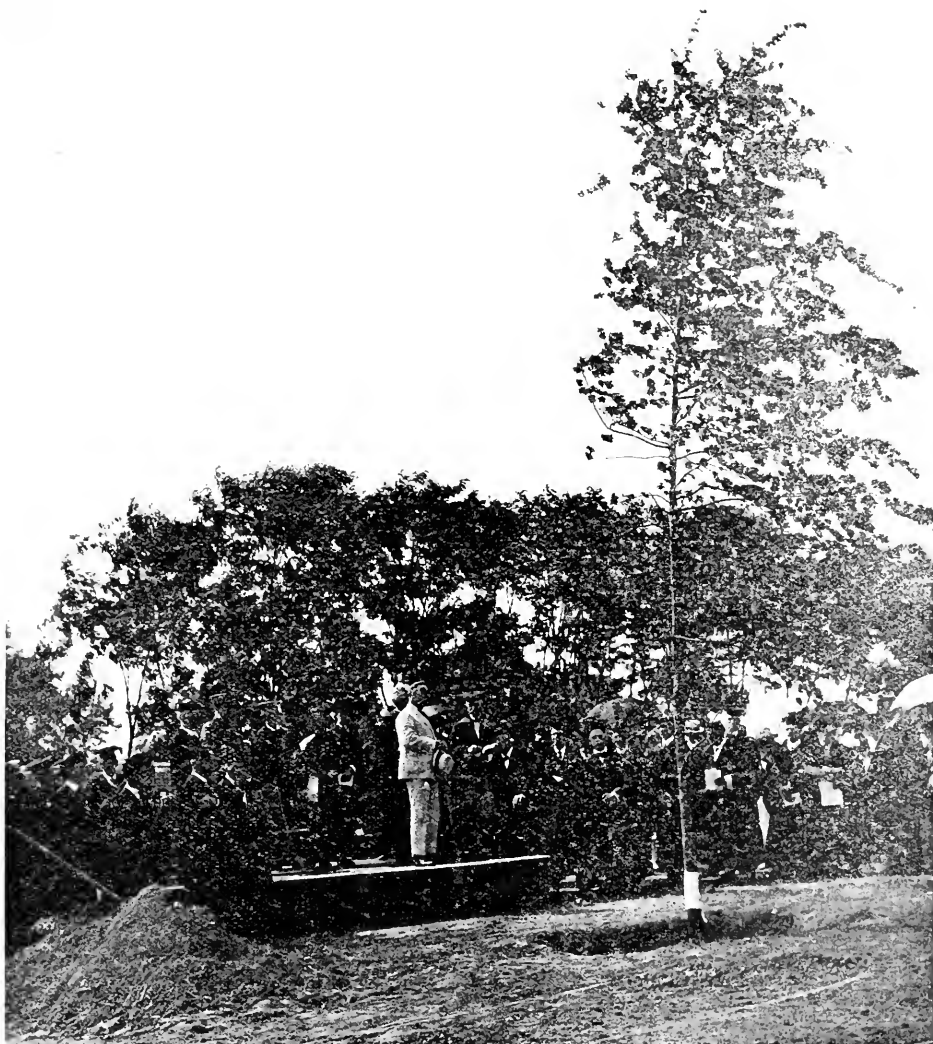

An appropriation of \$18,000 has been made by the Congress to maintain this school and for a great enlargement a little later in the season of the teaching and training for American citizenship in this city.

School of the Mob.

The clue to every trouble does not lie like a root out of dry ground. Most troubles are deep grown, occasionally one may be found which has simply a long tap root, but more have many fibrous or first-form roots. It is seldom a trouble obtains which does not originate in the root. There may be, but not often is, trivial or even a serious matter whose origin and promotion are discoverable wholly in the upper thing itself. It is most likely that the Ellangowan poison-bush which is injurious only when in fruit takes its bane from its root.

There has been much disposition to find the first cause of the so-called recent race riots of Washington and Chicago and account for it. The disposition is to be commended even at the risk of adding fuel to the flames. Nothing has so Saturnized and Satanized the two cities in the eyes of the whole enlightened world as the seventy-two-hour rule of the mob.

It might have been no great surprise to people who live away from there, and indeed to many who live there, that Chicago with so many live coals under the boiler should blow the lid off when the engineer had gone to bed and the stokers were all asleep. But that peaceable, sagacious Washington, the seat of the National Government, with Congress the politrarch of the city, then in session, the President, Commander-in-Chief of the Army and Navy during all the while in the White House, and the inhabitants constantly making proud and loud pre-

CONVOCATION DAY—SECRETARY DANIELS ACCEPTING THE PEACE MEMORIAL TREE
FROM LT. COL. BANCROFT, REPRESENTING THE WAR DEPARTMENT

tense that the metropolis was the pattern, in fine, the prototype of the proprieties for all other cities over the earth, should, as the people sat down to eat and drink and rose up to play strike itself such a blow as to put out both eyes of its reputation in full view of all nations is so appalling that "our ears do make us traitors." Little wonder that foreign peoples call our hypocrisy such a sin against liberty and the pursuit of happiness as never to have forgiveness in this life or the life to come.

Whence came this blow?

One has said the controversies and uncertainties and anxieties and nervous, sensitive, even irritable condition of minds engendered by the seemingly futile attempts of the belligerent nations to make an end of war was the underlying preparation for the explosion of the passions. It may be a distasteful, profitable truth.

Another claims it was the Bolsheviks getting in their work, and the attempt to destroy the Attorney General and his family looked like it.

The newspapers said it was started by the thirst of the many thieves who were come from many wheres to find the city an easy mark for robbery. The murder of the Chinese officials by Chinamen "was proof of it."

Confession was made that it was the breaking down of law and order. The safeguard of the people was one-fifth of the police force of cities half the size of the place.

A great churchman declared prohibition did it. "Bootlegging" by persons who were engaged in the liquor traffic was said to be the occasion of it, and sympathizers cried aloud "that's true." Then were there not a few reckless, lawless self-abandoned and recently dis-

charged soldiers lounging about, looking for something for nothing who would as lief shoot as not? Lastly there was one race negligent of another, constantly slurring, nagging, by reproaching it with its color and inferiority until the outlaws produced by such negligence, contumely and vilipending turned upon their vilifiers and broke out in such "storm as rent the sails that were unfurled." Is it not about time that the public mind should get down to the source of all this insurrectionary trouble and go about the cure of it?

What has come out of all this whirlwind of passion, downright hatred, crime, murder that has not begotten an "ugly treason"? If the riots were the culmination of the tragedies, in what has it resulted but just about as many white persons wounded and dead as colored ones?

What a vicious schoolhouse the public street has been. There were 5,412,364 persons absorbing their education in this national grammarless institute according to the statistics of the census taken in 1910. Of this illiterate population 2,273,603 were of voting age. Of these voters only 788,631 were foreign born. And the illiteracy is steadily increasing in eighteen of the Northern States, the heaviest increase being in New England and the Middle Atlantic States.

Let it be told in the vile streets which are the schools of the mob; tell it to Gath. Publish it in the streets of Askelon that ignorance of one's own interests is the root of all this evil. "He that knows not and knows not that he knows not is stupid. Shun him." "He that knows not and knows that he knows not is good. Teach him."

An Abraham Lincoln Cane.

One object in the John B. Hammond Collection which Mrs. Hammond is forming is of such unusually interesting character that it deserves especial notice. This is a cane which once belonged to Abraham Lincoln. The proof of its authenticity is above question. The cane originally was given by Lincoln many years ago to an old friend in Illinois who was close to Lincoln before the Martyr President as yet had emerged into fame. The friend first preserved the stick as a keepsake, then as an historic relic. Toward the close of his life the owner of the cane, to show his appreciation of certain kindnesses which Mr. Hammond had been enabled to do him, gave the cane to his benefactor as a precious treasure.

The real value of this walking stick, however, comes from the fact that it was made by Lincoln's own hands. And a curious cane it certainly is. It is a long natural hickory staff, fitted only to one of his stature. The wood is left in its knotted, original state and has no ferrule. But the handle of the cane is what attracts instant attention. It is formed crudely of rough white bone, apparently from some domestic animal, and, as a top covering, has nailed on it an old big American copper cent. Clearly this walking stick might have walked straight out of Sangamon Bottom itself. To carry on the street today a primitive club like this would evoke many an uncharitable reference to "the big stick."

But it is just such bits of flotsam and jetsam out of the past that call up to our minds and hearts the true picture of the simple, unpretentious environment wherein grew the "greatest American." Kindly hearts and simple faith are more than Norman blood, we remind ourselves. Aye, verily. Blessed the truth which little boys and girls in our public schools on the twelfth day of each month of February, as the month comes round, write on their writing sheets as the finest tribute possible to him who is of the Immortals,— "Abraham Lincoln was a kind man."

Benevolent Savings Banks.

It is a German proverb that "Saving is a greater art than gaining." It would raise very little question to say, as things go in this country, more money is saved than is gained. The argument for the saying can be found in the immense deposits in the Savings Banks, and other institutions of trust. Compared with such moneys, the ventures in business make a poor showing, since ninety per cent at least of business undertakings leave the persons engaged in them about penniless at the end of their days.

The chief value and virtue of money, like all other human agencies, should be to do good and pay one's way through life. The ordinary Savings Bank is a *negative* trust, simply holds the principal for gain and to furnish a modest interest or income to pay one's debts.

The Benevolent Savings Banks are a *positive* trust, which use the deposit or principal to do good, and at the same time to furnish the interest or income to pay one's way. Such deposits are called annuities. They relieve one of all care of investments, and in trust-worthy institutions of all fear of loss,—are a certain specific against anxiety.

Now that the accumulations in property and endowment of the American University are sufficient to keep it out of debt, have it live within its income, and add a creditable surplus to its accumulations, it is in position to accept and add to its Annuities with "safety first," and splendid opportunity for great usefulness at the same time.

Table Talk.

It is the white people who need education to know how to deal with the education of the Negro.

Intellectual pride is as sure as ignorant pride to go before a fall.

What would have happened to Washington if the educated and Christian people had been out of town?

There are more happenings in Washington in these days than the citizens can apologize for.

The person who discounts religion and education is not a patriot.

Ignorance, prejudice and passion with malice are the three schoolmasters that taught Washington the riot.

The University proposes to open two new departments of higher education as soon as provision can be made for their accommodation.

George H. Maxwell, one of the Trustees of the American University, has founded a department of citizenship in Boston University.

More learning came out of the war than out of all the schools and more religion than out of all the churches.

Mob rule, which is always its own worst enemy, convinces the public for the time being that the standard of the education of the sidewalk is desperately low.

The Washington riot should teach at least the wounded rioters that when persons are drunk or mad the manhood slinks away and what is left runs to brute.

To one who is not wild with partisan insanity, the League of Nations should be a careful study of its letter with excellent spirit through every section of it and decided in the interest of patriotism and altruism.

There is an institution recently opened in the Congress known as the School for the League of Nations. At present the Head Master is President of the United States. He is associated with a strong faculty.

The Chemical Warfare Service, which was started on the University grounds, has received an appropriation from the Congress to continue its work during another year.

How different would have been the condition and conduct of the Negro in this country if he had been treated as sincerely as good and faithful masters treated him before the war!

Learned Germany! Learned, indeed? Poor, ignorant Germany—how little she knew of some things when she forced the United States, at one time her best friend, into the great war!

Orthodox critics go mad over the higher critics and the higher critics ignore the orthodox or sneer. There is something wrong which is not in the learning of either.

While force must be used as a temporary expediency to maintain order in any government, the people are slow to learn that there is no government so successful as that which governs itself.

We fear the frequent repetition in the newspapers of the possible fact that twelve and more millions of Negroes in this country may take to the gun to resist the nagging and neurological killing by persons inflated with the false prejudice of race will do no good.

As the great war schools occupied the grounds and buildings of the University, THE COURIER was expected to give some account of their proceedings. Hundreds of copies of THE COURIER were taken by the soldiers and their friends.

How much have the rioters made out of their rioting, with some of them dead, more of them in jail and still more of them drawing on their poverty for fines? They have killed two or three white persons, but they will hang for their murders.

How long will it take this country to learn that there is political economy, social economy and religious economy, with no little financial economy, in the Christian education of the Negro? Prejudice has put a premium on the ignorance of the colored youth.

What would the referendum amount to in deciding the merit of the treaty with the Germans when not one in one hundred thousand of the population have read and will not read sentence by sentence the four hundred and more pages of the document?

Wherever towns, counties and states give less money for the education of the colored children than for the white, they show their interest in securing more ignorance, poverty and crime for the colored population, than for their intelligence, thrift and integrity.

The unsettled condition of world affairs, with the relation of the United States to them, has gotten on the nerves of the people and is as vinegar to the teeth, setting them on edge. The only cure for the malady must be in calm, deliberate sanity, with fair discussion and impartial decision.

What led to the riots in Washington and Chicago? Plato should be an authority. He said, "The most important part of education is right training in the nursery." The rioters got their education as Topsy got hers; it just "grewed," where there were more weeds than hoes.

There have been no more patient people under persecution than the Africans and their descendants, and by this they have won their friends, who are millions today and will be more millions tomorrow, if patience is permitted to have her perfect work. Guns never make good citizens, but the spelling book, Good Book and pocketbook do.

How little education some persons seem to require to be American citizens? If the winds didn't blow, where would their political information come from? If the present method of preparation (?) for the elections is to continue it will require an anemograph to record the direction and force of the political winds.

Good manners are a matter of education. If all employees could be persuaded to believe this there would be more of them in school and there would be more of courtesy, employment and promotion, and less of meager salaries and strikes for higher ones on simply selfish grounds, if no other.

If more than 250,000 houses were wrecked or destroyed in France by the war, and ten millions of men, little wonder that the persons who started it should call on heaven to witness that they had nothing to do with it. One minute with a lie is so much more easily disposed of than a lifetime with remorse.

Just now there is an awakening of the whole country to the importance of citizenship and Americanization. Give it the turnpike and all the other highways. It was Disraeli who said, "Upon the education of the people of this country the fate of this country depends." A monarchy can run on the education of the king. The republic can not run without the Bible, square and compasses.

FRANKLIN HAMILTON

Bishop Franklin Hamilton

(Reprint from the *Methodist Review*, September-October, 1919.)

By GEORGE P. ECKMAN, D. D.

Delayed twenty-four hours in sailing from Liverpool, Emerson bemoaned the tedium of his lot, and muttered: "Ah, me! Mr. Thomas Carlyle, I would give a gold pound for your wise company this gloomy evening." An uncounted host of lonely hearts have a similar longing for the gracious comradeship of Franklin Hamilton, and sometimes fancy they have it, forgetting that he is gone—so strongly does his spiritual influence persist. Therein lies the secret of the man. Above all his other fine qualities, and irradiating every one of them, was his power to make men love him. It would be an imprudence to print the half of what his friends still say of him. Months after his departure, asked for a critical judgment of his worth, all sorts and conditions of men with one accord praise him. It seems like a conspiracy of affection. We can only guess what the angels think of him, but God apparently shares the sentiment of men, and did a strange thing to show it. He gave Franklin Hamilton the best furnishing for the bishopric that could be provided at the time and then allowed him only two years to occupy it, evidently having a better position for him elsewhere. No other explanation of the facts is adequate. He was born at Pleasant Valley, Ohio, August 9th, 1866; consecrated a bishop at Saratoga

GEORGE P. ECKMAN

Springs, N. Y., May 28, 1916; released from service by what we call death, in Pittsburgh, Pennsylvania, May 5, 1918. Only one man in the history of American Methodism has held his bishopric for a shorter period. Erastus O. Haven was but a year and three months in the episcopate, but he was sixty years of age when elected. Franklin Hamilton was fifty when called to the high office. He was apparently in full vigor of life, but in twice twelve months his toil on earth was ended. Why he should have been permitted to withdraw with his supreme work just begun is a mystery impossible for earthly minds to solve. Judged by human standards there is a bitter irony in such a culmination, but faith rests on the assurance that God makes no blunders, though His strategy be not justified in the sight of men. Martin Luther besought God to reveal the divine purpose in a certain inscrutable event, but he seemed to hear the voice of the Eternal responding: "I am not to be traced."

How great pains God took with Franklin Hamilton one sees from his birth and breeding. He was the youngest son of the Rev. William Charles Patrick and Henrietta Dean Hamilton. His father was a stalwart Methodist circuit rider in Ohio and Virginia, and his brothers were endowed with much force of character. The oldest is Bishop John W. Hamilton, now and for several years chancellor of the American University, a man of eloquence, high executive ability and ecclesiastical statesmanship. The second, Jay Benson Hamilton, is a well-known preacher who has wrought valiantly and effectively for the better support of the

retired minister. The third, Willbur Dean Hamilton, is an artist and painter of portraits. The versatility displayed in the family of the talented Irish preacher flourished luxuriantly in the latest-born son. Out of the straitened conditions of an itinerant minister's home, in a day when salaries were meager and toil was abundant, Franklin Hamilton came forth endowed with many gifts of heaven. He had a fine presence. No man could see him without being impressed that he was an unusual person. His portrait reveals the warmth of his temperament and the dominance of his brain, but one must have observed the whole figure in action to have a true measure of the man's native strength and symmetry. To his physical superiority was joined a mind of singular excellence, an instrument capable of unrenitting toil, enriched by clear powers of discrimination, possessing an affinity for the finer things of the spirit, devoid of disturbing illusions, with wide vision, yet with practical sense; a good usable brain that could keep its balance and would go straight on with the business in hand. The inner nature of the man embodied his body and illumined his mind. He was a gentleman by instinct. His kindly disposition toward men was not an acquisition but a gift. The grace of God was upon him from childhood, and "he increased in wisdom and stature and in favor with God and man." He started life with a strong will. Without it bodily excellence, intellectual vigor and grace of spirit would not have availed to give him eminence. He was so constituted that, having embarked upon an enterprise, he would carry it through despite any discouragements, and having been set down in the center of things various and perplexing he would proceed at all hazards to master them. He had a deep moral nature, quickened and disciplined by spiritual aspirations. He saw truth clearly and embraced it ardently. He loved righteousness and hated iniquity. He was incapable of a mean action. Thus he began with great natural advantages, and it was the peculiarity of his fortune that his friends usually referred to his inherited characteristics as if they had been acquired by his own perseverance and therefore ought to be set down to his personal credit.

What must be put to his account is that Franklin Hamilton met the challenge of the divine bounty by resolving to use it to the utmost of his ability. He did not want to disappoint God. He realized that every achieving man is the joint product of what Divine Providence gives him and what he himself does with the capital intrusted to him. God provides birth, breeding, talents, and opportunity. A man uses or misuses these benefactions according to the spirit that is in him. Jean Paul Richter said: "I have made as much out of myself as could be made of the stuff, and no man should require more." But God does demand that much, so Hamilton thought, and he set to work on the material at his disposal with great earnestness of purpose. What Browning places on the lips of a less worthy man he might have made his own—the claim to have

Braved sorrow, courted joy, to just one end;
Namely, that just the creature I was bound
To be I should become, nor thwart at all
God's purpose in creation, I conceive
No other duty possible to man—
Highest mind, lowest mind; no other law
By which to judge life failure or success;
What folk call being saved or cast away.

He determined to secure an education broad and deep enough to meet any emergency. Under the guidance of his big brother, now the white plumed chancellor-bishop, he began his studies in the Boston Latin School. Here he stood so high that he swept off a whole sheaf of prizes, graduating with much honor in 1883. As the majority of his classmates entered Harvard he naturally went with them. His brother, John W. Hamilton, was then under the burden of the People's Temple of Boston. To pay the boy's bills was beyond his power. The brother next above Franklin in age, then also a resident of Boston and who died of a surgical operation many years afterward, undertook to finance the lad in college. It turned out to be a not difficult task, for Franklin nearly worked his way through on the prizes and scholarships he obtained. In 1885 he won the Old South Prize for historical studies in Boston. During his course in Harvard he secured both the Bowdoin and the Boylston prizes. He became editor-in-chief of the Harvard Daily Crim-son. He was also chosen a member of Phi Beta Kappa and a member of its literary committee. The two hundred and fiftieth anniversary of the founding of Harvard occurred during his junior year, and he was elected to deliver the oration for the undergraduates, the alumni address on the same occasion being given by James Russell Lowell. Both speeches were printed in a book published to commemorate the event. Franklin Hamilton was selected as class orator and served also as one of the Commencement speakers, graduating with much distinction in 1887. How he appeared to the student body in his under-graduate days is well described by one of his classmates, who says: "I shall always remember the first impression which Hamilton made upon me. I did not know him even to how to, but I was tremendously impressed with his appearance, which was always that of a serious, high-minded scholar. . . . His features were so clean-cut and so strong and his whole bearing was that of a man much older than he really was. In fact, I was two years older than he and yet I always felt his junior." After graduation he spent a year teaching Greek and Latin in Chattanooga University. Then, being still unsatisfied with his scholastic attainments, he went abroad and spent nearly three years in post-graduate courses at Berlin University and in Paris. At Berlin he was a favorite pupil of the celebrated Ferdinand Piper, with whom he engaged in researches in pagan antiquities and symbolism. A fellow student in Berlin University says that together he and Hamilton listened to Zeller, Paulsen, and attended Paulsen's Seminary on Kant, and testifies: "Hamilton had a superb mind, and was in fact one of the two most brilliant men I ever knew as a student." One can readily fancy with what ardor Franklin Hamilton followed the bent of his intellectual craving as he pored over the treasures to be found in the capitals of Prussia and France and mingled with the personages who could best satisfy the aspirations of his soul. He was a student all his life, and when his formal education was finished he was just beginning that expansion of his equipment which never ceased until he breathed his last on earth. Doubtless his researches continue in the invisible world whither all too soon he took his pilgrimage.

God did not stop with simply endowing Franklin Hamilton. He issued to him a summons to spiritual leadership. The lure of the Christian ministry caught

and held him. With a father and two brothers in that sacred calling it would naturally be suggested to his mind. But was this an intimation from heaven or the mere outgrowth of his surroundings? At last the drift of events and the desire of his own soul united to determine him. The conviction of his mission was upon him in Harvard. Professor George Herbert Palmer, after saying that Franklin Hamilton was a favorite student of his, standing among the first in his course in ethics, continues: "I thought him so promising that I suggested to him that he devote his life to teaching philosophy. . . . Such a life was very attractive to his taste, and I think it was largely on that account that he refused it. He had a soldierly temper and was determined to give his life to the poor and needy. Nothing could divert him from the ministry, though I felt he would be as true a minister in the teacher's chair. He gave himself to his work with all his heart." Those lines are worth pondering. They not only show Hamilton at a crisis deciding for the higher interests, but also reveal his love for humanity and his purpose to give sacrificial service to his generation.

A German university even before the war was not regarded by thoughtful Christians as a congenial place for the development of spiritual ideals, but in the case of Hamilton the reactions of Berlin were all to the advantage of religion. Professor E. A. Ross, of the University of Wisconsin, who was with Hamilton in Berlin, says: "Often we have sat until one or two o'clock in the morning nibbling rye bread sandwiches and pretzels, washed down with cocoa, and discussing philosophy or metaphysics. We ranged far afield in our philosophical discussions, but he always came back to the fact that in any case he was going to go home and work in the Methodist Church because he loved it and believed in the work it was doing. Where we came out in metaphysical discussions did not seem to give him much concern, for his mind was all set on behalf of the emotional and practical attitudes that his Methodism involved. In this, of course, he was quite right from the point of view of the latest psychology, for the attitudes of strong and leading men never flow from their speculations but from their fundamental reactions to life and experience."

On his return from Europe Franklin Hamilton entered the Boston School of Theology, from which he was graduated in 1892, being one of the Commencement speakers of the year. In this school of the prophets whatever depletion of the evangelical spirit he may have suffered in Berlin was corrected and his zeal for the service of humanity through the ministry of the gospel became intensified. He entered the pastorate with much enthusiasm and gave himself immediately to successful work. From 1892 to 1895 he was stationed in East Boston, where he organized a church and built its edifice. From 1895 until 1900 he was pastor of the church in Newtonville, Massachusetts, and in 1900-1908 of the First Church of Boston, the longest pastorate in the history of the church up to that time. His brother, John W. Hamilton, had been pastor of the church twenty-five years before and this afforded him a fine introduction. The union of the First Church on Hanover Street and Grace Church on Temple Street was effected at the beginning of his pastorate. During his work there, so writes one who has been a member of that church since 1875, "He was constantly active, alert, and able

in forwarding all lines of Christian activity and was greatly beloved by all of our people. The most extensive repairs and improvements that have been made since the church was originally built were projected and carried to completion during his pastorate." He also took an active part in the municipal campaigns for civic reform. It was during this term that with his family he made a tour around the world, 1904-1905, spending much time in the Far East, where he studied foreign missions and acquainted himself with the literature and philosophy of the Oriental religions, thus fitting himself for missionary supervision and for certain literary productions which were to give distinction to his name as a writer.

From the pastorate to the chancellorship of the American University in 1908 was not so abrupt a transition for him as it would have been for some others, since so large a part of his life had been spent in scholastic experiences. However, the teaching function was not the primary requirement for the new position. He was now to assume the responsibilities of a high administrative trust. Sixteen years in the pastorate had given him valuable acquaintance with the business of handling money and men. But here was something essentially different. Scholarship would count for little more than to give prestige to an institution which must have for its head a man of erudition. What was most needed was a masterly hand to guide an enterprise which had never enjoyed the enthusiastic support of the church and the very practicability of which was still in question, and to make it succeed by skillfully securing friends for it and wisely directing its career to an achievement which would compel general approval. No formal inauguration occurred when he was inducted into the chancellorship. As another has said, "He quietly took the reins and held them." The situation was so unhelpful that many persons admonished Hamilton that he was making an undue sacrifice of his own interests. But no sooner had prosperity commenced to dawn on his undertaking than critics began to suggest that he had assumed the difficult thing only to feed a fond ambition. The cynic must always find some reason for a sacrificial act which his nature is incapable of explaining apart from a selfish motive. The fact which impressed the church was that Hamilton was surely making headway, and immediately the place which he had taken when it was most undesirable began to appear very attractive to other persons. Consequently the tone of comment changed toward him and his work.

His approach to this task could not be better described than in the words of Bishop Cranston, published in *The American University Courier*, July, 1918:

Under the circumstances a weak man would have summoned the Board to a pretentious program which would have been a trumpet challenge to all adversaries. But Chancellor Hamilton came without pretense of skill or special wisdom. He brought no set program of campaign. He proposed no spectacular methods. He just came and went quietly about the drudgery of his office, first acquainting himself with every detail of the university's affairs and interests. His business instinct took quick account of essential values. He saw the need of keeping the Board constantly advised as to the condition of its trust, to the least item. He established close and confidential relations with his advisers, and relied so fully on their judgment that from first to last the administration was harmonious.

Not one breath of useless lamentation did the new chancellor waste over the chronic inertia that had been for years

the comment of the unfriendly and the disappointment of the friends of the university. He quietly garnered every hopeful utterance and was cordial to every friendly expression of interest in its welfare. He made no catalogue of adversaries, nor did he seek to identify anybody as such, but as if oblivious to all adverse influence he suavely smoothed his way into every bellicose group or camp without apology for his presence, accepting good wishes for active cooperation and even apathetic neutrality as loyalty. Who could fight such a man? Winning new friends for his cause, silencing old enemies and making no new ones, he largely succeeded in creating a new atmosphere for the university, especially in the Church.

Then came the new Chancellor's plan for the actual opening of the university and the partial fulfillment of the dream of its founder, Bishop Hurst. This scheme was outlined in an article which appeared in the *METHODIST REVIEW* for March, 1914, and which is one of the best pieces of writing Hamilton ever did. It presents at the beginning the characteristic intellectual demands of the age; namely, the search for the ultimate reality, the vitalization of truth when discovered, and the extensive development of individualism. He then proceeds to show in most practical fashion how the American University can meet these requirements; first, by utilizing the immense treasures laid open by the government in Washington for scientific research and scholarly investigation under capable direction; second, by the establishment of lectureships at the seat of the university, or wherever else may be deemed advisable, through which priceless knowledge may be made available to an increasing number of inquirers; third, by the maintenance of a system of fellowships granted to qualified students on the nomination of other universities for work to be pursued in any approved educational institutions or other places of investigation in America and in foreign countries. This plan was not born in a day. It took form after two years of conference with bishops, secretaries, religious and secular educators, statesmen, administrators, and leaders in almost every walk of life. At about the same time that it appeared the plan was placed before the Board of Education, the Educational Association, and the University Senate, all within five weeks, and adopted by these three bodies, unanimously by two of them, with practical unanimity by the third, and seriously and cordially by all. The American University was opened May 27, 1914, in the presence of a large company, with impressive exercises, in which President Wilson, Bishop Cranston, Bishop McDowell, Secretary Daniels, Secretary Bryan and other distinguished men participated. The plan was put into operation as rapidly as possible. Its beginnings were modest, but they went steadily forward and have continued during the present administration. The director of research was appointed and the work under his guidance has gone on with fine results. There have been forty-three annual fellowships granted in Columbia, Yale, Harvard, Johns Hopkins, Chicago, Northwestern, and other American universities. Some fellows have been accredited to institutions abroad, but the war made it impossible for them to use their privilege. Students have come from institutions within the church and from many on the outside. The lectureships are awaiting an opportune moment for their establishment.

It frequently happens that the bookish man is barren of hard sense and does not take kindly to financial affairs. It was quite otherwise with Hamilton. The vision of a great Protestant center of intellectual and moral influence at the heart of the nation captivated him. Many men could have that experience without

the ability to actualize it. To the surprise of most persons who were acquainted with the situation Franklin Hamilton immediately developed great strength in the handling of business. During his administration the productive endowment of the American University was greatly increased. With consummate skill he reorganized its funds and placed the institution on a sound financial basis. After his death the President of the Board of Trustees of the American University wrote: "He had great executive ability, tireless energy, and was a natural leader of men." The treasurer of the Board wrote: "He was a man of great gifts, eminently successful in the administration of business affairs and greatly beloved by all who were associated with him."

It is believed by those who knew him best that Hamilton's deepest longings would have been satisfied had he been able to proceed with the chancellorship of the university until it had realized and justified the hopes of its promoters. But the church had further business for him, and in 1916 he was elected to the episcopacy and assigned to the Pittsburgh area. By a strange providence he came into the territory which his father had traveled as a preacher many years before. He did so at the request of an influential body of ministers and laymen. It is confessed by the leaders of that section that Franklin Hamilton surpassed their expectations. He uniformly made a fine impression on the Conferences over which he presided. He showed a large grasp of the problems of his office, and he dealt like a statesman with the situations he met. In the fall of 1916, after he had held the three Conferences of the area to which he had been designated, the editor of the Pittsburgh Christian Advocate wrote:

Bishop Franklin Hamilton is here with a defined area of three strong Conferences in the heart of the nation and of Methodism. He came to his kingdom, however, not as resident Bishop, but as president of the three Conferences which he has just held in as many consecutive weeks. It is simply to state the truth to say that he has won the hearts of the leaders of the people called Methodists in this region, the preachers and laymen who attended the Conference session this year. He has shown himself gracious, strong, discriminating, commanding and efficient. He was among the brethren as a brother. In his addresses he was very much more than pleasing, though he was that in an eminent degree; he touched the depths of the best Methodist and human feeling; he stressed the vital truths of the Christian religion and interpreted them in the thought of the age. He faced very difficult situations in two of his Conferences, but in a brotherly way showed himself master.

This judgment was approved by the Methodism of the entire territory and was sustained and strengthened by the new bishop's work in the two years of service permitted to him.

To be a bishop is not so desirable a thing that any man should want it for his own satisfaction. The temporary honors that it brings are embittered by the care and anxiety which attend it. The fame of it is terribly short. Very few persons, and they chiefly of the ministry, could at this moment recite the names of our living bishops in full; and in the next generation the record of a majority of these conspicuous leaders will be reduced to a single line in the Year Book. If a man has been a successful educator, a trenchant writer, or a missionary who has lived and died for a heathen tribe, he will have secured a greater earthly immortality than any bishop can obtain apart from some monumental service of his character. On all accounts it is safe to assume that if a sensible man

really wants to be a bishop he is impelled by a desire for a place in which, under most exacting circumstances, he may use an opportunity of wide possibilities for the good of humanity and the glory of God. The significant thing is that men of Hamilton's type seek position in the Church and not in the state. He would have made himself a man of mark in any field. The Church elevated him, not because she lacked men, but because she regarded him as a man she could not afford to leave outside the bishopric.

It was during his chancellorship that the Church came to know Franklin Hamilton as an orator. His sermons and addresses while in the pastorate had charmed the congregations which heard them. The official necessity of appearing everywhere in the United States in behalf of the university gave him a wide and diversified auditory. His growing fame called him to the lecture platform and to the pulpits of the strongest churches. In all these opportunities he showed himself a speaker of distinction. It was in his brief tenure as a bishop, however, that he attained the climax of his reputation for eloquence. His experience in forensic discussion had been limited. He was still a learner in the school of general church business when he died. His type of mind does not naturally run to debate. His scholastic training was not calculated to incite ecclesiastical controversy. But his broad knowledge of affairs made his counsel invaluable. Familiarity with foreign missions and a growing acquaintance with the problems of the episcopacy in America were urging him to combat, and as often as he essayed to measure weapons with a contestant he handled himself adroitly and well.

It was on the platform and in the pulpit that his characteristic talents had their freest and fullest exercise. Here he was masterly and imposing. His rich stores of information gave him abundant material. He had been reared in the best traditions. He spoke with fluency and accuracy. His speech was enlivened by historical allusions and by illustrations from travel and common life. He knew the human heart and how to touch it. The rhetorical finish of his periods and a certain stateliness of language always at his command would have diminished his popularity had he not possessed so gracious a manner and so evident a purpose to get into intimate understanding with his audience. He knew the worth of pathos and humor, of vivid narrative and large free-hand pictures, and he used them effectively.

He was not vociferous but he was forceful. His reserve was an element of power. It left a true impression that he was greater than the things he said. After he became bishop, with the immense pressure of the new task upon him and the enlarging vision of things yet to be, he frequently overflowed the banks of reserve and was borne along on a wide and deep current of emotion. Great stories are told in the Pittsburgh area of his eloquence. He seemed to experience a new birth. His audiences were sympathetic, they drew upon his resources, they fairly transfixed him. It is a pity he could not have gone on. Perhaps then we should have had an orator of a new type and of surpassing quality. Unless, indeed, the drying and deadening process of official life had paralyzed his fancy. It is commonly remarked that after a few years in the bishopric most men begin to decline in preaching power. Insufficient time is allowed for pulpit preparation. The puzzling problems of admin-

istration clog the mind. What is more determinative than anything else, the lack of personal touch with the common people impairs the element of vitality. Hamilton's deep interest in mankind and his joy in mingling with all classes would doubtless have preserved him from this deterioration. The severely logical quality of mind was denied Hamilton. Of course, he had reason with him but he was not essentially argumentative. He fulfilled in a striking way the dictum of John Burroughs respecting oratory: "The great secret of eloquence is to set mass in motion, to marshal together facts and considerations, imbue them with passion, and hurl them like an army on the charge upon the mind of the reader or hearer."

It is not difficult to conjecture the development of Franklin Hamilton in the bishopric had he been spared to the Church another score of years. His mental and moral characteristics give the indication. He had an alert and inquisitive mind. He was eager to obtain knowledge from any source. Thus he gathered an immense fund of information on a great variety of subjects. He possessed an unusual memory. His acquisitions were always ready for use. This made him an attractive conversationalist and an effective public speaker. Apparently no topic of current interest or general literature could be presented on which he was unable to discourse intelligently and profitably, while in the distinctive fields of his own investigation he spoke with the tone of authority. But nothing was left to the chances of a public occasion. He was most painstaking in his preparation for speech. His subjects obtruded themselves upon his mind at night and were clarified by thought in the darkness. Frequently he would outline an address or sermon on his pillow or he would frame the form of something he desired to write. He did not find it necessary, like some, to rise and set down his thoughts and expressions. He would readily recall them in the morning. Many speakers have found that addresses thus conceived are not as fine under the glare of daylight as they appeared to be under the haze of midnight. It was not so with him. He had remarkable powers of concentration. The noisy playing of children in his workroom did not disturb him. The mental equilibrium of the man and his wide acquaintance with people and countries made him adaptable to any society. He was welcome wherever he went, and no more agreeable guest ever entered the home of a stranger. Archaeology was one of his fondest pursuits. Antiquities had for him an irresistible charm. He was a born collector, and carefully cherished his accumulating treasures. When he made his episcopal visit to Porto Rico he spent his leisure in searching for things rare and ancient till he found a couple of old Spanish pistols, which he later gave to his sons; also two old swords for the same recipients and pieces of very old mahogany furniture for his wife. He owned one of the best private collections of Wesleyana in America, and compiled the bibliography used by Methodists in celebrating the two hundredth anniversary of the birth of John Wesley.

In temperament he was fortunate, being invariably cheerful. His poise was not disturbed by those alternations of despondency which often harass men of sanguine disposition. Great seriousness, however, marked his demeanor in the presence of difficult problems. He had much personal charm. His inherent winsomeness was heightened by culture and refined

by religion. "Given a fair chance, he could make any man his friend," said one who knew him in the most sacred intimacy. Suffusing all his qualities was an indefinable spirit which captivated as if by magic those who met him. This is not to be confounded with that ready affability which is a fortune to the apt politician. It is a more delicate thing and eludes definition. Hamilton could not be indignified even when playful. One of his classmates in Harvard says it would be impossible to think of him as slapping a comrade on the back, or being the object of such a boisterous token of good fellowship. It was difficult for him in his student days to unbend. This was not a pose but a constitutional trait. Hamilton felt this limitation, and in after years overcame it in large measure. The one charge against him in college was his seriousness. This prevented him from being popular in the ordinary sense. He seldom mingled in the lighter affairs of his class, yet he commanded universal respect. No better proof of this can be given than his election by the class to the position of class orator on Commencement day. No one thought of contending against him, not because he was popular but because he was proficient.

One explanation of this early seriousness was his necessity to work to keep himself going. Another is the native modesty of the man. The aspiring soul can be diffident. The scholarly man is usually cautious about pushing himself. "If you ever hear me talk of myself stop me," he often said to his wife. It was characteristic of him to retire from view even when the occasion demanded his presence at the front. At Pittsburgh his ministers found it necessary forcibly to drag him out to receive the publicity to which he was entitled as a bishop. Yet this man, so hesitant to assert himself, when time and the occasion required it was fearless in the performance of duty. He was masterful in dealing with the problems coming to him as university chancellor and later as bishop. It is said in Pittsburgh that the courteous gentleman was also the firm administrator.

Deep conscientiousness lay at the heart of all his work. Duty was the great word in his lexicon. His epitaph reads: "He was a good man and a just." Tireless in his efforts for others, friendship was almost a religion with him. Such a man will have strong personal influence. It was not what he did but what he was that held men to him. In the General Conference he was unobtrusive, almost silent, save in committees. No man listened to debate with more serious attention. His very gravity was influential. His election to the bishopric was a testimonial to the impression of solidity he made. It was believed that he would exercise the office with dignity and force.

An ecclesiastical leader requires diplomacy. This he possessed in a marked degree. No one could more gently approach the irritated or more effectually assuage the fretful. The only fault named by one who was very close to him was his desire to please every one. It is held that such a policy ends in pleasing no one. If it is not chastened by judgment, regulated by conscience, and held in leash by duty, it will indeed squander itself in vanity. But if it is an honest desire to be helpful in every case, while sacrificing no responsibility, it will stabilize character and save the man who has it from prejudice and partiality. This

is what resulted in the case of Franklin Hamilton, than whom no fairer-minded man ever lived.

Probably none but his closest friends dreamed what fervency he would put into his work as a bishop. His life had been calm, in part cloistered. He was unacquainted with the noise of controversy. But no sooner was he at the business of episcopal supervision than he burst into flames. His nearest comrades believe that he worked himself to death. While chancellor of the university he wrote hundreds of letters with his own hand that he might economize in the expense of clerical help. He gave himself to details which should have been handled by some subordinate. He watched his trust with consuming attention. When he came to Pittsburgh he seemed to be hunting opportunities for work far beyond his or any other man's strength. He had no ability at refusing invitations for public service. On the Sunday before his death he preached three times in Wheeling, West Virginia, and on Monday lectured for the benefit of a church in Pittsburgh. Meanwhile he had been assiduous in preparations for the entertainment of the Board of Bishops, whose semi-annual meeting opened in his city on Wednesday. The Sunday following he fell on sleep. A former classmate in Harvard said of him: "He was too serious. He had a real New England conscience. He did not know how to play any more than some of his Puritan ancestors."

His home was the world in which his character was most graciously exhibited, and those who dwelt there experienced the joy of his presence and the nobility of his influence as no others could. He was married to Miss Mary Mackie Pierce, daughter of the late Hon. Edward L. Pierce, the biographer of Charles Sumner. They had two sons, Edward Pierce and Arthur Dean, and one daughter, Elizabeth Louise. The elder son was a lieutenant of artillery, and served by appointment in a colored regiment in the American forces overseas during the late war. The younger son was in training and soon to embark for France when the armistice was signed. It is a touching circumstance that, while Franklin Hamilton tossed in the troubled billows of his latest hours, his mind anxiously clung to the hope that he would receive tidings from the boy who had gone to fight for freedom, telling of his safe arrival in Europe. The message came, but not till the father's eyes were closed, and then it was placed in his white hands and went with him to his last resting place.

Franklin Hamilton's interest in life was profound. He loved its atmosphere and its burdens. His plans were many and they were full of color. He was prepared for a mighty conquest. He served in the midst of a world war that gave him great solicitude. He saw the bright prospect awaiting Christianity when the conflict should be terminated. He was not given the opportunity to participate in the new development of civilization. One can be sure that he would have bestowed upon the church a bishopric that would have adorned her history had he been permitted to remain on earth. Comparisons are impossible. It is a new day, and he was a new kind of bishop, essentially adapted to the age in which he appeared. By so much the more is the loss sustained by the church irreparable. Yet none can doubt he marches forward in some high mission among the sons of light.

John La Monte Hurst, the eldest child of Bishop John Fletcher and Catherine E. La Monte Hurst, was born May 14, 1860, at Passaic, N. J., and died October 10, 1919, at Denver, Colorado. His first eleven years were spent in the changeful life of his father's itinerant service of the Church in the varied fields of northern New Jersey, Staten Island, and in Bremen and Frankfort-on-the-Main, in Germany. His next nine years he lived at Madison, N. J., among the pleasant groves of Drew Theological Seminary, taking his preparatory course for college at the Centenary Collegiate Institute, Hackettstown, N. J. He took his bachelor's degree at Harvard University in 1885, and afterward graduated from Harvard Law School.

From early life to his latest days he suffered severely from asthma, which proved a handicap to him in his ardent desire and earnest effort to perform high and marked service in literary, educational and religious lines. He made several contributions to *The Independent* and other periodicals. He traveled extensively in Europe and for a few years was in Rome, where he served in the American Legation and Methodist Mission.

His adult years were chiefly spent in Denver, whose atmosphere and altitude were helpful to his physical comfort and doubtless prolonged his life. His death occurred at St. Luke's Hospital, after three weeks of acute sickness. Funeral services were held October 11 at the Warren Memorial Church, Dr. Albert Hurlstone, pastor, in charge, and Bishop Francis J. McConnell made the address. Interment was made October 14 in Rock Creek Cemetery, Washington, D. C., in the family lot beside the graves of his father and mother and sister Blanche. Bishop John W. Hamilton and Rev. Albert Osborn conducted the burial service. His sister Helen, Mrs. Gordon, of New York City, and two brothers, Dr. Carl Bailey Hurst, Consul General at Barcelona, Spain, and Col. Paul Hurst, U. S. A., survive him.

Mr. Hurst was deeply interested in the American University, to whose collection of historical pieces of furniture he added a valuable souvenir—a settee or sofa used in the White House by Abraham Lincoln.

Table Talk.

Is there any place or anything for which education is not needed?

The education of most of the people in this country is not in the little red schoolhouse. It runs loose in the atmosphere and is picked out much as they are trying to take nitrogen from the air to commercialize it.

Men in high places are often as ignorant of the qualifications needed for the welfare of the people as the youth who goes to school in the street. Ohio has had the experience recently that there was not enough moral intelligence in the public officials to prevent the prize fight.

What is the matter with the education of the man who says, "Gladstone may have spoken the truth when he declared strong drink destroys more lives than war, pestilence and famine. But such is my conception of personal liberty, I would have to favor the continuance of the saloon, though all my sons because of it should fill drunkards' graves"?

JOHN LA MONTE HURST

"Only a crowded metropolis can satisfy the craving of the discharged soldiers for excitement. There the dangerous, ever latent blood lust of the brute in man, aroused by four years of legalized killing, incites to homicide. Murders have multiplied and street battles are the matinees of the populace."—*Victor S. Clark, Germany in Revolution, Atlantic Monthly.*

If the armistice has been signed, it must not be inferred that the War Department has assumed that there is no further need for guarding against trickery, betrayal and possible war. Our share of military occupancy is provided for in Europe, and certain of the camps in this country are kept for the trained soldiers which might be needed.

The writer met a gentleman recently who had offered a set of resolutions in a large and miscellaneous assembly concerning the League of Nations, and a few minutes later he confessed he had not himself read the lengthy pages setting forth the demands of it, but he added, "I think I can risk my opinion on what certain men are saying of it." Education! Oh, Education! Thou art a distant dilemma.

There is an awakening to the relations of native Americans to the stranger within their gates. The Fourth of July feeling of superiority which the native of the United States has continually manifested toward his neighbor of foreign birth has been so inconsistent and un-Christian that he is looking about him in every direction with the fear lest the foreigner has turned anarchist and is about to repay him with compound interest for his behavior toward him.

The American University League.

This is a league of the friends of the university, who desire to speak well of it, know more about it, and help in any way that they can and whenever they can. It requires no previous examination or special literary qualifications to become members. If any one is interested enough to send in his or her name and address, with twenty-five cents to cover cost, it will be entered as a subscriber to the *University Courier* without money and without price. If a hundred thousand names are sent in they will all receive the *Courier*, to assure them of their acceptance as members. The university seeks first of all to increase the number of its friends. Often a postage stamp is as good as a dollar to "show which side you are on."

PROPERTY PURCHASED AT F AND NINETEENTH STREET FOR DOWNTOWN BRANCH OF THE UNIVERSITY

DEAN ALBERT HUTCHINSON PUTNEY.

Albert Hutchinson Putney was born in Boston, Massachusetts, September 28, 1872.

He received his A.B. degree from Yale University in 1893, being an honor man in political science and history; in 1895 he received from Boston University, School of Law, the degree LL.B.; and in 1918 the Ph.D. degree from the American University.

He practiced law in Boston from 1895 to 1898, and in Chicago from 1899 to 1913.

He was Professor in the Illinois College of Law for twelve years, from 1900 to 1912, and Dean of the same college from 1901 to 1912. From June, 1912, to September, 1913, he was Dean of the Webster College of Law. He then came to Washington to take the position of Chief of Near Eastern Division in the Department of State, which position he held until resigning on February 4, 1920, to accept his present position with the American University. In 1914 he joined the staff of the National University School of Law, which position he held until January, 1920.

He is the author of the following works: Government in the United States, 1901 (published by the Government as a textbook for use in the public schools of the Philippine Islands); Law Library, 12 volumes, 1908; United States Constitutional History

and Law, 1908; Currency, Banking and Exchange, 1909; Corporations, 1909; Principles of Political

DEAN ALBERT HUTCHINSON PUTNEY

Economy, 1909; Bar Examination Review, 1910; Handbook of Election Laws (with James Hamilton Lewis), 1912.

Dr. Putney is especially strong in Law, Diplomacy, and History. He has had twenty years' experience as a teacher, during nine of which he also served as dean of the law school with which he was connected. He has had six years' experience as Chief of the Near Eastern Division of the State Department, which includes the Balkans and the Levant.

He was a Counselling Professor in the American University during the years 1918 and 1919.

UNIVERSITY EXPANSION.

The American University, having been surrendered to the War Department for three years, with one hundred thousand soldiers coming in and going out of the permanent barracks erected on fifty acres of the campus and three thousand chemists and their assistants in more than a hundred more or less temporary buildings on the other parts of the grounds, it has not been convenient to "keep school," except in the homes of the professors or offices in some of the Government buildings far down in the city.

The inconvenience of long trolley rides, however, satisfied the Trustees of the University that at no distant day the University must have facilities down in the city to accommodate students from the more than one hundred thousand employees of the Government, many of whom desired the benefit of the post-graduate school.

As the War Department is still in possession of the University grounds and buildings, an effort was made to rent some property in the city for the University work. It was soon found that the rent of buildings at present prices in a very few years would amount to enough money to buy property if any could be found for sale. By a combination of circumstances, not to say accidents, it was learned that several old-time residences in excellent repair, aggregating a value of \$75,000 to \$80,000, would soon be placed on the market. In the hurry, if not haste, which made no waste, the Chancellor, who was afforded the opportunity through the foresight and insight of the president of the Riggs National Bank and Treasurer of the University, Mr. Glover, made deposits to guarantee purchase on the block of buildings at the corner of F and Nineteenth streets, the corner house being rented by the Postmaster General. Immediate arrangements were made to open in the large building, No. 1907, known as the Cassell residence, the three schools of Diplomacy, Jurisprudence and Citizenship. The lower floor of this large building readily accommodates classes of sixty to seventy-five students. Dr. A. H. Putney, a scholar of wide repute, in charge of the Division of the Near East in the State Department, was elected Dean of the new schools. Notwithstanding it is the middle of the school year, it was announced in the Washington daily papers that the new schools would open with the beginning of the second semester, and during the first week more than fifty applications were received, and classes

have been formed in some instances of from thirty to forty students. The lists of the excellent faculty and lecturers already secured will compare favorably with those of any other university in this country. The picture of the block of buildings purchased accompanies this paper.

CHARLES C. GLOVER.

It is a notable event when an official of great responsibility, strict fidelity, eminent usefulness, who is held in highest esteem by his associates, lays down his office because of accumulated cares and increasing years.

Charles C. Glover has given his time in unstinted measure, his best endeavors and wide influence, as well as his money generously, to create, endow and expand the American University. When Bishop Hurst knew not which way to turn, it was Mr. Glover who turned his face front, put money and credit at his disposal, and, better than all else, gave a morale to the whole Board of Trustees that sent the original marble building to the roof and to its finish. For many years Mr. Glover has been the Treasurer and backer of the University and headquarters of its activity. Now that he feels he must lessen his many responsibilities and must retire from the treasurership of the University, his resignation is most reluctantly accepted. It is a delight to all the members of the Board of Trustees that he graciously consents to remain on the Board and cheerfully advise in all matters of University concern.

As an expression of appreciation, the University has had a life-size portrait made by Mr. Wilbur Dean Hamilton, of Boston, which is fittingly framed and placed in the Chancellor's office in the College of History.

WILLIAM S. CORBY.

The American University has been peculiarly fortunate in the quality and character of its Treasurers. The first was the Hon. Matthew G. Emery, ex-Mayor of Washington, who served from the time of the incorporation of the University until his death. His successor was Mr. Charles C. Glover, president of the Riggs National Bank, and prominently identified with many civic and charitable organizations of this city, whose term of service extended from 1901 to 1919, and whose resignation, on account of accumulating burdens of care, was accepted reluctantly at the December meeting of the Trustees.

Mr. William S. Corby was chosen unanimously as the third Treasurer of the University. Mr. Corby is a member of the widely known firm of Corby Brothers, who have built up a most effective and successful industry in supplying the physical needs of Washington and extensive nearby regions with stores of wholesome daily bread. He is one of the leaders in the business and philanthropic institutions of the District of Columbia. In the lines of finance and business direction he is recognized as one of the master minds of this city. Like both of his predecessors, his name lends weight and dignity to any enterprise with which he is connected.

CHARLES C. GLOVER

While interested and zealous in the promotion of the material elements of successful living, Mr. Corby's time and energies are not wholly absorbed in the things that perish in the using. He gives daily evidence of the faith that is in him that "man shall not live by bread alone." His devotion to the fine arts of music, painting, sculpture and architecture finds expression in repeated and progressive contributions to the encouragement of these refining and inspiring branches of human endeavor and achievement. His home, where Mrs. Corby presides with simple but queenly grace, enshrines the visible and spiritual factors of the permanent treasures of human life. Hospitality, enriched by the concourse of sweet sounds from organ and other instruments, and made fragrant by the personal touch of welcoming host and hostess, has made "Ishpiming" the place of pleasant memories to very many happy guests.

Mr. Corby long has been a member of Calvary Baptist Church, whose present pastor, the Rev. Dr. Samuel H. Greene, has led that Christian body for more than forty years, and has in that period received upwards of five thousand persons into its membership.

ANNUAL TRUSTEE MEETING.

The meetings of the Trustees of the University continue to increase in interest. The annual meeting in December, which was largely attended, had some new and interesting propositions before it which awakened no little enthusiasm. The Chancellor reported \$62,000 had been received since the previous meeting, and he gave a summary of the receipts for the three years since he assumed the

WILLIAM S. CORBY

duties of Chancellor, showing that with the bequests in wills and good subscriptions, besides cash, more than four hundred thousand dollars had been added to the holdings of the University, the cash paid in amounting to more than two hundred thousand dollars. Owing to many embarrassments resulting from deaths in the family of the Treasurer, accumulating cares, increasing years and possible absence for an extended period from the country, Mr. Glover felt compelled to resign as Treasurer. His resignation was reluctantly accepted, and Mr. W. S. Corby was elected to the vacancy. Aside from the annual organization of the Board, by which the other officers were re-elected, other elections were postponed until the spring meeting.

The Chancellor gave an account of the origin and erection of the University Chapel, and announced its prospective opening February 1, 1920.

The most interesting incident of the meeting was occasioned by the report of the Executive Committee concerning the purchase, valued at about \$75,000, of downtown property. Photographs were exhibited showing the block of buildings which had been purchased near the Interior Building in the city. The opening of the departments of Diplomacy, Jurisprudence and Citizenship in the new property was authorized; and Dr. Albert H. Putney was elected Dean of these schools. The Chancellor reported that he had secured ten thousand dollars from the Centenary collections, and this with other moneys contributed would enable him very nearly to pay cash for the buildings and grounds, with the exception of a mortgage of \$5,000 due in May. He was authorized to borrow from current funds the small amount necessary to obtain deeds for the entire pur-

chase. The Executive Committee was authorized to negotiate with the Government for the restoration and return of the buildings and grounds to the University.

An excellent luncheon was served under the direction of Mrs. Frank W. Collier.

OPENING OF NEW SCHOOLS OF DIPLOMACY, JURISPRUDENCE, AND CITIZENSHIP.

The American University announces the opening of new schools of Diplomacy, Jurisprudence, and Citizenship. While the formal opening of these schools and the inauguration of the full curriculum will not take place until the opening of the next university year on October 3, 1920, a number of courses will be given during the second term of the present university year, beginning Monday, February 9, 1920. Students may begin their work at this time and will receive credit towards their degrees for all courses completed during this term.

In order to accommodate young men and women, employed in the government service or in other work in Washington, who may desire to take advantage of the post-graduate work leading to the Master's or Doctor's degree offered by the American University, the University has purchased two lots of land on and near the corner of F and Nineteenth Streets, Northwest, upon which the University will erect a Down Town Lecture Hall. Temporarily the University will hold classes at the building at 1907 F Street. All the lectures of the new schools of Diplomacy, Jurisprudence, and Citizenship will be held in this building. Such recitations and lectures will be held largely between 4:45 and 6:15 P. M. for the convenience of students employed during the day.

While each of the three new schools of Diplomacy, Jurisprudence, and Citizenship will have a distinct curriculum, leading to different degrees in each case, there will be a combined faculty for the three schools.

The schools of Diplomacy, Jurisprudence, and Citizenship, like the other departments of the University, will be on a strictly Graduate basis. No person can be admitted as a regular student in either school who has not received a Bachelor's degree from some approved university, college, or law school. A limited number of persons who have had a portion of the work towards the Bachelor's degree may be admitted as special students in the schools of Diplomacy and of Citizenship.

COMBINED FACULTY OF THE SCHOOLS OF DIPLOMACY, JURISPRUDENCE, AND CITIZENSHIP.

The Right Rev. John W. Hamilton, D.D., LL.D., Chancellor of the University.

Albert H. Putney, Ph.D., D.C.L., LL.D., Professor of Constitutional and International Law and Diplomatic History, and Dean of the Faculty.

Frank W. Collier, S.T.B., Ph.D., Professor of Racial Psychology and Comparative Religion, and Director of Research.

Charles C. Tansill, A.M., Ph.D., of the Congressional Reference Bureau, Professor of History.

Charles W. Needham, LL.B., LL.D., Solicitor, Interstate Commerce Commission, and former President of George Washington University, Professor of Comparative Constitutional Law and Interstate Commerce Law.

Lester H. Woolsey, A.B., LL.B., Solicitor, State Department, Lecturer on International Law.

Paul Kaufman, A.M., Ph.D., Bureau Chief, American Red Cross, Professor of Sociology.

Ales Hrdlicka, M.D., Curator of Physiological Anthropology, Smithsonian Institution, Professor of Anthropology and Ethnography.

Frederick Juchhoff, LL.M., Ph.D., Professor of Economics, William and Mary College, Professor of Economics.

Charles F. Carusi, LL.M., LL.D., Dean, National University Law School, Professor of Legal History.

John Barrett, A.M., LL.D., Director of Pan-American Union, Lecturer on Spanish America.

William Ray Manning, A.M., Ph.D., Adviser's Office, South American Affairs, State Department, Lecturer on Latin-American History, Industry, Commerce, and Culture.

Ray O. Hall, A.M., Trade Adviser's Office, State Department, Lecturer on Trade with Near East and Far East.

Edwin S. Puller, Ph.B., Chief Foreign Permits Bureau, State Department, Lecturer on Citizenship and Passports.

A. K. Schmajonian, A.B., LL.M., former Adviser of American Embassy, Constantinople, Lecturer on Oriental History and Mohammedan Law.

Charles W. Russell, LL.B., formerly Assistant Attorney General of the United States and United States Minister to Persia, Lecturer on Claims Against Foreign Governments.

Raymond F. Crist, LL.B., of the United States Immigration Bureau, Lecturer on Immigration and Naturalization Laws of the United States.

C. William A. Veditz, A.M., LL.B., Ph.D., former American Commercial Attaché at Paris, Lecturer on Commercial Geography and Transportation in Foreign Trade.

Charles L. Cooke, Officer in Charge of Ceremonials, State Department, Lecturer on Diplomatic Ceremonials.

The names of the other members of the Faculty will be announced in the near future.

SPECIAL LECTURERS.

In addition to the work given in the regular courses, a large number of special lectures will be given to the students by men prominent in public life. Among those who have promised to address the schools during the coming year are the following:

The Hon. Philander C. Knox.
The Hon. Wm. Jennings Bryan.
The Hon. Franklin K. Lane.
The Hon. William P. Dillingham.
The Hon. James Hamilton Lewis.
The Hon. Joseph G. Cannon.
The Hon. Champ Clark.
The Hon. Simeon D. Fess.
The Hon. Ira G. Hersey.
The Hon. Ira E. Robinson.
Dr. Edgar Blake.

BOARD OF AWARD.

A. C. True, Ph.D., Chairman.
P. F. Claxton, LL.D.
E. B. Rosa, Ph.D.
Oswald Schreiner, Ph.D.
John W. Hancher, S.T.D.
L. H. Murlin, S.T.D.
Vincent Massey, A.M.

Together with the Chancellor, Director of Research, and Registrar of the University, ex-officio members.

SCHOOL OF DIPLOMACY.

The courses of study offered by this school are intended not only for those who expect to enter the diplomatic or consular services, but also for those expecting to engage in foreign trade, and for lawyers and law students who wish to specialize in the practice of International Law.

Admission and Degrees.

Candidates for admission as regular students must have received the degree of A.B., Ph.B., or B.S. from some approved University or College, or have received the degree of LL.B. or J.D. from some approved Law School.

The regular course of study covers two years, but students who have already taken a sufficient number of the courses offered, in College or Law School, may be able to complete the course in one year. On the other hand, students who can devote only a portion of their time to the work of the school may be obliged to attend for a longer period before completing the course.

Candidates successfully completing the course will be given either the degree of Master of Arts (A.M.) in Diplomacy, or that of Master of Laws (LL.M.) in Diplomacy.

Persons who have taken a portion of the work towards a degree in an approved University, College, or Law School, may be admitted as special students. The number of Special Students admitted to the school may not exceed twenty-five at any time.

LIEUT. C. H. BROWN

SCHOOL OF JURISPRUDENCE.

The School of Jurisprudence offers Graduate work in law to those who have already received the degree of Master of Laws (LL.M.) from an approved Law School, or who have received both the degree of A.B. (or an equivalent degree) from an approved University or College and the degree of Bachelor of Laws (LL.B.) or Doctor of Jurisprudence (J.D.) from an approved Law School.

The course of study is for two years and leads to the degree of Doctor of Civil Law (D.C.L.).

No Special Students will be admitted to this school.

The method of instruction in this school will be largely by Seminar Courses and individual research work.

Candidates for the D.C.L. degree must present an original thesis upon some assigned topic, not less than 30,000 words in length.

SCHOOL OF CITIZENSHIP.

The School of Citizenship is intended for three classes of students:

- (1) Those who intend to engage in public service as a life career;
- (2) Those who wish to become teachers of Citizenship, or workers among the foreign immigrants to this country in the "Americanization" movement now in progress; and
- (3) Those who are preparing to become Social Workers.

Admission and Degrees.

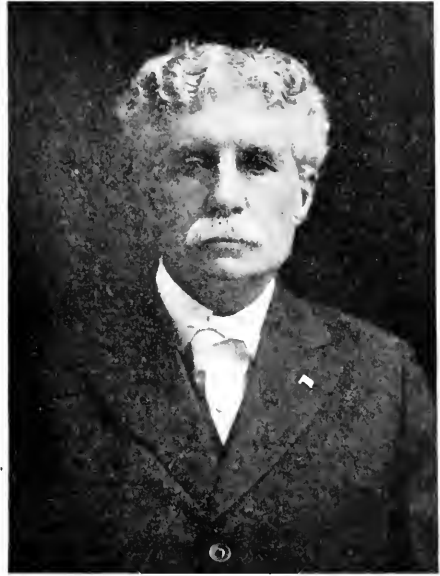

The qualifications for admission as regular students and the rules governing the admission of Special Students are the same as in the School of Diplomacy.

The course is one year and leads to the degree of A.M. or LL.M.

Students enrolled in the School of Citizenship may, with the approval of the Dean, take other courses given in the School of Diplomacy, or School of Jurisprudence.

TUITION.

The tuition fee in each of the three schools is Sixty Dollars per term (each University Year being divided into two terms). Students taking less than twelve hours classroom work per week will be charged at the rate of six dollars per term for each classroom hour per week taken.

JAMES JAY BENSON HAMILTON

All students pay a Matriculation fee of Five Dollars. The Diploma fee is Ten Dollars.

For further information address American University at 1907 F Street.

Among the subjects in which courses are offered are:

International Law (General and Advanced Courses), Diplomatic History, Citizenship and Passports, Diplomatic Usages, Immigration and Naturalization Laws of the United States, United States Constitutional History and Law, Comparative Constitutional Law, English Constitutional Law, Roman Law, Spanish-American Law, Mohammedan Law, Admiralty Law, Commercial Law, Outlines of Legal History, History of English Law, Interstate Commerce Law, Election Laws, Governmental Institutions of the United States, Political History of the United States, World History since 1848, Oriental History, Great Political Revolutions of the World, Current Diplomatic and Political Topics, Commercial Geography, Foreign Trade, Trade with the Far East and Near East, Trade with Latin America, Industrial Resources of the United States, Economics, Sociology, Comparative Study of Religions, Racial Psychology, Diplomatic Ceremonies.

Calloway, L. K. Hackett, Isaiah Jones, C. F. Bolton, Mrs. W. H. Coleman.

AMERICAN UNIVERSITY CHAPEL.

When there is not a cause for something, there is an occasion for it. There was both in the erection of the American University Chapel. It has always been understood that there would ultimately be a chapel on the campus or in the immediate vicinity of the University for the benefit of the students. But the present property had only a distant reference to that particular need.

The present chapel lots and building were bought before the armistice was signed. At that time it was proposed to matriculate a number of the young chemists employed at the University for instruction in the institution, the Government being in possession of the University buildings, and effort was made to rent a room or rooms for lectures, entertainments, reading and study for the young men, many of whom lodged in or near Cleveland Park.

Applications were made to the churches and schools in the neighborhood for the accommodation, but in vain. When the war was at an end the chapel was all contracted for. Looking to the future, when the vicinity is occupied with new residences and a church is needed, it was proposed, as had been contemplated for years, to occupy the chapel with a Sunday School for such of the children as would care to attend there rather than to go to their respective churches down town at the expense of car fares. Preaching was also appointed for the afternoons, when services are not held in most of the other churches. It is intended to invite clergymen from the different denominations in the city to preach from time to time.

DR. SKINNER HONORED.

As the following correspondence shows, Dr. J. J. Skinner, an alumnus of the American University, has been honored by the Franklin Institute of Philadelphia for his paper on "Soil Aldehydes" by awarding him the Edward Longstreth Medal of Merit. Dr. Skinner is the fourth person connected with the American University who has received this honor, the others being Dr. E. B. Rosa and Dr. Oswald Schreiner, members of the Board of Award, and Dr. Elbert C. Lathrop, the first graduate of the University.

UNITED STATES DEPARTMENT OF AGRICULTURE.

Soil-Fertility Investigations, Bureau of Plant Industry.

Washington, September 24, 1919.

Dr. Frank W. Collier,
 Director of Research, American University,
 Washington, D. C.

Dear Dr. Collier:

I am enclosing herewith a copy of a letter received by Dr. J. J. Skinner from Dr. R. B. Owens, secretary of the Franklin Institute, Philadelphia, relative to its award of the Edward Longstreth Medal of Merit to Dr. Skinner for his paper on "Soil Aldehydes."

This chemical research was conducted by Dr. Skinner under my general direction, and submitted by him to the Board of Award of the American University, as his doctor's dissertation. It was published by the Franklin Institute in its journal, appearing in five issues, from August to December, 1918.

Very truly yours,
 OSWALD SCHREINER,
 Counseling Professor of Chemistry.

THE FRANKLIN INSTITUTE OF THE STATE OF
PENNSYLVANIA.

Philadelphia.

Office of the Secretary.

July 28, 1919.

Joshua J. Skinner, Esq., Ph.D.,
Bureau of Plant Industry,
U. S. Dept. of Agriculture,
Washington, D. C.

Sir:

I have the honor to inform you that the Franklin Institute, acting through its Committee on Science and the Arts, has awarded you its Edward Longstreth Medal of Merit for your paper on "Soil Aldehydes," appearing in the five issues of the Journal of the Franklin Institute from August to December, 1918.

In awarding you this medal, the committee adopted the following resolution:

"Resolved, That Dr. Joshua J. Skinner, of the Laboratory of Soil Fertility of the Department of Agriculture, Washington, be awarded the Edward Longstreth Medal of Merit and Certificate for his series of papers on 'Soil Aldehydes,' printed in the five issues of the Journal of the Franklin Institute from August to December, 1918, inclusive.

"These papers present the results of scientific study of a new class of deleterious soil constituents, clearly described and effectively illustrated, the whole forming a valuable contribution to the science of agricultural chemistry, and one of marked practical importance."

The medal and certificate have been prepared, and are being forwarded you today by registered post.

I am, respectfully,

R. B. OWENS,
Secretary.

JAMES JAY BENSON HAMILTON.

The honors of the pioneer commonly come to him after he is dead. If his mission in life is to appeal from Philip drunk to Philip sober and he is adventuresome, with something of daring, he finds himself tested by angry times. But if his heraldic proclamation is a righteous one,

"There is a divinity shapes his ends,
Rough hew them how he will."

He is the type of his times. Each generation may have something to judge for itself, but the world's progress proceeds by one generation preaching for another to practice. The pioneer preacher is not welcome if faithful to his message, in his own day. He is buffeted and persecuted while he lives, but has a monument when he dies.

Many a temperance reformer suffered martyrdom, as in Sioux City, for his strong, harsh, but true words. Good men are slow to cherish sound doctrine when thus spoken. The terrific arraignment of intemperance once grated upon the sensitive nature of Phillips Brooks, but he lived to testify that "what we have of law and order where once was the reign of the saloon we owe to the extremest in temperance reform."

It was the notable editor of a Methodist paper that charged Wendell Phillips with blasphemy when he called down the wrath of God on the Commonwealth of Massachusetts for its treatment of Anthony Burns.

Doctor Jay Benson Hamilton, named for two eminent Methodists, died January 20, in St. Petersburg, Florida. Born in Ohio, he came from the privation of a pioneer parsonage to prominence in the Eastern and Middle States. He never could forget the pinching poverty of the poorly paid preacher. His soul was stirred within him when he

saw him turned out of his pulpit by old age to be more poor, neglected and forgotten. He turned from his own pulpit, at his own instance, and went over the whole country to rouse the indifferent churches to care for the "worn-out preacher." On one of his journeys he found the remnant of a preacher's family in an almshouse and a preacher himself actually consigned to "the poor farm." He cried aloud and spared not in his story, "From the Pulpit to the Poor House." He awakened criticism and denunciation by the preachers and people who fared sumptuously every day. But, said Dr. Buckley, "he did more than any other ten men, up to his time, for the relief of the superannuated preacher."

He wrote the law of his church to make the veteran preacher "pastor emeritus." There is a tender pathos in the numerous tributes to his memory which have come to his family from the "retired preachers" over all the church.

UNDER THE SNOW.

By J. Benson Hamilton.

(On the burial of Rev. W. C. P. Hamilton. The writer of these lines was a mere lad at the time of the death of his father, who died on the same day of the same month. The grave of the son was covered by a much deeper snow than that of his father.)

Up above us the sky is azure,
The world around us throbs with pleasure,
But our hearts are sad; we've laid our treasure
Under the snow.

Still the hands that were careful of us,
Hushed the voice that was prayerful for us,
Dimmed the eye that was tearful o'er us—
Under the snow.

Home had never learned to doubt him,
Home is lone and dark without him,
Since the earth has closed about him,
Under the snow.

Oh, loved ones! life's not cheerless,
The shining future will be tearless,
Let us go to him fearless,
Under the snow.

One by one our loved ones leave us,
And though their death may sorely grieve us,
Their spirits joyful will receive us
From under the snow.

When we've passed the crystal river,
We shall live and love forever,
Sorrow and pain shall grieve us never,
As here below.

Then cheer up, mother, sister, brother,
Look from this world up to another,
Where we shall meet and know each other,
Above the snow.

LIEUT. C. H. BROWN, PHOTOGRAPHER.

The efficient photographer of the Research Division of the Chemical Warfare Service is Lieut. C. H. Brown. He served in that capacity for about two years, with headquarters in the College of History, and then, with many other of the personnel, was sent to Edgewood, Maryland. The sunlight with which his work was accomplished found a place in his countenance, which is reproduced in this issue of **The Courier**. His genial disposition gave a charm to his presence among us. Photography was his

boyhood hobby, which he rode along scientific and educational lines. He enlisted at the outbreak of the world war in the Signal Corps, and was then transferred to the Chemical Warfare Service. While located on the American University grounds, his work ranged from making high-power photo-micrographs in the laboratory to securing motion pictures of exploding shells on the proving grounds. He deserves and has won many warm friends.

DR. DUNCAN WORKING ON THE PYRAMID TEXTS.

The article in the Boston Transcript by our Director of Research and reproduced in *The Courier* January, 1919, on Dr. Duncan's forthcoming book, *The Translation of the Pyramid Texts*, seems to have made its way around the world. M. Tina Schiffer, Docteur ès Lettres, Professor of Assyriology in the College of France, member of the Academy of Inscriptions and Letters, and author of several learned works on Assyriology, saw the article and has written Dr. Duncan as follows:

"Accept my hearty congratulations for the great work you are going to publish. It is an important matter that you are presenting to the learned world, and that merits many thanks. As an Assyriologist, I know what it means to study a text of that time and to translate it exactly. I hope you will not forget to send me your work, which I shall be glad to read with profit and to lay it before the French Academy."

Dr. Duncan is hard at work thoroughly revising the text, and the work is expected to be published this fall by the American University Press. We say this for the benefit of those who have sent inquiries to the University as to the date of publication.

TABLE TALK.

What is the population of Washington?

The census will bring some genuine surprises.

Cincinnati is the first city to report to Washington its canvass for the census and report as completed.

The Johns Hopkins Medical School had the highest percentage of promotions among its graduates in the service during the war.

The appropriation for night schools in Washington is exhausted, but they will go on just the same. Congress has the pocketbook.

The District of Columbia has more kinds of schools and more schools of a kind than any other city of its size in the country.

Dr. George S. Duncan has delivered six lectures at the Washington Y. M. C. A. School of Religious Education on "Archaeology and the Bible."

Is it because Washington has such increased population that there are not enough school buildings to go around?

The late Rev. J. Benson Hamilton, D.D., a sketch of whom appears in this number of *The Courier*, has left his library to the University. There are a number of very valuable and rare books of Biblical literature in the collection.

Dr. Collier has been lecturing to a class of ministers of the Baltimore Conference on "Advanced Psychology," and also is delivering a series of twelve lectures at the Washington Y. M. C. A. School of Religion on "Adult Psychology."

The expansion of the American University by the opening of the three schools of Diplomacy, Jurisprudence, and Citizenship at 1907 F Street, in the building which has accommodations for more than one hundred students, gives promise of far greater success than was expected.

The American University Chapel was an outgrowth of the war. Many of the young men who were employed in the Chemical Warfare Service at the University boarded in Cleveland Park. Application was made to the schools and churches in the neighborhood to rent a room for evening lectures, entertainments and social gatherings, but no place could be found. The University then bought the land and contracted to erect the building before the armistice was signed.

The distance from heathen India to New Jersey, with all its moral backwardness, is evident at least in one direction: when the estimate and treatment of woman is considered. It is said in one of the sacred books of India "to educate a woman would be like feeding a serpent milk: she would but turn her education into poison." And New Jersey is the twenty-ninth State to ratify the suffrage amendment.

Volume XXVI

Washington, D. C., April, 1920

No. 3

DOWN-TOWN BRANCH AMERICAN UNIVERSITY

Down-town Branch of American University.

No movement of the American University has met with more encouragement than the opening of the Downtown Branch. Notwithstanding the occupancy of the campus and main buildings of the University by the United States Government, the institution has continued its instruction during the war, though greatly inconvenienced in doing so.

It was found that it would be necessary, whatever the growth of the school at Massachusetts and Nebraska Avenues, to have certain departments in the center of the city to accommodate students coming from among the employees of the United States Government. The purchase of the buildings described in the previous issue of THE COURIER has more than met the expectation of the Faculty and Trustees. Beginning in the middle of the school year, it was thought by many to be a doubtful experiment, but such has been the attendance that projects are on foot already looking to the enlargement of the most commodious building of the three properties purchased.

Dean Putney has shown himself to be the master of assemblies. The house at 1907 F Street, which proved to be readily adapted to school purposes, has been crowded to its limit in a number of the public meetings for lectures. It is so centrally located and the courses of study have been so popular the large rooms for recitation have been filled to overflowing at times. Lectures have been delivered by members of the sev-

PROFESSOR CHARLES C. TANSILL

eral embassies, when the students from other schools have been admitted to hear them.

The building, a picture of which is given herewith, may appear from the street to be a double building, but it is one structure forty-eight feet wide and with the ell seventy feet deep. By a slight modification of the ell and the addition of fifty feet over the vacant back lot a hall can be secured which will seat 300 or 400 persons.

Progress at Down-town Branch.

UNIVERSITIES, COLLEGES AND LAW SCHOOLS REPRESENTED AMONG STUDENTS OF THE NEW SCHOOLS.

The following eighteen universities and colleges are represented among the degrees in Arts and Sciences (B. S., A. B., Ph. B., A. M., Ph. D.), held by the students in the Schools of Diplomacy, Jurisprudence and Citizenship:

American University, Bates, Bryn Mawr, Calvin, Clark, Columbia University, Cumberland, Emory, George Washington University, Hamline, Harvard University, Pomona, Simmons, Syracuse University, University of Pennsylvania, Wellesley, Williams, Yale University.

Law degrees (A. B., LL. M., M. P. L.) from the following twelve institutions are also held by members of the schools:

Chattanooga College of Law, Cincinnati Y. M. C. A. Law School, Doshisha University (Japan), Georgetown University, George Washington University, Harvard University, National University Law School, New York Law School, Minnesota College of Law, Richmond College, Vanderbilt University, Washington College of Law,

LECTURES ON CURRENT DIPLOMATIC AND FOREIGN POLITICAL TOPICS.

Early in the term a class for the study of Current Diplomatic and Foreign Political Topics was organized among the students. As a part of this work the class has listened to the following course of lectures:

March 6, "Armenia," by Mr. Miran Sevasly, President of the Armenian National Council of America.

March 13, "Albania," by Mr. Constantine A. Chezezi, the Albanian Commissioner to the United States.

March 20, "Persia," by Hon. Charles W. Russell, former United States Minister to Persia.

March 27, "The Zionist Movement in Palestine," by Mr. Julius I. Peyser.

April 3, Mr. Sevasly again lectured before the class, his subject on this occasion being "Cyprus." Mr. Sevasly, who is now an American attorney, was for five years a government official and for ten years a practicing attorney in Cyprus.

April 10, "Lithuania," by Mr. Richard DeWolf, Attorney for the Lithuanian National Council in the United States.

April 17, "Ukrainia," by Mr. Miroslav Sichinski, a member of the Ukrainian Commission to the United States.

May 1, "The Government of the Philippine Islands," by Mr. Emerson B. Christie of the State Department, who was employed for fifteen years in the Government service of the Philippine Islands.

On May 8 Mr. Kihoshi Shioni, an attache of the Japanese Embassy, spoke on "The Original Jurisprudence of Japan from 660 B. C. to 250 A. D."

May 22, Mr. N. H. Lahovary, the Charge d'Affaires of the Roumanian Legation at Washington spoke on "Roumania."

Two other very interesting lectures have been delivered before the students during this term, one by Hon. James Hamilton Lewis on the subject of "Amendments to the United States Constitution," and the other by Hon. Ira E. Robinson, formerly a Justice of the Supreme Court of West Virginia, on the subject of "American Recognition of the Roman or Civil Law."

Sixth Annual Convocation.

The sixth annual convocation of the American University will be held on Wednesday, June 2, 1920, at 2:30 P. M., in the outdoor amphitheatre on the grounds of the University at the extension of Massachusetts and Nebraska Avenues. Degrees will be conferred and fellowships for 1920-1921 will be awarded. The convocation addresses will be made by the Right Rev. William F. McDowell, Bishop of the Methodist Episcopal Church, and the Right Rev. Samuel D. Chown, General Superintendent of the Methodist Church in Canada, on Reciprocity between Canada and the United States.

The Board of Trustees will meet the same day at 10:30 A. M.

WE WANT A BOOK.

Please write us that we may know you read *The Courier*.

The expansion of the University, by which the three new departments of instruction have been opened "down in the city," calls for a new reference library. There are friends of the institution all over the country who do not find it convenient to contribute large sums, but who will respond at once to pay for one or more books, seeing how important it is that the school should have them. Some of these books wanted are inexpensive, others being technical, law and scientific books, and so new as to come under the high cost of paper and labor, are higher in price than ever before. A few of the books, which are elementary or simply outlines, can be purchased for a dollar; more require two dollars; many law books will cost five dollars, and some much more. Then the books published in foreign countries and some in foreign languages which we must have to study the citizenship of the world and diplomacy with different nations will come higher than domestic publications. We must have some expensive sets of reference books. Printed slips bearing donors' names are pasted in the book or books donated.

A Remarkable Library.

Doctor W. A. Wood of Boston was a man of versatile gifts and notable attainments. He was pastor of one of the historic churches in the city. He was not only a man of wide reading, but he read great books. He purchased from time to time books of great value. Among them are found many volumes which were published in foreign countries. One of the bishops has said he had one of the most important private libraries in this country. A man of scholarly tastes, giving attention to higher education in the departments of science and philosophy, he was selected, when it was created, as a member of the Board of Award of the University.

In the early part of this year he was stricken suddenly with some malady of the heart as he was walking in one of the streets of Ipswich, Massachusetts, and died before he could be taken to his home.

It became necessary to dispose of his library, and as it had cost several thousand dollars, Dr. J. Frank Knotts, Associate Chancellor of the University, was moved to go about among his friends and secure money to buy the library and present it to the University. Such was the sympathy of the many persons with Mrs. Woods, that the money was soon raised and paid over to her, and the library is now on the way to Washington. It will be given a special alcove in the library when the Government has made it possible to return the shelves to their respective rooms in the College of History.

Doctor Charles C. Tansill.

Dr. Charles C. Tansill, Counselling Professor of History in the American University, was born in Fredericksburg, Texas, on December 9, 1890, and at an early age removed to Washington, D. C., where he attended the public schools. In 1905 he entered the Emerson Institute, a private high school, from which he was graduated in 1908. In the fall of that year he matriculated at the Catholic University of America, and in 1912 he received the degree of Bachelor of Arts. In the following year he was graduated with the degree of Master of Arts, and in 1915 he received the degree of Doctor of Philosophy.

During his course of study at the Catholic University Dr. Tansill founded the Students' Literary Magazine and the debating society, and in 1912 he received the Andrew Lang prize for excellence in general scholarship. During the scholastic year, 1915-1916, Dr. Tansill was professor in charge of the undergraduate department of American History in the Catholic University. At the beginning of the next scholastic year Dr. Tansill resigned from the Catholic University in order to complete his historical studies. He entered the graduate departments of History and Political Science in the Johns Hopkins University. In 1918 Dr. Tansill was graduated from Johns Hopkins University with the degree of Doctor of Philosophy and in the fall of that year he was appointed professor of history in the West Virginia Wesleyan University.

When the United States became involved in the World War Dr. Tansill removed to Washington to assist in government work, and at present is the historical expert in the Library of Congress.

Dr. Tansill is the author of "A Life of William L. Marcy," one of our greatest secretaries of state, and collaborated with Dr. George L. Rives in the preparation of his splendid monograph, "The United States and Mexico, 1821-1848." He is a member of the Methodist Episcopal Church.

Recent Gifts of Money.

(Acknowledgment of sums less than five dollars is to be accepted as sufficient receipt therefor.)

The American University Chapel.

The Chapel, so conspicuously located on Massachusetts Avenue at the corner of 38th Street, meets the secondary purpose for which it was erected most satisfactorily thus far. If the war had continued, the three thousand and more of soldiers and employees of the Chemical Warfare Service would have found a most convenient building for so many of their members who were located in and near Cleveland Park for a rest room, writing room, entertainments and religious service on the Lord's Day. But when the Armistice was signed and the soldiers discharged and scattered requests were received for a Sunday school for the children in the neighborhood, the trustees readily acceded and were joined by the City Missionary Society in making the building a house of worship and for Bible study. The Sunday school, which was started in February, has brought in already nearly or quite thirty seniors, and a very gratifying adult Bible class was organized which is having its numbers increased from Sunday to Sunday. A number of persons in the neighborhood desired a preaching service in the afternoon which would not conflict with the services of other churches in the neighborhood. Preachers from the different churches in the city have kindly volunteered to preach and are interesting congregation assemblies every Sunday.

Camden M. Cobern.

Wendell Phillips has the distinction of making "Old Things New" in his famous lecture on the "Lost Arts." His discovery of so many old things that we had thought were new led him occasionally to prophesy. The writer heard him deliver that lecture in the Boston Music Hall nearly forty years ago, when he declared, among many other things, that there were persons present who would live to telegraph around the world without wires or poles. He was the only pioneer in the upturning of marvelous revelations.

In no field of research has there been so much of upturning of stones and tablets and discovery of palimpsests that had waxed old like mummy garments as in Bible literature. The writer recalls with antiquarian satisfaction that he has seen with his eyes and handled with his hands in the Imperial Library in St. Petersburg Tischendorf's "Codex Sinaiticus," and uncial MS. of the fourth century, found in 1844 by the professor ordinarius of theology and of biblical palaeography at Leipzig in the monastery of St. Catherine on Mt. Sinai, and finally acquired by the Tsar of Russia in 1869. But it is *parva componere magnis* to speak of that MS. as old now.

Dr. Cobern, in his address at the Hamline Church the other evening, told us of manuscripts that had been dug out of the sand by the hands of explorers that have come down from only twenty to thirty years after the death of Jesus. As Dr. Sayce has so epigrammatically said, "We have already dug up Homer; we shall yet dig up the Bible."

Table Talk.

The greatest obstacle to education is prejudice.

It is unselfish education that disturbs and destroys prejudice.

Mr. J. H. Monk, of Corsica, Pa., sends some rare musical books to the University. The Librarian would be pleased to add to this list all of the publications of Doctors Hunter and Wakefield. The old spiritual songs had fire in them.

The success of the Downtown Branch of the American University warrants the trustees in giving notice of a Summer School, which will begin about the middle of June in the large building at 1907 F Street. A suitable faculty has been secured which represents several of the research departments of the Government. Sent to the Dean of the American University for a bulletin setting forth the details of the work.

In his full-page article, "Greatest of Years for American Colleges," in the Boston Transcript, November 29, 1919, Mr. Henry T. Claus refers to Dr. L. H. Murlin's administration as follows: "For sheer rapid growth, few institutions in the country and assuredly none in New England have a record comparable to Boston University's. In a single year enrollment has almost doubled. B. U. has been adding new departments with considerable regularity, and the result is that today it has about 5,400 students. These figures include the registration in the popular night courses given in the College of Business Administration. This fall the University has opened a college of secretarial science, a school of education and a department of religious education and social service."

In the Cemetery at Milton, Mass.

The graves of good and great men become the shrines of the people who revere their memory. They erect memorials of them of such material in such form and with such ornaments and inscriptions as the times in which ornaments and inscriptions as the times in which they live may suggest.

The Methodist Year Book prints the lists of the burial places of the Bishops. We have thought it would be of interest to the readers of THE COURIER to know something of the plain and simple memorial of Franklin Hamilton. His Cave of Macpelael was selected with prudence and forethought in the Milton Cemetery in the suburbs of Boston, the burial ground of his wife's father and mother. Wendell Phillips and many other notable persons are buried there. A large corner lot was secured under the tall New England trees, such as grace the entire cemetery. The Chancellor-Bishop had selected the kind of stone which he desired to set up at his grave. He had been a studious observer of the epigraphical memorials which from time to time had been placed in the graveyards of this country since its settlement. He contributed a scholarly paper to the "Thanksgiving Number" of the New York Christian Advocate of November 18, 1915, giving an account of the evolution of headstones from slate to marble and from the lugubrious ornament of skull and cross-bones by the Pilgrims and Puritans to the embellished urn of the last century. Always a close student of Colonial history, he chose for his own grave a type of the gray slate headstone which marks the resting place, "where the rude forefathers sleep." It is of thicker

HEADSTONE AT GRAVE OF FRANKLIN HAMILTON, IN CEMETERY, MILTON, MASS.

stone than was common in their day, but the same simplicity is copied with that of the same ornament of "a cherub's face with pleasant eyes." A similar headstone marks the grave of James Russell Lowell in Mt. Auburn at Cambridge. He and Franklin Hamilton delivered the addresses commemorating the 250th anniversary of the founding of Harvard College.

We print the two pictures, one giving a view of the nearby part of the cemetery in the end of the winter, and the other the headstone of the grave. On the back of the slate, carved in plain letters, are the words, "Bishop of the Methodist Episcopal Church."

"Thou Shalt Know Hereafter."

T. N. Clive Nicholson.

By Rev. E. L. Watson, D. D.

Said He, "The Fragments, gather them,"
So careful that no waste there be,
Of aught his hands had multiplied;
Expressing God's fragility.

No leaf that falls, or flower that fades,
Or sand grain lying on the shore,
No atom of the universe
Is ever lost from Nature's Store.

Nor soul that strongly strove toward light,
Who valued Truth far more than gold,
Shall in God's Kingdom fail of place,
Though half life's story be untold.

The Great All-seeing knoweth where
Each one his fullest self may be,
Here, hampered by this human clay,
Or elsewhere in eternity.

Thought throned in brain, one's facile skill,
These are his property who dies,
Achieved through arduous effort here,
They serve him well beyond the skies.

Death is the Door God opens wide,
Some need beyond Time's bounds to fill;
Be sure, who his departure mourn,
Yonder, he does his Father's will.

Differentiation of Early Tuberculosis and Hyperthyroidism by Means of the Adrenalin Test.

Norman Clive Nicholson and Emil Goetsch.

(From the Trudeau Sanatorium, Trudeau, New York.)

The difficulties in the diagnosis of tuberculosis in its earliest stages are apparent to all workers in this field of medicine. Particularly is this true of that large group of patients in whom the familiar syndrome of fatigue, asthenia, loss of strength, loss of weight, nervousness in varying degrees, tachycardia, vasomotor instability and possibly slight elevation of temperature would make one suspicious of tuberculosis, but in whom the physical signs, laboratory and X-Ray findings are insufficient for a positive diagnosis.

How frequently indeed one meets patients, who, under the suspicion of tuberculosis because of just such symptoms, have undergone a most rigid anti-tuberculous therapy, extending in some instances over years. Not only have they followed the anti-tuberculous therapy, they have indeed subjected themselves to every form of therapy calculated to benefit them, such as rest, extra-feeding, exercise, work, change of climate, possibly even surgical measures, but all to no avail—their symptoms have remained unimproved.

An equally difficult problem is presented by another group of cases in which there is a tuberculous lesion definitely demonstrable by physical signs and X-Ray, which, however, after a sufficient length of treatment may or may not show retrogression, and which is still accompanied by symptoms of rapid pulse, fatigue, and possibly slight temperature. Here it is questionable whether the symptoms can be attributed to the tuberculous lesion. Especially is this so, if after six months rest cure the pulmonary condition shows improvement both from physical signs and X-Ray findings.

Regarding both of these groups the question naturally arises: Are these symptoms referable to the tuberculous lesion, are they a residual syndrome of previously active tuberculosis, or are they due to an entirely different cause? It is our belief that in some of these cases the symptoms are due definitely to hyperthyroidism.

Our problem then has been to discover the presence of hyperthyroidism. In the absence of a clear-cut history and physical examination warranting the diagnosis, a clinical test which would reveal the presence of hyperthyroidism would naturally be of the greatest importance. Such a clinical aid and test is available. We refer to the use of adrenalin to elicit a state of hypersensitiveness of the sympathetic nervous system such as is present in conditions of hyperthyroidism. We feel that the determination of a state of constitutional hypersensitiveness to adre-

main, injected subcutaneously, warrants the belief that a clinical state of hyperthyroidism exists. The use of this test by Goetsch (New York State Journal of Medicine, July, 1918), over a period of three years in conditions of hyperthyroidism, which were later confirmed by operation and microscopic study of the gland-tissue removed, has convinced us of the reliability of the adrenalin hypersensitivity test.

To support our contention, which is, that hyperthyroidism is responsible for the general symptoms usually attributed to tuberculosis in most of the cases where the presence of clinical tuberculosis is questionable, and also where the tuberculosis lesion is thought to be insufficiently active to account for the severity of the symptoms, we applied the adrenalin test, at first, to those patients in whom the diagnosis of tuberculosis was questionable, and later as a routine measure to all patients entering the Trudeau Sanatorium. By so doing it is clear that, hypothetically, we should be dealing with three classes of patients; first, those with frank tuberculosis; secondly, those with hyperthyroidism complicating the tuberculosis, and thirdly, those with definite hyperthyroidism only. There are patients who present the above-mentioned syndrome of symptoms common to all of these groups, namely, fatigue, asthenia, loss of weight and strength, increased or normal pulse rate, nervousness, and possibly slight elevation of temperature. It is this very similarity in the symptoms exhibited by these groups which has hitherto made the differential diagnosis so difficult.

Positive results in support of this view have been obtained in the comparatively brief time that we have been at work on the problem and we think these justify this preliminary report.

The technique of carrying out the test is as follows: We want the patient to be as calm and restful as possible before the test so that the reaction to the adrenalin will stand out sharply in contrast. Accordingly the patient is put to bed the previous day and is reassured by the attending physician that the test will be in no way painful or associated with any danger. At this time, too, the standard case-history is supplemented by a history taken with special reference to symptoms of thyroid disturbances. One must determine the presence or absence of nervousness, throbbing, tachycardia, tremor, depressions, crying spells, strama, apprehensions, hot and cold flushes, cold hands and feet, fainting spells, memory lapses, and gastro-intestinal upsets. The regular routine physical examination is amplified by a detailed scrutiny of the signs suggestive of hyperthyroidism, such as positive eye-signs (Joffroy, Moebius, Von Graefe and Dalrymple), tremor, strama, throbs or bruises over the thyroid, throbbing of the carotids and of the abdominal aorta, dermatographism, the condition and distribution of the hair, and slight edema of the eyelids, legs or hands. In this connection it should be borne in mind that hyperthyroidism may exist with negative eye signs and only indefinite clinical findings in the thyroid gland. Consequently we feel that the response to adrenalin is a much more dependable criterion of hyperactivity of the gland.

On the day of the test the patient is placed as nearly as possible under normal conditions. By this we mean in a warm room without the appliances such as hot water bottles, heating devices, etc., which are common to the outdoor treatment of tuberculosis. The patient, of course, is to take his meals in bed. We emphasize these precautions because of the well-known hypersensitiveness and irritability of hyperthyroid and tuberculous patients. Because of the tendency of the thyroid to hyperactivity at the menstrual period the test is not given during this time.

We proceed with the test as follows: "Two readings are taken, at five minute intervals, of the blood pressure, systolic and diastolic, pulse rate, and respiration. A note is made of the subjective and objective condition of the patient. This includes the state of the subjective nervous manifestation, the throbbing, heat and cold sensations, asthenia, and the objective signs, such as pallor or flushing of the hands and face, the size of the pupils, throbbing of the neck vessels and precordium, tremor, temperature of the hands and feet, perspiration, and any other characteristic signs or symptoms noticed. These signs are all noted previous to the injection of the adrenalin so that comparison may be made after the injection.

A hypodermic syringe armed with a fine needle which, when inserted, causes little discomfort, is then used to inject 0.5 cc. (7.5 minims) of the commercial 1-1000 solution of adrenalin chloride (Parks, Davis & Co.) into the deltoid region, subcutaneously. Intramuscular and intravenous injections are not given. Readings are then made every two and one-half minutes for ten minutes, then every five minutes up to one hour, and then every ten minutes for half an hour or longer. At the end of one and a half hours the reaction has usually entirely passed off, sometimes earlier. The repeated early readings are made in order not to miss certain reactions on the part of the pulse and blood pressure that may come on in less than five minutes after the injection is made. This is particularly true of cases of active hyperthyroidism.

In a positive reaction there is usually an early rise in blood pressure and pulse of over ten points at least; there may be a rise of as much as fifty points or even more. In the course of thirty to thirty-five minutes there is a moderate fall, then a second slight secondary rise, then a second fall to the normal in about one and one-half hours. Along with these one sees an exaggeration of the clinical picture of hyperthyroidism brought out, especially the nervous manifestations. The particular symptoms of which the patient has complained are usually increased, and in addition there are brought out many symptoms which have been latent. Thus it is not uncommon to have extra-systoles brought out, after the injections of the adrenalin. The patient is usually aware of them and may tell one that she has felt this same thing a year or two previously, at which time the symptoms of the disease were more active.

The following may all or in part be found: increased tremor, apprehension, throbbing, asthenia, and in fact an increase of any of the symptoms of which the patient may have complained. Vasomotor changes may be present; namely, an early pallor of the face, lips, and fingers, due to vasoconstriction, to be followed in fifteen to thirty minutes by a stage of vasodilation with flushing and sweating. There may be a slight rise of temperature and a slight diuresis.

In order to interpret a test as positive we have regarded it as necessary to have a majority of these signs and symptoms definitely brought out or increased. Thus there is at times a considerable increase of pulse rate without much increase in systolic blood pressure, but with a considerable increase or exacerbation of the objective signs and symptoms; or there may be an increase of ten points in the pulse and blood pressure and a moderate increase of the symptoms and signs; or again, there may be only slight changes in pulse and blood pressure and considerable change in signs and symptoms. These may be regarded as positive. In a word, then, one must consider the entire clinical picture produced in order to gain a correct interpretation, just as in the disease itself one cannot expect every one of the characteristic signs and symptoms to be present in order to make a diagnosis."

In this report it is our desire to present briefly the results thus far obtained in our studies of 40 cases. The diagnosis of these, as made by the Sanatorium staff, place them in the three following groups: (1) In the first group there are 18 in which clinical tuberculosis was questionable; (2) in the second group there are 16 with inactive clinical tuberculosis, and (3) in the third group there are 6 in whom clinical tuberculosis was definitely active. The terms "active" and "inactive" are based upon the latest conception of the Trudeau staff, as set forth in a recent article by Brown and Petroff.*

As is indicated in the tables below, of the 18 cases belonging to the "clinical tuberculosis questionable" group, there were 10 who reacted positively to the adrenalin test, and 8 who showed an entirely negative reaction. We wish to emphasize the fact that in practically all the cases of this group there was a clinical syndrome of symptoms which was suggestive of either incipient tuberculosis or possible hyperthyroidism. In the 10 cases with a positive adrenalin hypersensitiveness the intensity of the reaction varied in a way remarkably parallel with the severity of the symptoms exhibited by the patient. Furthermore, the

* (Brown, Lawrason and Petroff, S. A., The Clinical Value of Complement Fixation in Pulmonary Tuberculosis Based on a Study of 540 cases.) The American Review of Tuberculosis, 1918, II, 325-540.

* (Goetsch, E.—New York State Journal of Medicine, July 1918, pp. 22-24.)

majority of these cases showed only indefinite signs of hyperthyroidism by physical examination, and therefore had it not been for the additional diagnostic help afforded by the adrenalin test it would have been impossible, we feel, to state definitely whether or not hyperthyroidism was responsible for their symptoms.

In Group II, namely, the "clinical tuberculosis inactive" group, some of whom presented the symptomatology common to both tuberculosis and hyperthyroidism, others a symptomatology not characteristic of either condition, we found that out of the 16 cases, 9 showed a positive response to the adrenalin test. The suggestive symptoms and physical findings, but particularly the positive adrenalin reaction, permit us to say definitely that these patients were suffering with hyperthyroidism, varying in degree from mildly to moderately positive. The hyperthyroidism in these cases was a complicating feature in their tuberculosis.

To our great satisfaction we found in Group III, consisting of 6 cases in whom there was a definitely but moderately active clinical tuberculosis that the reaction to adrenalin was negative in all of them. We wish to point out, however, that in 3 cases there was a late slight atypical reaction, namely, a rise in blood pressure and pulse at the end of an hour or an hour and one-half, which is quite contrary to the typical hyperthyroidism reaction in which, at this time, the pulse and blood pressure are approximately the same as before the test. Furthermore, there was a conspicuous absence of the symptoms and signs so characteristic of the adrenalin response in hyperthyroidism.

In Table I we have listed the cases belonging to the three groups discussed above. The degree of the response to the adrenalin we have conveniently designated by the use of the "+" sign. A mild response is indicated by the use of "+", a moderate by "++", and a marked response is indicated by "+++". A negative reaction is indicated by the zero sign.

Analysis of Results.

The importance of being able to diagnose a condition from which many patients suffer, namely, a syndrome similar in many respects to that of early tuberculosis, in whom, however, clinical tuberculosis is not proved, is apparent to all workers in the field of tuberculosis. In fact, there must be many patients presenting themselves at sanatoria for tuberculosis with symptoms which appear not to be accounted for by the amount of tuberculosis, either active or inactive, which they have. Of this fairly large number of patients, we feel, as a result of our brief studies, that there is a considerable percentage suffering from hyperthyroidism. We have come to this conclusion as a consequence of the fact that there is in many

of these patients a positive adrenalin hypersensitiveness. Furthermore, confirmatory support is afforded by a carefully taken history and physical examination.

We wish to make clear that in the first place the constitutional hypersensitiveness to adrenalin is an indicator of excessive thyroid function. According to the degree of the response we are permitted to draw conclusions as to the degree of thyroid overfunction. Consequently, there must of necessity be all degrees of thyroid overfunction from the mildest to the most marked. There are doubtless many individuals with a mild hyperthyroidism who respond mildly to the adrenalin test, and who have not been greatly annoyed by their symptoms. The fact that these patients react mildly to adrenalin does not mean that, in our opinion, they should receive medical and possibly surgical treatment for this hyperthyroidism. These individuals are living in comparative comfort as far as their hyperthyroidism is concerned, and are not incapacitated by it. Rest and well-regulated hygienic life is indicated for them whether they have or have not tuberculosis. If, however, the hyperthyroidism is incapacitating or even of such a degree as to be definitely annoying, then after the failure of a faithfully carried-out rest and hygienic regimen, it is time to think of surgical measures.

In those unfortunate individuals suffering from both tuberculosis and hyperthyroidism, the problem becomes more complex. It is of course apparent that the very nature of hyperthyroidism is such as to make it impossible for them to carry out the rigid rest regimen which their tuberculosis requires. The well known nervousness and often extreme restlessness of these patients might readily defeat the ends to be gained by a well-regulated rest cure. On the other hand, a surgical operation, unless definitely advisable, might be contra-indicated on account of the nature of the tuberculosis present. The question as to whether the tuberculosis or the hyperthyroidism is to receive predominant attention at the beginning of treatment rests with the physician in charge.

Another point we wish to bring out is that a mild hyperthyroidism may have existed in an individual years before the symptoms become so severe as to cause the patient to seek medical advice. When finally the patient does seek aid, he is found to have a rather clear history of hyperthyroidism; the physical findings may or may not be especially prominent, but there is a moderate or marked reaction to adrenalin. This would mean to us that his

disease has reached the stage where medical or surgical treatment is necessary. The situation here is analogous to that in tuberculosis where there may be an incipient stage of the disease not apparent to the patient, which later develops into a frank clinical tuberculosis. Our point is this: that it is just as wrong to say that a patient with a mild adrenalin hypersensitiveness has not a mild hyperthyroidism which may not require treatment at the time, as it would be to say that a patient had had his tuberculosis only during the time that it was clearly active.

It should be mentioned furthermore, that the adrenalin hypersensitiveness reaction affords us a means of early diagnosis of hyperthyroidism at a stage before the disease has seriously damaged the individual or perhaps incapacitated him. It thus allows us to appreciate an early mild hyperthyroid element in tuberculosis should the two diseases exist concomitantly. The interesting question as to whether a mild hyperthyroidism may not have been the causative factor in his subsequent breakdown with tuberculosis, or whether the tuberculosis may in some instances elicit a mild hyperthyroidism, we shall not attempt to discuss in this preliminary report.

Summary.

In probably every sanatorium for tuberculosis, and in fact in the practice of every physician interested in this disease, there are patients who symptomatically might be considered as having either incipient tuberculosis or mild to moderate hyperthyroidism or both. The problem then is one of determining whether these symptoms are due to tuberculosis or hyperthyroidism or both. In many instances the severity of the clinical syndrome of symptoms appears to be out of all proportion to the amount or activity of the tuberculosis present. Heretofore it has been a matter of opinion and oftentimes a diversity of opinion among members of the same staff as to whether the amount and activity of tuberculosis present was to be considered responsible for the symptoms. Naturally, when the diagnosis depended upon such a difference of opinion difficulties arose, and in the end the patients have doubtless often suffered. We felt justified at the present time in offering a diagnostic help in these cases, namely, a means of determining whether the disease from which the patients are suffering is purely a tuberculosis, a tuberculosis complicated by hyperthyroidism or a pure hyperthyroidism. The diagnostic aid consists in the determination of the constitutional hypersensitiveness to adrenalin. Hyperthyroidism, whether or not associated with tuberculosis, will give a positive reaction to adrenalin. Tuberculosis uncomplicated by hyperthyroidism, as it appears from our brief series of cases, does not react positively to the adrenalin. We feel that in a considerable number of borderline cases presenting symptoms more or less characteristic both of tuberculosis and hyperthyroidism, we can now pick out those suffering with hyperthyroidism. The value and importance of such a diagnostic aid to the patient need hardly be mentioned.

In conclusion, we would like to thank the medical staff of the Trudeau Sanatorium for their ever-ready help and interest.

Norman Clive Nicholson.

For the first time the ranks of the active Fellows of the American University have been broken by death. After a brave fight against influenza and pneumonia, Norman Clive Nicholson, son of the Reverend Doctor and Mrs. James C. Nicholson, of Baltimore, entered the higher life on February 16, 1920. Clive was born August 20, 1892, at Cumberland, Maryland. He took his preparatory course of four years at Baltimore City College and graduated with his bachelor's degree from Johns Hopkins University in 1915. He has continued his studies and researches in the graduate department of Johns Hopkins, and at the Trudeau Foundation for the Study of Tuberculosis at Saranac Lake, New York, and was in his third year as a Fellow of the American University. We reproduce in this number of THE COURIER from The American Review of Tuberculosis, Volume III, Number 2, April, 1919, an article bearing his name in collaboration with Emil

Goetsch. Of this production, Professor Adolf Myer of Johns Hopkins says: "It is a piece of work of decided practical importance and shows the temperament of the man and his worth-whileness." His face speaks of culture and strength as it appears in the picture herewith presented.

Table Talk.

With reference to the cut in the last issue of THE COURIER of the downtown property purchased by the University it should be stated that of the four buildings shown in the picture, those numbered 1901, 1903, and 1907 have been purchased by the University, while the house numbered 1905 is not the property of the University.

The Personalist is the name of a new quarterly issued under the auspices of the University of Southern California, with its Professor of Philosophy, Dr. K. T. Flewelling, as editor. It is a journal of philosophy, theology and literature, but it is especially devoted to the expounding and extending the influence of Personalism, or that form of personal idealism found in the philosophical system of the late Borden P. Bowne. The American University is represented in the first number, which appeared in March, by its Director of Research, Dr. Collier, who writes on Personalism, a Vital Philosophy.

GRAND SUPERINTENDENT METHODIST CHURCH IN CANADA

Important Meeting of Trustees.

The meeting of the Board of Trustees of the University in June was destined to be one of the most notable in the history of the institution. There was an unusually large attendance of the members, a number of whom had come from a great distance.

The Chancellor reported \$167,674 received since the preceding meeting six months before. The entire indebtedness of \$73,000 had been paid. The additional mortgage of \$5,000 on the down-town property had also been paid. Most of the investments had been made at the rate of 6 per cent per annum. Between \$6,000 and \$7,000 had been appropriated to the Board of Award for Fellowships. The income from the newly purchased property in the center of the city was \$350 per month. The expense of the down-town branch of the University for the spring semester had been paid and \$1,500 paid for the new reference library. The Fellowships were awarded, ranging from \$500 to \$1,000 each.

Gordon Battelle, of Columbus, Ohio, and W. J. Faux, of Philadelphia, were elected Trustees.

The Chancellor was authorized to confer the graduate degrees of Doctor of Philosophy on Miss Claudine Elizabeth Clements, and of Master of Arts on Harry Joseph Heltman.

The list of Fellows to whom the several sums of money were granted is printed in another column.

A committee consisting of Mr. John B. Larnier and the Hon. H. B. F. Macfarland, from the Board of Trustees of the George Washington University, was received to present a proposal which had been made by the Trustees of that institution soliciting a union of that venerable school, whose centenary occurs in 1921,

with the American University. After some outline of the plan of union had been given by Mr. Larnier, President of the George Washington Board of Trustees, and Mr. H. B. F. Macfarland, another member of that Board, the proposal was received with favor, and B. F. Leighton, Bishop John W. Hamilton, Bishop W. F. McDowell, W. S. Corby and John C. Letts were appointed the committee to confer with a similar committee from the George Washington University and, if found practicable, to report back to the Trustees for their decision the plan for the union.

The Chancellor, who had offered his resignation at the previous meeting of the Trustees in December, to take effect at the close of the school year, was requested to continue his administration until the opening of the next school year, when it was hoped his successor would have been elected.

Convocation Address, American University, June 2, 1920—Reciprocity Between Canada and the United States.

BY RT. REV. SAMUEL D. CHOWN,
Toronto, Canada.

Mr. Chancellor, Bishop McDowell and American Friends:

Your Chancellor has given me, if not a difficult task, at least a delicate operation to perform in joining together the ligaments of sentiment, affection and principle, which bind the United States, Great Britain and Canada together.

On behalf of your northern neighbor, the Dominion of Canada, I wish to express appreciation of the fact that one of her citizens has been chosen to speak on this important occasion, and upon a theme so vital to the world's welfare as Christian and National Reciprocity.

It indicates that Canada's new status as a nation has seized the imagination of leaders of thought in this great Republic. It is a gratification to our people to be acknowledged as a world power in that much-discussed document called the League of Nations, and it has been our pleasure promptly to assume the duties which membership in that organization implies. Further emphasis has recently been given to the national standing of my country by the consent of the Imperial Government to the appointment of an accredited minister from Canada to the Government of this land.

I gladly confess at the outset my inability to discuss reciprocity as an international policy, or a political program. The purpose I have in mind is to reach a background of mutual understanding between this country and the British Empire, and to promote a spirit which will assist in making all public policies, in which we are mutually interested, fruitful for good, in order that if possible we may be drawn into deeper sympathy, and into closer co-operation for the future safety and progress of the world.

The utter absence of any preparations on either side of the border line for defence against naval or military attack, is but a sign of the mutual trust which already fills our hearts, and inspires our international relations. Now that the war is over in which the soldiers of both nations rendered such valiant service, it is very important that we should take stock of our mutual relations, of some things we have in common, and of other things we ought to have in common. While speaking particularly for Canada, may I with obvious limitations, be understood as representing to some extent, the opinions and sentiments of the motherland.

CANADA THE INTERPRETER.

I have said elsewhere, and it may be worth repeating, that in my judgment Canada's chief duty and opportunity in world affairs in these new times, is to play the role of inter-

preter of the United States to Great Britain, and of Great Britain to the United States. This indeed is my mission here today at the request of your Chancellor. We venture to think that little Johnny Canuck understands the psychology of Uncle Sam and of John Bull more intimately than either of them understands the other, and he greatly desires to make these gentlemen better acquainted. Though we live in provinces over in Canada, we try not to be provincial. We are related to a world-wide empire, and are under constant stimulus to live a world-wide life.

We can come to a mutual understanding only by sincere appreciation of each other, by speaking the truth one to another in love, but with perfect frankness and freedom, and if my remarks today have any virtue at all it will be due altogether to their sincerity, and to the fact that I represent the sentiments of a very large portion of the people of Canada.

As the groundwork for mutual understanding, absolute trust in the good intentions of the ordinary people of both nations is fundamentally essential.

Politicians are apt to be misunderstood even when trying to act in good faith, and the great security of nations lies in the educated Christian instincts of the common people.

There have been little ripples of ill-feeling raised by popular assumptions, generated principally by moving picture shows, as to who won the recent war. These assumptions I am glad to think are confined to the less thoughtful people. Were I to present my view of the case I would simply say that you cannot fill a five-gallon measure with one gallon, unless you have four gallons in first. We both, with others under the divine favor and assistance, won the war.

If compelled to confess further, I would gladly adopt the words of the distinguished American minister of religion, speaking to the General Conference of the Methodist Episcopal Church at Des Moines; I refer to the Rev. Dr. Eckman. In introducing the British Wesleyan Delegate, he said in part: "When we glory in the fact that we were able to transport two millions of men across the Atlantic Ocean in order that we might bear our part in the great conflict for the permanency of Christian civilization, we sometimes overlook the fact that it would have been possible for the enemies of civilization to have transported an equal number of men across the Atlantic Ocean to despoil the fair cities of our Atlantic seaboard, were it not for the fact that the Imperial British Navy said, 'You shall not cross.' When we sometimes give ourselves over to excessive self-regard, which we frequently imagine to be a warm and zealous patriotism, we are now and then led to speak in glowing terms about our achievements. But, fellow-citizens of the United States of America, had it not been for the staying hand of Great Britain, we could have done nothing other than to await the signal of our doom." I need say no more. "This tribute, touching as it does but one of the many British activities in the war, is warmer than we would have claimed for our own kinsmen. Englishmen are proverbially in the habit of doing great things in an atmosphere of silence. They might be fighting on all the fronts of the war, financing many of the allied nations, supplying them with munitions, and solving difficult problems of transportation for large and small nations alike, yet no representative man would give himself to exploiting the Empire's praise.

ANGLO-AMERICAN UNITY.

The oneness of language which marks our two peoples with a slight tincture of Christian feeling would suggest that our feet should be set upon similar paths of progress. I sometimes think that even to do so simple a thing as to extend the range of our common sense would cement our unity.

We have nursed suspicions of each other; but if we would only sit down for half an hour's steady thought and casting aside our pride, and our prejudices, ask ourselves wherein the two nationalities differ in loyalty to the highest ideals, we should be dumbfounded at our folly, and all ill-feeling would vanish into thin air. Speaking broadly, we should find no reasons founded in the nature of things, nor in history itself, why there should now be any doubt or mistrust between us. The same elements of character are found in both peoples as such, but possessed by various individuals in differing proportions. If there is any constant note of dissimilarity it lies in your greater gift of self-expression. It is something we Canadians are prone to envy, but we cannot imitate. Our English brethren are even more taciturn than ourselves.

In the matter of expression, however, I am told that I have an advantage over Champ Clark. I was being brushed down by a porter in a Pullman car a short while ago, and he said to me, "You remind me, sir, of a gentleman I often take care of in my car." I said, "Who's that?" He said, "Champ Clark, sir." Then I said, "Here is an extra quarter to give Champ Clark the next time you see him for being such a good-looking man." He said, "Oh, yes, good looks is all right, but a fine expression is ever so much better."

The expression of a fervid patriotism is a great gift with your people. I account for it by the fact that the liberty of this country was bought with precious blood. It was fought for; and that set you to talking about it, writing about it, and singing about it, until the war that won it became the outstanding feature of your folk lore, and you developed a very distinct national self-consciousness, and out of that has grown by way of reaction, a consciousness of selfhood clear and vivid in the units of your nation.

On the other hand our liberty broadening down from precedent to precedent, and coming to us without any shock of arms at our national birth, has been quietly accepted without any great flurry of exaltation. We inherited it from our forefathers. Of them it may probably be said with truth that liberty came by the transfusion of the blood of conquerors into the native stock, but its spirit was greatly enlarged by education, and made vigorous through the agency of powerful revivals of religion. By action and counter-action of diverse parties in the State the people widened the bounds of freedom, their antagonists being their helpers, and I can assure you we value it for its fruits as much as you do, and are as willing to die for it as you are.

This English language has never couched more noble sentiments than in the interpretations that your President gave from time to time, early in the war, as to the real significance of the conflict, and in the pressure of his convictions upon the conscience of Christendom.

Equally grateful to us also are the eloquent words of Bishop McDowell setting forth the higher thought of the American nation when he said, in speaking for the College of Bishops of the Methodist Episcopal Church a few days ago:

"Four years ago when we met the world was on; and the United States had not entered it. We shudder to remember 'those drugged and doubting years,' before

His mercy opened us a path

To live with ourselves again,

before we 'firmly made our choice for Freedom's brotherhood.'

Today with the full sense of what it cost us to go in, in treasure and precious life, we who are of the United States reverently repeat the words:

"Then praise the Lord most high,

Whose strength has saved us whole,

Who bade us choose that the flesh should die

And not the living soul."

This stanza so full of the sentiments which inspired your people finds a prompt response in our Canadian hearts.

While so speaking let me thank you for the generous appreciation the American people have always expressed for the Canadian army. We like to think of it as the shining spear head of the shock forces of the British Empire, and man for man our soldiers were very much like your own.

IDEALS IN COMMON.

As indicating our unity of ideals we have also noted with great satisfaction the protests made by important public bodies against the interference of Congress with the internal affairs of Great Britain. These indicate clear mutual understanding and warm international good will.

But let me assure you that we Canadians do not judge the great American people, with their innate courtesy, and with their fulness and fervor of Christian sentiment, by the action of the majority of the Senate, particularly in the face of an approaching election. The tactics and strategy made use of at times by our own politicians, are too much like yours not to understand your Senators. The best people in this land tell me they are humiliated by the low platform upon which the Covenant of the League of Nations has been discussed.

To degrade a question of scarcely less than infinite importance to the level of ordinary partisan politics is to confuse the whole situation, to rob the people influenced by the discussion of any just idea of proportionate values, and so far as may be to chloroform their moral sense.

We say all honor to the name of George Washington and his warning against foreign alliances, but we conceive it to be contrary to the genius of this great Republic to be restrained in its progress by a dead hand. "New occasions teach new duties." "The thoughts of men are widened with the process of the suns," and you will permit me to say that all sound international progress moves in the direction of a brotherhood of nations.

A modern Japanese statesman has described Japan as no longer the Japan of the Far East, but Japan of the world. We Britishers would like to see America, not America of the Western Continent only, but America of the world. Not that we wish you to come into the League of Nations to take part in the wars of the world, but to stop the whole foolish and nefarious business, and we are confident that in association with the British Empire you can do it.

FUTURE OF BRITISH EMPIRE.

Do not think of the British Empire as it is today. Think of what it will be. Think of all the development that Canada is about to have. Think of Australia, larger in area than this great country, exclusive of Alaska, Hawaii and Porto Rico, and holding as yet only five millions of people. Think of British Africa with its provision for great development at different points between the Cape and Cairo. Think of New Zealand with its most advanced industrial legislation. Think of the teeming millions in India. The power of such an aggregation of nations when they come to their predestined development is beyond computation; and you can depend upon it to hand itself together, and unite with you, if you wish it, for the permanent peace of the world. I beseech you American people in the name of the bleeding heart of humanity, disappoint us not. I speak for a nation that has suffered relatively twelve times as much as you have in proportion to your population. We need your big brotherly help. "Come inside the door," and as Ex-President Taft says, "put the house to rights afterwards." Americanize the Covenant if you will, but if you truly Americanize it you will Britishize it, for we are not dead to the need of self-preservation, and are as keen and strong on democratic ideals as you are. We shed our blood and rolled up a huge debt in Canada so great that your financiers by processes of reckoning too obscure for me to fathom, charge us a rate of exchange which would suggest to the common mind that we are in a condition of semi-bankruptcy, though we are stronger financially than ever in our history. It is true that for the moment, owing to our immense expenditures in the war, and our extension of credits to impoverished and suffering peoples, we lack ready money to meet our immediate obligations.

We shadowed our homes so deeply by bereavement that nothing but the light of eternal day can lift the darkness, and we did this for things we believe in, and enjoy, not merely dream about, or hope to get.

It is true that in attaining peace, we leaned towards France out of sympathy with the terrible blood-letting through which she has passed, and because she needs strong guarantees against German aggression, but we really want as humane a peace as you do, and need your help to ensure it. We fervently pray that you may be saved from the fear of accepting the conditions of high leadership in world affairs, and that you may be fitted by Heaven worthily to fill a larger place in determining the destinies of mankind. Why have you been raised to the pedestal of wealth and power upon which you now stand, but for such a time as this.

I know that many of your people think much of the blots upon the civilization of the British Empire. We deplore them as much as you do. You think democracy is in a backward condition in India, but we are advancing it as rapidly as we can. I do not say it to sink the mountain to a plain and make an equal baseness, but to put our mutual understanding upon corner stones of equal truth, when I ask you to think of your last treatment of the Red Indian, when tempted to reflect severely upon British treatment of the East Indian. We bear the white man's burden in that country as a sacred, divine trust.

I went to Leeds, England, to obtain the services of Sir Michael Sadler, wishing to bring him to Canada temporarily, to advise us in the development of a scheme of moral education. To facilitate his coming, I offered to pay his expenses to Winnipeg, by way of Yokohama, Shanghai and Vancouver. He had, however, committed himself to the British Government to go to India to reorganize Calcutta University for the purpose of making it a means of assisting to forward

democracy in that great land, and he would not forsake his task. Secretary Montague has carried through the House of Commons a bill providing for large extensions of freedom and democratic responsibility upon the part of the East Indians, and if you do not extend too rapidly the privileges of democracy among the Filipinos, it will permit us to make steady advancement in democratic ideals in the great Indian empire. The world is not safe for democracy without education for citizenship.

An American gentleman of considerable intelligence asked me with some vehemence what about the atrocities of the British in South Africa which brought about the war. He possibly had Belgium and the Congo in the back of his mind. Yet I presume that the worst that could be said about that war is that it was prosecuted for the purpose of protecting invested capital and its profits, and I am not sure but that if the United States should drift into war with Mexico, there would not be somebody who would lay the charge of atrocities at your door, though you would be protecting British-Canadian capital as well as your own.

Events as they have turned out in South Africa, however, furnish a striking proof of the unique genius of Great Britain for the government of diverse peoples, and of her power of winning the admiration and affection of all parts of the Empire—witness the conduct of South Africa during the war.

After all Great Britain is a wonderful old empire. Its romance grips us Canadians. A few months ago there was gathered in London a number of notables, including General Seeley and General Smuts. In speaking on that occasion General Seeley said that when he was in the South African War he learned that there was a graduate of Cambridge University fighting on the other side and he himself was a graduate of Cambridge University. He learned that this gentleman was a member of the Inner Temple, London, and he himself was a member of the Inner Temple, London. He learned that he was a Commander of Cavalry, and he himself was a Commander of Cavalry. One day this officer rode rapidly down the veldt on the opposite side of the river. Gen. Seeley's orderly told him the rider was Gen. Smuts. Seeley got the first rifle he could lay his hands on, he aimed to kill, he fired, but missed. Later the two gentlemen were engaged in elaborating a Constitution for the South African Commonwealth. Later still they were joint members of the British Privy Council and worked together drafting the terms of the League of Nations, and "I am here," General Seeley said, "to propose a toast tonight to the health of Gen. Smuts." There is no other empire in the world of which such a story could be told.

THE IRISH QUESTION.

And poor Ireland puzzles your people. It puzzles us and it puzzles the Irish themselves. It is a perpetually running sore in the British body politic. The ointment has not yet been found that will cure it. There seems to be no specific known to man which will meet the case. She has suffered much from many physicians, and feels no better, but rather worse. The sins of our fathers of a darker age in Great Britain, are being visited upon their children, and the children are at their wit's end to know how to atone for those sins.

But speaking for Great Britain, again I may say we are doing the best we can. We are not working in a vacuum but with elements that are hard to control and interests extremely difficult, if not impossible, to harmonize. While the Irish people possess many qualities of a most engaging character, they have an immense capacity for hatred, however they came by it, and in view of their interecnic strifes it is not clear that the interest of the whole people would be served if the British Government should relinquish all control. The arm-chair critic has an easy task, but the practical statesman makes progress by the sweat of his brow. The colt browses and capers about the pasture, but the old horse must draw the load sometimes in harness that chafes and galls. Administering affairs in Ireland is no coltish job. I was there in 1917 when an Irish Convention, representative of nearly all important sections of opinion in Ireland, was about to assemble at the request of the British Government. They had been told that if they could work out any satisfactory system of government themselves, it would be granted to them, but they could not agree as to what they wanted. This is the crux of the whole situation—if they could agree amongst themselves, they could have almost anything short of complete separation from Great Britain.

I was in Cork one evening when a number of political prisoners arrived who had been released from prison in Dublin to put the Irish in good humor for the discussion of the terms of the new Constitution which had been promised them. These released prisoners were met at the railway depot by five thousand Sinn Feiners who escorted them through the city. The Sinn Feiners were well drilled men, and carried themselves in erect military fashion. In a few hours a riot was staged, in which one man was killed and thirty-eight wounded. I escaped home from the Conference Church safely, but those who came a little after took refuge in train cars to avoid the stones and bullets flying around them.

An Irish gentleman, illustrating the character of his people, told me a rather amusing story of a certain man, who having got into an altercation, had his ear almost bitten off. He was taken before a judge and examined for discovery. The judge said to him, "Do you think, sir, you could recognize your antagonist?" He replied, "Sure I could; I've got his nose in my pocket."

Oh, Ireland is a problem, and I am sure the Government of Great Britain would give a fabulous reward to any American genius who could suggest a real solution of the difficulty. That would be a thousand times more to the point than passing condemnatory resolutions by the Senate of this country. You might as reasonably punish a man for being afflicted with an hereditary disease, as blame the British of today for Ireland's condition.

DEMOCRACY IN CANADA AND GREAT BRITAIN.

We have in Canada, however, no inherited grievances, nor grievance of any kind against old England. We have every measure of freedom that we could desire and are shaping our own destiny. I was sitting at dinner in Southern California a few weeks ago, when a chipper old lady turned to me quickly and said, "How are you governed in Canada?" Well, I scarcely should have said it, but being on this side of the boundary line, and under the influence of your gift for self-expression, I somehow could not help it, so I blurted out, "We have the most democratic Government on the face of the earth." Of course I went on to prove it, which I need not do in this intelligent presence.

I will say, however, that the King, as you know, has no independent governmental authority. He stands to us as the living symbol of the unity of the empire—a most useful function. The Commons can control the House of Lords. If the Lords twice refuse to pass a bill sent them by the Commons, it can be enacted into law without their consent. These arrangements provide for unity of action and concentration of power. No member of the Cabinet can hold office unless elected to the House of Commons. All bills relating to the expenditure of money must emanate from that House, the members of which are directly and always responsible to the people, and if at any time the administration fails to command the confidence of a majority of the electors, it may be turned out, without waiting for the lapse of four years or any definite fraction thereof. That, we conceive to be democracy in government. In our view the measure of ordered liberty is the measure of control which each citizen exercises in the government of the country.

The same statements apply to Canada with a change of terms, substituting the Governor General for the King, and the Senate for the House of Lords. We have not yet obtained complete control of our Senate, which is not an elective but an appointed body, appointed, however, not by the King or Governor General, but by the people's government, yet it seems to be written in the book of fate that a party pledged to the abolition of the Senate will next come into power in our country. If they carry out their policy, we shall have still further broadened down our liberty, "firm based upon the people's will."

A gentleman in Canada on his honeymoon trip took his bride to Ottawa, and going to the House of Commons they watched with great interest the proceedings of our representatives. He then said to her, "Would you like to see the Museum?" She said, "I would." He took her to the Senate Chamber and after she had looked at the gentlemen there for some time, she turned in amazement to her husband and gasped, "Why, some of them look as if they were almost alive."

You must sometimes ask yourselves the question whether your Senate and Senators have entered the promised land and are alive to the new age into which the world has come.

Some of them are, thank God, but others still lodge in some vast wilderness.

EDUCATION THE CURE OF MISUNDERSTANDINGS.

It is quite clear, I think, that any lack of sympathy between us is not due to fundamental dissimilarity of ideals, but altogether to education. I have about come to the conclusion that blood is education condensed and fluid. We talk about American blood and British blood as though they were composed of different elements, but so far as I can see, if it is real American, or real English blood, it is what it is as the result of education. We use the expression "blood" loosely as a synonym for the out-standing characteristics of different nationalities. It is therefore immensely important that we should assimilate our educational results.

I do not know how much this generation is responsible for it, but it seems to us that the impression has got into the minds of many American people that monarchy is of the devil. This is one thing that has tended to separate us. Then the word "subject" used to describe the citizens of the empire should be suppressed as it carries with it certain historic implications which had some significance in earlier days, but the world has now no justifiable content of the old kind, and it serves to mislead those who have but superficial knowledge of our institutions. The use by the King of the expression "my government" is an unfortunate and misleading anachronism.

At Chautauqua, N. Y., that great center of light and leading, an American young lady said to a friend of mine early in the war, "Would not this be a great time for Canada to rebel and get her liberty?" That is beyond comment.

On our side of the line we believe that autocracy is of the devil, wherever it may reside, or under whatever label it may hide itself, but it does not exist only in a monarchy. It did exist in the King George, who wickedly provoked the American colonists to rebellion, but it does not exist in the King George of today. He is a King who knows and keeps with due reserve, and dignity, his place. Neither is it found in that happy young warrior whose bonnie ways win all our hearts, the Prince of Wales, heir-apparent to the throne. He showed his mettle a few days ago in New Zealand during a railroad strike in which Laborites refused to run trains for the use of the people, but would permit one to run for the convenience of the Prince, when he refused it, saying, "I am one of the people."

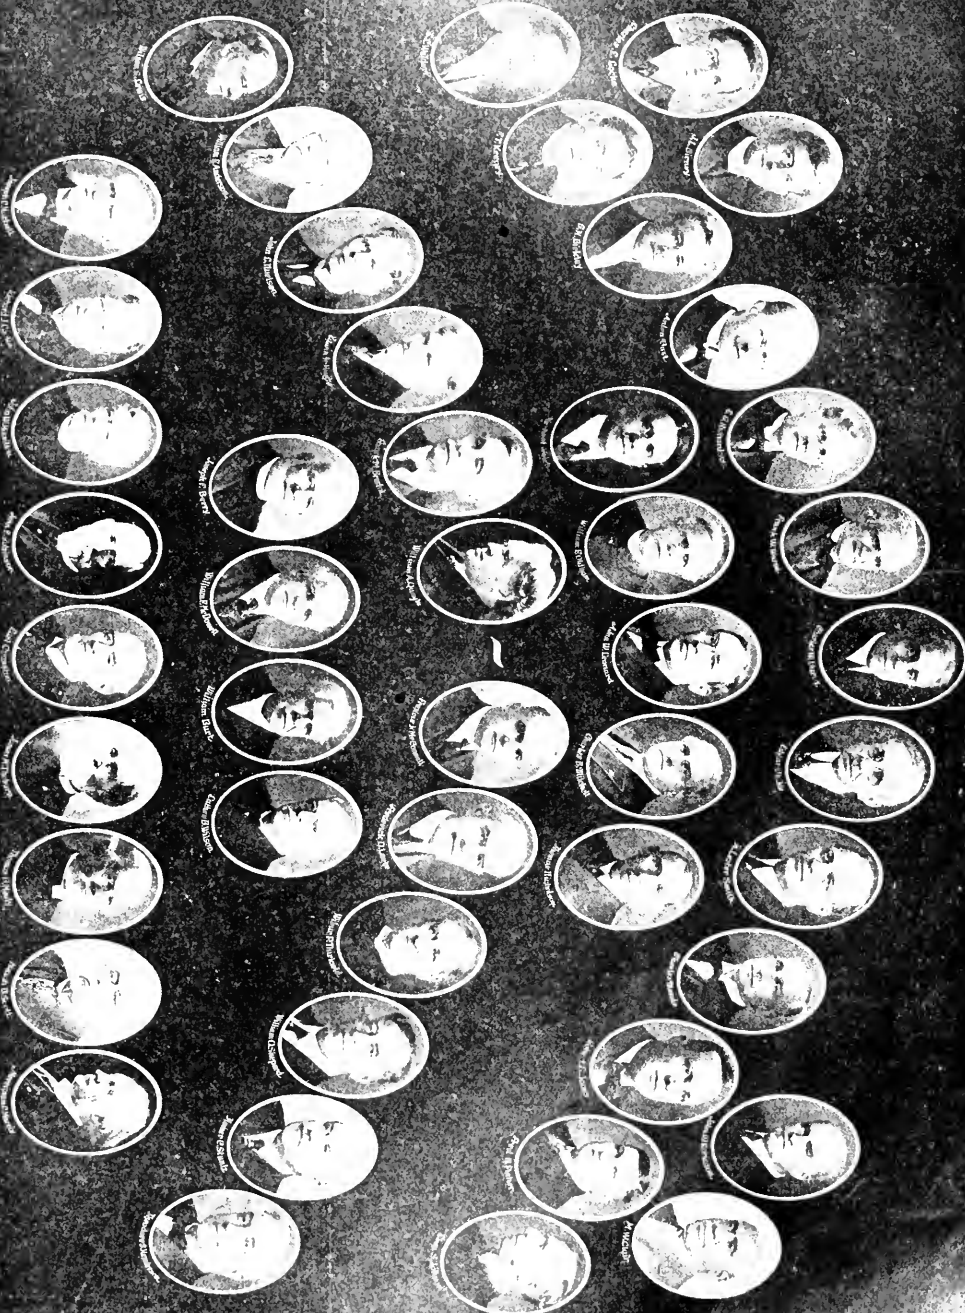

In our view the thought that monarchy is always and altogether evil seems to have impregnated your nation. This is accounted for we think by a great deal of fiction in your school histories. Your own brilliant novelist, Owen Wister, says that of 40 school histories used 20 years ago, in 68 of your cities, and in many more unreported, 4 tell the truth about King George the Third's Pocket Parliament, and 32 suppress it. Today, he says, your books are not much better. Thousands of your American children all over the country are still being given a version of the Revolution, and the political state of England at that time, which is as faulty as King George the Third's Government. He says that this teaching plays straight into the hands of your enemies; and it assuredly does. Very few of your children (or for that matter scarcely any of our children) know that when your forefathers began their fight for independence, there was no such a thing in existence as an American citizen—not one. That class of person became evident upon this planet some time after. The "embattled farmers" were British colonists who fought for liberties already enjoyed by their fathers and brothers in England, but denied to them. They fought because they had English convictions in their hearts. It was because they believed in the English tradition of liberty they gave their lives to uphold and extend it. The Declaration of Independence was only a further evolution of the principle of liberty, embodied much earlier in the Magna Charta wrung from King John, and in the Bill of Rights, for opposing which King Charles later lost his head.

Few of the rising generation know that Pitt, the great Earl of Chatham, so vehemently denounced the treatment of American colonists by the Crown of Great Britain that he was overcome and fell in a fainting fit on the floor of the House of Lords, and was carried out to die.

Few of us recall that it was impossible to obtain sufficient enlistments among the English to fight against your forefathers in the Revolutionary War, and that 17,000 Hessian mercenaries (men of German blood) were sent out to fight and retreat before the outraged colonists.

Members of the Methodist Episcopal Church

General Conference at Des Moines 1920

We fully, most heartily, and without the slightest reservation of feeling, approve of the War of Independence, and rejoice in its success. With the spirit we possess in Canada, we would do the same thing under similar circumstances, so that in our relation to that great event, there is nothing to repress, but everything to increase our high regard for the American people.

On the other hand, I am equally sorry, yes, more sorry, that few of our Canadian children realize as they should do, that it was the blood shed upon American soil by your forefathers which procured the large, may I not say, the perfect liberty which we now enjoy. The reaction of the American Revolution upon the British Government was such as to lead to a new policy in the treatment of her colonies by Great Britain, which not only inured to the benefit of Canada, but of all British possessions, from the great overseas dominions to the smallest dependencies of the empire.

The experiment of American nationality, owing to the tragic circumstances of its beginning, and its huge material success has challenged the attention of mankind so that to you as a Republic the down-trodden peoples of the world look wistfully for example and inspiration. The American Revolution has been a world-wide blessing, and I regret that in the interest of truth and good will our children are not better informed of this fact.

I count it a most regrettable circumstance that the occurrence of the last great war prevented the due celebration of one hundred years of peace between the United States of America and the Britanic peoples. In that event the history of our mutual relations would have been re-written and probably truth would have taken the place of fiction in our public schools on both sides; for we confess to literature that is too unscrupulously patriotic to convey an exactly truthful impression. I wish that this re-writing of history through a commission to be appointed jointly by our two great Anglo-Saxon peoples, under the aegis of our universities, might still be done in the interests of international understanding and good will. Two such powers animated as we are by Christian ideals, however imperfectly they may be realized, should be working together by every possible means for the world's peace and progress. I am sure God wills it.

SPIRITUAL FORCES OF GOD WILL.

One word more. That we may keep our two democracies pure and progressive, it is becoming more evident every day that we must submit democracy itself to a moral criterion beyond itself, whether this be found in common law, in conscience, in the greatest good of the greatest number, or in what we believe to be the divine will. We must not make a god of it and worship it, or it will betray our people with false hopes, and arrest the growth of national character, and possibly destroy our civilization. The eye of the soul must ever search beyond the material, and find those invisible principles, which girding the divine throne, are a girdle of strength to all nations who seek unto the highest life. Let me quote some words recently sent forth by Lloyd George, Prime Minister of Britain; Sir Robert Borden, Premier of Canada, and the premiers of four other British Dominions, in which they say that "neither education, science, diplomacy or commercial prosperity, when allied with belief in the material forces as the ultimate power, are real foundations for the development of the world's life." The League of Nations will be a failure unless men are possessed of the spirit of good will.

For the complete fulfillment of a world destiny and the exaltation of national life to its true poise, we must look beyond ourselves and accept such a mission to more backward peoples as the League of Nations is destined to provide. I believe that, including the United States of America, the League of Nations will yet become a fact accomplished, and when it gets properly down to work it will do much more than merely prevent war and protect weaker nations. The logic of the world's need will lead it to evolve a constructive moral program. It will unify and exalt the conscience of mankind on many other issues besides that of labor. To this end the Church of Christ, and the educational institutions of our countries must supply those intellectual and spiritual influences and inspirations, which will enable the two powers we represent here today to rise to their divine opportunity.

In this sublime atmosphere, Church and State, spirit and body, will coalesce in an organism, which we can call by no lower, and yet no higher name than the Kingdom of God.

American University Fellows for 1920-1921.

Name, Nominating Institution, Subject and Place of Study.
 Olin Winthrop Blackett, Wesleyan University, Economics, Harvard University.
 Margaret Hamner Bomar, University of Virginia, History, American University.
 Alexander Brady, University College, Toronto, Modern History, Oxford University.
 John Robert Chappell, Jr., William and Mary College, Diplomacy, American University.
 Henry Chung, University of Nebraska, History of Korea, American University.
 Erwin Ramsdell Goodenough, Garrett Biblical Institute, Classical Philosophy, Oxford University.
 Evangeline Harris, University College, Toronto, Classics, Oxford University.
 Henry Martyn Lewis, Jr., William and Mary College, Diplomacy, American University.
 Ella M. Martin, University of Wisconsin, Zoology, University of Wisconsin.
 Frederick Peter Myers, University of Virginia, Diplomacy, American University.
 Elmer Lewis Sevringhaus, University of Wisconsin, Medical Research, Harvard University.
 Harold Ridout Willoughby, Wesleyan University, New Testament, University of Chicago.

Recent Gifts of Money.

Acknowledgment of sums less than five dollars is considered a receipt therefor.

General Fund—\$1,000.00, Geo. H. Maxwell; \$50.00, F. C. Dunn; \$25.00, Wolburn, Mass. M. E. Church, J. L. Spaulding, Jr., L. J. Birney; \$20.00, J. L. Harvey; \$15.00, Edward Marsh, F. P. Luce, H. BISHOP JOHN HEYL VINCENT

Action of Trustees on the Death of Bishop Vincent.

The Trustees of the American University, assembled in their annual meeting on June 2, 1920, having heard of the death of Bishop John Heyl Vincent, a Trustee for many years, desire to put on record their sincere appreciation of his life, character and services, and to place the following item in the minutes of the meeting:

The death of Bishop John H. Vincent removes a most interesting and influential figure from our Board and from American life. Our own interest in him lies chiefly in his relation to education. He was a brilliant secretary, a very inspiring and suggestive preacher and bishop, a vigorous and instructive writer and a master organizer; but he was above all a man with vision, outlook and purpose. He literally invented or discovered the Chautauqua idea, and by so doing has brought learning to life, popularized higher education, stimulated the common mind to read and study as probably no one else in our history has ever done. He lacked a college education, but opened the college vision to tens of thousands. He missed the discipline of a college, but by self discipline made himself worthy and fit to stand with the world's elect. He has done vastly more than most men to "Keep the soul of the world alive."

L. B. WILSON.

Giving Twice by Giving Once.

When we first said through the COURIER, "We want a book," we did not know that we were to give the donors the privilege of doing so much good twice by doing good once: It was imperative that we should have a reference library in the school room where we were conducting a high-class school. We had learned of the sudden death of the Methodist preacher who had so valuable a scholarly library. We had not seen the books nor did we know just the needs of the home where the mother must now give herself to constant employment to give her two bright and appreciative children an education worthy of their father. Now that the books have come to the University and that thus far we have been able to send the good woman one-half the cost of the library we can assure every giver who gave a dollar toward this purchase that has

not only put the University under obligation to him for even a better collection of books than we had anticipated but he should know the great joy he has helped to bring into the home of the fatherless family. Was it not the big hearted Burns who wrote:

"To mak' a happy fireside cline
To wean and wife
That's the true pathos and sublime
O' human life."

Table Talk.

What the schools of the District of Columbia need is less controversy and more school houses.

The school year of the American University is divided into four terms of eleven weeks each.

The summer term of the American University in the down-town branch has been an agreeable success.

The union of the George Washington University with the American University is probable.

Combined Faculty of the School of Diplomacy, Jurisprudence, and Citizenship.

The Right Rev. John W. Hamilton, D. D., LL. D., Chancellor of the University.

Albert H. Putney, Ph.D., D.C.L., LL.D., Professor of Constitutional and International Law and Diplomatic History, and Dean of the Faculty.

Frank W. Collier, S.T.B., Ph.D., Professor of Racial Psychology and Comparative Religion, and Director of Research.

Charles C. Tansill, A.M., Ph.D., of the Congressional Reference Bureau, Professor of History.

Charles W. Needham, LL.B., LL.D., Solicitor, Interstate Commerce Commission, and former President of George Washington University, Professor of Comparative Constitutional Law and Interstate Commerce Law.

Lester H. Woolsey, A.B., LL.B., Solicitor, State Department, Lecturer on International Law.

Paul Kaufman, A.M., Ph.D., Bureau Chief, American Red Cross, Professor of Sociology.

Ales Hrdlicka, M.D., Curator of Physiological Anthropology, Smithsonian Institution, Professor of Anthropology and Ethnography.

Frederick Juchhoff, LL.M., Ph.D., Professor of Economics, William and Mary College, Professor of Economics.

Charles F. Carns, LL.M., LL.D., Dean, National University Law School, Professor of Legal History.

James Hamilton Lewis, Lecturer on Special Topics in Constitutional Law.

William Ray Manning, A.M., Ph.D., Adviser's Office, South American Affairs, State Department, Lecturer on Latin-American History, Industry, Commerce, and Culture.

Ray O. Hall, A.M., Trade Adviser's Office, State Department, Lecturer on Trade with Near East and Far East.

Edwin S. Fuller, Ph.B., Chief Foreign Permits Bureau, State Department, Lecturer on Citizenship and Passports.

Hayden Johnson, LL.M., Lecturer on Federal Corporations.

Gilbert O. Nations, Ph.D., Lecturer on Roman and Canon Law.

A. K. Schmavonian, A.B., LL.M., former Adviser of American Embassy, Constantinople, Lecturer on Oriental History and Mohammedan Law.

Henry L. Bryan, LL.M., Lecturer on Federal Statutes.

Walton C. John, A.M., Ph.D., Lecturer on Principles and Methods of Teaching Foreigners.

Charles O. Paullin, Ph.D., Lecturer on Historical and Commercial Geography.

Charles W. Russell, LL.B., formerly Assistant Attorney General of the United States and United States Minister to Persia, Lecturer on Claims Against Foreign Governments.

Raymond F. Crist, LL.B., of the United States Immigration Bureau, Lecturer on Immigration and Naturalization Laws of the United States.

Richard C. DeVolf, LL.B., Lecturer on the Law of Copyrights.

Charles L. Cooke, Officer in Charge of Ceremonials, State Department, Lecturer on Diplomatic Ceremonials.

SPECIAL LECTURERS.

In addition to the work given in the regular courses, a large number of special lectures will be given to the students by men prominent in public life. Among those who have promised to address the schools during the coming year are the following:

The Hon. Philander C. Knox.
The Hon. Wm. Jennings Bryan.
The Hon. Franklin K. Lane.
The Hon. William P. Dillingham.
The Hon. Joseph G. Cannon.
The Hon. Champ Clark.
The Hon. Leslie M. Shaw.
The Hon. Simeon D. Fess.
The Hon. Ira G. Hersey.
The Hon. Ira E. Robinson.
Dr. W. S. Bovard.

BOARD OF AWARD.

A. C. True, Ph.D., Chairman.
P. P. Claxton, LL.D.
E. B. Rosa, Ph.D.
Oswald Schreiner, Ph.D.
John W. Hancher, S.T.D.
L. H. Murlin, S.T.D.
Vincent Massey, A.M.
Together with the Chancellor, Director of Research, and Registrar of the University, ex-officio members.

Qualifications for Graduate Degrees.

1. Only persons who have taken the bachelor's degree are considered as candidates for a graduate degree.
2. The Degree of Doctor of Philosophy requires one major and two minors with three years of graduate study as a minimum.
3. The Master's degree requires at least one major and one minor with one year of graduate study as a minimum.
4. Resident work pursued at a reputable university may be recognized by the American University, but at least one year's residence and study in Washington will be required of a candidate for a degree.

Before a degree is granted the candidate must meet the following requirements:

1. A thesis in typewritten form by March 31 (at least five copies).
2. A written statement by the candidate on his work in each subject pursued.
3. An oral examination of the candidate by members of the Board of Award.

American University Fellowships.

The American University has granted annually for five years past fellowships ranging in number from five to ten and in value from \$300 to \$1,000. Two fellowships are granted on the Massey Foundation to candidates from Canada, but if there be no appli-

cants from that Dominion they may be granted to others. The Gustavus F. Swift Fellowship is awarded to some graduate of the Garrett Biblical Institute who has been recommended by that institution.

Candidates for fellowships should apply to the Registrar of the University as soon as possible for application blanks, fill them out with care, and return them to the American University not later than April 30th of the year preceding the scholastic year during which the fellowship is to be in effect. An earlier date, however, is to be preferred. Candidates will have preference, other things being equal, who submit a definite plan and outline of contemplated research. A photograph of the applicant is requested. Awards of fellowships are announced about the first of June for the ensuing year.

UNFINISHED LABORATORY BEGUN BY U. S. GOVERNMENT FOR CHEMICAL WARFARE SERVICE

SAVE WHAT WE HAVE.

Believing benevolently disposed persons prefer to know the particular object to which they contribute we have been giving from time to time in the COURIER some account of the imperative needs of the University.

Just now no large matter so much engages the attention of the Trustees as the absolute necessity of finishing the large laboratory building which the Government began to erect on the campus and which has been left unfinished. The War Department expended \$225,000 in carrying up the building to its present status and there left it. We print herewith a picture of the incomplete edifice as it now stands. To preserve from damage by the weather what has already been expended, make a presentable appearance in conformity with the other handsome University buildings and put the laboratory in shape for immediate use it must be finished. At present prices of material and labor the building can be roofed, inclosed with doors and windows, and finished on the outside for about \$50,000. It can be finished inside with all sewer connections, gas, electric light and the grounds beautified about it for about \$100,000 more. To make it as well equipped with all expensive laboratories and office furniture as the Government required for the other buildings used for like purposes during the war will require from \$25,000 to \$50,000 more. To make it safe for itself it should be inclosed at once; to make it habitable for laboratory purposes it should go forward to completion as soon as possible.

This must be done or the patrons of the University will be able to give to the city and country no apology for the apparent neglect.

We know where we can get the first \$10,000 for the purpose. Shall we not expect our friends to respond at once to this appeal?

WHY DO WE ASK?

Because we receive. The success of all we have undertaken has been because the American University has friends and friends all over the world. When we need we ask and they give. As it is the only institution of highest grade that has been chartered as this has been; as it is located in Washington, more than ever a world center of influence, and as it is provoked to good works by the zeal, propoganda and determination of the Roman Catholic University, why should we not ask?

We find that when we specify the things we need someone selects to give one thing, some another. We are now asking again. We specify again the urgent needs going up in values as the things we need will cost.

First—For our down-town library. (a) Freeman's Historical Geography of Europe, including the volume of maps. (b) A Copper Heating Reflector, to be connected with the electric wire in the library—this for days that are damp and chilly, but not cold enough for furnace fire. It saves coal and can be turned off when not needed.

Second—Encyclopedia Americana and Encyclopedia Britannica.

Third—A Ford, Dodge, Buick, Studebaker, Oakland or Franklin automobile. It is two miles and a half between the two departments of the University and the trolleys only run every forty-five minutes.

"For a school as young and growing

As any others are,

We should either have a Ford,

Or else a Franklin car."

A colored preacher has sent us a dollar to buy the spark plug—we have that much toward the machine.

Fourth—The Chancellor's house. If rents keep going up it will be necessary for the Chancellor to rent

some rooms in an aeroplane. Until then a house is what he needs. The rent he is paying in ten years would buy as good a palace as the Episcopal residence Bishop Berry occupies.

Fifth A dormitory on the University campus or in the city for the down-town students. Fifty thousand dollars will buy one in the city. Two hundred thousand dollars will build one on the University grounds; considerably less will finish the large unfinished building—capacious and commodious—which the United States Government left us when the armistice was signed.

GEORGE W. F. SWARTZELL.

Another worker in the earthly fields of Christian usefulness has been called to the higher activities of the eternal. The sterling qualities shown in his young manhood were steadily developed through a long career of business success, marked by unswerving rectitude of spirit and of practice. In his manifold

GEORGE W. F. SWARTZELL

relations as citizen, as church member, as fellow-worker in philanthropy, and as counselor in moral, educational and financial enterprise, he showed himself an able and efficient workman. He traveled the royal road of service to his fellowmen, and won the distinction of a brother beloved in many circles of his acquaintance and friendship.

A constant and generous contributor of money to a long list of benevolent agencies ministering to human need, he was also the inspirer and stimulator of a multitude of others to similar helpfulness. His cheerful spirit, his quiet smile, his cogent words of statement and persuasion, led many a man and woman to the active support of the good causes in which he himself had become interested. Unostentatious in his manner of giving, he nevertheless did not hide his light under a bushel, but let it so shine as to glorify the author and giver of all light and love.

George Swartzell's name in Washington was the synonym of integrity, fidelity, fraternity and honor. His face and form disappear. His influence and spiritual force remain, a source of strength for all who labored with him and an abiding treasure of comfort and satisfaction to the widow and children who survive him.

He rendered long and efficient service as a Trustee of the American University and as an active member of the Executive and Finance Committees of the Board. He was a safe and progressive adviser and backed his opinions with deeds.

THE REFERENCE LIBRARY AND THE NEW LIBRARY ROOM.

The response to the appeals of the Chancellor made to the friends of the American University to furnish the down-town branch of the school with a reference library is bringing contributions from over the whole country. No large sums were asked, as this was an appeal to persons who were not known to be in possession of great wealth. It was the intention to widen the circle of the patrons of the University and acquaint the greater number with this new work undertaken for the students from among the employees of the Government.

The library of the late Reverend W. A. Wood of the New England Conference, which was purchased from his widow with moneys solicited by the Assistant to the Chancellor, has been received and is being placed on the shelves of the new room fitted up for the reception of these books alone. As mentioned in another column of the COURIER one of the Trustees of the University furnished the money with which to adapt the room set apart in the College of History for the purpose. Shelves made of lumber similar to that used in the doors and wainscoting of the building at the cost of several hundred dollars have been placed on the four sides of the room between the doors and the windows, and as the library consists almost wholly of new books the different colored bindings in the bright light give an artistic air and attractive appearance to the little room.

A table with chairs in the center of the room furnishes accommodation for consulting the books without taking them from the room.

As soon as the books which came in different shipments were received the money contributed was forwarded to Mrs. Wood.

Two or three encyclopedias are needed, one or two technical, and the Encyclopedia Britannica, together with two or three technical dictionaries. As soon as money enough is received the books will be purchased, unless some generous friend will purchase one or more of them for the University.

THE UNIVERSITY MOVES ON.

No mistake was made when the Down-town Branch of the University was opened under the eaves of the New Interior Building so near to the White House. The schools of nearly all grades in Washington receive their patronage from the employees of the United States Government. What in many schools are called "day students" will apply to the majority of all the institutions of learning in the city.

The venture made in the middle of the school year last February proved so successful that Summer School was undertaken and was made much more of a success than the Spring Term.

The regular school year for 1920-21 began the first week in October with more than twice or nearly three times as many students as were enrolled in the Summer Term.

About a dozen instructors are busily employed with the classes, and nearly all the nationalities resident in Washington are represented among those who have matriculated—Japanese, Chinese, Koreans, Armenians, Czecho-Slovaks, Porto Ricans, South Americans from Panama and American Indians. These are all graduates

from colleges and universities; Harvard, Yale, Columbia, Pennsylvania and Chicago Universities are represented with a number from the well-accredited colleges in the different states of the United States and provinces of Canada.

A new course of lectures on the World War is being given by Captain Gordon-Smith, who was through the war when the Germans invaded Serbia and with the Serbians when they retreated through Albania. He was one of the notable war correspondents.

UNROLLING PROPHECY.

Before the beginning, the American University was called a dream. But dreams are only "the fancies of those that sleep." They were no sleepers who laid the foundation of the American University. It was prophetic vision of the men who were the founders of the school that first foresaw the "things unattained yet in prose or rhyme" and "then set about forging the irons in the fire." They were armed prophets whose prophecy was conceived in travail of the soul and whose imagination was "a ruling and divine power" and whose wisdom had in it "generations of concealed art."

The history of the institution, like all history, is but the unrolling of prophecy. It has taken little time as universities grow, to turn the country farm into a campus and leave on the now templed hills the marble monuments that so fittingly grace the college green.

But now, and then—there's the rub, the long distant rub in which the years and the men and youth are to unroll the prophecy within "the walls of the building." "We have met with some notable rubs already," as Bunyan said. Scarcely had the doors opened when the World War was bent on closing them. They, having the authority, took the students by main force off to fight and what few of them were left with the emulating women that helped to increase their number passed out of the doors to let the soldiers in, and for three years lectures and examinations were given in the homes and offices of the instructors.

Then came the necessity for buildings convenient to the employees of the Government who were seeking admission to the University. The purchase was made at once. The Down-town Branch for the enlargement of the school with Departments of Diplomacy, Jurisprudence, and Citizenship, followed immediately.

It was in the air everywhere to acquaint the people with some better way to rule the world than by physical force. The opening of schools of ethics was demanded by political necessity. The University planned to be in the forefront of the movement. The Assistant Chancellor, the Reverend J. Franklin Knotts, D. D., who had been faithfully engaged in visiting the Conferences, and representing the University in New England, was brought to Washington to create a Bible School and assist in promoting the Department of Religious Education. The Reverend Frank Collier, Ph. D., who had been director of research and teacher of philosophy, was given the additional task of instruction in the Bible School and classes of religious education. Dr. Knotts had visited the different churches and communicated with hundreds of teachers in most of the Protestant schools in Washington and

secured an enrollment of about seventy-five persons before the school was opened. The end even in sight is not yet. The unrolling of the prophecy will still go on.

OUR FIRST FOUR CHANCELLORS—THIRTY YEARS OF PROGRESS.

Nearly a generation has passed since the first concrete action was taken for the establishment of the American University. A brief review of some of the major steps in the path of progress is herewith grouped under the period of the terms of office of the first four Chancellors of the University.

John Fletcher Hurst, Founder and First Chancellor.

The first great act of faith and venture was the assumption on January 21, 1890, by Bishop Hurst of the obligation to raise and pay \$100,000 for the site of ninety-two acres. This obligation he carried for five years until in March, 1895, he transferred the trust from his own name to the Trustees of the University, and thus made this magnificent keystone-shaped site its unnumbered possession. The College of History was built during his administration. Bishop Hurst served as first Chancellor from May 28, 1891, the date of the organization of the University under its first charter granted by the District of Columbia, to December 10, 1902, when he was made Chancellor Emeritus. Under his administration, and chiefly through his own personal efforts contributions amounting to \$500,000 were brought into the treasury. The Trustees in accepting his resignation as Chancellor thus expressed their appreciation of his great service:

"It is no diminution of the honor due to any others to say that chiefly to your own keen vision both of the need and of the opportunity, to your courageous faith in God and in the people, and to your bold venture upon the field of actuality, the church and the country owe the chartered existence of this corporation and the substantial foundations already laid for a great Christian University. To your office as Chancellor and to your present honored title of Chancellor Emeritus the whole body of our constituency will spontaneously and justly add the distinctive and unique name of founder."

His latest, greatest concept, on Washington's fair height,
To plant this home of learning, this fortress for the right,
O man of faith and action, teacher and friend of youth,
Here science blent with worship shall speed man's quest for truth.

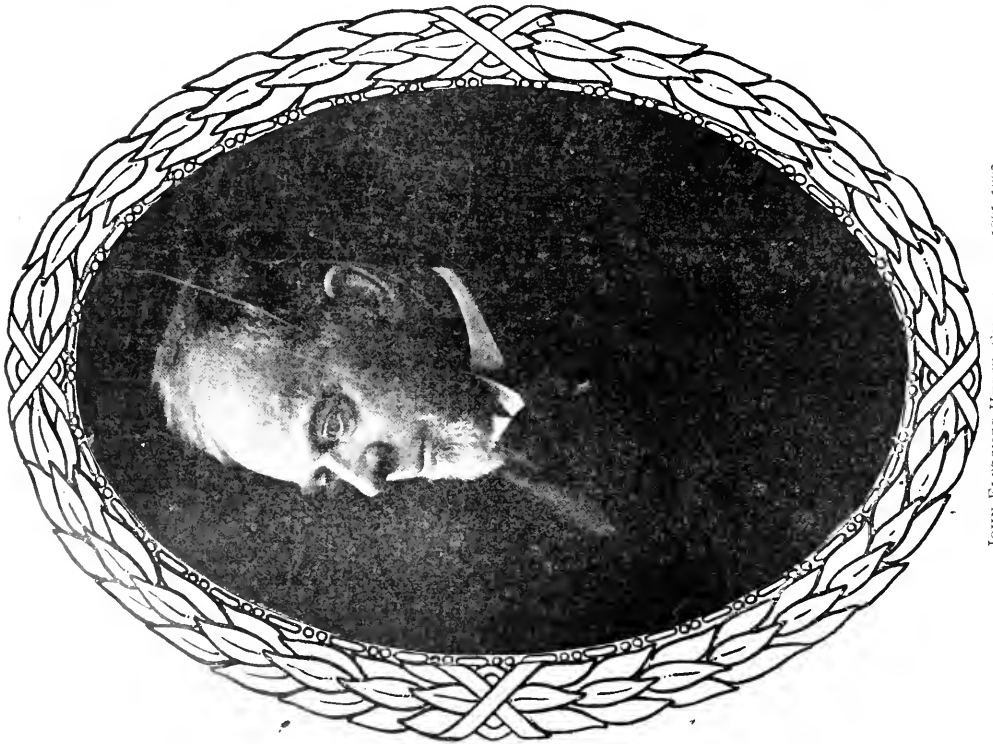

Charles Cardwell McCabe, Second Chancellor.

Bishop McCabe served as Chancellor from December 10, 1902, until his death on December 19, 1906. He had from the beginning of the enterprise been a Trustee, and both in private and in public given it his warm approval, and was Vice Chancellor from May 17, 1899, to the time of his election as Chancellor. His appreciation of his predecessor and his faith in the institution found expression in these words: "To me there is a wonderful pathos in the vision of John F. Hurst, in declining health, with waning physical vigor, at an age when other men seek repose, passing through the land from city to city, talking, arguing, pleading with men to help make his dream come true, and it will come true!"

Bishop McCabe came to his Chancellorship loaded down with a score or more of varied financial obliga-

JOHN WILLIAM HAMILTON, CHANCELLOR 1910-1916

JOHN FLETCHER HURST, CHANCELLOR 1891-1902

CHARLES CARDWELL MCCABE, CHANCELLOR 1902-1906

FRANKLIN HAMILTON, CHANCELLOR 1907-1916

tions for as many good causes on this and other continents, and was about free from the loving task of making good on all, when his body broke under the stress of his multiform labors, and his plans for devoting himself more exclusively to the endowment of the University vanished with his decease. During his administration the superstructure of the McKinley Memorial Hall was erected on foundations that had been built previously; the seven hundred-acre farm of Miss Jane Gibson in southern Indiana was received by deed, and the autograph letter of George Washington to Governor Brooke of Virginia, relating to the building of a university in Washington, was secured for the University.

Of heart and hope and song our Charlemagne,
He sang a sweet, strong, buoyant, victor strain.

Franklin Hamilton, Third Chancellor.

On May 15, 1907, the Trustees elected the Rev. Franklin Hamilton, Ph. D., then pastor of the First Methodist Episcopal Church of Boston, Mass., Chancellor of the University. After two weeks of careful consideration he sent his acceptance of the office. While yet a student at Berlin he had in 1890 led a company of Americans studying in Europe in a letter of congratulation to Bishop Hurst upon the inception of the institution, and had in 1905 been chosen as a Trustee. In his first public utterance after his election as Chancellor, he said: "The new campaign will be irenic"—a promise later fulfilled to the letter.

For nine years Franklin Hamilton was at the helm of the enterprise, relinquishing his task on June 2,

1916, after he had been summoned during the preceding month to take the office of a Bishop in the Methodist Episcopal Church. His administration was marked by a steady increase in the endowment funds of the University, the official and public opening of the institution by President Wilson on May 27, 1911; the development and inauguration of a working plan for beginning academic studies in October, 1911; the origination of a plan of fellowships to encourage research in all lines of human investigation, and the advocacy and successful accomplishment of the extension of the trolley lines to and through the grounds of the University.

Strong heart, with pulses ever true,
Clear brain, and will of firm decision,
The fruitage of thy years, too few,
Abides and shines, O man of vision.

John William Hamilton, Fourth and Present Chancellor.

On the same day, June 2, 1916, that the Trustees regretfully accepted the resignation of Bishop Franklin Hamilton, they elected Bishop John W. Hamilton, who had just been retired by the General Conference, his successor in the Chancellorship. The new Chancellor had been a warm friend of the enterprise from its inception, and a Trustee since December 10, 1902, when he was elected to fill the vacancy caused by the death of President McKinley.

During the first four years of his leadership the endowment has continued to grow until it has reached three-quarters of a million of productive securities

and lands, the debt of \$73,000 has been paid, the University campus has harbored a hundred thousand American soldiers in training and in transit for the World War, the McKinley Memorial Hall and College of History have housed the Chemical Warfare Service and the Fixed Nitrogen Research Laboratory of the United States Government, the Artemas Martin Mathematical Library and the Wm. A. Wood Theological Library have been secured; three properties at and near Nineteenth and F Streets have been acquired and paid for, and the Schools of Diplomacy, Jurisprudence, Citizenship and Religion have been organized with a present registration of about one hundred students. With eye undimmed and vigor unabated, he is giving himself unparingly to the varied lines of progress, both financial and educational. Although his resignation is in the hands of the Trustees, they seem to be in no haste to accept it. A. O.

RECENT GIFTS OF MONEY.

(Acknowledgment of sums less than five dollars is to be considered sufficient receipt therefor.)

General Fund—\$25.00, Geo. E. Hume; \$10.00, Mrs. Anna B. Silver.

Asbury Memorial Fund—\$30.00, John A. Faulkner.

Lucy Smith Endowment Fund—\$2,293.25.

Chancellor's House Fund—\$10.00, W. D. Reed; \$5.00, H. B. Potter, R. B. Cuthbert, J. F. McAnally, E. M. Antrim; \$4.00, G. W. Townsend, M. N. English, Gilbert Rogers, E. D. Dimond, Frederick Spence; \$3.00, A. M. Hammond, Dudley Matthews, G. H. Brackett, W. F. Scitler, J. Gislser; \$2.00, H. W. Farrington, R. A. Buzza, G. L. Snyder, W. A. Wiant, W. C. Twombly, D. V. Gowdy, James Torbet, A. A. Heinlein, H. E. Smith, H. H. Harris; \$1.00, H. G. Buell, F. S. Kline, Edwin Genge, E. G. Vischer, H. E. Howard, O. G. Hammond, Lucy E. Robinson, J. F. Cooper, E. M. Pace, A. D. Stroud, G. W. Flagg, C. R. Morrison, J. A. Canfield, W. B. Wolcott, Henry Idel, Wm. Baleke, E. H. Warner, J. B. Goss, F. G. McCauley.

Bishop Hamilton Lectureship Fund—\$20.00, May C. Bliss; \$5.00, E. J. Curry; \$4.00, J. W. Harwood.

McKinley Memorial Hall Fund—\$200.00, W. F. Phillips; \$12.00, F. L. Leonard; \$10.00, Miss Horatia G. Peabody; \$5.00, W. E. Hosler, C. C. McLean, J. P. Wright, W. J. Jeandrou, W. A. Brown, O. L. Jones, A. E. Piper. \$4, Paul McFadden, Roland Woodhams, B. E. Allen, Mrs. J. F. Braden; \$3.00, R. B. Collins, H. D. Mitchell, F. A. Blake; \$2.00, C. W. Baldwin, H. F. Downs, J. O. Spencer, Arthur Lucas, C. D. Taylor, H. P. Fox, G. M. Albertson, J. O. Sparron, L. F. Higgins, R. J. Wyckoff, H. S. France, A. H. Edgerley, C. F. Tower, A. E. Kent, S. W. Townsend, E. C. Powers, J. REVIVALS IN EDUCATION.

If all the people were educated and would stay educated educational revivals, like religious revivals, would be less needed to recover the people from their lapses, relapses, backslidings. But all the people do not keep up with the schools, not even with the street. It requires more teachers and more zeal than the world affords to keep a respectable civilization moving. Children bring so much ignorance with them into the world, and prejudice so cultivates it, that the hindmost never can catch up with the foremost, can't even keep in sight of him when the road turns a little either to the left or right. Ignorance never knows learning when it sees it, and for the most part is so stupid that it knows not that it knows not. It is so contented with itself that it seldom sets its heart on a higher beyond. The boy whose father reproached him for always standing at the foot of his class, replied demurely, "Why, father, they have the same learnin' there that they have further up the class."

And ignorance when set up by self-conceit is like the mule gone stubborn. There is no dealing with it except with domino sugar and some kind of good-natured apophysis. Like clearing a ship's bottom under water, it is no easy task to "drag the drowned honors up from beneath." It requires all the teachers all the time to be always at it and at it always. Then if the Lord did not help those who help and those who help themselves, the world never would make any headway.

Commissioner Claxton needs to make a patent office of his head and have a hundred hands for the business he commands. The National Citizens' Conference held in Washington last May voted that the Commissioner of Education call another similar conference to be held late in the fall of this year for the purpose of discussing the educational situation at this time, legislation to be presented to the legislatures of the several States next year, sources of income for the support of schools, the means of continuing to foster such interest among the people at large and their representatives in legislative bodies as may be necessary to bring about the needed legislation.

The Commissioner very wisely has decided that a series of regional conferences would be more effective than one conference for the entire country could be. He has therefore called a dozen such conferences.

To these conferences are invited governors and chief school officers of the States, members of legislatures, members of State boards of education, county

and city superintendents of schools, country and city boards of education, representatives of universities, colleges and normal schools, and members of governing boards of these, mayors of cities, members of city councils, members of chambers of commerce, Rotary and Kiwanis Clubs, women's clubs and all patriotic and civic organizations, members of farmers' and labor unions, ministers, lawyers, editors, and other publicists, business men and all who are interested as citizens in the improvement of the schools which, as citizens they can control, pay for, and use, and all who are interested in any way in the promotion of education from the standpoint of statesmanship and the public welfare.

Let us educate! Educate, we say!! And having done all, educate!!!

UNIVERSITY NOTES.

A number of pastors in Washington are taking advantage of the opportunities offered in the School of Religion for advanced work.

Two members of the Faculty of the American University are teaching in the School of Religion of the Foundry Methodist Episcopal Church.

Two members of the American University Faculty, and two graduates of the University are teaching classes in the Y. M. C. A. School of Religion.

The Rev. and Mrs. Thos. Copes, of Anacostia, have presented the library of the School of Religion with twenty bound volumes of the Palestine Exploration Fund.

Mr. Chas. E. Morganston, candidate for Ph. D., has presented the University with a fine photograph of the United States Supreme Court, and also one of President-elect Harding.

Dr. James D. Buhner, Ph. D., 1918, in addition to his work as pastor of the Grace Reformed Church, is teaching Comparative Religion at Howard University, and has two classes in the Y. M. C. A. School of Religion.

Mr. Henry Chung, Fellow of the American University, 1920-21, has been notified by his publishers, Fleming H. Revell Company, that the second edition of his work, "The Oriental Policy of the United States," has been exhausted and the third edition is in the press.

TABLE TALK.

Politics is the deathbed of good manners.

The Methodists are building five new churches every nineteen hours.

Sectionalism is the result of ignorance and prejudice—unification is the result of education.

More intellectualism ignores the greatness of Christian character. Great men are not merely intellectuals.

Why is it persons go mad the moment they begin to discuss politics? Anger is the unmarried father of hatred.

What is to be thought of the state that appropriates ten dollars to educate a rich boy and two dollars for a poor boy?

It would be the misfortune of any political party in these times to nominate for its candidate a bad man. *The people have secured microscopes.*

The Atlanta University Publication No. 14 is an interesting pamphlet giving some most pertinent suggestions on the education of the worst cases.

There are two hundred thousand pupils in the schools of Maryland and only about twenty thousand of them in the private and church schools of the state.

The American University opened October 4 with an increased number of students and has taken possession of every room in the "down-town" building.

Availability, like utility, is a greater quality than mere ability. The Irishman said he would have been rich if he had only had somewhere to put his waste land.

The Reverend Doctor Robinson's paper in the *Zion's Herald* on the "Best Sellers in John Wesley's Day," is an excellent lecture for delivery in all the theological schools.

The new Superintendent of Schools in Washington is certainly showing a spirit of enterprise in bringing the great need of the scholars and schools to the attention of the public.

The argument of prejudice is sure to begin with the disparagement of the intellectual abilities and attainments of the opponent. This is both unparliamentary and to argue one's self deficient.

There are in Georgia some 400,000 negroes who are engaged in farming for themselves or for someone else. They constitute over fifty per cent of all persons engaged in agriculture in that state.

Since the American University is out of debt, every dollar received is appropriated to the advancement of the several new departments. The clergymen of the city are admitted to the lectures gratuitously.

The special patron of Georgetown College which was opened in 1790 was Bishop Carroll, brother of Charles, the "ex-Jesuits having appropriated a part of the Society's property for that purpose."

Evolution in hunting its "missing link" one time went to Australia for its original race. It is now sending an exploring expedition to China sure that protoplasm got in its best work over there.

Can a Christian minister keep his level by staying out of politics until he is sure that his public utterances will be those of a gentleman as conversation goes in the refinement of the parishioner's parlor?

"Private character has nothing to do with public office" is no longer an apologetic utterance in American politics. It has lost its open voting possibility. Moral and Christian education is coming to its own.

Where is the honor of the men who repeat wickedly untrue and merely floating rumors about their fellow men but do not instantly retract them when they are denied and proven to be maliciously untrue, and seek to undo the injury they have done?

What must be thought of the intelligence and integrity of the people of this United States, when it is said enough bolshevists can be found in this country to starve, murder, and destroy the best government on earth for the poor man, as they do in Russia!

The University has suffered great loss in the death of its greatly beloved and justly honored Trustee, G. W. F. Swartzell. His devotion to the institution was constant and unwearied. His care for it was evidenced in his generous giving while he lived and is found in his will since his death.

The Rev. Merle N. Smith, pastor of the First Methodist Episcopal Church in Pasadena, has contributed a valuable book to the library of the University—"English Constitutional History from the Teutonic Conquest to the Present Time," by Thomas Pitt Taswell-Langmead; revised by C. H. E. Carmichael.

The South, like the North, has many things to learn. But there are some things both sections ought to know. One simple axiom is that the most ignorant should be the first to receive instruction. Ignorance is a perilous pest in any community and should be gotten out with all possible haste for safety.

Mr. George H. Maxwell, of Castle Hot Springs, Ariz., has contributed between four and five hundred dollars for fitting up the room in the College of History in the American University for the library of the late Rev. W. A. Wood, which had been purchased from his widow with contributions solicited from friends by the Assistant to the Chancellor.

Do not politicians reckon with the intelligence and fair-mindedness of American citizens when they "levy blackmail" on their opponents by originating untrue stories and giving currency to them in public utterances, and bandying equally false, pernicious and salacious gossip about them in private to carry the elections?

The Cardinal again has called on all the Roman Catholic churches in the United States to take a collection for their University in Washington. As this will be considered equivalent to a mandate every parishioner will be pleased to be a contributor. It will not surprise anyone if the amounts received will total another one hundred thousand dollars.

The union of the George Washington with the American University in Washington involves the relation of endowments and bequests. But other questions aside from "tonnage and poundage" delay matters; the Joint Committee of the two Boards of Trustees, however, have practically agreed on their report. Meanwhile both institutions have begun the school year with better prospects than ever.

The American University has as many students as any of the colleges had at the close of the American Revolution. There were then ten colleges in the United States, from New England to Virginia, inclusive, besides two intended ones in the Carolinas. Harvard College had one hundred and fifty students; William and Mary, one hundred; Dartmouth, eighty; Jersey, sixty; Philadelphia, thirty.

The sagacity and alertness of the Knights of Columbus in watching for every opportunity to advance the interests of the Roman Catholic Church is certainly creditable to their genius for a shrewd statesmanship. The proposition to put a great assembly hall in Washington, which is so much needed, at the cost of five millions of dollars, to say the least is most opportune, and both Protestants and Catholics, churches and state, will find frequent uses for such a building.

During the great meeting of the Lutherans in Washington the Immigrant Missionary of Pittsburgh said the Lutherans had missions among the four hundred thousand Slovaks, nine hundred and thirty thousand Hungarians, eighty thousand Letts, nine million Italians and three hundred and fifty thousand Finns in this country, beside others among Swedish, Danish, Bohemian, Magyar, Esthonian, Polish, Yiddish, Lithuanian and German immigrants.

The Rev. E. Meachem, familiarly called "The War Daddy," who is connected with the Calvary Methodist Episcopal Church in East Orange, N. J., has made a generous donation of modern standard books suitable for reference in the several schools of the American University. If our many friends over the country knew how much the Trustees appreciate some recognition of the work we are trying to do and knew how grateful they are for every form of assistance in money or material the University would grow to large proportions in a short time.

Baron Roobach's tour through the western and southern states put a new but very unpalatable word into the United States tongue, but very possibly it will find its way into the English language everywhere. The definition given in the dictionaries is "A lie or fictitious report for political purposes, as before an election." Men otherwise honorable resort to this method in the delirium of their partisanship thinking thereby to get some advantage over an opponent. This country has caught onto this mischievous maneuver and it is no longer effective. "A man may survive distress—but not disgrace."

The "reformers" who are waiting for the Lord to come again before a check can be given to the world "growing worse and worse," should read more to expect intelligent persons to take them seriously. A letter written to the Archbishop of Canterbury in 1676 says of Maryland, "the moral and religious condition of the province was most deplorable. In ten counties there were only three clergymen of the English Church. The Lord's day was generally profaned, religion was despised and all notorious vices were committed, so that it had become a Sodom of uncleanness and a pest house of iniquity."

No. 2

NEW PURCHASE OF ADDITION TO DOWN-TOWN BRANCH, F AND 20TH STREETS

DECEMBER MEETING OF THE TRUSTEES.

For the first time the Board of Trustees of the American University met in the central building of the Down-town Branch of the institution at 1907 F Street in their semi-annual meeting. A number of the new Trustees and the largest representation of the Board at any one meeting were present. Judge Leighton not being present the Vice-President, Mr. Pilling, presided.

The Chancellor reported \$31,077 received since the previous meeting. The Treasurer gave an extended report in which it appeared that not only the long-standing indebtedness on the main properties had been paid but the amount in the Treasury had been sufficient to meet all the current expenses, with a goodly balance still on hand.

The Chancellor announced the death of Mr. G. W. F. Swartzell and paid a worthy tribute to his memory. The minute which Dr. Osborn had prepared was placed in the records.

The resignation of Judge Leighton as President of the Board came as a most unwelcome surprise. But he stated in the former letter which he sent to the meeting that the duties of the office, with the growth of the school, had become so exacting that he could not consent in justice to himself with the present condition of his health to continue the task with its constantly increasing responsibilities. His long and faith-

ful service led the Trustees to decline to receive his resignation, but in gracious recognition of his invaluable assistance not only in the Presidency of the Board but as an attorney of the University, in which relation he had given gratuitously through long years his professional service without stint on all occasions, responding readily and cheerfully to every call of the institution, he was unanimously elected President Emeritus of the Board. A committee was appointed to draft some fitting expression of the grateful sentiment of the Trustees and to nominate his successor and such other officers as were required to fill vacancies.

The announcement that the property at the northeast corner of F and 20th Streets had been purchased by the Executive Committee was heartily approved and the President and Treasurer requested to conclude the negotiation.

With the increased room and facilities for extending the work of the University, a Department of Business Administration was provided for which will be opened with the beginning of the new school year.

The committee on the union of the American University with the George Washington was given more time, as the report was not yet ready to submit.

Luncheon was served at the University Club, after which a brief business session was held and the following officers and committees were chosen for the ensuing year: President, John C. Letts; First Vice-

President, W. S. Pilling; Second Vice-President, Wm. Knowles Cooper; Secretary, Charles W. Baldwin; Treasurer, W. S. Corby.

Executive Committee—J. C. Letts, J. W. Hamilton, W. F. McDowell, W. K. Cooper, W. S. Corby, C. C. Glover, C. J. Bell, A. C. True, W. T. Galliher, C. F. Norment.

Finance Committee—W. S. Corby, J. C. Letts, W. T. Galliher, C. J. Bell, C. C. Glover.

Auditing Committee—G. H. Grosvenor, A. C. Christie, C. F. Norment.

SIX PRESIDENTS OF THE BOARD OF TRUSTEES.

The man who is touched with devotion and uses frequent exercises of it contracts a certain unselfishness of mind that soon identifies him with the object of his devotion. There are men whom we never separate in our thinking from the work to which they are committed. They often become more devoted to works of benevolence than to their own business. They accept without question the sentiment that "to be doing good is man's most glorious task."

There are certain official positions in connection with the American University which would take all of a man's time, if he were not wise enough to call for fair play. The Presidency of the Board of Trustees is no sinecure; the President can soon use up his honors with gratuitous devotion and plenty of work.

The University has been honored by distinguished men who, without stint of time and money, have given so much of themselves to this task that it has seemed more than once the institution could not go along without them.

The first to accept the honor was Mark Hoyt, of Brooklyn, New York, a devoted Christian man who was willing to "stand on the promises" for a great University which it must take time to build. He was followed by John E. Andrus, an honored member of Congress from New York, who was among the substantial givers in laying the foundation of the University. Then came David Carroll, of Baltimore, who put the greater part of his fortune in his will for the University. At his decease the Board elected A. B. Browne, of Washington, an attorney of acknowledged merit and strength, who took the University into his home to provide for it as he did for his family. It is no disparagement of others to say that Benjamin Franklin Leighton came to the honor with a devotion to which his business, times without number, was allowed to give way. His long and varied experience at the bar made him an invaluable acquisition, whose judgment was the "Yes-no consciousness" of the entire Board—his word was law. His decisions were never ambiguous. His noiseless poise brought him great respect. His excellent spirit was his best remedy for all differences. His greatest weakness was that all men speak well of him. When the duties of the office became so numerous and exacting that he felt he could not, with his increasing years, do justice to all matters involved, he insisted on the acceptance of his resignation, but without acceding to his request, so highly was he esteemed, he was unanimously elected President Emeritus.

No more efficient successor of Judge Leighton could have been selected for President by the Board of Trustees than John C. Letts, the owner of the great

BENJIMAN F. LEIGHTON

JOHN C. LETTS

chain of Sanitary Stores in Washington. Prompt, aggressive, systematic, he set about at once a detailed study of all the affairs of the University. His well-known business ability assures a careful and progressive administration.

AMERICAN UNIVERSITY EXTENSION.

The American University in Washington has made advances from the beginning. When Bishop Hurst bought the "Country Farm" of 100 acres for \$100,000 he was looked upon as a visionary. When he paid for it he was thought to have nothing on hand but a fearfully extravagant agricultural adventure. When the first marble building was erected the Trustees were said to be vying with Congress in building "gorgeous palaces."

When Dr. Franklin Hamilton went to the Capitol to ask for the extension of the Massachusetts Boulevard through the property and a trolley system brought to "the farm" they said much learning had sent his wits wool-gathering. When the whole General Conference went over from Baltimore to Washington to pay tribute to his undertaking everybody said, "What a site! What a chance!"

When his brother, Bishop John W. Hamilton, went there as chancellor no one could tell what might happen. There was \$80,000 indebtedness; the United States Government had taken possession of land and buildings and covered the one and filled the other with war workers. The school went to the homes or offices of the instructors and the students went about the streets. There has been no trumpeting, no drive. But there has been a steady march of the Trustees. The debt is paid and between \$600,000 and \$700,000 in property and endowment has been secured for the University and more than half of it paid in and the balance put in bequests. THE UNIVERSITY COURIER has been quietly announcing these amounts for four years. They are from hundreds of donors all over; bishops, preachers, laymen, women and children, have been pledging and paying from dollars to hundreds of thousands.

It was imperative that a Down-town Branch of the University should be opened to accommodate Government employees after business hours. It was found to be cheaper in the long run to buy than build. Providence or "fortuitous circumstances" brought to the University an admirably suited corner house in the block diagonally across from the new Interior Building, five minutes from the White House. It was purchased and then to avoid undesirable neighbors, the adjoining house was bought. Then came the best purchase of all in the middle of the block, a four-story

DESTRUCTION OF GAS-IMPREGNATED BUILDINGS OF THE CHEMICAL WARFARE SERVICE
(Note Form of Man's Head and Face in the Smoke)

house fifty feet front and seventy feet back with the lot, like the whole block, 120 feet deep. In this building about 200 persons have been receiving instruction during the fall and winter. Now that the whole block may be protected, the other corner, 150 and more feet front, with a great and substantially built house in excellent repair, well suited for dormitories, having a summer garden with more than a hundred feet front, has just been contracted for by the chancellor. It belonged to the Hon. Augustus Gardner, of Massachusetts, who resigned his seat in Congress to enlist in the army and died in camp. The garden affords an eligible location for a commodious assembly hall.—*Christian Advocate, New York.*

DOWN-TOWN BRANCH OF UNIVERSITY.

The success of the departments opened in the city proper becomes an embarrassment already. One branch leads to another; the call is now for more open doors. Additional requests are coming in for teachers in trade, politics, the upper sciences and many practical phases of religion.

The new School of Business Administration will introduce a number of new studies. Special students will be admitted to the Summer School. There is a new awakening in the republics to the south of the United States, and many students are coming north to enter the universities in this country. There is a revival of Latin languages and it has been found necessary to provide instructors in French, Spanish and Italian. The more the better.

The spring term of the Schools of Diplomacy, Jurisprudence, Citizenship and Religion will open on Monday, March 21st, and close on Saturday, June 14th, 1921. The School of Religion will be housed at 1901 F Street at the beginning of the spring term.

THE UNIVERSITY'S OWN HOME.

Henry Ward Beecher once said, "Nowhere can a man get real root-room and spread out his branches till they touch the morning and the evening but in his own house." There is something in the phrase "in his own house," if it is but a cabin in the woods, that a rented palace cannot give nor take away. Daniel Webster was never more eloquent than in his tribute to the pioneer's "own cabin." Paul evidently felt a degree of independence when he "dwelt two whole years in his own hired house." But the only sentiment which attaches to even that residence is the fact that Paul once dwelt there. A hired house can have little interest to the man who is able "to have his own house." Mark Twain added little inducement to Horace Greeley's advice, "Go West, young man," when he said, "Go to California; you can get a farm there already cleared, fenced and mortgaged."

The American University, crowded out of its own house by the war for two years, thought to hire a house for temporary residence, and went about "looking for" one for a year and more. But house-hunting is an ignoble avocation, and the Chancellor soon tired of the task.

Once he had determined to have the University own its extension, Providence and the people came to his assistance; just the block of buildings needed was found. He wanted room enough and both corners to protect his purchase. The location selected itself. Two houses on the first corner gave ample room there; the large four-story building in the middle of the block needed little remodeling for the extension. All that was wanting to finish the plan was to own the remaining corner. This splendid property, once the home of the lamented Augustus Gardner, turned itself over to the University in the nick of time. Money

came along just as it was needed. Now no more buildings are called for to house the five departments of instruction provided for and an eligible vacant lot now offers itself for the location of an ample assembly hall.

COAL BY THE CARLOAD.

When the prophet said "There shall not be a coal to warm at, nor fire to sit before it," think you he had Washington in mind? When the winter winds began to blow, and the chill of December poured with the angry waters over the Great Falls of the Potomac, we were told there were one thousand households in this city, no one of which had a hod of coal. The University had about a half dozen tons, but what was that in a building of forty-two rooms, with the outside walls of cold white marble?

The caretaker, with a prudence worthy of the professors, said, "Let us pin some copper reflectors to the walls, and turn on the fire-juice from the telegraph poles." It was done. The Secretary and bookkeeper took their places between the copper cups, and turning first one side and then the other, they imagined for a time that they kept warm.

Just then there came a Christian voice out from the neighborhood of mines saying, "Could the University use a carload of coal?" The telephone was not short enough for the quick reply. We all grew warm thinking of it—a whole carload of coal! Every lump was a diamond. Mrs. Sarah B. Cochran, of Dawson, Pennsylvania, who donated the coal, never can know how warm it made the hearts of students, faculty and Trustees as the mercury went up from poverty to plenty.

RECENT GIFTS OF MONEY.

(Acknowledgment of sums less than five dollars is considered sufficient receipt therefor.)

McKinley Memorial Hall—\$6.00, Alex. Kerr, C. E. Bacon; \$5.00, M. E. Baker, V. J. Stafford; \$4.00, W. F. Burris; \$3.00, J. A. Sumwalt, C. B. Leuffel, F. W. Davis, John Boon, W. D. Cater; \$2.00, B. D. Beck, G. M. Bing, J. W. Kirkpatrick, C. E. Flynn, J. F. Hageman, S. J. Cross, W. H. Wylie, W. C. Brewer, Wm. Richards, A. W. Armstrong, C. S. Buchtel, D. J. Shenton, Elias Handy, W. C. Smith, Jasper Weber, E. M. Holmes, W. E. Hardaway, H. C. Smith, E. E. Higley; \$1.00, J. E. Jacklin, F. S. Conger, H. W. Cope, J. G. Walker, S. H. Caylor, T. H. Worley, J. F. O'Haver, D. W. Noble, J. T. Scull, W. S. Rader, M. O. Robbins, F. M. Westhafer, W. I. Cain, A. B. Storms, E. C. Searles, D. C. Challis, J. M. Walker, N. P. Barton, W. E. Harvey, G. L. Kleinschmidt, W. H. Cable, C. W. Hohanselt, Mrs. B. F. Miller, G. D. Crissman, W. C. Smith, J. M. Ryder, E. A. Thomas, J. W. Anderson, H. A. Dougherty.

Franklin Hamilton Memorial—\$3.00, S. P. Crummett.
Chancellor's House Fund—\$10.00, I. R. Cranfall; \$5.00, Norman LaMarche, W. E. Marvin; \$4.00, E. E. Whittaker; \$3.00, A. D. Moon, E. A. Armstrong, W. M. Puffer, J. A. Hoffman, H. B. Green; \$2.50, S. P. Crummett; \$2.00, N. E. Hulbert, W. S. Culp, F. H. Townsend, C. C. Campbell, M. L. Fox, T. P. Bennett, D. D. King, W. B. Theobald; \$1.00, C. E. Wakefield, J. H. McCune, R. Woodhams, R. G. Finley, Mrs. C. F. Colburn, N. F. Jenkins, Mrs. Richards.

Asbury Memorial Fund—\$25.00, O. W. Willets; \$10.00, D. A. Allen.

General Fund—\$428.00, Geo. H. Maxwell; \$10.00, A. L. Wiley, Geo. C. Coon.

Bishop Hamilton Lectureship—\$4.00, G. K. MacLinnis; \$3.00, R. W. Wilcox; \$2.00, C. E. Weed.

Americanization School Fund—\$5,000.00, Mrs. Annie M. Swift; \$1,000.00, J. W. Sparks, Charles Gibson; \$50.00, V. O. Shepard; \$25.00, E. H. Bell; \$20.00, H. C. Conrad; \$10.00, C. L. Hubbard, C. E. Goodwin, W. H. G. Gould, F. W. Greene; \$5.00, C. E. Kelso, H. G. Budd, L. A. Bennett, A. W. Hewitt, M. S. Daniels, B. P. Wheat; \$3.00, F. B. Bell, Carrie M. Brown, Fred Everhart, Mrs. L. Jacques, Jr.; \$2.00, F. J.

Mackenzie, W. R. Mowbray, Sue M. Johnson, R. P. Parrott, E. W. Blakeman, C. M. Olmstead; \$1.00, W. F. Atkinson, W. C. Bradley, D. H. Harper, W. W. Howeth, R. K. Stephenson, Mrs. J. L. Weiland, W. W. Keays, S. S. Andrews, Carrie A. Casson, Thos. Lawson, W. McRoberts, J. E. Kunderl, V. I. McKim, J. E. Woodward, Ephraim Smith, H. G. Love, H. J. Fell, U. S. Landstreet, Mrs. Margaret Hill, Mrs. George Northrup, Mrs. Emil Sulzer.

COMBUSTION VOLUNTARY, IF NOT SPONTANEOUS.

During the progress of the war the activities of the Chemical Warfare Service were so varied and comprehensive that it was necessary to construct about seventy-five subsidiary buildings in which to carry on experimentation with the chemicals and gases. Powerful poisons and noxious substances were absorbed by the wood used in some of these temporary buildings. Seventeen of these structures, deemed too highly impregnated with these dangerous elements to be salvaged for the lumber in them, were devoted by the Government authorities to be destroyed, and on January 26 and 27, 1921, under the supervision of the fire department of the District of Columbia, were burned to ashes. For the photograph of the fire from which this illustration herewith shown was taken, we are indebted to Mr. Howard D. Hoenshel, of the Fixed Nitrogen Research Laboratories, now utilizing the fine chemical apparatus installed in our McKinley Memorial Hall.

Slow, Too Slow, the War-Clouds Lift.

Slow, too slow, the war-clouds lift
Their murky folds and darkly drift
To deep oblivion's dismal vale.
Come, breath of Heaven, a cleansing gale;
Faith, hope and love, blow from on high,
Make war's defeated squadrons fly
From swift retreat to utter rout,
Till all the sons of God shall shout,
The morning stars again shall sing;
Till round the world the welkin ring
With "Peace on earth, to men of good-will,"
And the sea of human strife be still.

A. O.

A BURNING VILLAGE.

Worse than a deserted village is a town on fire. There is a mortal dread of fire anywhere if it is not under control. The fire alarm startles even the firemen; they go forth as to battle. When the Government turned the fire on certain of the Chemical Warfare buildings that had been erected on the Campus of the University and which had been saturated with war gas and other dangerous chemicals, and the volumes of dense black smoke rolled away over the hills, the thought in the city was that there was a great fire in the University buildings. Many persons rushed to the ground to find the city fire department in full control. The fumes emanating from the burning buildings were suffocating a hundred yards away.

Some persons called it great waste to burn up a village of good houses. But if that were waste what of \$800,000 worth of munitions that had been manufactured in the buildings on the University grounds and had not yet been started overseas? If the war had gone on, and there had been no munitions on hand, then what of the waste of human life? War is waste from start to finish. The lumber in the seventeen buildings that were burned was so impregnated with the infamous gases that it could never be used

To the Senate & H. R. of the United States
 The undersigned citizens of the
 United States respectfully ask that
 you will take measures to
 secure an amendment to the
 constitution that shall plainly
 authorize Congress to abolish slavery
 in the States

A LINCOLN MANUSCRIPT NOW FIRST PUBLISHED

To the Senate & H. R. of the United States. The undersigned citizens of the United States respectfully ask that you will take measures to secure an Amendment to the Constitution that shall plainly authorize Congress to abolish slavery in the United States.

when taken out of the buildings and the buildings could not be left there for another war, and they could not be used where they were without the workmen wearing masks. The munitions were taken back to the limit of the University acres and there buried in a pit that was dug for them. Would that it were as deep as the cellar of Pluto and Proserpine. *Requiescat in pace.*

WHAT IS WANTED NOW?

We do not say "What is wished for now?" The word *wanted* signifies *need*. It is always encouraging to know that something is needed—that means advance, growth, at least it affords the privilege of helpfulness. It is far more inviting to have need of money for growth than for debt, though the only thing to do with a debt is to pay it.

It is the season of the year when things should soon be growing everywhere. Why not the University? The extension requires for the increasing number of students the use of another building. The large four-story building on the corner of 19th and F streets, soon to be vacated by the Postmaster General will be occupied by the new Department of Business Administration. The large drawing room extending the whole length of the building affords an adequate lecture room capable of accommodating from one hundred to one hundred and fifty students. The room must be furnished for this purpose.

This requires a teacher's desk and chair, with chairs for the students, maps for the walls, and shelves for the reference library. The students' chairs can be bought for three dollars apiece, the arm chair for the instructor for five dollars, the maps about ten dollars each. Here is the opportunity for helpful giving. The larger givers have bought the building, one constant helper having contributed ten thousand dollars.

We can, therefore, with good grace, ask our friends all over to send us in the price of a chair or map or dictionary. Will not someone give us twenty-five dollars for the desk, and another twenty-five dollars for an American Flag?

AN ANTI SLAVERY MANUSCRIPT OF ABRAHAM LINCOLN NOW FIRST PUBLISHED.

John Marston Goodwin, Second, was the third clerk to E. M. Stanton, Secretary of War in Abraham Lincoln's Cabinet. It was his duty to receive and distribute the mail of the President and Secretary and to keep the files of important papers.

When the change of administration occurred many documents not required for the permanent records were subject to his disposal. The only interest belonging to numbers of them were their associations and the sentiment connected with the autographs of the writers. Others were so related to the historic events and incidents of the war period as to give them something of far more value than the mere matter of sentiment.

The few lines in the handwriting of the President which are printed herewith constitute the first draft of a heading to a petition that the President suggested to a delegation of citizens who called upon him to express their desires concerning the exciting and all-important slavery question. It is so worded as to give an unmistakable impression of his own judgment of the legislation that should be enacted.

The petition suggests the evolution of events and process of development in the mind of the President that led up to the issuance of the Emancipation Proclamation. Nicolay and Hay say in their life of Lincoln, "In tracing the anti-slavery policy of President Lincoln his opinions upon some of the prominent features of these laws (concerning slavery) become of special interest." He studied the signs of the times and the movements of Congress so as to keep in the lead and yet be sure of his following. His mind travelled from the consideration of returning slaves who had gotten over the lines into the army to their owners, to their confiscation as property, contraband of war, compensation of their owners, gradual emancipation by the

States, or by Congress, finally to absolute abolition of slavery by himself. He came by slow process but with sure footing to the responsibility and decision taken by himself alone to make an end of American slavery and declare all colors entitled to life, liberty and the pursuit of happiness.

John Marston Goodwin, Third, who is in the employ of the Nitrate Division of the War Department that still occupies the Ohio or McKinley Building and the score and more of temporary buildings on the University campus, is the son of the clerk to the Civil War Secretary Stanton. He has an invaluable collection of war papers and autographs. It is to him the Editor of the *Courier* is indebted for this autograph of President Lincoln.

INCREASED RATE OF INTEREST.

Annuities in these times must bear increased rate of interest as well as loans at the bank. The American University has succeeded in securing a number of annuities which have hitherto proved satisfactory to both annuitants and the Trustees of the University. It is understood now to satisfy both again, the University to secure the money, and the annuitant the interest, that the business in common with all other high costs must pay the advance in like proportions.

The University is able to meet such propositions as satisfactorily as any of the philanthropic educational or benevolent causes. It has paid a higher rate of interest in at least one instance, and neither party the worse for the transaction. There are three bank presidents on the Finance Committee, and all interests are safely guarded. If in any instance the rate of interest gives the better inducement, it is because of the better investments of the moneys received.

A LEAGUE THAT IS A LEAGUE.

While statesmen have been meditating, meandering and miscalculating in their endeavors to meet the determination of the Christian world to make an end of war, the Methodist Episcopal Church has solved the problem; or rather, has formulated the plan for the *league of nations* and gone about working it.

When before in the history of the entire Christian Church has any one branch or denomination elected and ordained on a single day seventeen bishops, each of which has jurisdiction over all the earth? And when since the Man of Nazareth sent His apostles to the lost sheep of the house of Israel, as recorded in the tenth chapter of Matthew's Gospel, saying "Go, preach; the Kingdom of Heaven is at hand," has the Church sent another twelve at any one time to so wide a world? Andrew went only to Achaia, Philip to Phrygia, Thaddeus to Armenia, Simon to Persia, Thomas and Bartholomew probably to India, Matthew to Ethiopia, Peter and Paul between them all round the Mediterranean possibly, with Paul into Britain. But here go Nuelsen to the Central Powers, Germany, Austria, the Balkans and Switzerland; Blake to the Allies; Bast to Scandinavia and Finland; Lewis, Birney and Keeney to China; Welch to Korea and Japan; Warne and Robinson, Fisher and Smith, to Southern Asia; Locke and Bieckley to Southeastern Asia, including the islands of the Eastern Oceans and Siam; Oldham and Thirkield to South America, Central America and Mexico; and Johnson and Clair to

Africa—the world is their tabernacle. Before starting, the home base delivered itself of all the hitherto handicaps which denied a man a man's chance, thus laying the cornerstone of its tabernacle with the inscription:

"No line divides the rich and poor
Who follow Christ alone,
If caste should close this open door
Remove this cornerstone."

Do you think any of these world messengers will be likely to shut themselves up with some dishonoring Shantung business, or carry gas and guns to enforce the allegiance to their league? "Not for fellowship in hatred," said Sophocles, "but in love am I here." How political tiffs, big as a *vesata questio* may think itself, dwindle in the presence of the only authorized world empire, which is the Parish of the Church. "The full grown Jew was a Pharisee, the full grown Roman a Caesar," but the full grown *Christian* is a *citizen of the world*.

PORTRAIT OF BISHOP FRANKLIN HAMILTON UNVEILED.

An event which brought keen sorrow to this community, to the Pittsburgh Area and to the whole Church was vividly recalled on Monday of this week when the portrait of Bishop Franklin Hamilton was unveiled in the chapel of the Methodist Building. Bishop Hamilton died in May, 1918, after a residence of less than two years in this city. But he had won a large place in the admiration and love of the Area to which the General Conference had assigned him in May, 1916.

The portrait, which is a living likeness and a genuine work of the highest art, was painted by his distinguished artist brother, Edward Wilbur Dean Hamilton, of Boston.

The program was eminently fitting. President E. W. Kelley of the preachers' meeting was in the chair. Hymn 207 was sung, and prayer was offered by Superintendent B. E. Wolf of the Blairsville District. Superintendent W. F. Conner of the Allegheny District read a high and tender tribute to "Franklin Hamilton, Our First Resident Bishop." Bishop Francis J. McConnell spoke of "Franklin Hamilton, My Predecessor," stressing the rare gifts, the spiritual consecration and the unswerving loyalty of Bishop Hamilton. Superintendent W. S. Lockard of the Pittsburgh District called attention to the deeper significance of "Our Portrait Gallery." After some intensely interesting reminiscences of the early years of Franklin, who became Bishop, and Edward Wilbur Dean, who became an artist and painted the portrait, as they were when they lived in his own home following the death of their father, Bishop John W. Hamilton unveiled the portrait. "Blest Be the Tie That Binds" and "The Son of God Goes Forth to War" were sung, and the benediction was pronounced by Superintendent J. B. Risk of the Washington District.

The brethren now look upon the faces of Bishops Simpson, Smith, Lucecock and Hamilton as they assemble in their weekly meeting. All were intimately associated with the Methodism of this region.—*Pittsburgh Christian Advocate*, Feb. 17, 1921.

GEORGE WASHINGTON UNIVERSITY.

The trustees and faculty of the George Washington University are making great preparations for the celebration of the one hundredth anniversary of the founding of that institution. President Collier has shown himself to be an enterprising promoter of great undertakings and a veritable master of ceremonies. There can be no question but that the observance of the anniversary will be all that is promised.

There are not many universities in the country which are a hundred years old—less than fifty of all kinds of schools. Money is what the schools are constantly asking for, but time is what they need most. Millions of dollars may supply endowments and prop-

erty, but years on years give permanence and repute. It required a hundred years to make Harvard College a university. "Each succeeding day is the scholar of that which went before it." It is experience which makes all futures, fruits of all pasts.

It is worth a hundred anniversaries to be able to celebrate the centennial. We wonder if we can make our school a century old. We will try it. Age should improve men and women, as well as the work of their hands. "No wise man," said Swift, "ever wished to be younger." It must be conceded, however, we all like being young; the air seems so nimble with fairies all about us.

A UNIVERSITY REBORN.

The American University, the great Methodist institution of learning in Washington, whose grounds and facilities contributed so much to the successful administration of the Chemical Warfare Service during the war, is returning to its peace-time activities. In fact, the University promises to take on a new lease of life through the election to the Presidency of its Board of Trustees of one of Washington's most progressive and successful business men. What the election of John C. Letts may mean to the future of the University can hardly be predicted in any concrete fashion, but taken in connection with other plans now in the making it may safely be said that the institution will be developed henceforth in a manner commensurate with the great task it has undertaken. The American University is perhaps the only institution of its kind in this country that devotes itself wholly to graduate work. It was unmatched in its patriotism during the war, turning over its entire plant, with the exception of three rooms, to the Government. It asked no compensation for use of buildings and grounds. During the war an official survey revealed that there were 2,500 college graduates in the Government departments who desired to pursue graduate work. In order to meet the needs of as many as possible of this class of students the University last year gained possession of valuable property in the down-town section of the city. Apparently the work down-town has made fair progress; but the election of Mr. Letts as President of the Trustees is considered by those who know Washington and its opportunities and needs as representing an epoch in the history of the University.

REFUSED TO BE A PROFITEER.

Mr. Letts has in himself that rare combination of strength, gentleness and modesty which makes him as valuable as a citizen as he is charming as a personal friend. In his business he expects efficiency, but he is so studiously fair that his large company of employees look to him with admiration and affection and regard their employment as an opportunity to gain a first-class business training. Mr. Letts is not one of the older business men of Washington, he having been here only eleven years, but in this short time he has established a wholesale business and increased his chain of retail stores until his whole business institution is now of mammoth proportions. He received his education in the schools of Iowa and entered upon his business career about thirty-two years ago. It is one of his fundamental principles in the conduct of his business that in commodities which the public are continually consuming there should be small profits and quick sales, and for this reason he always has been a thorn in the flesh of the profiteers. During the war, when the extravagantly high Government salaries being paid to many of the temporary army of war workers were a temptation to merchants to charge extravagant prices for their goods, Mr. Letts tenaciously stuck to his principle, in behalf of the local public who were so sorely inconvenienced by the unfortunate conditions prevailing in Washington. Certain producers, it is said, threatened to withhold their commodities unless Mr. Letts increased his prices, but he quietly defied them and the matter was dropped. At one time he actually sold one article at a loss, that the little children of the poor might suffer less.

GREAT EXPANSION NOW EXPECTED.

This is the kind of man who now will turn his great business talent to the advantage of the American University. Although wealthy and, in fact, building one of the finest residences in Washington at Thirty-second and Elliott streets, near Chevy Chase, Mr. Letts holds that a man should not go into business solely to make money, but that service to the public is a part of the duty which he owes to himself and his family; and he believes that to the everyday business man is

given the opportunity, because of his position in the body politic, to render social service of the most effective character. Mr. Letts enjoys a reputation as a wise financier aside from the mere management of his business. He is a director of one of the largest trust companies here and chairman of the finance committee of a public institution which is about to raise funds for and erect a building costing some \$200,000. He is a regular church attendant; and for years he has supported twenty boys in schools in India and has given freely for mission work in that country. Notwithstanding his devotion to religious interests, Mr. Letts is a great believer in recreation and a participant in social life. He is an enthusiastic golfer and has offered many prizes for contests on the superior links of the Columbia County Club, but it is one of the standing rules governing contestants for the Letts cups that they shall not be played for on Sundays. Mr. Letts has no criticism to make of persons who play on Sunday, but he does not play himself and he believes that the silver trophies he so generously offers can be won during the six days of the week without trespassing on the seventh. As chairman of the Board of Trustees of the American University Mr. Letts succeeds B. F. Leighton, originally a Maine man, who has been identified with religious and educational work in Washington for many years. Advancing age and warnings of impaired health, however, caused Mr. Leighton to resign, but in recognition of his long, valuable and unselfish services he has been made President Emeritus of the Board of Trustees. The interest of every Methodist in the country centers more or less in the American University, whose normal activities were sadly interrupted by the coming of the war. Not at all to glorify anyone, but merely to state a fact of very widespread interest, it may now be said that the University proposes a growth and expansion for itself which shall place it in the front rank of institutions of its kind. *H. E. Brigham, in Boston Transcript.*

TABLE TALK.

The University will soon need more room.

The longest lived persons are found in Norway.

The largest refracting telescopes in the world are in the United States.

Indifference to moral qualities threatens every house and business office in the country.

What safety is there anywhere in business when a revolver must lie on the desk of every cashier?

Who will furnish us with a new lawn mower and a good rake?

One hundred and eighty-three school rooms are needed in the District.

There are 37,000 foreigners in Washington, and 50,000 are expected soon.

Every issue of the COURIER brings responses to our appeals in the interest of the University.

Applicants for admission to the American University have come from the Province of Quebec and New Brunswick.

It is proposed to create a Department of Education in the United States Government to be represented by a new member of the President's Cabinet.

There are twenty-four high schools in New York City. There are 1,000 pupils in the Morris High School. The school population of the city numbers 900,000.

The annual tobacco bill amounts to fifteen dollars each for every man, woman and child in the United States, or twice what it costs to maintain the Government.

The people don't like one set of politicians calling another set ugly names. And coax them afterward all they will, verily, verily, when the votes are counted the rick-names get their reward.

The Reverend William Powick, D. D., of the Philadelphia Conference, has presented the University a file of the *Methodist Review* and some good books from his library.

The number of books by American authors printed in this country are about three to one of the reprints of foreign books.

The father of eleven children writes to the Government to say he is not able to give them an education, and hearing that there were to be schools in the Navy offers three of his sons for enlistment.

The smokers are disposed to make light of the law proposed by Congress to prohibit smoking in Government buildings, but the insurance companies estimate one-third of all loss by fire to be due to tobacco.

Ambassador Jusserand fully understands the American people, and has done more than any other man to preserve and promote the friendly relations between France and the United States.

Mad men! Mad men! Bad men these garrulous electioneering "orators" whose scurrilous talk no school board could tolerate in the school teacher unless he were going alone and through the woods where no one could hear him from the schoolhouse to his lair.

There is wisdom in the use of a portion of the Rockefeller Fund to educate the Oriental peoples. The West has need of much that can be learned from the East, but it is the Western civilization that must save the Orient. *Lux orientis ab occidente.*

It is far more interesting and encouraging to give money to increase endowment, or purchase something new in books or benches, houses and lands than simply to pay toward an old indebtedness or constantly growing a new one. Every dollar given now to the American University increases its possessions.

The Reverend C. W. Miner, D. D., Superintendent of the New Castle District, Erie Conference, has presented the University with a complete file of the minutes of his Conference, a set of Doctor J. N. Fradenburg's History of the Conference, together with a collection of miscellaneous books.

Mr. William A. Reid, Foreign Trade Adviser of the Pan-American Union, has delivered a series of lectures in the University on Trade Investigations based on his experience (during five years in forty countries) in Europe, Asia, Africa and the Americas from Northern Canada to the Straits of Magellan.

The workers in the Fixed Nitrogen Research Laboratories in the McKinley Building find the game of quoits a very interesting and helpful form of recreation at their leisure time. As many as sixteen men at a time may be seen on pleasant days at the noon period throwing the discs and making "leaners" and "ringers" with commendable skill. The open winter has permitted this outdoor sport to be carried on through December and on some days in January.

When the impassioned utterances of the political campaign are passed and men are willing to be thoughtful, intelligent, let them sit down alone and read "The League, the Nation's Danger," by the Rt. Rev. Thomas B. Neely, published by E. A. Yeakel, Philadelphia, and then accept or reject as their judgment may calmly determine. When no persons know the subject in detail—they decide either one way or the other because someone else does.

We are indebted to Dr. Thomas Dowling, of Wilmington, Del., for the gift of a strong, beautiful cane made from the original timbers of the old Swedes' Church, built of stone in 1698, and also for a copy of the pamphlet containing the account of the 211th annual commemoration of that historic house of worship on June 18, 1916.

MINIMUM WAGE FOR TEACHERS.

Seventy-five dollars a month has been fixed by the state of Kentucky as the minimum salary for school teachers, either white or colored, in all schools where the state has control. The same examinations are required for teachers of both races as well as the same length of term in the schools. These laws cover all rural public schools, where efficiency is being developed among both teachers and pupils.

GROWING ANNUITIES.

The increased rate of interest which the American University pays on the annuities secured since the money market tightened makes this form of investment especially attractive to persons who desire to be relieved of the care and responsibilities for their business affairs with an adequate return for the use of their money. With no indebtedness and between three and four millions of dollars in property and endowment the American University furnishes a more secure investment than can be given by companies seeking annuities on merely a business basis. The names of the Trustees furnish guaranty that all trust funds will be safely guarded.

The American University Courier

Entered as second-class matter February 27, 1909, at the Post Office at Washington, D. C., under Act of July 16, 1894

Volume XXVII

Washington, D. C., April, 1921

No. 3

PRESIDENT WARREN G. HARDING

PRESIDENT HARDING ACCEPTS TRUSTEESHIP.

The following correspondence has taken place between the Chancellor of the American University and the President of the United States:

The American University,

Bishop John W. Hamilton, Chancellor

April 7, 1921

The Honorable Warren G. Harding,

Washington, D. C.

My Dear Mr. President:

You were unanimously elected a member of the Board of Trustees of the American University at the meeting held last December. The Honorable William J. Bryan, a member of the board, was delegated to

notify you at Marion of your election.

President McKinley was a trustee when the University was founded, and President Roosevelt had been a trustee at the time of his death for nearly fifteen years.

We will be pleased to receive your letter of acceptance for the records of the University.

Yours sincerely,

JOHN W. HAMILTON

703 Stoneleigh Court,

The White House, Washington, April 8, 1921.

My Dear Bishop Hamilton:

I have received yours of April seventh, notifying me of my selection on the Board of Trustees of the American University, and am writing to advise you of my acceptance of the position. I do this with some misgiving as to the measure of active service I may be able to render because public duties in other directions are extremely engrossing. I shall hope, however, to be of some service and am taking this opportunity to assure you of my good wishes for the institution.

Most sincerely yours,

WARREN G. HARDING.

Bishop John W. Hamilton,
703 Stoneleigh Court,
Washington, D. C.

CONVOCATION DAY.

The University is making special, unusually special, preparation for Convocation Day, Wednesday, June 8th. The exercises will be most attractive and highly interesting. The meeting of the Trustees will be held in the College of History at ten-thirty o'clock in the forenoon. Luncheon for the Trustees will be served at one o'clock sharp in the University building.

The exercises will begin with the flag raising. Some one or ones—"sure," no doubt about it—will furnish that flag. Major General William Mason Wright will preside. The presiding officer will make a brief address and request a representative of the Fixed Nitrogen Division to raise the flag. One of the city clergymen, assisted by others as aides, will act as chief marshal.

The Chancellor will preside in the outdoor auditorium. Representative clergymen from the different denominations will conduct the devotions. Addresses will be delivered by the Honorable Warren G. Harding, President of the United States; the Honorable J. J. Jusserand, the French Ambassador, and the Honorable N. W. Rowell, King's Counsel and leader of his party in the Canadian Parliament. The music for the occasion will be furnished by the United States Marine Band. Arrangements are being made for extra trolley cars to run from the city to the University during the afternoon.

DEAN FREDERICK JUCHHOFF.

Dr. Frederick Juchhoff, the dean of the new graduate School of Business Administration, comes to us from the historic old College of William and Mary, in Virginia, where, during the past two years, he has been professor of economics and head of the school of business administration. During the summer sessions of 1915, 1916, 1917, 1918, 1919 and 1920 he served as professor of economics and finance in the University of Virginia.

Dean Juchhoff is a graduate of Kansas City University, where he took the bachelor's and doctor's degrees, of the law schools of Ohio Northern University and the University of Maine, receiving the LL. B. and LL. M. degrees, and of the school of commerce of Northwestern University. He also pursued graduate courses in the University of Chicago for several years.

The career of Professor Juchhoff as an educator has been unique. Beginning in 1906, he was for two years instructor in commerce in Berea College, Kentucky; for five years he was a teacher in the public high schools of Chicago, at the same time instructing in several of the evening law schools, of one of which he was elected dean. For one year he was associate professor of commerce and finance in the James Millikin University, Decatur, Illinois, and the following two years was head of the department of accountancy of the municipal University of Toledo, Ohio. In addition to the academic appointments mentioned, he has for several years held a number of professorial lectureships, among which is that in economics in the Richmond School of Social Work and Public Health and in jurisprudence in the Medical College of Virginia. He has been a regular lecturer in our school of Diplomacy and Jurisprudence since its opening. For several years he served as editor of the accountancy and law departments of the Business Journal, of New York.

Dean Juchhoff is the unusual combination of the sound scholar, progressive educator, and keen business man. His practical business experience was obtained in the practice of public accountancy and in connection with one of the banking houses in St. Louis. He has been on the directorate of several corporations.

The new school of business administration is, like the other schools already established, a professional-graduate school, open to men and women who have received their bachelor's degree from an accredited college. The work of the school is divided into a number of major study groups, among which are accountancy, transportation, finance, banking, economic theory, foreign trade, etc. The staff of the school includes a number of the leading specialists and economists in the country, each devoting a few hours a week to teaching his specialty. Among these men are found former professors in the University of Nebraska, Tulane University, Columbia University, University of Maryland, Dartmouth College, University of Kansas, and Northwestern University.

The new school begins its work October third under most favorable conditions; already a number of applications for admission have been received.

DEAN FREDERICK JUCHIOFF

WE MUST HAVE ANOTHER FLAG.

There is a firm and durable flag pole set in eight or ten feet deep of cement, on the campus of the American University. It is nearly one hundred feet high. During the occupancy of the grounds by the United States Army the soldiers permitted the national colors to float in all weathers until the colors were all gone and the national emblem was badly worsted. They came to the University then and asked the loan of a fine large bunting flag, promising to care for it better than they had done for their own. But when that promising contingent was ordered to France, they were succeeded, time after time, by some fresh troops—very fresh—and they, having made no promises, had forgotten to bring their obligations to the University, and one morning they brought the flag back with several more than thirteen stripes in it; but the additional ones were openings nearly the length of the flag and all of them had been made for the accommodation of the weather; and instead of keeping the flag intact, they had divided the red and white stripes from each other, and the whole emblem was only fit to "stop a hole to keep the wind away." The boys were sorry, but claimed they were utterly unwilling because "unable to be held responsible for the winds." There you are; that flag cost twenty-five dollars, in the good old times, "befo' the war." That was not all of the story. "The boys" pulled so hard at the cord they broke it. Now we must get a steeple-chaser to carry up this time a *wire* rope, adjust it to the pulleys, and make ready for the colors. All this we will do. But who will give us the money for another flag? Please let enough of our readers speak up—at least, to take a share in its purchase, if no one feels patriotic enough,

DR. BARTLETT L. PAINE

or all are too poor for any one to give us the whole flag. If we should get two flags, one from the North and another from the South, that will be all right; we need one for week days and another for Sundays.

RECENT GIFTS OF MONEY.

Acknowledgment of sums less than \$5.00 is to be regarded sufficient receipt therefor.

Bishop Hamilton Lectureship Fund—\$25.00, W. R. Wedderspoon; \$3.00, A. C. Stevens.

General Fund—\$60.00, Estate of Mary and Susan Bayard; \$4.00, A. L. Wiley; \$1.00, Dr. Isabel H. Lamb.

McKinley Memorial Hall—\$10.00, J. L. Gardiner, \$5.00, Wm. B. Anderson, Jas. A. Huston; \$3.00, C. E. Hill, A. S. Watson, C. C. Jordan, Benjamin Rowe; \$2.00, S. E. Shafer, E. B. Thompson, J. O. Taylor, E. L. Trotter, L. Bennett, O. L. Chivington, W. M. Brooks, F. J. Beisel, C. S. Dopp, Claude Young; \$1.00, Cameron Harmon, C. M. Yost, O. L. Sample, G. A. Law, G. E. Tift, P. C. Wolf, C. A. Hughes, J. C. Jackson, G. F. Cramer, J. E. McCloud, S. D. Kilpatrick.

Asbury Memorial Fund—\$15.00, Don A. Allen. Franklin Hamilton Memorial—\$5.00, E. O. Jones, C. E. Allen, E. J. Westfall; \$2.00, W. C. Hartinger; \$1.00, Perry Robinson, J. B. Workman, L. B. Bowers.

Chancellor's House Fund—\$17.00, G. W. Taylor; \$10.00, W. D. Reed, \$6.00, Bernard Gibbs, J. W. Campbell; \$5.00, John F. Black, C. E. Allen, C. W. Flesher, C. E. Goodwin, Daniel Westfall, H. P. Magill; \$4.00, W. J. Vaughn, C. E. Dalley, B. F. Newman; \$3.00, H. H. Barr, E. C. Rickenbrode, H. B. Workman; \$2.00, J. P. Burns, E. D. Hulse, L. B. Bowers, Roy McCuskey; \$1.00, J. B. Neff, C. F. Anderson, F. J. Raab, V. W. Doolittle, P. L. Flanagan, H. A. Coffman, W. L. Gearhart, Maurice Monroe, C. H. Frampton, W. M. Shultz.

Americanization School—\$5,000.00, Mrs. Annie M. Swift; \$1,000.00, John C. Letts, W. S. Corby; \$400.00, George F. W. Shburn; \$100.00, W. H. Morgan; \$50.00, W. E. Massey; \$25.00, Wm. H. Chadwick, Oscar P. Miller, Wm. T. Rich, Edgar C. Linn, John T. Lord, Sevell S. Watts, J. H. Pfister; \$10.00, Wm. A. Quayle, H. A.

Moses, Mrs. Jeannie R. Field, W. O. Hoeffcker, Mrs. M. H. Kinney, J. Luther Taylor, C. S. Woolworth, Albert R. Kerr, G. W. Crabber, \$5.00, Lloyd Dorsey, Jr., W. L. Caswell, S. B. Godd, N. E. Fisk, \$1.00, Mrs. J. E. Fisher, \$2.00; E. A. Thomas, J. S. Whittington, W. J. Carr, Mrs. Rosa Badgley, Lee M. Bender, J. Milton Patterson, \$2.50, G. E. Hiller, \$2.00, W. C. Wmotsky, Roxa King, Mary A. Lewis, H. H. Eldridge, J. W. Cochran, O. R. Higgins, G. Russell Matthews, Mrs. Belle C. Williams, Nellie D. Chatfield, J. D. Chadder, Frederick Cramer, L. F. Mulhall, S. S. Hall, Jr.; \$1.00, E. G. Bond, J. H. Guyton, F. W. Huth, Mrs. W. F. Keim, Mrs. G. T. Leach, J. R. Maccauley, C. M. Snyder, M. B. Warwick, B. W. Welbourn, P. L. Whittington, Ida R. Bentley, G. O. Sapp, Mary H. Frost, G. H. Hyde, Virginia Moore, L. F. Garfield, W. H. Alderson, Granville Hooper, S. O. Neal, L. A. Bradley, Mrs. Minnie House, M. E. Wheatley, Geo. M. Osborne, Harry Titus, Emma P. Bruce, F. A. Armitstead, W. R. Davenport, Mrs. A. L. Norton, J. W. Keller, Oriinda Bryant, John A. Ames, Vinnie L. Hall, E. O. Taylor, A. B. Taylor, Mrs. A. B. Taylor, Mrs. W. O. Baughman, Mrs. John Dendel, A. W. Prentiss, G. E. Pomeroy, Uloyd Dent, Harry E. Miller, O. M. Wenrich, Mrs. A. E. Smith, Phil Foot, Florence E. W. Carpenter, G. M. Towle, J. H. Smith, Mrs. J. Howard Creamer.

LAWYERS NOT HEIRS—A GOOD AND GREAT WILL.

Lawyers are as much entitled to their living as the preachers where both make it the same way. There is no more reason why the lawyer should not be a good man than the preacher. It is a mistake to say that there are conditions and circumstances in which a lawyer who is honest cannot earn a livelihood.

The law is an honorable profession and calls for honorable men, and it is a violation of trust to dishonor the calling. Honor always "breasts the blows of circumstance." The courts and the daily walks of life have provided versatility of employment adequate to all kinds of talents and times and places in the law as certainly as in other vocations. No profession is ever so crowded that there never "is no room at the top," and well up in the middle.

The prolific source of temptation to good conduct seems to be round and about wills. "Whosoever the body is, thither will the eagles be gathered together." Certain lawyers make a practice of running down wills for the purpose of becoming joint-heirs to the large sense of the inheritance. Great sympathy with lucrative promises furnish the approach to the broken hearts and untutored minds of the beneficiaries. Of such partners in the testament it may well be said "The weeping of an heir is laughter under a mask."

Some account is given in another column of the "Courier" of the great and good will recently probated at Lincoln, Nebraska.

The Department of Jurisprudence in the American University was created as an offset to cheap lawyers with their practice of lawyering. To find the moral quality of the law and establish the moral character of the lawyer is the aim of the instruction given by the high-minded Dean and Faculty.

DOCTOR BARTLETT L. PAINE.

The American University is not without friends in distant parts. A contribution was received within a few days from Walla Walla in Washington. The

Chancellor had written to a German brother soliciting a small sum toward the purchase of a reference library for the school; the response came with double the amount requested.

Now comes the news that a good friend, who had assisted the Chancellor from time to time, as far away as Lincoln, Nebraska, has shown his confidence in the University by the munificent remembrance of the institution in his will by making a gift to it of nearly or quite \$70,000. The last expression of his kindness before this great gift was a message to the Chancellor from Florida, accompanied by a basket of beautifully and carefully selected fruit from his large grove of young trees just come into bearing.

Doctor Bartlett L. Paine, this friend worth having, was not simply a man of large means, but a brother beloved whose money was a good servant and ran on many a Christian errand for his Master. He was a devoted churchman and gave his service to St. Paul's Church in Lincoln until he became distinguished, for his name is in all the churches.

His death is lamented by many a person, little and unknown, as well as the circle of friends which included many more than resided in his own city. His will is said to be one of the most remarkable ever probated in the western country. The original draft consists of 135 paragraphs and nearly every one provides for a separate bequest. Two codicils are added containing 35 paragraphs. His personal gifts are many. The bequests are scattered so widely, the ends of the earth will speak his name gratefully. Nearly or quite a million dollars is loosened for worldwide service. "The residue of the estate is thought to be more than \$100,000. Of this amount the American University received two-twelfths."

THE NEIGHBORS WITHIN OUR GATES.

Sydney Smith usually mixed a grouch with his smart sayings, but he always managed to get no little common sense in his growls. He had a good agricultural notion in his head when he said, "Whoever can make two ears of corn or two blades of grass grow where only one grew before deserves better of mankind, and does more service to his country than the whole race of politicians put together."

When the armistice was signed, and the Chemical Warfare Service removed from the campus of the University, the War Department asked the privilege of the University Trustees to permit the Fixed Nitrogen Research Division to occupy the chemical laboratory, used hitherto for war purposes temporarily, and the buildings connected therewith, for giving to every Cincinnatus who returned to his plow the ability to grow the two grains of corn for the previous one, and likewise the two blades of grass.

The Fixed Nitrogen Research Laboratory was founded by an order of the Secretary of War, dated March 29, 1919, and has been operated with a budget of \$300,000 a year from funds which were made available to the President of the United States by the National Defense Act of June 3, 1916.

The laboratory has a total personnel of between 110 and 120 persons, fifty of whom are chemists. The total equipment for purposes of chemical researches has a value of approximately \$399,000.

The following outline and personnel of the plant in the Ohio or McKinley building will give some idea of the technical task in hand, and the able and skillful workmen who are devoting their gifts to taking from the air and nature's chemistry—an inexhaustible resource—a never-failing supply not only for fertilizing the soil, but for numerous other purposes.

Arc Section.

Dr. S. Karter, Ph. D. in Physics, University of Illinois, is Chief of the Arc Section. The fixation of nitrogen by the Arc Process is of fundamental importance, and in event of national emergency nitrogen may be obtained quickly by this process. For the advancement in the improvement of this method involves a more complete knowledge of the processes which take place in the path of the electric arc. For that reason the work at present is confined largely to a thorough fundamental and scientific study of the chemical actions which take place in the path of an electric discharge.

Cyanamid Section.

Dr. J. M. Braham, Ph. D. in Chemistry, University of Illinois, is Chief of this section. The work in the Cyanamid Section involves the perfecting of processes as well as the utilization of products from the huge nitrate plant built in the State of Alabama during the war. Many interesting and valuable discoveries benefiting the industrial nitrogen interest, more specially agriculture, have been developed in this department.

Haber Section No. 1.

Dr. A. T. Larson, Ph. D. in Chemistry, Harvard, is Chief of the Haber Section No. 1. The work consists mainly in the developing and testing at low pressures of catalysts used in the manufacture of ammonia which is the fundamental step in the fixation of atmospheric nitrogen by the Haber Process. A large amount of technical and scientific information on catalysis has been obtained. Dr. Larson is accredited with being America's expert in this line of research.

Business Office.

Mr. H. M. Frampton, Business Manager. The work consists of handling anything not of a purely scientific nature at the Laboratory.

General Shops.

Mr. F. J. Berchtold in charge. The work involves repair, maintenance and specially constructed parts of chemical apparatus.

Machine Shop.

Mr. L. F. Kirk, in charge. The work involves purely machine work of high grade, thus requiring exceptional skill.

Haber Section No. 3.

Dr. R. O. E. Davis, Ph. D. in Chemistry, University of North Carolina, is Chief of Haber Section No. 3. This section is investigating methods of recovery of ammonia from the mixture of hydrogen and nitrogen gases after they have passed over the catalyst in the ammonia synthesis operation. The method must be adapted to suit the catalyst and to substance deleterious to the catalyst introduced into the gases, while at the same time the removal should be as complete as possible. A number of solid and liquid absorbents for ammonia are being investigated.

Dr. R. C. Tolman, Ph. D. in Chemistry, M. J. T., is Director of the Laboratory. He was formerly head of the Division of Physical Chemistry at the University of Illinois, and has published considerable research in chem-

McKINLEY MEMORIAL HALL FROM SOUTHEAST

istry and physics, including a book on the theory of relativity. He is the discoverer of the theory of the relativity of size.

The Haber Catalyst Testing Plant has involved a Government investment of some hundred thousand dollars and has been built to test Haber catalyst for the combination of nitrogen and hydrogen to form ammonia at pressures of 1,500 pounds to the square inch and at temperatures of from 800 to 1,100 F. The plant is complete with hydrogen and nitrogen manufacturing installation, holders, compressors, high pressure purification system, and eight reaction bombs for testing. The plant operates twenty-four hours per day and has operated without a break-down for a year. There are no other similar installations that are known to have operated more than a week continuously.

The Section under which this high pressure development and testing work comes is in charge of Mr. R. S. Tour, formerly Chief of the Technical Department of U. S. Nitrate Plant #1, built at Sheffield, Alabama, during war, for the Haber synthesis of ammonia, and later a member of the U. S. Fixed Nitrogen Commission, investigating the Processes of Nitrogen Fixation in Europe.

There is also located at the American University grounds another branch of the Nitrate Division, which employs draftsmen, engineers, mechanics, computer, etc., and which has for its purpose the engineering redesign and development of U. S. Nitrate plant #1 at Sheffield, Alabama. In case emergency should require, or national policies desire that Plant #1 should again be brought into operation, it is hoped that this section will have the necessary plans and organization for the reconstruction and operation.

This branch of the Nitrate Division at the Laboratory is directed by Mr. R. S. Tour, who has been mentioned above in connection with the U. S. Fixed Nitrogen Laboratory Section for High Pressure Experimentation.

Mr. F. J. Fox, B. A. Chemistry, Richmond College, Chief. Work in this section involves analytical work for all the research sections of the Fixed Nitrogen Research Laboratory. Between two and three thousand samples are handled in this section each year, requiring between five and six thousand separate analyses. Considerable research work on analytical methods has also been done by Mr. Fox.

know of him that he will be a religious adviser whose devotions will be in the interest of every member without so much as to entertain any thought of differences. But as highly as we esteem the distinguished divine, let it be said we honor not a whit less the highly honored gentleman from Georgia who has brought to himself and the party for which he has spoken a worthy and honorable distinction by this noble example. "Harmony is always understood by the crowd."

ONE OF OUR TRUSTEES.

The Reverend A. J. Palmer one of the earlier, as well as the present, members of the Board of Trustees of the American University, who has just rounded out his fifty years in the ministry, with three or four years additional in the army during the Civil War has been commemorating his remarkable career with a Memorial Address, delivered before the New York Annual Conference pursuant to a vote of that body. The address is so well written, racy and rich in the recital of historic associations and incidents that it is running as a serial in the New York Christian Advocate. The Doctor holds the primacy of having been the youngest soldier enlisted in the Union Army, being only fourteen years, six months, and twelve days old, and serving with distinction as a private during the Civil War. The story reads like Abbott's History of Napoleon, graphic, exciting and entertaining. He was one of "Strong's Fighting Brigade" that assaulted Morris Island and was decimated at Fort Wagner. He was included in the twenty-eight who had been abandoned in the bastion after they had captured it, but who were surrounded by the Confederates, taken prisoner and sent from one prison to another until only six survived. After nine months of confinement he managed to escape from Libby Prison and to furnish Secretary Stanton and President Lincoln with valuable information. His associations with Chaplain McCabe, officers of the War Department, General Grant, and the President, make interesting reading. Some account is given of the origin of the Doctor's famous lecture entitled "Company D, the Die-no Mores" which, with Chaplain McCabe's "Bright Side of Life in Libby Prison" and General John B. Gordon's "The Last Days of the Confederacy," was heard from ocean to ocean. Doctor Palmer is now Annuity Secretary of the Board of Foreign Missions.

CONGRESS BEGINS WELL.

Say a good word for the Democrats! We have heard so much of how things have been going wrong, let us say in honor to whom honor is due that there are numbers of men in the minority who are honoring the new administration as one that is no longer a partisan administration, but a government of the people, to whom all the people owe their allegiance. The example set in the House of Representatives was very properly a religious one to begin with. When the party of the majority announced the candidate for the Chaplaincy, immediately a Representative from Georgia arose and moved that the election be made unanimous and for the first time, as far back as the writer can recall, no such instance is to be found in the Congressional Record. We congratulate the new Chaplain sincerely and assure ourselves by what we

A HUNDRED YEARS IN WASHINGTON.

We do not know of any man or woman who has lived in Washington a hundred years. But there are some other living interests beside the Congress of the United States which have been in the city so long. Instead of bringing to them a second childhood the years have added to their activities, prestige and influence. And they are highly honored for their long life and increasing usefulness.

George Washington University lays claim to this distinction. On the mathematics of the husband and wife who declared they were both one hundred years old because the two were one, the Institution has established the validity of its claim. The old gentleman said he was sixty-seven years old and his wife was thirty-three; if that doesn't make them a hundred, what does?

The old gentleman in this instance was a Baptist until he married, and since he married outside the fold he went with his wife out in the wide, wide world and at present they have no affiliations. But they are highly esteemed for their work's sake. Their children rise up in great numbers to call them blessed. They are in good society and have many of the best of friends. The President is in the thought of many persons eminently qualified to sit in the council of the nations.

As announced in a previous number of the "Courier," that it would be, the anniversary of the University was observed on its one hundredth birthday and was celebrated with becoming exercises and orderly stateliness. President Collier appeared at his best to direct the exercises and confer honors on the distinguished guests who represented a number of different nationalities and included some of the noblest men and women in their respective walks in life. Twenty-seven degrees were generously bestowed with gracious hospitality and the recipients thus made honorary members of the Alumni Association. The addresses in the several convocations were all of a very high order and reflected great credit upon the University, as well as upon the speakers themselves, all of whom recognized the dignity and importance of the occasion. We congratulate the highly honored President and his distinguished Faculty and Board of choice Trustees.

OUTSIDE SCHOOLS ON THE CAMPUS.

The American University has entertained on the Campus during the last four years schools of great celebrity. The one hundred thousand soldiers quartered first and last on the grounds during the war were in training from the day they arrived until they were called to the colors. They were at school. Here were the civil engineers, the foresters, the camouflage, and the Chemical Warfare Service. This last came into existence to match the wits and savagery of the Germans. The Bureau of Mines was granted the free use of the Ohio or McKinley Building to manufacture gas. Then gas masks followed with explosives. A few chemists were selected from the universities and manufacturing chemical laboratories with which to begin. When the armistice was signed two thousand chemists, with their assistants, were employed in the largest laboratory this side of the sun or other burning stars. There were munitions on hand, including multiplex gas and an invented explosive many times dynamite, valued at \$800,000. When it was ascertained for a fact, after the first announcement, a false alarm, that the fatal stop or proceedings in the field was actually on paper, and the Commander-in-Chief, so near to a crushing victory, had given away to his feelings, as was reported, and the armies of the aliens were going home singing "We were not whipped; we'll up and at 'em again," disarmament began at the University. It was begun by the destruction of munitions? The numerous collections on hand, just ready to go overseas, was valued at nothing now but the expense of putting them away. As "this was to be the last war," permission was given to go far back on the University acres, to dig a pit deeper than the one into which Joseph was cast, bury the munitions there and cover them up to wait until the elements shall melt with

fervent heat, when the earth and the works therein shall be burned up.

When the Chemical Warfare Service was removed from the grounds of the University the War Department asked to have the Nitrate Division occupy the Ohio Building and temporary structures round about for an experiment station. A glowing account of the School and plant is given by Mr. H. O. Bishop in the Washington Star. We reproduce a part of his paper here. He says:

It sounds mighty like a fairy story to say that it is possible to reach up into the sky and pluck something out of it that men can put into their gardens and farms that will make the ground richer and the crops greater. Nevertheless, that's exactly what is going to take place in every nook and corner of this vast and beautiful country of ours.

Here in Washington is located the greatest nitrogen research laboratory on the western hemisphere for the investigation and discovery of the cheapest and most effective methods of procuring nitrogen fertilizer from the skies. This world-famed laboratory is housed in the buildings of the American University. It is technically known as the fixed nitrogen research laboratory and was founded by an order of the Secretary of War, March 29, 1919, by authority of the National Defense Act.

It is generally conceded that the scientists at the head of this institution are the ablest men in their line of work that America has thus far produced. The present director is Dr. Richard C. Tolman, formerly head of the Division of Physical Chemistry of the University of Illinois. During the war he served as a major in the chemical warfare service. He is the man who developed the famous toxic smoke candle, planned to be used by the allied armies in the spring drive, but which was unnecessary on account of the signing of the armistice. Four millions of these candles were in process of manufacture when the war ended.

The first director of the laboratory was Dr. Arthur B. Lamb, now professor at Harvard. He is still connected with the laboratory in the capacity of consulting engineer. Dr. Alfred T. Larson, who knows more about ammonia catalysis than any man on earth, is the head of the catalyst division. The chief of the cyanide section is Dr. Joseph M. Braham. Capt. R. S. Tour conducts the catalyst testing plant. Dr. Sebastian Karrer is in charge of the electric arc section, and H. M. Prampton is the business manager in charge of the entire outfit.

It costs about \$300,000 annually to operate this laboratory, but the ultimate value of the discoveries of this notable group of scientists can only be estimated in terms of billions. Their job is to learn how to harness nitrogen and make it work for us in the years to come, just as the Franklins, Edisons and others learned how to harness electricity.

The first chemical used in warfare seems to have been gunpowder—or a combination of potassium nitrate, sulphur and charcoal. This use first occurred about the year 1250. It was revolutionary in its effect upon munitions. The chemical development was at first slow, but gradually increased until today. The strength of an army is not measured by its man power alone, but in great measure by its power to inflict damage through the intelligent and up-to-date use of chemical ordnance.

Today the various branches of the Army, or the infantry, artillery, cavalry and air service, all rely in great measure for their offensive power upon the tremendous force turned loose on the enemy by the detonation of the explosive charge contained in the shell or bomb or by the momentum of the bullet developed by the burning of smokeless powder. The Navy is similarly dependent.

It is doubtful if any man in the United States has given the subject of nitrates and fixed nitrogen, for use both in times of war and peace, more careful study than Col. J. H. Burns of the Nitrate Division of the Ordnance Department of the United States Army. Here is a remarkably interesting statement from him, in which he covers the subject of gun powder:

The statement has been made that nitrates and fixed nitrogen are indispensable for strictly military purposes in the manufacture of powder and explosives, and for peace purposes in the manufacture of fertilizers and chemicals.

It is, therefore, apparent that powder, explosives and chemicals are the heart of munitions, and it can be truthfully stated that fixed nitrogen is the heart of powder, explosives, and chemicals.

After giving a technical and scholarly account of the "slight affinity existing between nitrogen and other elements furnishing a peculiar character to its compounds," he states further:

The demand for fixed nitrogen for peace pursuits can be divided into two main classes—fertilizers and the chemical industry.

Nitrogen for fertilizers: The three essential elements of a complete plant food are fixed nitrogen, phosphoric acid and potassium. And of these three, nitrogen is claimed to be the most important, and it is the most expensive.

Fertilizer has, of course, since the earliest days of human history, been used in the growing of plants. As chemical development has progressed, study has been made of just what elements are needed and in what form they should be used to properly sustain and develop plant life. And as a result of this, knowledge has been gained as to the inorganic or mineral materials that can be used to augment as fertilizers the organic substances previously used. And one such substance is fixed nitrogen in one form or another.

Chemists have long recognized the atmosphere, of which four-fifths is nitrogen, as the huge reservoir that must ultimately be relied upon to supply our needs in the way of nitrates or other fixed nitrogen compounds. The very aloofness of nitrogen or its refusal to combine or stay combined with other elements, which gives it so much value in explosives, on the other hand, causes tremendous difficulty relatively in harnessing it. The artificial fixation of atmospheric nitrogen by chemical or electro-chemical means has, however, been developed in recent years, and several methods are in actual operation.

In all cases it is necessary to force the combination of nitrogen with some other material. This combined nitrogen can then be manufactured chemically, so as to produce the desired material.

There is every reason to believe that the Government will eventually increase the size of the nitrogen research laboratory out on Massachusetts Avenue, until it becomes the greatest institution of its kind not only on the western hemisphere, but in the entire world.

TAKING OFF OUR HATS.

Every number of the "Courier" which goes out to the readers brings some interesting responses, showing that there is no little interest in the success of the American University. We have never printed any of these letters, but that the friends of the institution may know that there are readers who enjoy every bit of news concerning the advance movements of the school, and at the risk of enjoying a bit of commendation in public, we print the following letter from among the many that enter the office of the editor:

THE METHODIST BOOK CONCERN.

Oliver S. Baketel, Editor,
150 Fifth Avenue, New York.

April 20, 1921.

Bishop John W. Hamilton, D. D.,
Stoneleigh Court, Washington, D. C.
My Dear Bishop:

I have read with much interest almost every line in the recent number of "The American University Courier," and enjoyed it greatly. It certainly looks as if you were doing something with the prospect of doing more. You are surely to be congratulated on the purchase you have made in the downtown section.

I hope the work will continue to grow, and that you will see before you die that institution in such a position and doing such work as was hoped for by those who were its founders.

Wishing you much success in everything you undertake,
I am sincerely yours,
O. S. BAKETEL.

TABLE TALK.

Mrs. Henry Baker, whose husband was one of the retired and venerable preachers of the Baltimore Conference, died recently and in her modest will left her piano to the University.

The large brick house occupied during the last Administration of the Government by the Postmaster General is given over to school purposes. The first floor is occupied by the University for lectures and recitations. The unusually large drawing room, which will accommodate nearly or quite one hundred persons, is admirably adapted to the varied uses of the school. The second story and basement, which is finished in rooms, are occupied by the Bureau of Commercial Economics, that offers illustrated lectures in the large lecture room in almost every department of knowledge—trade, politics, science, letters and religion. The upper story is furnished for the residence of students where a half dozen can be very comfortably accommodated.

DR. J. J. JUSSERAND

PRESIDENT HARDING

DR. NEWTON W. ROWELL

SEVENTH ANNUAL CONVOCAATION. June 8th, 1921.

THE THREE NATIONS AT THE AMERICAN UNIVERSITY.

No more notable Convocation has been held in Washington than that of the American University on June 8, 1921. The time, the place, the circumstance gave opportunity to the program. The sun shared its radiance with the clouds and the people, the air was balmy and salubrious, the foliage was dense and luxurious, the bloom of the trees shed its fragrance everywhere, the stately tulips overshadowing the natural amphitheater, like the groves of the Academy at Athens, made of the landscape a fit temple for the schoolmen.

The occasion had brought together the representatives of the three kindred nations to espouse a common cause. England and her colonies, the moral and financial symbol and support as well as safeguard of Europe, was represented by the honored and distinguished statesman from Canada. France, come out of the greatest of tragedies, literal vivisection, but with unconquerable will and genuine esteem and love for America, could have sent no more welcome guest or interpreter of the first principles of friendship than the affable, scholarly and eloquent ambassador. The United States, the basic resource of relief and liberty of other peoples, was given the representation by the President that was heard in all lands and must have convinced the nations that "America was the half-brother of the world."

The theme and tone of the addresses were of such dignity and earnestness as to give encouragement to the distressed and disheartened in every country. The speakers had come not so much to "lash the vices of

a guilty age" as to lend a helping hand to those who had suffered most from its ruthless and desolating scourge.

We print, with grateful acknowledgment to the authors, the addresses with all other proceedings of the Convocation.

FLAG RAISING EXERCISES.

Two great flags having been donated to the University, the flag raising preceded the Convocation exercises. A large assembly was gathered about the flag pole, that stands near the College of History. The Chancellor of the University, Bishop John W. Hamilton, in presenting the presiding officer, said:

Ladies and Gentlemen: You know it has been the custom, indeed for long the law, over all our institutions of learning, including the public school, to float the national flag. We are met today to receive first the flag donated by Senator Robert A. Booth, of Oregon, who said he wanted the Oregon colors to float over the Nation's Capital.

The exercises were to be in charge of General Pershing, who consented to be here in case he was not called to his own institution in the west. He has notified me that he has not been released from his tentative engagement, and expresses his regret that he will not be present today. He states that he had secured Major General William Mason Wright to represent him. General Wright, however, has been called suddenly today to the hospital on a very serious errand, and in his place he has designated General Preston Brown, who will preside at these brief but patriotic exercises, after which we will go immediately to the amphitheater in the grove for the annual University exercises. It is my pleasure to present to you now General Preston Brown.

GENERAL BROWN: Ladies and Gentlemen: Before asking Dr. Pierce to offer the invocation, I know you will pardon me when I say it is peculiarly fitting that he should do so. The ambassador of our sister republic is present. He will appreciate when I announce the fact that three years ago today in the bloody fighting at Belleau Wood, Dr. Pierce, then a chaplain in the Second Division, took an honored part, and represented his calling with the greatest credit. Dr. J. N. Pierce.

Almighty God, Whose we are, and Whom we serve: We cannot meet here without recognition of Thy presence; that our country owes her life to Thee; that our desires of the sisterhood of nations are born of Thy Holy Spirit operating in our minds and heart; that this great University, set on a hill, which cannot be hid, looks to make real among men Thy wisdom, Thy truth, Thy love, and Thy service.

And now is this flag accepted, as it has been given, in the spirit of allegiance to country and to the ideals back of country. And guiding onward as this flag shall float in this place, wilt Thou make us loyal to all Thy children and to all Thy truths, in all our lives. And to the Father, Son, and Holy Spirit shall be our thanksgiving and our praise now and forevermore. Amen.

GENERAL BROWN: The presentation of the flags will be made by Mr. H. M. Frampton, who represents the Fixed Nitrogen Research Laboratory, and to whom has been entrusted the honor of presenting the flags. Mr. Frampton,

General Brown, Bishop Hamilton, and Distinguished Ladies and Gentlemen: I have the honor to present, for your formal acceptance, two flags, both of which were sent to the American University for use at its Seventh Convocation exercises, June 8, 1921. The flag which I shall first hand you was presented by Senator Robert A. Booth, of Oregon, and the second by Mrs. and Col. P. M. Anderson, of the District of Columbia. The Fixed Nitrogen Research Laboratory, which it is my pleasure to represent, was entrusted with the custody of these flags until such time as they were formally accepted. The Laboratory is very grateful for this and other honors bestowed upon it by the American University, which honors we desire hereby to acknowledge. And as I now present the flags as described, I present also an expression of the high esteem we hold for the officers and faculty of the American University, as well as for the officers of the War Department, which you now represent, and under whom we serve.

GENERAL BROWN: Ladies and Gentlemen: The acceptance of the flags will be made by Bishop Hamilton.

Ladies and Gentlemen: No extended remarks are necessary in this day to accept anything! We are always grateful for all we can get! Under these circumstances it is very fitting indeed that the flags should have been entrusted for presentation to the partners with the American University in the occupancy of this ground. We have been associated with the United States Government here for the last three or four years, they occupying all of our hundred acres. The Nitrate Division is still in possession of the Ohio or McKinley Building.

In behalf of the University, it gives me greatest pleasure from the representative of the Nitrate Division, to accept these flags, the first to be erected here, the second to be erected over the downtown branch of the University, between Nineteenth and Twentieth Streets, on F Street.

That you may not tire in waiting, I will venture very briefly an extremely frank but good-natured remark. The boys who were here were not as careful as possibly we would have been with our own flag. It was up in all weathers, night as well as day, and it soon lost its colors; and another untoward matter, it broke from its moorings at the top. The men of the Nitrate Division, at all times our helpmates, borrowed from the Weather Bureau three or four balloons and a number of pulleys, and by some sort of skill or legerdemain, they were able, by a hoisting hydrogen process, to bring that pulley not only to the top, but to fasten it there, and then also to strengthen the pulley, as you see, by these wrappings. And now it is certainly proper that they should test the pulley and the wrappings to see that the thing has gone into place to do the business!

As the flag rose to its appointed place the Marine Band, led by Lieut. Wm. H. Santelmann, played "The Star-Spangled Banner," and the audience stood at salute while the colors were being raised.

GENERAL BROWN: We will now proceed to the grove for the remainder of the exercises.

The Convocation exercises proper were held in the outdoor auditorium at 2:30 o'clock, with Bishop John W. Hamilton, Chancellor, presiding.

BISHOP HAMILTON: Good friends, you cannot understand the pressure upon the time of the President in these most busy days. We must have the time for the exercises, but when he shall appear, which will be in a very few minutes, we desire that he shall have the full time necessary for his address. He must retire, and the band also, if our exercises should be extended beyond four o'clock, as Mrs. Harding has a garden party at which she must be present from five to seven o'clock, and the Marine Band that is serving us today, through the direction of the President of the United States, of course must go with the President, to be present at that reception in the grounds of the White House. We will therefore proceed at once with the exercises. The audience may remain standing during the prayer, which is to be offered by the Rector, the Rev. James E. Freeman, D. D., of the Church of the Epiphany. (The audience arose.)

Prayer.

Let us pray. Almighty God, our Heavenly Father, Thou art the source of all life, Thou art the source of all strength, Thou art the Giver of every good and perfect gift; and we approach Thee today as Thy children with the confidence and assurance that Thy Spirit is with us in all things. And we come to Thee, in this day of holy beginnings, to ask Thy love and favor upon us, as we meet here in this place which is dedicated to things of wisdom and of knowledge and of power; to ask Thee to give us Thy grace and Thy Heavenly benediction; to grant that here in this place truth may dwell serenely, and truth inspired by Thee.

Do Thou give great judgment and wisdom to all those charged with the concerns of this place, granting that nothing untoward, nothing unfavorable to the acceptance of truth may enter here. But may all things be done with an eye single to Thy Glory, and may every enterprise here undertaken have but one issue—the Glory of God and the uplifting of man.

Do Thou broaden our outlook today. Do Thou make more sensitive our consciences. Do Thou render clearer our vision. Do Thou grant that more comprehensive may be our love as we confront the great issues of the world. May we approach thee, not in any fearsome spirit, but with large confidence in Thee. May we remember that "if God be for us, who can be against us?" And do Thou grant that here in this place and in this great city there may be developed a spirit of fraternity and of international interest and of international love that shall literally embrace all the children of men.

Do Thou bless him who is appointed to preside over this nation; give to him peculiar wisdom in these days; and grant that every safeguard may be thrown about him, and grant that Thy Holy Spirit may lead him day by day, hour by hour, into paths of truth and into ways of pleasantness and of every increasing service for Thee and for his nation.

And to one and all of us do Thou give the sense of loyalty, do Thou give the sense of devotion, not only to our national ideals, but to those uplifted ideals that may be ringing round the world, that today are making for the larger fraternity of human interest.

And do Thou bless the student body and all those who are teaching these Thy sons and Thy daughters in this place. Do Thou grant that each one of them in his or her place may fulfill every holy obligation to Thee, and may render service worthy of Thee.

Do Thou hear us in this, our prayer. Forgive us when we make mistakes. Lift us when we fall. Strengthen us when we are weak. Encourage us when we fail. And grant that as we grow in years, and in the ripeness and richness of knowledge, we may grow more and more in our spirit of fellowship one with the other, and more and more in the spirit of reverence and devotion to Thee. These things we ask with sure confidence and for the sake of Thy Son, our Savior, Jesus Christ. Amen.

BISHOP HAMILTON: The Scriptures will be read by the Rev. John Paul Tyler, D. D., of the Methodist Episcopal Church, South.

DR. TYLER: The Scriptures appointed for the day are, first, the Twenty-third Psalm, which we shall repeat in concert. Let us rise.

(The audience rose and repeated the Psalm.)

Hear now, also, the Word of the Lord as it is recorded in the seventeenth chapter of the Acts of the Apostles, verses twenty-two to thirty-one.

Here endeth the reading of the lesson.

BISHOP HAMILTON: The Rev. Dr. Mitchell will lead us as the precursor in the singing of these combined hymns, first, "America;" secondly, "God Save the King;" thirdly, "The International Hymn," accompanied by the band.

(Dr. Mitchell led the audience with enthusiasm in singing the hymns.)

BISHOP HAMILTON: At the earnest request of the graduating class that the President would consent to be in a picture with them, we will wait just a moment for the photographers.

Numerous photographs were then taken of the President and Mrs. Harding, the officials of the University, members of the graduating class, and distinguished guests.

BISHOP HAMILTON: Mr. President, Mrs. Harding, Honored Guests, Ladies and Gentlemen: It was Wendell Phillips who said, "Education is the only interest worthy the deep controlling anxiety of the thoughtful man." This statement becomes startling when it is understood that the world has never been educated. Education itself has not arrived at the age of definition. There have been many attempts to define it by men and nations, but its meaning does not lie on the surface, and it is elusive. It has had no maturity and will have none in your time or mine. It would have to exhaust both knowledge and wisdom to become mature. The nearest approach to it is in what we call the ideal, and that is more imaginary than real. The most that can be said for the best educated is that they are going on to perfection; they cannot hope to be made perfect in this life; they have the infinite in their curricula. All wisdom comes from above. Cicero declared, "All things are full of God." No man, therefore, in our use of the term can be a scholar who does not know the presence and will of God revealed in His Bible and in all things about him. To be a scholar even then is to be a smatterer.

Nicodemus, who was ignorant of the new revelation, knew enough to say to the Man of Nazareth, "We know that Thou art a Teacher come from God." The prophet had said of Him many centuries before, He will teach us of His way and we will walk in His paths, and He Himself has directed us of His knowledge to teach all nations. Christian education is the common bond of human fellowship the world round, the only measure of human progress.

We have come here today to commemorate the search for the higher learning. There is a significant proverb that "God blesses the seeking, not the finding."

Introducing the Honorable N. W. Rowell.

When New France was ceded to Great Britain our provinces were all one country. George the Third made us some disturbance between neighbors, but he didn't obliterate the neighborhood. And what is the use of digging up that old trouble? We are still neighbors. The American University stands for a closer fellowship, wiser statesmanship, and Christian reciprocity. To this end we have brought our neighbor and brother to promote this national brotherhood. It is my very great pleasure to introduce to you the Honorable Newton W. Rowell, LL. D., King's Counsel, of Toronto, Ontario, Canada.

The North American Spirit.

DR. ROWELL: Mr. Chancellor, Your Excellencies, Ladies and Gentlemen: In the year 1908, it was my privilege to be present on these University grounds and to hear an address from your then President, the late Theodore Roosevelt. I listened with great pleasure and satisfaction to the proclamation of ideals which I could not distinguish from the ideals which we advocate and hold dear in our own country. And, Mr. Chancellor, when you invited me to be present today and informed me that your President, Mr. Harding, was to be present and deliver an address, that was a great inducement to come that I might hear again the proclamation of American ideals by the first citizen of your country.

May I refer, in passing, to that interesting incident in which we were privileged to take part a few minutes ago—the presentation of the American flag to this University? It recalled to my mind a most impressive experience of the 4th of July, 1918. In the early hours of that morning it was

my privilege to stand on an elevated platform to the northeast of Amiens and witness the soldiers of Australia, your soldiers and some of our Canadian troops attack the German positions which then threatened Amiens. It was one of the first attacks, if not the first attack upon the veteran troops of Germany, in which your men took part. I was asked: "How do you think the American troops will act?" Does my answer contain any presumptions? I replied: "You know how the Canadians have acted under fire; the American soldiers will act in the same way." Later in the day, when present at the meeting of the Supreme Council in Paris, we learned the result of that morning's engagement. Our combined forces had not only gained their objective, but they had advanced much beyond their objective. It was the first real advance after the disasters of the spring and was to prepare the way for the later movements which culminated in those great victories which brought the war to an end. May one express the earnest hope that the spirit of fraternity and co-operation manifested on that 4th of July, 1918, between the citizens of the British Empire and the United States may continue to characterize our relations in all the days that lie before us.

At this Convocation of the American University, established in the National Capital by one of the great religious bodies of this country, it would appear to be fitting to speak of the ideals for which this University stands; the name, the geographical situation and the religious affiliations all suggest that the founders of this institution were possessed of a great ideal. What was that ideal? May I suggest an interpretation? The word "American" means more than territory; it means more than population, it means more than certain institutions; it means the product of all these—the "American spirit." We all understand it. It is more easily understood than defined. But some, at least, of its characteristics are an ardent patriotism, a marked individualism, a notable self-reliance, an outstanding optimism, strong moral aspirations and a democratic spirit. I believe these qualities are equally characteristic of our Canadian people. They are characteristic of the North American spirit and might be described as the new world ideal of citizenship.

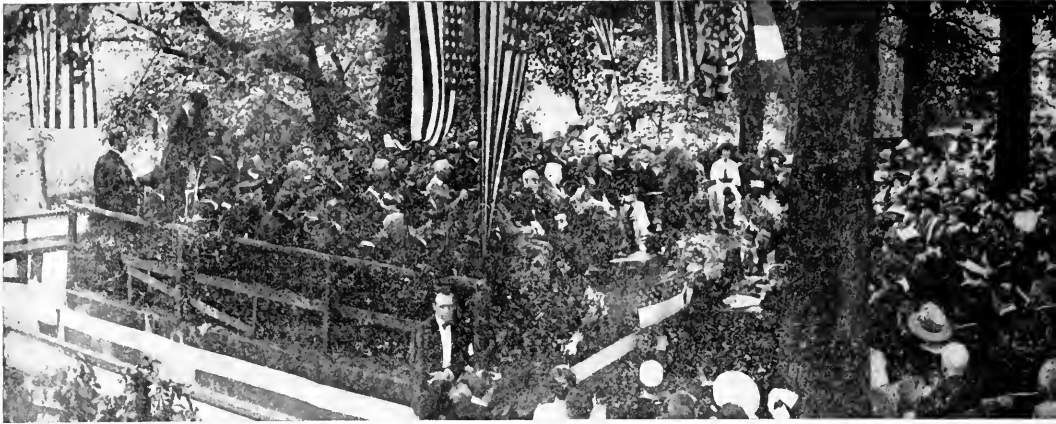

The founders of this University had much more in view than simply the development of the national spirit. They realized that if this national spirit were to receive its highest expression it must be broadened and steadied, rendered reverent and efficient by the knowledge and discipline that come from training in a great university.

We all realize, as the Chancellor has pointed out, that the life which opens to a student when he enters the University broadens his horizon and should give him a truer view of life. He must realize how greatly the American and the Canadian of today are indebted to the civilization of Europe and Asia, the older civilizations which have preceded ours, and that as we are building upon foundations that others have laid, we should recognize the place and inestimable value of their work and be worthy of the past as well as of the present.

But the founders of this institution had a still broader conception of the new world ideal. The North American spirit, broadened, steadied and disciplined by education, may yet be intellectually cold and selfish. If so, it can neither save its own country nor help to save the world. It must be warmed and inspired with noble and unselfish ideals, and so they founded not a secular but a Christian University, the roots of which sink deep into the religious life of the country and which draws its inspiration from our holy Christian faith. Mr. Chancellor, such a conception of individual and national character means much to the future of your country and ours.

You ask: "What is the Christian conception of national life?" It certainly is not narrow selfishness, it is not national isolation; it is the expression of the spirit of service in practical co-operation on a world-wide scale in the interests of humanity. The chaplain read to us this afternoon that passage from the Apostle Paul, in which he said that God "hath made of one blood all nations." The Christian conception is not several distinct humanities. It is one humanity, of which all nations are members. No one member can suffer without the whole body of humanity suffering with it. No one member can be honored without the whole body of humanity being honored with it.

I am sure this University stands not only for ardent patriotism and love of country, for an educated and enlightened citizenship, but it stands above all for the Christian conception of individual and national character and the Christian

SEVENTH ANNUAL CONVOCATION OF THE AMERICAN UNIVERSITY

view of international relations. If I have one word to say to the graduates today, it is to express the earnest hope that as they are among the first to go forth from this University, they may in their life express the great ideals of the founders of this American University.

Looking beyond the immediate sphere of the University may we not ask ourselves today, is there any contribution which the North American spirit can make to the life of the world? Is there any distinctive contribution that will benefit humanity and promote human progress? One is simply recalling what is familiar to all when one points out the invaluable contribution of Syria to the religious life of the world, of the contribution of Rome in law, of Greece in art, of Great Britain in the science of government, and of France in the humanities. What contribution, what distinctive contribution, can the North American spirit make to the world's civilization at this time?

Mr. Chancellor, I venture to suggest there is a contribution which we can make which is well worth while. In August, 1914, when the great war broke out, we in Canada and you in the United States, were engaged in preparations for commemorating the one hundred years of peace between our two countries. It was a notable event in our histories. It was a much more notable event in its implications. What has it meant to our two nations? What does it promise to the world? Fifty-four hundred miles of boundary between our two countries unguarded for a hundred years. No battleships upon our international boundary waters, no troops stationed on either side to defend us against hostile attack. Peace for a hundred years. No disputes between us? Yes, many disputes. No disputes likely to lead to war? Yes, many just of the character that have led to wars in the past and threaten to lead to wars in the future, disputes about territories, disputes about fishing and other property rights, disputes on all conceivable questions. Mr. Chancellor, how does it happen that for more than a hundred years we have lived side by side in peace? We have lived in peace because the leaders and people of both nations have willed it that all our disputes should be settled by peaceable means. Our two nations have demonstrated to the world the practicability of avoiding war and of settling international disputes by peaceable means. That in itself is a great contribution to human progress. But we have done more. We have demonstrated that peaceable settlement of international disputes is not only practicable but is vastly more profitable than war. It is quite true that we in Canada were not always satisfied with the decisions; we grumbled about many of them. We thought you got the best of the settlement in a good many of them. I judge from what I have seen in your press there were some people on your side of the line who thought in some of these arbitrations you got the worst. But I put this question to any thoughtful citizen in either country. Considering what war costs in life and property and its effect upon the whole life of the nation, who is there who will say that the

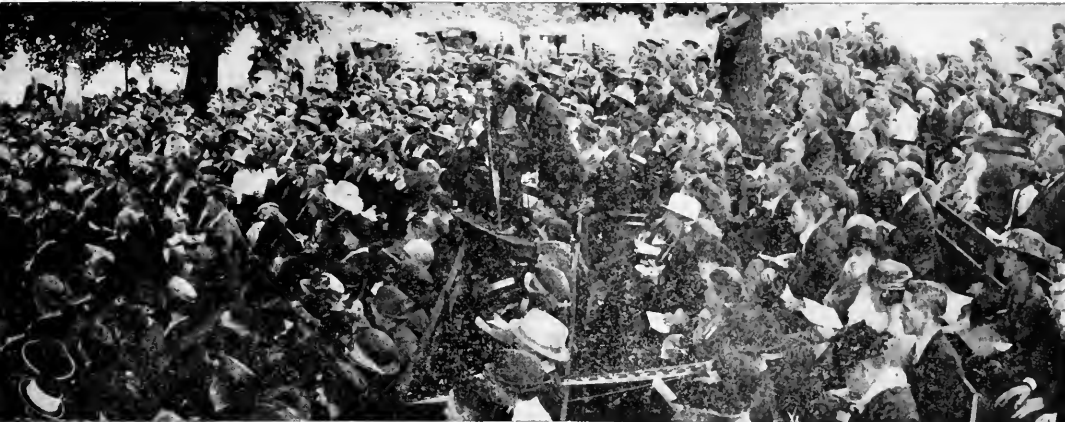

worst settlement was not a thousand times better for both nations than any settlement that could have been secured by war?

I repeat, our two countries have not only demonstrated the practicability of the peaceable settlement of international disputes, but from more than a hundred years' experience, the national benefits and blessings resulting from it. What contribution should the North American spirit make to the world today? A world still reeling under the shock of the last war, still suffering from its crimes and horrors. We can endeavor to introduce a better spirit into international relations and try to lead the world to the settlement of international disputes by peaceable means. We may differ on the form in which this should be done. Men do honestly differ as to the form. We should respect each other's convictions on this matter. But so far as the spirit is concerned, I am convinced, Mr. Chancellor, and I am sure the President will confirm it, that the two nations are as one on the desirability of avoiding war and of substituting some other method for settling international disputes.

Our nations do not like war. We want to see right and justice, not force, governing the relation of nation to nation, and peaceable methods substituted for war as a means of settling international disputes. Mr. Chancellor, may not one venture to believe that with the whole-hearted co-operation of the men on this side of the Atlantic, it may be possible for the North American spirit to make this contribution at this time to the world's peace and to human progress?

What greater contribution could your country and ours possibly make? We know the benefit of freedom from huge armaments. We know the benefit of freedom from war. Should we not work together in seeking to establish some means of co-operation between the nations for the peaceable settlement of international disputes and the preservation of the world's peace.

The people of Canada occupy a unique position politically and geographically. We are fortunate, Mr. Chancellor, in that we have two mother countries, France and Great Britain. We have the greatest respect and admiration for both. Geographically, for fifty-four hundred miles our boundary line touches yours. We do a great deal of business with you. I have not seen the statistics for the last year or two, but I know that we were doing a larger trade with you than you were doing with all the Central and South American states combined. I only mention this to show the intimacy and importance of our commercial relations. Then you are always annexing some of our citizens by marriage or otherwise, and we are annexing yours. We find the Americans who come to Canada and settle with us are just like our own people, they make the very best of settlers. I hope the Canadians who come over here conduct themselves well. I understand they usually get good positions. Mr. Chancellor, Canada has her part to play on this continent, related politically to Great

JUNE 8, 1921—PRESIDENT HARDING SPEAKING

Britain, geographically to the United States, the daughter of one and the sister of the other; she should act as a mediator and interpreter between the two, interpreting and reconciling the one to the other. Our place in history—and it will become greater as our population increases—should be to seek to bind together in peace and brotherhood the peoples of the British Empire, and this great English-speaking republic. I can conceive of no higher purpose Canada could serve.

Some may say these are the idle dreams of dreamers—that this idealism is not practical in a practical world. Speaking to a University gathering it is not necessary to apologize for a measure of idealism. The path of human progress has not been blazed by the cynics or the pessimists. The path of human progress has been blazed by the idealists and the optimists—those who have had vision to see, faith to believe and courage to execute; and I am quite sure that is the spirit which inspires this University.

Presenting President Harding.

BISHOP HAMILTON: The world at this moment is turning its eyes on us as only a terrible calamity can drive a tired hope to look for sympathy and help. It is a momentous responsibility to speak for a hundred million people, but it is an inspiring confidence we have when we are assured the words will be so well chosen as to express only good will with an excellent spirit.

It is high privilege and distinguished honor that enables me to present the one man whose every word is heard round the world.

PRESIDENT HARDING: Bishop Hamilton, the Faculty, the Graduating Class, and Student Body: I do not think I can let this occasion pass without giving assent to many of the appropriate and appealing things just uttered by Dr. Rowell. I like his expressions that American and Canadian ideals are in common. And while he spoke about the North American contributions to present-day civilization and to the world, it occurred to me that the picture of the two great peoples living side by side in peace, in confidence and mutual understanding is about the finest exemplification that two nations can give to the world.

I have said on many occasions that if all the nations of the earth were as honest and unselfish as our republic there never would be another war. I shall revise it today and say that if all the nations of the earth are as unselfish and devoted to their ideals as the United States and Canada there never will be another war.

If I may suggest, without a discordant note, for there is none in my heart, I should like to call attention to the fact that the United States of America and the Dominion of Canada have dwelt side by side and settled their controversies without resort to a superpower; but by the exercise of the sovereignty of free peoples dealing with one another. If we

can commit civilized humanity to abiding righteousness and everlasting justice and inspire it with our example, we shall have made a long stride toward the peace the world craves.

I am glad to extend greetings and congratulations on completion of another year's work of the University. We are at the height of the annual commencement season, when thousands of students go out from institutions all over the land to take up the tasks for which their years of study have been preparing them.

I wish I could impress the young men and women of every graduating class this year with my own acute conviction regarding the obligation of service that is placed upon them. They have been favored with the privilege of special equipment and preparation, such as is vouchsafed to an all too small proportion of the people. They will not prove themselves worthy of their peculiar good fortune or of their special responsibility unless they regard it as a trust to be held for the good of the whole community.

We look to this month's graduating classes to provide far more than their numerical share of leaders for the Nation in a future not far ahead. You will play your parts in a world in many ways unlike any that former generations of your colleagues could have anticipated.

I would feel that I had performed well the part that has provisionally fallen to me if I could impress upon everyone who goes out this year with a diploma the thought that it is not a certificate of right to special favor and profit in the world but rather a commission of service. Men all about you will need the best you will be able to give to them.

Never, I firmly believe, was there a time when the call was so insistent as that to those capable of giving unselfish, broad, comprehending direction to public thought.

You of the next generation of leadership will live in a time of readjustment and reorganization. Much that has been esteemed elemental has been swept aside. Almost nothing remains that we may safely think of as sacred, as secure from the attacks of the iconoclasts. It is a time in which men search their souls and assay their convictions, in which they examine the very fundamentals of institutions immemorially accepted, in which no tradition may be held immune from the assaults of the skeptic and the doubter.

In such a time I can not but feel that the great need which proper education can supply is embraced in the broadest culture, the most inclusive vision, the most clear-eyed comprehension of the terms which mankind's problem today presents. There was a time, and not very long ago, when we were wont to think of education as a sort of specialized training for some kind of special service. We esteemed it as an intensive process of equipping fortunate persons for doing particular things particularly well along established and accepted lines. Today we may say that there are few accepted lines. Nothing remains with us that is not queried. Therefore we need for the leadership of the coming generation an

open-minded willingness to recognize the claim of the doubter, the innovator, the experimenter, the would-be constructivist.

But while we must give these adventurous ones their full chance, we must sedulously guard against the spirit of mere cynicism, the disposition to condemn all things as they are because they are not perfect, the tendency to tear down before any plan of reconstruction has been prepared. The trained mind—provided it is not overtrained—is the one that must provide the saving faculty of discrimination. The world must go forward, and not backward; and it will not go forward as the result of any philosophy of mere destruction. After all, unsatisfactory as some earnest people regard the present structure of society and existing human relations' ships, a reasonably conscious world has been a long time traveling as far on the road toward ideal conditions as it now has reached. History has afforded many illustrations of societies crumbling and going to pieces, and the process has invariably been attended with superlative disaster to great masses of humanity. It is a commonplace that at this time the world stands on the brink of what looks much like a precipice. It must not be allowed to take the fatal plunge. It will not, if it shall be able to summon to its leadership in the coming generation men and women who will unite a necessary measure of conservative purpose with an equally necessary portion of willingness to consider new expedients, to test out old formulas, to apply the acid test even to what we have learned to believe is pure gold.

The education that can truly prepare for the demands of society in the time before us can not be given merely in academic halls. The great world outside must contribute of its practical experience, its intimate knowledge, its discipline and disappointments, to complete the equipment. We can learn much from books, but if we learned only from books we would learn only the wisdom of the past. Nobody will ever live long enough or be wise enough to equip himself with all the wisdom of the past, to say nothing of projecting it into the future. The student who has learned the art of learning, of application, of concentration upon the particular problem before him, will find that he is better qualified for the practical affairs of life than the one who has merely stowed even a very great array of facts in his brain. Books are tremendously useful if they be made the servants of the inquiring mind; they may be deadening and worse than useless if they become the master of the too receptive mind. He who has learned how to use books, how to find what he requires in them and then to apply it, without the necessity of overloading his mind with unnecessary detail, is the one who has made his educational preparation most useful. As a mere storage warehouse, for facts, beliefs, impressions, the human mind is an unsatisfactory plant. It is too liable to error and too limited in its capacity. But, on the other side, when it is used as a maceator of information, a molding, developing, forming, and re-forming mechanism, it does its best work. To do that work, it must possess the qualities of boldness, originality, confidence. It must be capable of sustained and well-directed effort.

So, to the young men and women in cap and gown, gathered here and on a thousand other platforms to receive the testimonies that they have completed their allotted academic courses, I would plead that they recognize that, after all, the effectiveness of their educational effort will at last be in proportion to their recognition that it is only preparation and not conclusion.

There is no such thing as finished education. The wisest person that ever lived took his last observation of life and living into a mind which was still in the processes of preparation.

It is, I think, a part of our national good fortune that we have viewed culture from this standpoint. I think the college graduate who imagines himself at the completion of his education is one of the most pathetic human spectacles we have to view. Fortunately, he is not nearly so numerous as the humorous paragraphs would have us believe. Fortunately, also, in case he may be too well endowed with self-esteem and confidence, the world has special facilities for rapidly and efficaciously reducing the excess of assurance.

Its democracy is one of the fine things about our American system of higher education. It is almost invariably true that any young man or woman, who earnestly wishes it, may attain the privileges of the best educational preparation. There is, thank God, no caste system here. All kinds of experience, of social background, of ancestry, of tradition, of

training are brought together in the melting pot of the American college or university. Neither social nor intellectual snobbery is likely very long to survive such experience. That is why education, when it is of the right sort, is the greatest leveling and democratizing influence we can find. It inculcates a realization of true standards, an appreciation of the fact that differences in estate and fortune are, after all, but the superficialities of life as compared to the fundamentals of character, ambition, and determined purpose. To whatever extent it fails to impress this conception of the democracy of intellect, education will brand itself a failure.

The young men and women who are coming upon the world's stage today, equipped to take their parts as leaders, will find themselves welcomed as their predecessors have not always been in other times. Humanity is seeking as it never sought before for those who can see widely, clearly, fearlessly; who will be capable of determining what is sound and what is right, and courageous enough to stand for it, though they stand alone. Interrogation points have been written in the blood and sufferings of countless millions, at the end of a thousand statements of what a little time ago we deemed the very basic principles of economics, of sociology, of international relationships, of public policy and human justice. We must have that faculty of fine discrimination which shall understand what is good, true, and reliable, and what is false, unjust, and vicious.

I have known somewhat intimately a good many young people who have been growing into their years of maturity within the time of the great crisis through which the world has been and is still passing. My observation of them and of their attitudes toward life has given me, I may tell you, a greater confidence in our future than seems to be reflected in the pessimistic observations of some who would have us believe that, because our young people nowadays see things differently than we older ones saw them, the youth of today must somehow be a bit degenerate. On the other hand, I am convinced that their early introduction to the realities of life has given to the youth of our day a truer perspective, a better appraisal of human and social values. I have faith to believe that success, in the minds of educated young people today, means less in terms of dollars than it did two generations, or a generation, or a decade ago, and that it means more in terms of sincere human service than it ever did before. If I am right, then surely we have accomplished much for the betterment of mankind; for it is a great thing to have implanted such a spirit, such a purpose, such a vision, in the minds and souls of those who are to direct our future. This we have done to a greater extent in our generation than ever before in a like period.

The world and its experience constitute the greater university in which all of you have yet to complete, so far as it is humanly possible, your education. I pray you to go out to it without too much thought of personal rewards, of individual gains; and yet, not to trust these considerations entirely aside. Be generous, but do not dissipate your capital of knowledge and ability in aimless, useless generosities. Hold true to those ideals which your own country and its institutions represent. We Americans will best help mankind at large if we most earnestly sustain men immediately about us. Let us make our America the best place on earth in which men and women may dwell. Let us make it an example to all others, an inspiration and a model. It has been our privilege to see this country which we love called upon to redress the wrongs of a world, to restore the balance of civilization. We could not have played that part had we not first been true to ourselves, confident of our destiny, assured of our righteousness and of the power inherent in our concept of righteousness. Let us go on, holding fast to what, in the great trial, has been proven good, seeking to make it better, stronger, and more unselfish. Let us place a firm reliance in our destiny and let us seek to realize that destiny through unceasing effort and unflinching devotion.

Humanity never needed broader, illuminated understanding more than it does now. It must needs lean heavily upon those to whom it has given its best of opportunity for preparation. Those who today hold aloft as best they can the standard of civilization and progress must presently pass it on to you who are just entering upon your responsibilities. I can think of no greater service I could render than to impress upon every graduate of this June the part that awaits him in humanity's affairs, if he will but realize it. Therefore, I implore a dedica-

tion to common service, to human betterment, to civilization's advancement, on the part of these young people who at last must so largely direct the affairs of country and of society in the hard but very hopeful times which lie ahead.

After the deeply impressive address of President Harding, "The Marseillaise" was sung with thrilling effect by Lieut. Jean J. Labat, of the French Embassy.

Introduction of the French Ambassador.

BISHOP HAMILTON: There is no gratitude like that which responds to the rescuer of one's life from danger and death. A drowning girl feels an obligation to marry the man who rescues her from a watery grave.

When the Marquis de Lafayette, marching in Virginia, and Count Rochambeau, sweeping the coast from the Hudson to the Chesapeake, finished at Yorktown, the French and American armies were betrothed. When they finished in Flanders the wedding was consummated. We are here now to receive the blessing of France at the hands of the French Ambassador, the Honorable J. J. Jusserand.

DR. JUSSERAND: Mr. President, Mr. Chancellor, Ladies and Gentlemen: After the words we have heard from the Chief of the State, words full of wisdom, of good will, of humanity, and which will be overheard in other lands besides this one, who can dare speak? Not I. If I speak, it is not because I dare, but because I am bidden.

How could I disobey when I have such a debt of gratitude to the one who had me? We happened to return together to America, in the same ship, during the anxious days of August, 1914, before any one could tell for sure whether a General Joffre would win a battle of the Marne. We trusted that he would, and so did your Chancellor, offering prayers for the success of the great cause which we were defending, and which you were, one day to defend too, with what success, all the world knows.

In its efforts toward better days, mankind suddenly rises at times, then falls back, but usually not so low as its starting point, so that part of its gains remain permanent and the ascent continues. Yorktown and American independence, our revolutions of 1789, 1830, and 1848, with their immense influence in Europe; the great war in which the three Yorktown nations, now united at last, and, we feel confident, forever, took such a prominent part, were events of this sort.

The foundation of your University is the result of one of those deep movements involving the generality of men. The King's Counsel from Canada was considering a moment ago what were the thoughts of your founders. Those thoughts and the possibility of the foundation are a consequence of a profound transformation which took place in the world, and especially in England, during the first half of the eighteenth century, the seat of which was less apparent than the trenches at Yorktown or the forts at Verdun, and was men's hearts.

Studying the manners of the day, and the mass of writings published at the time when, having received the scepter from Dryden, Alexander Pope reigned over the realm of letters, one is struck by the extreme dryness of the literary king and of his subjects. Clear-sighted, sceptical, ironical, vindictive, doubting all that they could not see, including their own hearts (because they could not see them), having but scorn for sentiment, they perpetuated throughout their days, "the drought of March," to borrow a word from old Chaucer. Theologians, philosophers, poets and novelists, belonged most of them to this intellectual school of dryness. Pope would, to please his teacher, Bolingbroke, write a poem to show that all is for the best in this world, and so write it as to leave his readers persuaded that all is bad, and that there is no remedy and that life is scarcely worth living. Those poets offer to our sight metallic gardens, all glitter and no sweetness, with bright birds, which are stuffed birds, and tin roses with a smell of varnish and no perfume. Much of what happens to Robinson Crusoe touches his readers because they have a sensitive heart, but he himself is scarcely touched at all. Freed from his island and returning home after twenty-eight years of absence, he first ascertains what has become of the money he had left, afterwards only whether his father and mother are alive, and finds that they are not, but that two of his sisters survive, who probably said, "Glad to see you." But he does not go so far as to tell us.

All know the immense change which took place even before the middle of the century, when one after the other, warm-hearted all of them, the friends of man and beast, of all that lives and can suffer, caring little for the acrobatics of mere wit and much for the play of sentiment and affections, men like Johnson, Richardson, Fielding, Goldsmith, came to the front. Tolerance, kindness, good will, a fondness for the masses, which was a return to what forms the basis of Christianity, now predominated. The movement had begun with men like Steele, Addison, William Law, when the other tendency was at its height; the oncoming of every season can be detected before the next begins. Law, who like Addison was persuaded that to give virtue repellent features was not a way to make her attractive, published in 1729 his *Serious Call to a Decent and Holy Life*, and adorned it with charming portraits and characters, true to nature all of them, like that of saintly Miranda, and that Flavia, of the world worldly, not a bad girl, but not a model one, who, when there is a collection for some good work, "and she likes the person who makes the proposal," will give half a crown, and add: "If you knew what a long milliner's bill I have just received, you would think it a great deal for me to give."

Law's virtues and kindness, his good will to all, attracted many who, tired of the ambient scepticism and dryness, longed for better things and a more complete development of man's nature. Among those who came to listen to the "Sage of Putney," and were strongly influenced by him were two young men, the two brothers, John and Charles Wesley.

In the great renovation which took place during the second part of the eighteenth century, John Wesley's role was of paramount importance. Place was found in his great heart for all sufferers and outcasts, prisoners, people in want, poor children, illiterates. Having a clear mind as well as a warm heart, he managed to help his followers both materially and morally, organizing love feasts for men to better understand, and come nearer to, each other, and a system of loans to assist them in their undertakings. Traveling, preaching, writing ceaselessly, covering between four and five thousand miles in a year, reading on horseback books of religion, history, literature, the *Odyssey* for example, visiting not only England but Ireland and America, "always in haste," he said, "never in a hurry," he came in contact with people innumerable and his influence was immense.

On Americans, when they began their struggle for liberty, he wrote memorable words. His letter to Lord North and Lord Dartmouth is, or should be, famous. He changed his mind, it is true, after having read Dr. Johnson's pamphlet, "Taxation No Tyranny" (which depends; sometimes it is, sometimes not); but let us rather remember his first and more spontaneous movement, when he expressed himself thus: "I cannot avoid thinking if I think at all, that these our oppressed people asked for nothing more than their legal rights; and that in the most modest and inoffensive manner which the nature of the thing would allow. But waiving this, waiving all considerations of right and wrong, I ask, is it common sense to use force toward the Americans? * * * Whatever has been affirmed, these men will not be frightened. Some of our officers say: 'Two thousand men will clear America of these rebels.' No, nor twenty thousand, nor perhaps treble that number, be they rebels or not. They are as strong, as valiant as you, if not more, for our soldiers fight for pay and they, on the contrary, are one and all enthusiasts, enthusiasts for liberty. And, while they are contending *pro aris et fociis*, for their wives, children, liberty * * * are we sure that our neighbors will stand stock still?"

The words of a prophet, including even the part to be played by France, fell that day, 14th of June, 1775, from the lips of John Wesley.

You have not changed; neither have we; both our nations continue to be capable of the utmost efforts, careless of risks, when a great idea, or a deep sentiment is at stake. Both our nations surpassed themselves in the great war, you coming three thousand miles away to put in the balance the weight of your unconquered sword, and finding then, on the same side of the trench those whom we shall ever be happy to call our British friends.

The three flags just now displayed in front of us differ in their arrangement of colors, but the colors are the same, and one who sings of the red, white and blue evokes the idea of those three great peoples, with an incomparable past, and we hope, an incomparable future. Dr. Rowell praised you Americans for the fact that during more than a hundred

years you have not been at war with England. Well, I do not see why I should not praise France, for we, too, have enjoyed and greatly enjoyed a more than centennial peace with England; with more merit even, so much older, and more persistent than yours was our custom of being almost ceaselessly at war with her. But after the great deeds of the great war, now that the poppies of Flanders' fields are dropping their red petals on the tombs of those from our three countries who died for liberty, nothing we trust will ever disunite our three colored flags, sacred emblems of the same cause, both in war and peace.

In this University, the principles of John Wesley, irrespective of any particular tenet, will be faithfully adhered to. All will remember that any who may be tempted to swerve from the rule of tolerance, patience and good will ceases to be his pupil. All will remember that in accordance with the forceful words of a French thinker of the sixteenth century, Rabelais, "Science without conscience is the death of the soul."

BISHOP HAMILTON: I have already stated to the audience the necessity for the departure of the President and Mrs. Harding at four o'clock. I think we have time enough to conclude our exercises, but if we should not and the band must go, then we want the rest of you to stay! I say this because I know that you are interested to be here. We have nothing now but the graduation, the conferring of degrees, and the announcement of the fellowships.

The several Deans of the University presented to the Chancellor the following graduates to receive their respective degrees:

David Joseph Shorb, A. B., Master of Art. Thesis: A Special Treatise of Federal Taxation as Applied to Corporations.

Charles Emile Morganston, Jr., B. S., LL. M., Master of Arts. Thesis: The Treaty-Making Power and Its Limitations.

Simon Cruz Capule, LL. M., Master of Laws in Diplomacy. Thesis: The Constitutional Relation of the Philippine Islands with the United States.

Henry Chung, A. M., Doctor of Philosophy. Thesis: The Case of Korea.

Henry Clay Keene, LL. M., Doctor of Civil Law. Thesis: The Antecedents of the Commerce Clause.

Zhivojin Kittich, LL. B., Doctor of Civil Law. Thesis: Serbia in International Treaties.

Otto Erwin Koegel, LL. M., Doctor of Civil Law. Thesis: Common Law Marriage and Its Development in the United States.

John Nelson Torvestad, B. S., LL. M., Doctor of Civil Law. Thesis: The Growth and Development of a National Police Power as Implied in the Constitutional Grant to Congress to Regulate Commerce "Among the Several States."

Edson Leon Whitney, Ph. D., LL. B., Doctor of Civil Law. Thesis: The Law of Strikes and Lockouts.

BISHOP HAMILTON: Now, please, we will have time enough, I think, to sing the hymn that I think we will all sing and sing with the heart and with the understanding, "Blest Be the Tie That Binds." Let us all rise.

(The audience rose and sang the hymn designated.)

BISHOP HAMILTON: We all sympathize with disappointment, and possibly never more than when the persons disappointed are in their young manhood or young womanhood; but this is a world of rivalry, and we can not all, when we are competing for a prize, obtain the crown, when it is not offered to everyone that competes. So today we must simply say that some of these persons came very near to the goal, but we are here to announce only seven persons who have received the fellowships of the University. We are fast equipping ourselves for bringing all these persons to find facilities for continuing their study in the American University. I take pleasure now, in the midst of the disappointments of these who may be defeated, in saying, another chance ahead, try again. You are near, and not far, from "the consummation devoutly to be wished." Cheer up, young people; the whole world is ahead of you, and it's wide enough for you to succeed somewhere and sometime. I congratulate the notable seven who have learned "the race by vigor not by vanities is won." The names of these successful candidates for fellow-

ships are: Erwin Ransdell Goodenough, James E. A. Johnstone, Frederick P. Myers, Lester Bowers Pearson, Mary Lois Raymond, George J. Schulz, Edwin Edgar Voigt.

Let us unite now to sing "The Battle Hymn of the Republic," and then the doxology and the benediction will be pronounced by the Rev. John R. Edwards, D. D., District Superintendent of the Washington District.

(The audience sang the hymn indicated.)

Let me ask the audience please after the benediction to remain in their places until the President and Mrs. Harding have gone to their carriage.

Dr. EDWARDS: The peace of God, which passeth all understanding, keep your hearts and minds in the knowledge and love of God, and of His Son Jesus Christ, our Lord. And the blessing of God, the Father Almighty, the Son and the Holy Spirit, rest upon an I remain with you always. Amen.

BENJAMIN F. LEIGHTON

EDWARD B. ROSA

EDWARD F. COLLADAY

FREDERICK A. FENNING

Benjamin Farnsworth Leighton.

There have still been left among us—it must be for our example—some gentlemen of the old school. When they come of sturdy New England stock their lives have been fashioned in intelligence, integrity and with noble aspiration. Benjamin Farnsworth Leighton came of the State discovered by the Northmen, granted by royal charter to the Plymouth Colony, and for long a part of Massachusetts. Ambition was set in his bones. To know him was to suspect he was born in Maine. He was tall and straight and the same size a long way up, like one of her pines. You would have guessed he was an Earl of Pembroke, born in the town of that name in the State. Whatever may have been his shambling walk on the farm it was dressed down to precision by military drill. His next birthday, November 1, would have made him seventy-four years old, thus carrying him back far enough not to have been spoiled by the carelessness of modern manners.

His whole career was of the type of the best heroism. They tell us in the books there are no heroes out of the ancient times, but heroism has been improving its definition very much since those times so much praised and written about. It has come to be something more, very much more than merely Spartan discipline and hardihood. It is no longer only a martial movement, an outward deed of daring; it has come to be a thing of motive, an inner impelling force of character. Conspicuousness is far from being its only expression or manifestation. Mr. Beecher used to say, "More heroism has been displayed in the household and in the closet, I think, than on the most memorable military battlefields of history."

Genuine merit in most instances waits long for recognition and esteem. It wears itself out in waiting; the world remains cruel to the end. We shall be very much surprised in the next world over its revelations of welcome and allocation. The disappointments will be numberless. Many that from the hillocks of notoriety were esteemed little and unknown will bear the plaudit. "Well done, good and faithful servant; thou hast been faithful over a few things. I will make thee ruler over many things. Enter thou into the joy of thy Lord."

I hazard none of the prophecies when I find it comely to praise the upright. The plain tale of the career of "Leighton," as he called himself, was itself eulogy.

He was indeed a hero. His heroism consisted of lofty aim, fearlessness, resolution, fortitude. It began in public in silent patriotism. He counted not his life dear unto himself when he enlisted as a soldier in the Civil War, so much a boy that his older brother enlisted, he said, "to go look after Ben." Dashing about in the cavalry he was soon shattered by the storm of shot and shell which he faced like McGregor. Carried to Libby Prison, his wounds neglected, and kept there until he was exchanged as no longer worth anything as a soldier, he came home so emaciated in body as to find his bigger battle to get over it and get on. Once able to go about again, he made first for the humble school at Kent's Hill in Maine. He thought most of its Christian reputation. There he laid the foundation of his life in learning, but no more than in building a home, for it was there he found Sarah Adams Foss. Then he struck out for the Business College at Poughkeepsie, and thereafter the Law School in Washington. Here he stayed and with unwearied step came in time to be honored with the Presidency of the Bar Association. His devotion to his home and family altar was the impressive trait of his character. He said no time was lost in his busiest days to stop long enough for family prayers. His was the old-fashioned New England home. As such it was his castle from which he went forth a Sir Knight to every tournament that dared him. Herein was his heroism of fearlessness, resolution, fortitude. He wrote his best autobiography in the annals of the poor. Howard University, because of the color of its students, was set siege to by prejudice in high places. He went there simply to defend the approach of education when the whole South thought it a crime to teach a colored person to read. For forty years as Dean of "the black law school" he withstood the knock-kneed obloquy eyeing askance and the contemptuous sneer of priggish Washington. Said one of his colleagues: "But for his presence as Dean at Howard University he would have been one of the judges of the District."

While the tombstones of his opponents would crumble if made to bear their truthful epitaphs, Judge Leighton will need no monument but the memories of the poor and the judgments of the righteous.

He came into the Board of Trustees as one of the Founders of the American University. He served long and gratuitously as University counsel. For many

years as President of the Board he guarded and guided the interests of the institution with as much devotion as if they had been his own personal estate.

His coronation is for his heroism, unwavering faith, childlike simplicity and modesty, integrity and piety. His Bible was his manual of devotion. "When too weak to lift his voice a day or two before his death, he said, "Sarah, now you will have to read and pray."

"In every walk of life, as in his worship, his "supreme excellence was his simplicity."

If our love were but more simple
We should take him at his word.
And our lives would be all sunshine
In the sweetness of our Lord.

Edward Bennett Rosa.

All men are only relatively great. There are spheres in which their great men are confined to their limits—limits to the matter in hand. After all, that is the circumvallation of all talent. No man can be great all over. He cannot know all over, and his greatness is limited to his knowledge. He is expert where his skill covers his knowledge. There the greatness stops. There is also difference between the thing itself and the publicity of it. The "greatness," so called, often consists in nothing more than publicity. There is as much difference between the reality of greatness and the publicity of it, as between notoriety or publicity and character. As things go in this country we count publicity a big share of greatness. If some men whose genuine achievements are confined to their spheres could have them made known to the world they would be lifted into the celebrity which is their due. Greatness, therefore, has many shades of meaning, as great brain, great learning, great heart, great love, great spirit, great enthusiasm, great goodness.

No one of us who only knew Doctor Edward B. Rosa, as he sat and moved so unobtrusively among us in the Board of Trustees of the University, knew the distinction he had attained in his great sphere of usefulness. Whether as professor of physics in the University, or chief physicist in the National Bureau of Standards, he was eminent; during the war, illustrious. The editorial in the *Washington Herald* about the time of his death said most fittingly: "Those who have never heard of Doctor Rosa have doubtless heard of some of his work. All electricians, all makers of electric apparatus, all experts in electricity, know of his highly technical accomplishments which they have applied in practical ways. He was their pioneer; they reaped the fruits. Every public utility has the advantage of his discoveries and studies of electrolytic desorption of underground iron and steel construction. All have heard of sound ranging devices to locate big guns by sound; of radio finders to locate ships and air craft; and of other developments in radio communication. They only do not know they owe these to Doctor Rosa."

Leaning over his desk, deeply concerned in some marvelous discovery and invention, he ceased to work as inconspicuously as he had quietly lived. His name would have been the voice of his fame if the world had but known him.

Responsive Trustees.

The Trustees of the American University accept the honor for service; it is not merely the honor that pricks

them on. They give time and attention and employ business methods as faithfully as they can possibly do in their own affairs.

At the meeting in June deepest expressions of sympathy were manifested when the death of Dr. Rosa was announced. The message sent to Judge Leighton when the word came that he could not recover could not have been more tenderly spoken and written. The tribute to Dr. Rosa was presented in a beautiful spirit by Bishop McDowell.

After carefully considering the condition of the New York property, it was voted that the Chancellor be authorized to effect its sale. Two prominent attorneys of the city, Frederick A. Fenning and Edward F. Colclay, were elected trustees.

At the meeting in December a suitable and appropriate tribute to Judge Leighton was presented by the Chancellor, and Bishop Cranston, who was present, was requested to present a memorial of the Judge for the record of the proceedings of the meeting.

The Chancellor reported \$33,168.20 had been received during the preceding six months. On his recommendation it was voted to finish on the outside the unfinished laboratory, and Colonel Peter M. Anderson, one of the Trustees, was requested to superintend the construction. The Hon. John J. Tigert, United States Commissioner of Education, was elected a member of the Board of Award.

The officers of the Board of Trustees were re-elected for one year.

Armaments versus Arguments.

The most notable event in the political history of the world has occurred since the previous issue of the COURIER. The President of the United States invited the ruling or major powers of the nations to Washington for a conference on the preliminary steps toward the peace of the world. No other government could have given a more practically disinterested invitation and no other city could have afforded a more impartial environment. The United States had long since given over the idea of war for any personal interest. There was no claim for spoils of any kind. The nation was rich and hospitable. Nothing was in mind but the peace and good will of mankind. Every motive was as transparent as clear glass.

But the nations that accepted the invitation came entangled with a yoke of bondage to mingled motives. They had been all their lifetime subject to the bondage of fear, suspicion, distrust, self-preservation, with the conviction that sooner or later they would have to fight for it—many of them having fought for it. Some came with an overwhelming ambition to get more than they had, others with a will to hold what they had gotten by war. But they came into an ethical atmosphere, which though it had come out of a different religious tuition, had in it the universal conception of equity and righteousness. It has been difficult to get the nations most ambitious or those most in peril, released from their aim, sense of fear, suspicion and just regard for safety with threatening all about them. Scarcely anyone has been daring enough to put forth only selfish purposes as the basis for refusing to cooperate. All have conceded something should be done to avoid war. And much has been done by everyone, including the warlike peoples, by yielding to the atmospheric pressure of the unselfish, philanthropic Christian

appeals, in making concessions that have honored the nations making them and contributed so much to the bringing of all peoples into one fellowship.

The Ullalulla Jeremy Diddlers, who would "wait a sigh from the Indus to the pole" for a couple of rupees, and who strangled their language with malice in trying to make trouble for the delegates to the Conference, will go home like Little Bo-Peep and mostly his sheep. But when that history is written, which "dare not say anything that is not true," "above all Greek, above all Roman fame," will be that of the President of the United States, his Secretary of State, and the Conference on the Limitation of Armaments.

Where Does the Money Come From?

The Secretary of the American University recently reported more than \$800,000 secured for the institution during the present administration. More than \$500,000 has been passed into the treasury and three bequests of \$100,000 each have been subscribed. No one of the "drives" by which large sums have been secured for other universities and colleges over the country has contributed anything toward the accumulations of this University. The debt of more than \$80,000 on one of the marble buildings on the campus has been paid, and nothing is now owed on the block of buildings in the city which has been purchased for the Downtown Branch of the University. The institution now has in addition to all its property, one million dollars of endowment, fully \$800,000 of which is productive. So soon as the bequests in wills, which have already been probated, are paid, and one or two farms with some houses and lots are disposed of, the entire endowment will be productive. The income of the University the present year will aggregate \$40,000 besides tuitions. These sums are growing in total amount as the number of students increases. When the school was opened five years ago only about thirty students were enrolled. The number registered the present year is 226. Of these fifty are students from the National Law School, with which the University reciprocates.

When it is known that the University is the only institution in the United States which is a graduate school without a college connected with it as a feeder, these figures will be regarded as most gratifying. The first University in the country to establish a post-graduate department and which has thousands in its under-graduate departments, has only 248 students in its graduate school, and the largest number anywhere is only 149, and that is with the university having an under-graduate college for a feeder whose students number 9,000 plus.

We have succeeded in getting our money because there are 10,000 clergymen in this country who appreciate having a University in Washington to touch the ends of the earth, and almost as many laymen who are sending us help from the single dollar up to the \$10,000. See the column of receipts in this issue of the COURIER. Our neighbors of the Roman Catholic faith appreciate the importance of putting their best efforts, best schools and great properties in Washington. Please continue, brothers and sisters of vision, to send us your money for sympathy. Alexander, the copper-smith, never did us any harm.

JOHN JAMES TIGERT
U. S. Commissioner of Education
Member Board of Award, American University

Recent Gifts of Money.

(Acknowledgment of sums less than \$5 is considered sufficient receipt therefor.)

Chancellor's House Fund.—\$25, R. Y. Williams; \$15, J. C. MacDonald; \$10, J. F. Murray, J. T. Carson, C. W. Baldwin; \$9, A. R. Myers; \$5, W. B. Fleming, J. B. Risk, Christian Golder, J. F. Jose, R. B. Cuthbert, W. L. Woodcock, B. S. Swartz; \$4, E. C. Toy, A. E. Husted, H. W. Davis, John Goorley, J. K. Mason, S. K. Moore, A. M. Osgood, J. E. Reynolds; \$3, A. S. Orton, W. F. Seitter; \$2, H. J. Chattin, R. H. Pfeiffer, J. M. Betts, C. C. Fisher, Mrs. W. F. Conner, Alex. Suttler, P. O. Wagner, T. W. Murphy, H. A. Reed, S. T. Walker, E. C. Woodruff, Lewis Campbell, J. M. Judy, D. L. Jeffers; \$1, J. S. Brown, J. E. Manning, W. P. Varner, Mrs. S. J. Patterson-Abell, C. P. Sayers, H. S. Miner, H. G. Eudd, J. F. Cooper, H. B. Slider, L. A. Kilpatrick, C. Hughes, W. B. Wolcott, F. S. Kline, E. G. Vischer, H. W. Farrington, C. R. Morrison, A. D. Moon, A. D. Stroud, G. W. Flagge.

Franklin Hamilton Memorial.—\$500, Dillon Bronson; \$20, J. B. Risk; \$9, J. B. Rupert.

Asbury Memorial Fund.—\$5, E. W. Caswell.

Bishop Hamilton Lectureship.—\$6, Geo. Grant, R. K. Stephenson; \$5, W. B. Perry, T. G. Thompson; \$4, J. K. Grimes, C. M. Starkweather; \$2, P. O. Wilcox, J. L. Wheeler, W. A. Campbell, D. J. Faulkner; \$1, F. Palladino, G. A. Allison.

General Fund.—\$2,190, bequests of Susan E. and Mary Bayard; \$1,000, legacy of G. W. F. Swartzell; \$50, R. A. Booth; \$47.50, Mrs. N. P. Pond; \$7.50, estate of Henry Baker.

McKinley Memorial Hall.—\$200, W. A. Phillips; \$20, E. M. Carman; \$10, B. D. Barton; \$6, W. W. Costin; \$5, W. E. Hosler, W. J. Jeandrow, C. S. Hunt, T. M. West, J. G. Patton, W. A. Brown, Levi Bird; \$4, J. F. Heisse, F. T. Keeney, H. A. Leeson; \$3, W. E. Shaw, S. L. Kennedy, Wm. Rogers, C. H. Richardson, R. D. Rowell, Blanche Young, Fred Turner, F. A. Killmon; \$2, F. T. Keeney, C. P. Hargraves, H. F. Downs, C. W. Baldwin, H. S. France, W. G. McNeil, J. M. Jaquette, Wilbert Westcott, I. C. Nicholson, C. D. Taylor, L. F. Higgins, G. W. Eney, B. W. Meeks, J. O. Now We Must—

The picture on page five makes its own appeal. The Government of the United States, in the threatened continuance of the war, possible for years, and when American soldiers were being cut down at Belleau Wood and on other fields in terrible slaughter, began the building which the picture represents for an additional laboratory. There were then about 2,000 chemists and their assistants located on the campus in the Ohio Building and other temporary structures which had been erected for war purposes, but the plans were so extensive for the manufacture of munitions more room was needed. The Trustees had consented to the erection of this additional building on terms that were mutually agreeable. The building was to cost \$600,000 when complete and equipped; the equipment was to cost a large share of the total amount. When the tide was turning against the Central Powers the Government stopped work on the building, after expending \$225,000, and left the unfinished structure in its present unrepresentable appearance.

As the building consists so largely of stone, brick, iron and concrete little or no damage has happened to it thus far, but we were advised that it should not go through another winter without enclosure—the cost might amount to \$10,000 if neglected. We must finish it. Besides we had been approached by the owners of a laboratory in New York who desired to occupy it, and give the University School of All Sciences the use of all the chemical rooms and appliances for experiments and study. Every undesignated dollar received now will be applied to this end. No offering, as another column shows, will be too small. It must be finished on the outside! *It will be.* As the University does not owe a dollar, whatever is put into this college building will be so much endowment—permanent investment. We must appeal to every friend we have; they will respond. Persons who learn how our Roman Catholic neighbors are building so extensively, can feel the importance of our representation at the Capital. If everyone who receives the COURIER will send us a contribution, we will do the rest.

Such Visionings.

We think we all wish to see large. But do we? It is certain the American University was founded in no ordinary conception or merely local design. The outlook was far and wide. The founder had traveled in many countries and studied many schools. His first appeal was to the whole country and for ten millions of dollars. "To design great things implies no common minds." At once men and women of large sympathies and who see more than others joined in the vision and prophecy and began to promote with their kind words and substantial gifts the American University, believing its influence would be world-wide. Among these friends who saw at once the opportunity because of many proposed advantages large and liberal and in the Nation's Capital, was Colonel N. P. Pond, editor and proprietor of the *Rochester Democrat and Chronicle*, with his public spirited wife. With the university in his own city to which he was always loyal, he was broad-minded enough to lend the influence of his paper and give his money to promote the University in Washington. Mrs. Pond, since the death of her husband during the last year, has visited the institution and left with the Chancellor in answer to the appeal in the COURIER the largest American staff flag that is made.

We mention these friends because they are typical of the many men and women of both large and small means who see in the University its possibilities and are contributing of their substance to guarantee the fulfillment of its great promise. Annuities have come from the States on the Atlantic and within three months from the great State on the Pacific. The large bequest soon to be distributed from the capital of Nebraska comes from a man whose remarkable will cared generously for the interests of his own State, but gave evidence of his foresight as to what he saw in the future of the American University by the bequest of possibly a hundred thousand dollars. If the unselfish men and women of such visioning who came to see or who only read of the University were to put in their wills either hundreds or less or thousands or more, according to the measure of their vision, millions for the only graduate institution in the United States unsupported by an under-graduate school, would soon come to the Capital City to give it the lead in Christian education.

CHEMICAL LABORATORY BEGUN BY THE U. S. GOVERNMENT, UNFINISHED AT TIME OF ARMISTICE,
TO BE ENCLOSED AND COMPLETED FOR UNIVERSITY USES

Edward Douglass White.

The friendly interest shown in the American University by the Chief Justice of the United States and the cordial relations existing between himself and the Chancellor, would be motive sufficient for a word of tribute to the great man who has gone from Washington like a notable landmark that has fallen down. But when each universal estimate of his worth is being voiced by so many reputable men and women, it is esteemed a privilege which friendship gives to be numbered among so distinguished a company as those "who mingled their approbation with reverence."

Ex-Senator Beveridge has written an appreciative and valuable life of John Marshall. Who will write the life of Edward Douglass White? Nearly thirty years a Justice of the Supreme Court, more than a third of which time he was the Chief Justice, his decisions have been given from time to time through the period of momentous issues. Righteous judgments would have been enough to give distinction to the jurist of modest attainments. But when the wealth of legal acumen, with long experience, perfect knowledge of the historic background and current occasions which gave rise to so many questions of national import, was brought to bear on the memorable cases in the national Court the decision, making a precedent and rendered with such preciseness, firmness and dignity, went into organic law, to stay there and be respected in that and every other court.

When prejudice and passion were dominating the public mind and the attorneys let every sun go down on their wrath, they felt assured with the close of the day the Justice was as much stirred to anger as they were, *aut regem aut fatuum irasci oportet* (but with the morning cool reflection came).

It was Justice White's power of penetration to discover things to others invisible, imperturbable calmness of demeanor, excellent spirit and impartiality in decision that made him great.

In the darkest days of the great war he held to "the mighty hopes that make us men," and said, "The defeat of this country is impossible."

In speaking to the writer on one occasion of differences of religious opinion he asked in an unmistakably tolerant tone: "When we are all seeking the one country why will we quarrel as to which is the best road to get there?" He had "a face untaught to feign." A "slave to no sect" he lived to explain his doctrine by his life.

American University Chapel.

When the war was at its worst there were several thousand soldiers and two thousand chemists with their assistants on the campus of the American University. No suitable building could be found in the neighborhood for a reading room, lectures and entertainments for the young men. The officers and men that were not located in the barracks, were lodged in boarding houses and private homes in Cleveland Park.

Two large and suitable connecting lots on Massachusetts Avenue, corner of Thirty-eighth Street, in full view of the University, were secured and a building erected to accommodate several hundred persons. When the Armistice was signed and the soldiers had returned to their homes the City Church Union desired to open a Sunday school in the Chapel, and at once thirty to thirty-five young people were enrolled. The parents and friends of the scholars very soon asked to have preaching in the Chapel for the people living in the community. Several pastors in the city volunteered their services, and the meetings continued to grow in interest, until the Chancellor of the University was requested to join Dr. Edwards, the City District Superintendent, in finding a permanent pastor for the society.

During his recent visit to England the Chancellor met the Rev. Geoffrey W. Stafford, A. M., a young and brilliant clergyman, who had recently graduated from both Durham and Oxford Universities, including the Divinity School, and who desired to come to the United States. It was arranged at once that he should come to the University Chapel and assume the pastoral care of the community charge. He became a member of the Foundry Church Quarterly Conference and was recommended at once for admission to the Baltimore

Annual Conference. He continues to preach in the Chapel and gives promise of great usefulness in the ministry in this country.

Old King Coal.

Old King Coal! No "merry old soul is he." With temperature at from ten to thirty below, strikers with guns and knives at the mines, and transportation a pawnshop with "permitted interest from 24 to 120 per cent per annum" and no sovereignty anywhere, the Old King is no "courteous knight of merry mood." There are Coles, and there are Coals; they differ widely in their disposition and habits. Originally their names were the same, but the summers and winters divided and dispersed them. The merry old Coles took to the warm weather and the stoical hard Coals took to the cold. The generations of the Coal-weather-family increased so rapidly that when wood as a fuel began to diminish there were all sorts of Coals "to burn."

But the extravagance and waste of the people soon put the whole family under the control of the foreign populations and monopoly of the carriers. This was nothing to make merry over.

The American University was compelled to enter the list of competing bidders and buyers. But for the generosity of its friends the occupants of its buildings because of the insufficient supply might have gone about shivering like their destitute neighbors in the street. But with snow falling in blizzards and high winds piling it in drifts about the doors and even windows, the coal bins of the University are now full to the top, and teachers and students go all through the house as complacently as married couples at a wedding. Last season the bright, shining and well-groomed coal came from the mines of Sarah B. Cochran, a Trustee, at Dawson, Pa. This season two special cars of aristocratic anthracite have come from William J. Faux, a Trustee, of the Logan Coal Company, of Philadelphia. Because of the relish with which the coals rush into and enjoy the fires, there is no merriment over the last disappearance of all the members of the family, but if you think Old Coal is not King, let him withdraw for twenty-four hours from the two hundred and more students and fifty members of the faculty with the thermometer at zero and the wind seventy miles an hour. Nothing but his return would quell the riot. "Aye, every inch a King," and William J. Faux is his prime minister.

"Keep a Knowin'."

There is a colored farmer in South Carolina who has run far ahead of his neighbors in the cultivation of his farm. He has been a student of the soil and of the methods of the agricultural college. He is growing rich out of his farming. When asked how he does it, he simply replies, "Keep a knowin'."

There is an emeritus college president at Boston who has this same sleight of it—of the colored farmer we would say trick of it—in keeping ahead of the rest of us, and fresh as the four-year-old. He is reaching for ninety with a fair show of getting his grip on it. He rides his bicycle without a wobble to and from the libraries as gracefully as a girl. If you were to ask him how he does it he would answer you in the same strain as the colored farmer, possibly with a bit of

aristocratic English, but we are not so sure of that, for he is through and through a democrat of democrats. In any case, the gist of his answer would be "Keep a knowin'." Here is a sample of his wares. In the contributors' column of the *Boston Herald* we ran on this account of "The Seven Seas":

"THE SEVEN SEAS."

As the World Wags:

The question as to the origin and meaning of the term "The Seven Seas" having been raised in this column, I am surprised that as yet no one has called attention to the fact that the expression is far older than the English language, antedating even the science of geography as we understand it. In prehistoric Hindu thought our world consists as to its solid parts of seven concentric continental *Dwipas*, whose names are *Jambu*, *Plaksha*, *Suinah*, *Kmsa*, *Kramcha*, *Saka* and *Pushkara*. According to the sacred *Vishnu Purana*: "They are surrounded severally by seven great seas—the sea of salt water (*Lavana*), of sugar-cane juice (*Kshu*), of wine (*Sura*), of clarified butter (*Sarpis*), of curds (*Dadhi*), of milk (*Dugdha*), and of fresh water (*Jala*). *Jambu-dwipa* is the center of all these; and in the center of this is the golden mountain, *Meru*." *Jambu* is the *dwipa* occupied by human beings, *Meru* the indescribably glorious north polar mountain by which the portal to the heaven of heavens is attainable.

In Oriental literature, therefore, the expression "the seven seas" has no reference to the bodies of water named seas by our geographers, but is an interesting survival of a geocentric world view which we of the western nations have lost, but which all orthodox Brahmims and Buddhists still hold sacred and true. Its recent appearance in Occidental literature is doubtless more due to Kipling than to any other writer.

Boston.

W. F. W.

Almost any wiseacre at Boston who would read a paper of that sort with "W. F. W." at the end of it, would divine—not guess or reckon, but divine—the initials stand for the Reverend William Fairfield Warren, D. D., LL. D., Emeritus President of Boston University.

The Dowling Indian Collection.

Dr. Thomas Dowling, of Wilmington, Del., formerly of Washington, D. C., has sent to the American University as a loan for an indefinite period his magnificent collection of about 15,000 specimens of rare Indian relics. The collection has been placed in the museum of the College of History, and the collection have already proved a source of delight to all who have seen it.

Dr. Dowling, who is a member of the Washington Anthropological Society, has made a careful study of the remains of the village sites of the Potomac tidewater region, and has confined his collection to specimens found within the Washington area—a field which, though not generally known as such, is one of the richest in archaeological specimens in the country. The site of the District of Columbia was formerly the hunting ground of the many tribes of the Powhatan confederacy, and more than forty village sites have been identified within the boundaries of the original ten miles square of the District, where the utensils and implements of stone, bone or pottery have been found in the first layer of the surface earth.

The petty tribes which composed the Powhatan confederacy had in general the same implements of war and of the chase, and the same social customs and domestic habits. That they had attained to the pottery making stage in their history is proved by the relics which remain, but that they had not yet passed from the savage state into the more advanced stage of barbarism is shown by their stone knives and spears and arrowheads, mortars, pestles, drills, scrapers and implements of war, all of stone, serving to indicate the character of occupations of these aboriginal people. There are a few bone implements of a much later period which are, unfortunately, in an advanced stage of decay. Fragments of pottery have been found whose decoration shows that the tribes had become expert in the art of rudimentary ornamentation. The pottery ware is, however, not so good as that of the western Pueblos and is not so well calculated to withstand the action of the weather.

The chief feature of the collection of mineralogical interest is the collection of arrow and spear heads, which is about 12,000 in number. The heads gradually increase in size, there being no distinct line of demarcation between the arrow and the spear. They exhibit every variety of mineral, ranging from white flint to green jasper, including moss agate, red, brown and green flint, smoky quartz and all the hard crystalline stones of the area. The arrow heads average an inch in length, and are of triangular shape, although some slender ones are two inches in length and only a half inch wide at the thickest point. Many of them are notched at the ends for hafting, but most of them have no trace of shaping out for the shaft. Some of the work is very fine in character, but the major portion is merely rough flaking and compares unfavorably with the delicacy of the stone-working of the western tribes.

There are about fifty axes in the collection in a more or less perfect condition.

Another quartzite implement, whose use has never been solved, was found in the same region. It is about fourteen inches long and six inches wide. Its point has been slightly worn away, and it has, therefore, been suggested that it may have been used as a kind of primitive spade. It is unpolished and shows no trace of careful finishing, as does the ax. The Smithsonian Institution possesses a cast of this implement.

There is a large number of smooth stones or "gorgets," as they are known in the collection. These stones were ground down to a fine surface and are suspended around the neck as an ornament by means of a small hole bored through the upper end. The drills and punches with which this boring was done are pieces of hard crystalline stone, one point of which is clipped down sharp and the other is left large and smooth for a handle. Marvelous success in boring is exhibited in a few stone beads, which have holes not more than a sixteenth of an inch in diameter drilled through them for more than an inch. The development of such expert drilling usually requires two or three generations, and the possessor of the knowledge was regarded as one of the native aristocracy.

Some of the best stone knives in the collection are in a half-finished condition, having been "cached" in the earth by the workmen either to temper or perhaps to await a more convenient season. Five of the most perfect specimens were found at Benning.

The United States and Canada.

A very pointed lesson in international amity was exemplified to the world by President Harding in his address at the convocation of the American University. Referring to the friendly relations between the United States and Canada, he said:

"I have said on many occasions that if all the nations of the earth were as honest and unselfish as our republic, there never would be another war. I shall revise it today and say that if all the nations of the earth are as unselfish and devoted to their ideals as the United States and Canada, there never will be another war."

He called attention to the fact that for many years these two great nations have dwelt side by side and settled their controversies peaceably, without interruption of friendship. They have set an example to the world which should inspire all nations and advance the cause of world peace.

The illustration used by the President is quite apt, and demonstrates that it is entirely possible for two peoples to maintain harmonious relations, even though their boundaries are contiguous and in spite of a lively competition for trade. The experience of the United States and Canada has bred confidence between them and a deep respect on the part of each for the ideals and purposes of the other, so that now the thought of an interruption of friendly relations is foreign to both.

There have been disputes between them in the past, and doubtless there will be in the future. Boundary questions of a perplexing nature have arisen, but they have caused no ill-feeling. Joint commissions have been appointed by the two governments to determine the facts and make awards by which each has been ready to abide. Questions involving fishery rights have been raised, and at times the nationals of both the United States and Canada who were directly interested became much wrought up, but the governments proceeded to arrive at settlements in an amicable manner. Tariff matters which restricted imports from one country to another have hobbled up from time to time, but in every instance a

COLONEL N. P. POND

MRS. N. P. POND

proper consideration for the interests of each party facilitated an adjustment of them.

Like two merchants established on opposite sides of a city street, these two countries compete for trade, and yet that competition is not permitted to disturb their personal relations or disrupt their friendship. It cannot be said that Americans and Canadians always have the same viewpoint; but, what is of more importance, they have respect and consideration for the views of each other, which is the basis of the mutual understanding that has endured through the years.

These relations have been maintained without the surrender of sovereignty on the part of either the United States or Canada, such as is proposed by the League of Nations. Both have preserved their full freedom of action. Their agreements have at all times been voluntary, and not because of any pressure from super-government. They have been "unselfish and devoted to their ideals."

By treaty it is provided that neither the United States nor Canada shall maintain naval vessels on the Great Lakes, except such as are required for law enforcement, and both nations have rigidly observed this agreement. If the same sort of agreement were made among all the great powers and as conscientiously adhered to, the question of disarmament would quickly find a solution.

President Harding's citation of these two great democracies, elbow touching elbow, progressing along the pathway of civilization in complete accord and harmony, is most felicitous. To those hardened pessimists who look upon international amity as an iridescent dream it should give food for thought. Those who argue that peace can only be maintained by the establishment of an authority higher than national authority and through a surrender of sovereignty will find in his illustration a complete refutation of their theory.

The relations which the United States and Canada have established between themselves can be adapted to the world, for they are founded upon mutual respect and justice.—*Washington Post*, June 10, 1921.

Table Talk

What is the trouble with Mexico? Popular ignorance.

There have been nearly 500,000 copies of "Uncle Tom's Cabin" circulated in this country.

Ignorance and war have brought total depravity to the surface wherever anyone has money or jewels.

The total number of Germans who have been received in this country since 1820 is 5,191,549, but only fifty-two were admitted in 1919.

What is human life worth in this country with lynchings at the South, and murders everywhere in the North? Why not go to Mexico?

Five thousand more homes are needed in Washington to accommodate satisfactorily the present growing population.

The new property recently purchased, known as the "Kent House," which once belonged to Colonel Augustus Gardner, has been rented to the Lithuanian Legation. They are fitting it up artistically enough for the Bishop's residence.

More Mexicans came to this country in 1919 than any other foreign people, except the people from British North America. We don't call them immigrants—they are only our country cousins come to see us.

Is the community not awake to the destruction that wasteth at noonday, the terror that is criminal at midnight? Have we all lost confidence in the only cure possible?

Two hundred thousand copies of Headley's "Napoleon and His Marshals and Generals" have been sold in the United States and two hundred and eighty thousand sets of fourteen volumes each of the "Encyclopedia Americana."

In the census taken in 1910 there were 5,082 persons of voting age in the District of Columbia who were so illiterate they would not have been entitled to vote if the citizens of the District had had the right of suffrage. How is it now?

It was no small achievement for the American University to pay off an indebtedness of about \$85,000. This being done, it is a complacent feeling that comes with being able to say the University owes no man anything.

A lady whose name we know not, knowing that it could be used in the rooms being fitted up for students, sends us some antique furniture which is gratefully and graciously received. The lady simply signs her name a "Friend Anonymous."

Forecast and Not Forecastle.

A man who takes no chance in the one may have none left him except in the other. There is a proper dealing in futures that is not classed in the category of gambling: "A prudent man foreseeth the evil, and hideth himself, but the simple pass on and are punished." "Who is wise and he shall understand these things; prudent and he shall know them." There is only one place for a man's future, and that is straight in front of him. When his future is all behind him, he is indeed of most men, if not all men, to say the least, very uncomfortable. It may be human to preach to him, but it is inhuman to reproach him. When he has "passed on and" is "punished" he is his own preacher and has preaching enough. Hard experiences nevertheless, according to someone, are "foundation stones" of successful careers. There are in this view of the case a lot of "foundation stones" just now waiting for affording occasion for "successful careers."

The writer met in the market place a year or so ago a neighbor who had a good paying employment. He quite boastfully said, "I have just bought three dollars' worth of chickens for my dinner tomorrow. It is a good deal to pay, the price was pretty steep, but I am getting eight dollars a day. I have gone short long enough; I might as well eat it up." They tell us now the man is "gone short" again, can't pay his rent and is hunting for work. Is that a typical case? They tell us at the furrier's the high priced sealskin garments have been bought by the working girls, white and colored, who pay on the installment plan, leaving the garment until the last payment is made. The same kind of customers bought in the same way at the jewelry stores. Young men bought automobiles on the same plan. Now they tell us the young people are out of employment, and in some instances the final payments have not been paid on purchases, and the merchants hold

the goods. Did none of these purchasers think high wages might some day, and very suddenly, cease? Indeed employment stopped all at once. We suspect some farmers who placed mortgages on their farms for high priced automobiles, when corn was two dollars a bushel, are not in easy circumstances now with corn at thirty cents a bushel. Is this the practice by which other persons have grown rich and can indulge in luxuries with prices up or down? Is not this rather the way in which passengers who once exulted in the first cabin, now go to sea in the forecastle? Is not such "thrill the fuel of magnificence?" Experience is a hard schoolmaster and will bring us to our knees.

"Ken when to spend, and when to spare,

And when to buy, you'll ne'er be bare."

Eighth Annual Convocation.

The Eighth Annual Convocation will be held in the grove amphitheater at the site of the University on Wednesday, June 7, 1922, at 2:30 P. M. The addresses will be given by the Vice President of the United States, the Hon. Calvin Coolidge, and the Right Reverend Charles H. Brent, Protestant Episcopal Bishop of Western New York. General John J. Pershing, of the United States Army, will be present. The Trustees of the University will meet at 10 A. M. the same day.

The Three R's Only.

There is an uprising all over the country among intelligent students and teachers of public affairs. Something has been radically wrong with the system of education pursued in the schools.

With all the thought of self-preservation, which bordered so closely on selfishness, the first great need of the country in settlement was people, next money. The Colonial period so certainly settled the claim for these supplies, that the Constitution of the United States, in the organization of the Federal Government, included in Paragraph 1, Section 9, the following article:

"The migration or importation of such persons as any of the states now existing shall think proper to admit shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person."

With varying legislation immigration has continued in one form or another until about one-third of our

population is reckoned as either foreign born or children of foreign born parents.

The nationality and character of the immigrants had been so varied that the principles involved in the first settlement, which were religious, were of necessity become matters of legislation for all the people. An altruistic relation was forced in upon the descendants of first settlers and the atmosphere of a free people forced open the minds of legislators to provide for all incomers. Such had been the cruelties of religious persecution in all ages, a divergence was not only necessary to avoid the repetition of such cruelties here, but a blanket privilege was thrown over all forms of faith in another constitutional provision as the guarantee of the freedom of conscience. It was not in the evolution of events easily attained. The love of self had come over with liberty, and two troubles stood in the way of a perfect religious autocracy that after all was the summing up of worship and thinking as practiced by the "standing order," for it was Winthrop who said "the church is the cornerstone of the state." The Indians must be Congregationalists or fight and run. And Mr. Blackston declared that he had left England to be "rid of the Lord Bishops, and now he must leave Boston to be rid of the Lord's Brethren." So also, Roger Williams, the father of the American kind both of civil and religious liberty, had to flee from the penalty of the court to find or make the Providence Plantation.

But immigration and the atmosphere were working their way over the states, and the following enactment came on apace [Article 1, in "Addition to and Amendment of the Constitution of the United States of

America, Proposed by Congress and Ratified by the Legislatures of the several States, Pursuant to the Fifth Article of the Constitution"]; "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

This amendment was pursuant to the provision in Article 6, Section 3, of the original Constitution, that "no religious test shall ever be required as a qualification to any office or public trust under the United States."

Having spread this altruistic blanket over all citizenship the descendants of the Pilgrims and Puritans lay down under its personal comfort and went to sleep.

The foreign populations saw their opportunity, and fleeing from the intolerance and oppression of their own countries, they hastened to the United States as to the city of refuge. They came from monarchy, anarchy, deism, atheism, and finding American citizens all Rip Van Winkles, buried in the slumbers of Sleepy Hollow, they moved into their estate and began business on their own account. They set up government in States and more cities to their own liking and familiar to their own experience; and it proved to be the very schoolcraft they had left, tainted with all the miasma in which they had been bred. The Rip ———s, having been awakened sufficiently to rub their eyes, have found that loving their neighbors better than themselves has led them into a series of perils which will now require a moral earthquake to make up for their lost time and fill up Sleepy Hollow with regrets, lamentations and noise, while they go to work to do their first works over again. While men slept their "friends" the enemy came and sowed tares among the wheat, and stayed by to garner the growth and now

Peril (1)—Judges of the Supreme Court in the backward States have ruled the Bible—the cornerstone over which the nation was built—out of all State schools and public institutions. This they did doubtless as David Hume did when he fabricated his notorious argument against miracles. He confessed to the Bishop of Durham that he had never carefully read the New Testament.

Peril (2)—The surrender voluntarily of the claims of church and religious schools simply to get the money of men who discard all instruction of such schools—a surrender primarily started by luring principals and teachers to become pensioners on their wealth.

Peril (3)—Neglecting home instruction by turning the children over to the secular schools for the alphabet and the three R's on week days and to any kind of schools on Sunday for all the moral, not to say religious, instruction that may be picked up there from strangers in a half-hour; selling the Bibles that had been given to them by colporters to second-hand book stores, and never offering a prayer in the presence of the family, only begging one from some preacher, and asking the undertaker to find him for them when death has come on the home unawares.

Peril (4)—Demands by the immigrants. These incomers, with a boldness that knows no gratitude, demand the Constitution be so changed as to take out the "cornerstone of the state" and replace it with the slipping sand which caused the governments they left to

come down upon their heads. They demand that every semblance of Christianity be taken from all legislation and anniversaries—no more Christmas, Easter or Sunday; split off the New Testament from the Old, take the name of Christ out of all school hymns and literature and make Sunday a work day. Pretensively they demand that Saturday be substituted for it, but really that they may have seven days for business and pleasure.

Peril (5)—Ignorance of the results of all these combined perils. No effective plan to withstand the conditions ensuing from the long slumbers of the descendants of the lawmakers in Sleepy Hollow. The results are innumerable. No one of them is more threatening than the broken family and scattered fatherless and motherless children, the patronage of the divorce courts which come to be so largely panderers to the physical passions and legal procurers for houses of lust. Next in logical sequence is the outcome in the character and conduct of the abandoned children. Judge Fawcett, of the Juvenile Court in Brooklyn, New York, said: "In the five years I have been sitting on this bench I have had 2,700 boys before me for sentence, and not one of them was an attendant of a Sunday school." The numbers, thirst and thrif of the criminals have so increased that a member of Congress publishes figures to show that they exceed in number and violence here in Washington all such plunderers of the public good in London, that greatest city of the world. The crime wave not only sweeps the greatest cities, for the papers report in a "Western city of 250,000 inhabitants, in the month of January 120 persons below eighteen years of age were jailed for crimes and misdemeanors." It was stated also that during the winter "in that city 800 girls went wrong and therefore presumably as many boys."

But we do not go west only for particulars. A Baltimore paper states this month "every coal dealer in Baltimore is under indictment. Ditto every milk dealer. The City Council is impliedly under a cloud growing out of the Boulevard Theater scandal. * * * Every bill looking to moral legislation failed at Annapolis."

The terrible comment on all this state of affairs is the fact given in the statistics that nine-tenths of the criminals in our penal institutions have been in or through the public schools. Has it come to this that *our only prevention* is the three R's—"Reading," "Ritlin," "Rithmetic?"

Our altruism has run mad. We have taken the viper to our breasts and he is hunting about for heart beats. To coddle him we have petted his curlings and given his fangs their chance. We have sneered at the Pilgrims and Puritans, and told all the world we are doing it better. We no longer believe in moral instruction, and at best have given it a morganatic marriage to accommodate our neighbors from over the seas. "Education, the cheap defense of nations," where art thou? "Educate men without religion," said Wellington, "and you make them but clever devils."

All this we know: "We are only vulnerable and ridiculous through our pretensions." Let us be done with pretense and go to our knees and to the first faith and works with which we began and built the state. "None but God can satisfy the longings of the immortal soul." "If we make religion our business, God will make it our blessedness."

Another Soldier-Trustee.

Abraham John Palmer, one of the oldest and longest in service of the Trustees of the American University, has ceased at once to work and live. He died before his age had fully retired him; he still had something to do. With the last January 18 he had finished his 75th year and a remarkable career. He had one distinction no one could take away from him—he was the youngest enlisted soldier in the Union Army. He was under fifteen years of age when he left school to answer an early call of Abraham Lincoln for troops. He saw death at its worst all about him when he was captured at Fort Wagner and taken to southern prisons. He had quite enough of these pernicious pens with their insults still unavenged after nine months of beggary in them, and with the ingenuity and alertness of the Yankee soldier, he made his escape. He climbed through the Methodist schools from Pennington to Middletown, entered the Methodist ministry in New Jersey, passed to New York City, built two of its fine churches, was pastor of the most notable one, and presiding elder on three of the Districts; was four times elected to the General Conference, the highest honor the Annual Conference could give him; was made Missionary Secretary by the General Conference, and only came short of the Episcopacy in a very large vote. He was four years a member of the Book Concern Committee, having charge of the largest publishing interests in the world. He was elected and served a term as State Senator of New York.

His lecture delivered from ocean to ocean on the "Die-No-Mores" will stand out in the aftermath of the Civil War, vying in popularity with those of Chaplain McCabe, Bishop Fowler, Colonel Watterson and General Gordon.

Dr. Palmer was married in 1874 to Miss Emma T. Lacy, who died three years ago. Three children survive them—Mrs. Helen Andrus, Dudley Baldwin and John Leonard. He was taken to his burial from St. Paul's Church, New York, of which he was a distinguished pastor. The church was erected during his pastorate. The address in memoriam was delivered by Dr. S. Parkes Cadman, a long time personal friend.

He was deeply interested with Bishop Hurst in the founding of the American University, and served longer as one of its Trustees than any other now living. Few persons were gifted with more graces, for popular address, and none knew better how to make friends. He had a rich exuberance of energy and his vitality and vivacity of spirit kept him young to the last. His

patriotism was unquenchable. His humorous nature softened his temperament, and he bore no ill will overnight. His youth had ventured, his age was considerate. He had joy in his friends, "those sacred people in whom was consolation."

School of Business Administration.

The Graduate School of Business Administration which was opened by the University last October is now closing its first year's work with an enrollment of sixty-four students. Thirty-one universities are represented among the students, the degrees held ranging from that of B. A. to Ph. D. Among this list are Harvard, Columbia, Clark, Chicago, Northwestern, Wisconsin, Glasgow, Marlburg, Halle, Brown, and other universities of similar standing, as well as such colleges as Williams, Hamline, and William and Mary. The faculty, which is composed largely of part-time specialists in the various government bureaus, includes men who have held professorships in the following universities: Columbia, Tulane, George Washington, Nebraska, Virginia, Texas, Johns Hopkins, Kansas, South Dakota, Maryland, Arizona, and Pennsylvania.

Several of the men who will complete their work in the School of Business Administration this year are already under appointment to responsible teaching positions in various colleges, and as time goes on this school will, doubtless, furnish a large part of the instructional staff of the various schools and colleges in the field of applied economies.

One of the unique features of this new school is the fine Christian spirit of the student body and faculty. Unlike many of the older schools, where all sorts of radical ideas and thoughts have forced their way in, every lecturer in this school is a man of definite religious convictions and of sound Americanism.

(Acknowledgment of sums less than \$5.00 is to be accepted as a receipt therefor.)

Chancellor's House Fund.—\$5.00, Geo. B. Fairhead, Norman La Marche; \$3.00, J. R. Fults, G. B. Marsh, W. A. Robinson; \$2.00, Mrs. C. G. Callurn, E. E. Small, R. C. Kilpatrick; \$1.00, E. H. Warner, James Torbet, E. D. Dimond, Roland Woodhams, H. E. Smith, G. W. Turner.

McKinley Memorial Hall.—\$10.00, A. A. Thompson; \$8.00, J. D. M. Buckner, J. L. Boyd; \$6.00, Wm. C. Parrish, E. T. Mowbray; \$5.00, Lincoln Road M. E. Church, Washington, D. C., C. A. Carlson; \$4.00, E. T. George, C. A. Hutchison; \$3.00, W. H. Rule, W. H. Thompson, A. Breeling; \$2.00, G. P. Suedaker, W. G. Nixon, J. A. Chapman, O. E. Badger, B. D. Beck, B. E. Allen, C. S. Leufest, O. E. Milson, J. A. Sunwalt, A. B. Storms, C. S. Buechtel, W. H. Cable, G. D. Crissman, J. F. O'Haver; \$1.00, C. M. Merrill, J. W. Kirkpatrick, W. H. Day, H. W. Cope, J. T. Hageman, W. S. Rader, M. O. Robbins, F. S. Conger, J. T. Scull, D. W. Noble, N. P. Barton, E. M. Holmes, W. E. Harvey, G. L. Kleinschmidt.

Bishop Hamilton Lectureship Fund.—\$20.00, George Elliott; \$1.50, E. W. Kramer.

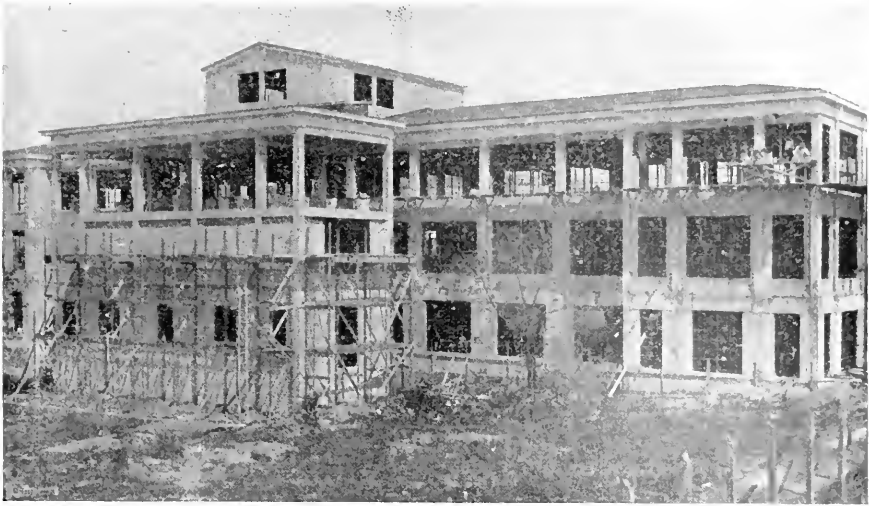

Franklin Hamilton Memorial.—\$5.00, George B. Fairhead. *Americanization School Fund.*—\$1,000.00, W. S. Corby, W. S. Pilling, Geo. H. Maxwell; \$200.00, J. L. Atcock, Mrs. John E. Keator, Mrs. B. F. Leighton; \$100.00, Harry M. Wagner; \$25.00, W. C. Rouse; \$20.00, T. S. Henderson; \$10.00, Herbert Welch, W. A. Wiant, N. I. Hall; \$5.00, H. W. Flanagan, G. P. Wilcox; \$3.00, E. C. Hardesty, W. T. Johnson, R. W. Cross; \$2.54, Mrs. H. Darling; \$2.10, P. Schwanter; \$2.00, C. E. Webber, S. W. Irwin, I. S. Nippes, D. L. Starr, Mrs. E. C. Goodwin, Mrs. H. H. Smith, Mrs. Fred A. Pease; \$1.00, J. F. Taylor, Mrs. N. T. Arnold, E. R. McDorman, J. O. Bozman, J. K. Weber, Mary E. Clark, C. G.

Young, W. D. Woodward, C. F. Bolton, Mrs. C. P. Davie, Mrs. C. A. Barrett, Mrs. L. A. LaDow, M. B. Dumire, Salome Smith, G. A. Hamm, Nettie P. Norton, Norris Startzman.

General Fund.—\$360.00, Geo. H. Maxwell, \$100.00, George W. Dixon, \$50.00, Charles J. Bell, \$25.00, Calvert Crary, Gilbert H. Grosvenor, H. O. S. Heiland, \$2.00, A. L. Wiley.

Laboratory Fund.—\$10.00, W. S. Simpson, L. F. Bower, R. E. Jones, J. F. Andrews, F. J. Kennedy, Jr., A. J. Higgins, T. T. Pittman, Annie N. Battelle, John C. Letts; \$6.25, anonymous; \$5.00, G. G. McCausland, W. R. Taylor, J. W. Engle, E. P. Moon, H. G. Budd, W. R. Mowbray, Rebecca Watt, Saml. Jones, M. E. Sanders, J. A. Hamilton, D. W. Howell, E. B. Caldwell, S. E. Leech, T. W. Owens; \$4.00, W. B. Zipper, G. B. Fairhead; \$3.00, Solomon Hammond; \$2.16, J. A. Taylor; \$2.00, T. A. Brandt, R. S. Burgham, W. S. Child, Thos. Farrell, C. S. Fees, J. S. Garrison, E. J. Gayner, John Handley, J. F. Heilenman, J. B. Hingeloy, A. L. Izzard, Ed Johnson, J. W. Kirkbride, W. A. Lilley, W. S. Ludlow, J. F. Richardson, W. M. Riley, J. H. Robbins, J. R. B. Slayback, J. N. Wilkins, W. B. Woodrow, T. J. J. Wright, Walter McLain, C. M. Lower, I. E. Lower, W. C. McEwen, Wm. Brown, Peter Fagan, J. H. Goodrich, C. E. Hodges, A. J. Mitchell, A. J. Smith, J. W. Sir William Mitchell Ramsay.

The Chancellor, when the resident Bishop at Boston, started the American University the foundation for a Lectureship on World Outlook. It was intended for the preparation of young men and women who purposed to go into foreign countries as missionaries, and others who were looking to the consular service for their life vocation. The fund was soon subscribed, amounting to \$25,000. Twenty thousand dollars has been paid in and invested. The income was to be devoted to lectures by representative men from over the earth, who would bring the latest information concerning the countries with which they were familiar. These persons were to be experts in all the departments of trade, letters, politics, science and religion.

Dr. John R. Mott had been engaged to open the course of lectures, but the war had so taken his time and attention that he desired his engagement postponed.

The Chancellor, when in Europe during the summer of 1921, secured the Honorable Sir William Mitchell

Ramsay, the distinguished archaeologist, to give the first series of lectures. Dr. Ramsay, whose honors had come from the great universities in England and Scotland and whose books were in all the great libraries in Europe and the Americas, attracted audiences varying from 500 to 700 persons, and the lectures were given in the audience room of the Foundry Methodist Episcopal Church. His revelations from the excavations in Asia Minor and Egypt led one to think that the prophecy of Professor Sayce would be fulfilled: "We have already dug up Homer; we shall yet dig up the Bible."

Ten Thousand Preachers.

It will not be said of the American University that it had ever been without benefit of clergy. The citizens of Washington purchased the site on which it has been built. But met by the usual criticisms which always assail every new thing, the founder, Bishop Hurst, was forced to convince the people that such an institution was needed and could succeed. He had many personal friends who listened patiently to all his claims and prophecies. But they were few who caught his vision, or who would believe in a greater Washington. The present city with its population, energies, activities, national and world influence, was as much hidden and as far away from the intelligence of even educated persons as the World Conference, so recently assembled here. Sympathy with the undertaking was largely within the city limits. The ventures would have failed but for the indomitable courage and perseverance of the one layman whose resources as president of the largest bank in the city gave him a sure footing. But it was more his great sagacity in divining the future growth and importance of the city and anticipations that led him to head the great improvements which must always bear his imprimatur.

It was Charles C. Glover who provided the money to finish the first building that would have been left without a roof and with unfurnished walls, as an unimpeachable witness that somebody had begun to build and could not finish.

Then it was that the tenacious bishop betook himself to "the brethren," and with a desperation that could scarcely be tolerant, he put the responsibility on the preachers of even burdensome subscriptions or utter failure in sight of the whole country. The responses were overwhelmingly generous. Some preachers struggled under them through half their ministry, and some of them went into the skies so soon, that like the Irishman's will, their subscriptions were good will only. But they saved the American University. And they have never failed it since.

Chancellor McCabe ransacked the parsonages for what Chancellor Hurst could not find. When the blind man's buff could not bring it, he would sing it out of them with "Papa, What Would You Take for Me?"

Chancellor Franklin Hamilton knew enough to tell the same preachers of the privilege and blessing of having the University in Washington, and let it go at that. They loved him from coast to coast. Having acquired the habit the preachers kept on giving until they and the laymen in moneys and bequests added a million dollars to his holdings.

What was left for the present Chancellor to do? The Centenary was on, drives to right of him and drives to left of him, "rode the six hundred." He had no share in any of them. They all had their local areas, and their constituencies tagged after giving.

One chance alone remained. The General Conference had officially founded the University and bounded it. For more than a score of years it had made appeal through the Episcopal Address to the entire church. There were preachers and laymen now of large vision who could give at home and still have something left for the measure of larger influence in Washington. To these preachers and laymen the Chancellor had scarcely to appeal. He simply said small gifts will make large gifts when there are enough of them. They opened their hearts like lovers and their pockets like oil wells. The offerings looked small beside the gold of Ophir. But the preachers and laymen who knew the Chancellor were tens of thousands, and when you multiply anything, except nothing, by tens of thousands, it takes on bulk and weight and value and pulse. The giving has gone on. The war couldn't stop it. If you think it has stopped, turn over to the columns of names with gifts found in this number of the COURIER.

The Red Book.

As the University increases in numbers and relative importance, it follows the example of other great institutions and publishes its own books. It has had a University printer for several years; why not a book publisher? When the fellows present theses for standardizing their scholarship, and students as candidates for degrees present their papers of great significance, they will be published by the University.

But there have been calls for another kind of book that has induced the Trustees to look into the matter

and, if prudent, comply with the requests. A certain kind of academic information is printed every year in the Catalogue, but the information is such as to confine it to the patronage of students seeking admission or instructors for making comparisons.

It was not necessary to print a college society book, for are not all graduate schools permitted or entitled to enroll their students in the Blue Book?

The American University has printed the Red Book, not for martial or fashion purposes, but for straight information concerning the history, growth and present prevailing conditions of the school. To this end the Red Book appears. The interest awakened by its appearance is evident from the fact that more than two thousand copies have already been sold, and a second edition is ordered.

It not only sets forth the purpose of the University, with illustrations of the buildings and portraits of several prominent patrons and gives account of the various stages in its progress, but it prints the program for its future achievement in the stenographic report of the notable Convocation held in June, 1921, when President Harding, Ambassador Jusserand and Dr. N. W. Rowell, of Toronto, Canada, set forth in able and eloquent addresses the high ideals of education that should obtain in the best of universities. The title of the book is "The Three Nations at the American University." Each book of the first edition cost to publish with postage to mail, a few cents more than a dollar. Subscriptions are taken for the book at the price of one dollar, and an additional dollar to promote an imperative interest of the University.

Annual Conference Minutes.

The secretaries of the Annual Conferences have been constant in their courtesy to the American University. They have invariably sent a copy of the Annual Minutes as soon as published to the University office. If there has been failure we don't recall one. These Minutes come from all around the world.

If all the contributors, for it is the Annual Conferences that bear the slight expense, knew the service they render to the general public and the church at large they would know they do a good work. It is probable there is no other institution anywhere preserves a similar file. Preachers and laymen can secure from our Librarian a knowledge of the whole church which only these books report in detail. They are consulted daily by the Secretary of the American University for information needed to answer questions from the nearby and remotest parts of the world church. They furnish the only accurate lists of the addresses of the preachers in all nations, and the much sought for statistics can be obtained nowhere else. The number of communicants published by the Federation of Churches gave the second place in numbers to another aggressive and worthy associate denomination, but reference at once to these Minutes corrected the mistake, showing an error had been unintentionally made of many tens of thousands. The Trustees of the University appreciate the interest thus shown and desire to express their gratitude to the secretaries and Annual Conferences for their kindness and help.

Historical Museum.

Very early in the history of the American University, so soon as a building was erected, friends began to contribute various kinds of objects having historical interest and value. One room after another was given over for a museum until a very creditable collection filled two or three of the rooms in the College of History. The founder of the University had a bent for rare and valuable memorials.

There has been no disposition to fill the halls with simply the "old country's" second-hand and cast-off belongings, out of date heraldry, questionable relics and legions of legends, musty with age and noted for nothing else. It is an American foundation, not without sentiment or reverence; but at the nation's capital it is ever impossible to express an American sentiment that the University does not feel and wish to cultivate—a sentiment that is an intellectual and patriotic emotion.

The Treasurer set the pace for the collection of memorials when he secured George Bancroft's cabinet for manuscripts. The Chancellors soon acquired the habit, and the next important token of remembrance to be secured was the large and costly desk of Edwin M. Stanton, on which the notable Secretary penned all his army orders during the Civil War. Good fortune came our way then, and the Trustees came into possession of Abraham Lincoln's sofa. There is no question as to the genuineness of the lounge except the Scripture, "For the bed is shorter than that a man can stretch himself on it." Having gone after the memorials associated with the Civil War, General Grant's chair and General Sherman's chair; some time later General Garfield's chair from the White House—all came into the amateur museum. As eating and drinking is a part of the curricula of the University, and thinking the University might some time have visits from overseas of "the lords, whose parents were the Lord knows who," a friend in the aristocratic circle gave to the University the dining room set, table and chairs, of Charles Sumner. We have never dared profane the set with bringing Grant's chair up to the table. Moving in this higher circle at our banquetings, Dr. MacWatters determined that the ladies for their reception room should have a Heppel White piece straight from France, or better, a more highly ornate centerpiece upholstered in velvet and brought from Florence. There it is.

Turning from history and fashion to the military room, a large Indian collection together with fire arms and munitions of many sorts is to be seen as the generous donation of Dr. Thomas Dowling. In the collection is the sword of "Light Horse Harry" Lee. One of the Trustees, W. S. Corby, has contributed a large glass case of well selected and carefully classified Indian flints and antiquarian stones. Other treasures are letters of George Washington and Thomas Jefferson, with many autographs of early eminent American citizens of state and church. There are a number of rare and ancient coins in still another glass case.

Many are the old Bibles, rare manuscripts and first editions of well-known books. The "Notes on the New Testament," by John Wesley, in the proof sheets with marginal corrections in his handwriting, is substantially bound in a well cared for volume. The Chancellor was given straight from Charles Wesley's family the New Testament that John Wesley's mother gave him when he left home to attend Charter House School.

Another paper will give some account of the contents in other cases—the copper etchings, steel engravings that grace the walls, oil paintings, and many miscellaneous gifts received from friends, who have desired a safe and permanent place in which to preserve precious heirlooms and valuable papers and books, where a conscientious caretaker keeps all these things under lock and key, or sets over them a faithful watch.

Encouragement is given friends everywhere to give to the University such valuables as they desire to have permanently cared for and kept on exhibition for the pleasure and instruction of students and visitors. They will all be marked with the names of the donors and the date when they were given.

The University of Oxford.

By G. W. STAFFORD,
E. Coll. Wadha, Oxon.

Among all the wonder-spots of old England the city of Oxford has no peers. Situated on the banks of the Thames, sixty miles from the Metropolis, its spires towering towards the heavens, the waters of the Thames and the Cherwell flashing in the sun, it presents a sight never to be forgotten. The town itself has been greatly modernized. Its three main streets, the "High," the "Corumarket" and the "Broad," are magnificent structures, and the view up the "High" from Magdalen Bridge, taking in as it does the colleges of St. Mary Magdalen, Queens and University, the spires of St. Mary the Virgin, and the University Church, is one of the finest sights in Europe.

The actual founding of Oxford goes back as far as the days of Alfred the Great. Magdalen, Balliol and New Colleges are among the oldest; Magdalen being the home of the English aristocracy, and Balliol of the "intellectual" aristocracy; the latter college being famous for the number of eminent politicians which it has given to the country, including among more recent men H. H. Asquith and Viscount Morley of Blackburn. The famous Benjamin Jowett was Master of Balliol at the time when Dean Stanley was delivering his well-known lectures on Ecclesiastical History. Turle Street is the place where Exeter, Jesus and Lincoln Colleges are situated; it was at the latter college that John Wesley held his fellowship, though he was a student of Christ Church, where, today, are the lodgings of the Regius Professors of Divinity, Ecclesiastical History, Hebrew, and the Lady Margaret Professors of Divinity. Christ Church is the Cathedral of the Diocese and the seat of the Lord Bishop of Oxford. Other colleges are Worcester, Brazenose, where Sir Douglas Haig was an undergraduate; Hertford, Trinity, Keble, Oriel, Corpus Christi, Merton, St. John's, Pembroke and Wadham, where Sir Christopher Wren, the builder of St. Paul's Cathedral, was an undergraduate, and which has housed in these latter days such men as Frederic Harrison, the Lord Chancellor Lord Birkenhead, Sir John Simon, the politician, and John Drinkwater, the author of "Abraham Lincoln," and others whose names are too numerous to mention. There are in addition three or four women's colleges which have come into prominence in the last two years, since women have been granted equal academical rights.

The length of the course is not less than three years, for the Bachelor of Arts Degree, and not more than four, which must be in residence. The applicant must first of all pass Responsions Examinations which, until 1920, included Latin and Greek. This is a University Examination. He must then pass the Matriculation Examination of his college unless satisfactory substitutes are offered for both these. At the end of eighteen months comes the first public Examination, Pass or Honors, which is called Moderations. At the end of three or four years the student must sit his Final Schools, Pass or Honors. Pass degrees have no class, but Honors Degrees are divided into four classes. Every student must petition to be allowed to take the Honors Degree.

The system of education is tutorial. In most colleges there are tutors in most subjects and the theological tutor, for instance, will have charge of the theological men. He does not take them in a class, but one by one. This ensures minute individual attention. Consequently Oxford never ad-

vertises, and it is not always easy to gain admission. The degrees conferred are all the ordinary degrees except those which are distinctively American. The religio licita is in conformity with the Doctrines of the Church of England, and the day is not so far distant when a student had to subscribe to the Thirty-nine Articles before gaining admission.

The most famous degree which Oxford bestows is the Lit. Hum. Degree, and a First Class Lit. Hum. is practically essential to the highest honor which Oxford bestows, i. e., to become a Fellow of All Souls. Its education aims not so much at mere book knowledge as the foundation of character, and its curricula are so colossal that when one has finished one realizes how little one knows, and sets out with renewed vigor in the pursuit of knowledge.

Those towers and spires that stud the countryside are silent witnesses for God. The memories of the years spent under the old gray walls are ineffaceable, and when a man has at last left his Alma Mater forever, it is surely with the word on his lips, "If I forget thee * * * let my right hand forget her cunning; if I remember thee not above my chiefest joy."

Liberty Bonds Exchanged for Better Investments.

The rate of interest on Liberty Bonds remains unchanged until the principal is paid. The American University has been able to secure investments in first mortgages on high-class property in the city of Washington paying so much higher rates of interest than the government bonds, that it is able to exchange University bonds paying more interest on the annuity plan for the Liberty Bonds. In the purchase and exchange of property the University can use the Liberty Bonds in trade, making payments with them, and thus disposing of them in such a way as to turn them into money.

The ends of patriotism having been realized to the satisfaction of the government, that received the money for the bonds, the trade in them has now become a matter of merchandise, and the University is thus able to receive benefit from the exchange and keeps its money invested in additional mortgage bonds.

The Secretary of the University or the Chancellor will be pleased to answer all inquiries and give full explanation of the annuity plan and state the rates of interest paid respectively to the annuitants.

It is appreciated by the persons who are relieved of the care of the Liberty Bonds, and all risk in the collection of coupons, through the mails or the banks, that a safe and convenient income for life is assured without any further business transaction. Their money is sent to them periodically and promptly, without even the asking for it. And all that is required by the University is the correct address of the annuitant.

Table Talk.

We hear the question asked frequently: "Could the District of Columbia administer its own government as well as or better than it is administered by Congress?" Can men who must always keep their own home interests in mind, and who are elected to look after the whole country, and many of them entire strangers to Washington, with these others duties, give all the attention to the District it needs?

We know some persons who never carry their watches or pocket books with them when they are required to go out in Washington in the night.

It is impossible to persuade some people that they should put their money in the bank rather than carry it for burglars to their homes.

Why do people in these days of crime carry large sums of money about with them to tempt burglars and encourage hold-ups?

He took it out of the bank for his wife to take home to a safe place. Two men and two pistols asked her for it. She gave them \$30,000.

The Reverend J. R. Chitambar, who has recently been elected President of Lucknow College in India, has sent the University a copy of the beautiful souvenir prepared by the Centenary Commission for India and Burma.

Mr. Cornelius M. Hoult, of Guilford, Baltimore, has presented the University with some volumes of rare interest which are now out of print.

DR. LUCIUS C. CLARK

DR. ELLERY C. STOWELL

DR. WILLIAM M. MARSTON

HON. CALVIN COOLIDGE

BISHOP CHARLES H. BRENT

GENERAL JOHN J. PERSHING

OUR NEW CHANCELLOR.

Dr. Lucius C. Clark assumed charge of the administration of American University on June 22. He was elected chancellor by the trustees at their June meeting, to succeed Bishop John W. Hamilton, who recently resigned after six years of valued service.

Dr. Clark is a graduate of Cornell College and received the degree of Bachelor of Sacred Theology from Boston University. Upper Iowa University granted him the honorary degree of Doctor of Divinity. He was one of the organizers of the School of Religious Education at the State University of Iowa, the first school of its kind to be established at a state institution.

Later Dr. Clark studied in Glasgow, Scotland, under Doctors George Adams Smith, James Orr and James Denney. He came to Washington nine years ago as pastor of the Hamline Methodist Episcopal Church, and for the past two years has been executive secretary for the Washington Federation of Churches.

His inauguration will very likely take place in November.

ELLERY CORY STOWELL.

Ellery Cory Stowell, who comes to the American University as Professor of International Law, is an A. B. from Harvard, 1898; traveled in the Orient and Europe, 1901-2; at the University of Berlin, 1903-4; University of Paris, 1904-7; *Licencie en droit*, 1906; *Docteur en droit*, 1909; Graduate Diplomatic Section of School of Political Science of Paris in 1906. Dr. Stowell has been an instructor in George Washington University, University of Pennsylvania and in Columbia University. He is an author of numerous works.

WILLIAM MOULTON MARSTON.

William Moulton Marston, psychologist and lawyer, has been appointed to the chair of Psychology at the American University, in conformance with Chancellor Clark's program of educational expansion and development. Doctor Marston holds the degrees of Bachelor of Arts, Bachelor of Laws, and Doctor of Philosophy, all from Harvard University; is a member of the Massachusetts bar, and is the originator of the well-known Marston Deception Tests. Professor Marston is primarily an experimental psychologist, and arrangements have been made to open, at the American University this fall, what will probably be the only psychological research laboratory in the United States, strengthening greatly both the School of Arts and Sciences and the School of Jurisprudence. With Doctor Frank W. Collier and Doctor Marston both at the University, it is not too much to hope for the growth of a psychological center second to none in this country.

MY VALEDICTORY.

I have been for two years and more the resigned but still chancellor of the American University, because I had to be—no one trying on my shoes. Whatever vigor or virility I have been credited with, it was simply at my time of life, ordinary prudence with half that amount of intelligence to let go the thread already stretched up to its full tension, before the silken cord is cut off by the fates.

Hence I am delighted to say that the trustees at their semi-annual meeting, not only granted my request, but elected my highly esteemed and accomplished brother, the Rev. Lucius C. Clark, D.D., chancellor. He has been executive

secretary of the Federation of the Washington Churches. No clergyman is more widely or favorably known in the city. Having been educated in this country and abroad, he brings excellent equipment with business experience to his new task.

The trustees insisted on confining me in relation to the university as *emeritus* chancellor "with the bird having the door of the cage wide open." But my friends over all the church must not think I will consent to go into the air, like a bird, or buy a cushion and settle down at an old man's job. There are contracts now under way that must be carried out, and bequests in the courts that must be settled and properties that are only half sold. So when my success or will take these over I'll go a fishing.

It will be recognized as a privilege by every member and adherent of the entire church whose vision reaches beyond the hoise and lot in which he resides to share in promoting the interest of the school that has such an influence over foreign countries. Nearly if not all the embassies that are resident in Washington are represented in either the instructors or the body of students of the university.

I have seen a million dollars in round numbers added to the holdings of the university and the number of schools in the institution increased to five and the number of students multiplied eight and now ten times. It was a high privilege to confer the several degrees on twenty-five graduates recommended respectively by three of the five graduate schools included in the present make-up of the university, and representing respectively three continents.

If my friends will continue to help us as they have so loyally helped me, there will be no occasion for American students to go to foreign universities for their post-graduate equipment.

JOHN W. HAMILTON.

SIGNIFICANT TRUSTEE MEETING.

The meeting of the Trustees of the American University in June was well attended by members from out of town, as well as the faithful men in the city. The Chancellor reported with deep feeling the death of Mrs. Gustavus F. Swift, of Chicago, who had been one of his constant friends and supporters in every aggressive movement he had made. She had promised to help again in May. He had every confidence that she had remembered the University in her will. No woman of greater vision and more liberal motives has gone from the church in a generation. Her beneficence was widespread and multifarious. Her noble family will miss her scarcely more than the Christian Church.

It was a matter of gratulation that during the six months' interval since the December meeting moneys for addition to the endowment or for improvements and extension of the holdings in the properties of the University had continued to flow in. Since the meeting in December the total receipts were thirty-nine thousand dollars.

The report of the Chancellor also stated that the work of enclosing the unfinished laboratory building had been completed, and the architect would soon pass upon and approve it and recommend the final payment to the contractor. The building is now secure from damage by the weather.

A resumé of the properties scattered over the country was presented by the Chancellor.

The Chancellor again reminded the Trustees that it was now two years since he had tendered his resignation and he was only continuing to administer until his successor should be named. A free discussion of the matter followed, with a recommendation by Bishop McDowell, who had been requested to seek for some suitable candidate to relieve and succeed the present Chancellor. He named the Reverend Lucius C. Clark,

D. D., Secretary of the Washington Federation of Churches, and gave a full account of his qualifications for the position, after which he was duly elected. The retiring Chancellor was then requested to continue his relations with the University as Chancellor Emeritus, with no duties required of him. Various kindly tributes were expressed for the work he had done, and he was unanimously elected.

TWENTY-FIVE THOUSAND DOLLARS.

With no indelateness against the American University, every additional gift makes for the extension of the institution and contributes much to its already excellent standing and growing repute. It is because philanthropic persons have made an investigation of its financial condition and conservative administration, that they have been willing to arrange for annuities, make donations outright, and leave bequests in their wills.

No more careful, conservative and judicious distributor of great wealth could be found than Mrs. Gustavus F. Swift, of Chicago. She listened patiently years ago to the account of the founding of the University, and satisfied with its plan and growth she has been a firm friend and generous promoter of its welfare. She has contributed many thousands of dollars to the school. It was on her mind and in her heart therefore in the final disposition of her fortune to have the University a sharer in the beneficence with all that had gone before.

It was a kindly, consistent course for her to remember the University in her will. There will ever be a grateful and recorded remembrance of her generous gifts on the part of the Trustees. No more beautiful testimonial to her estimate of the significance and value of the work being done in and by the University, has been evinced than in the bequest made known in her will of *twenty-five thousand dollars*.

ADDRESSES AT CONVOCATION. JUNE 7, 1922.

ADDRESS OF CHANCELLOR JOHN W. HAMILTON.

An article in one of the leading magazines for this month begins with the statement that "Our American Universities are changing these days; changing so rapidly that we have hardly time as yet to realize what is taking place." Why should they not change? We ourselves change. The thinking minds of all nations call for change. The world exists by change. The object of the School is to create change. "The central idea on which the philosophical theories turn is the concept of change." One of our philosophers has said, "the succession of schools corresponds to the stages in the evolution of thought."

Education before Plato was a sort of peripatetic form of lectures; here today and gone tomorrow. Protagoras, the head of the Sophists, gave way to Plato, who was the first to give a regular educational course extending over three or four years and in a fixed place, the Academy. But schools in his day were very limited in the scope of tuition, confined to such subjects as philosophy, rhetoric, logic, grammar, history restricted to the history of Greece, some law and what divinity could be made out of whether there were gods or not. Socrates followed Plato with a school of his own in the Lyceum. Schools in that day, however, were of a very elementary kind. But the spirit of change was already on. From these two institutions other nations of Europe derived for the Germans their gymnasium, the French their lycee, the Scotch their academy. There was a constant expansion of the curriculum from Athens to Alexandria, Alexandria to Rome, Rome to Paris, and Paris to Oxford and Cambridge. Natural sci-

ence received less attention than literature. Poetry, with Homer as a kind of Hellenistic Bible, occupied the Greek mind. When Grecian culture went to Rome, some names and new schools of broader significance came on. Dyonisus, the grammarian, and Pliny, the Younger, who was a pupil of Quintilian, and founder of the first endowed school, set a new pace to the evolution. Grammar and rhetoric schools spread throughout the Roman world, but even in the fourth century the status of the schools was much the same as in the first. Justinian became responsible for the dis-establishment and dis-endowment of the old learning.

Astonishment, as some one has said, was the forerunner of the new learning. Philosophy could not satisfy the cultured man, could not secure for him the promised happiness. Philosophy then turned over to Religion for help. Schools sprang up in the cathedrals and monasteries, and foundations were laid for the universities. St. Patrick and Columba shook drowsiness from the eyes of Ireland and Scotland, and Augustine broke in on the sleep of England. Charlemagne prodded the monasteries and cathedrals to open the doors wider. In the eleventh century time and agitation had awakened the minds of men to a revival of broader learning. New subjects of study, new methods of teaching and the growing tendency to organization laid the foundation for the universities. The University of Salerno had already become known and famous as a school of Medicine, Bologna achieved a reputation for the study of Law. Dialectic was looked upon as "the science of sciences." Abard imparted to logic its new development and led to such enthusiasm in the University of Paris that John of Salisbury, who had visited the French capital, returned to England to report "how all learned Paris had gone well nigh mad in its pursuit and practice of the new dialectic." The fully developed university, divided into four faculties, the head of each faculty a dean, became the model of many universities, including Oxford and Cambridge. Harvard, William and Mary, and Yale, the three pioneers of Colonial times, were organized on the plans of the English colleges, and the alumni of these first schools were not slow to found similar colleges in the other older original States. The term university was courted and married without license by country academies, much as F. F. V. initialized the earlier residents of Virginia, which came to mean, as some one has said, the First Families to arrive in Virginia from Ireland. It was not until about 1880 that the term university was divorced, and then only married according to law. There are still some forgeries of the name by one or more persons, whether incorporated by States wanting a dollar, or not incorporated, that cannot claim even a morganatic relation with sound learning, and go peddling university degrees, like oil stocks that have no wells, if they only get a few shekels in the bargain. One of the heads of such a school was reported as arrested yesterday.

But the fundamental character of education has come to be a matter of erudition more than speculation, and universities in this country are segregating themselves in departments or professional schools with a dean at the head of each of them, that warrant not only the degrees they confer, but the scholarship they impose. Harvard University is said to have fifteen or more such correlated schools.

It is out of such or in such universities that the graduate schools have been founded, for purposes of research and higher professional education. The American University was incorporated by Congress as a graduate school. As such it is the only school in the country without a subordinate college as a feeder. It has already Schools of Diplomacy, Jurisprudence, Citizenship, Religious Education and Business Administration. It is closing the eighth year since its opening and there are only two or three other similar schools in the United States that have a larger attendance. Three of the departments of the University present today the twenty-five graduates to receive degrees.

The world goes no faster or farther than the schools. They are the measure of the world's progress. Like Atlas, they carry the whole round earth on their shoulders. They must be the servants of all. How much service the schools must yet give to the world is evident from the grass ignorance all about us. Germany, with all its boasted superintelligence, is face to face with such confusion as General Von Bernhardi was led to make in his book on "Germany and the Next War" when he said, "It is significant of the knowledge of our national history, which the school imparts that out of sixty-three recruits of one company to whom the question was put who Bismarck

was, not a single one could answer." How much better are we when of all the millions enlisted in our armies nearly one-fourth of them could neither read nor write? The work of the schools will be "ending still and beginning still" until the last man and the last woman are educated. "That one man should die ignorant who had capacity for knowledge," said Carlyle, "this I call tragedy." The only school we now have for all the people is the newspaper and with the man in the street calling for little information more than the stories of vice, crime, scandal, and corruptions of State and Church in high places, how much is he educated! It is the outdoors that must be moved up to the level of the indoors of the best schools. Bellingbrooke was right when he said "The school of example, my lord, is the world, and the masters of this school are history and experience."

PRESENTING THE VICE PRESIDENT.

The American people have great respect for the man of convictions, courage, and in whom they can have supreme confidence in an extreme emergency. Time was, when the politicians selected for the highest offices of the nation men from the "Pivotal States." Massachusetts, no larger than the county of Aroostook, in the State of Maine, lost the distinction of "Pivotal" many years ago when she tried to nominate William Claflin candidate for the Vice President of the United States. But in the desperation of conditions the people themselves, overlooking and overstepping the precedent of Pivotal States, nominated and elected before the convention and election were held, the *pivotal man* who had been the man of the hour, and was "all there when the bell rang." It is my distinguished honor to present him to you at this time, Calvin Coolidge, Vice President of the United States.

ADDRESS BY CALVIN COOLIDGE, Vice President of the United States.

Mr. Chancellor, Members and Guests of the
American University:

Graduation is always a privilege; but when it is accompanied by such pleasing surroundings as those which adorn this occasion, it becomes even more than a privilege. The opportunity to bring to a final conclusion the work of a course in this grade under the sun of heaven is a privilege which those who take part in it will remember forever.

The world needs education in order that there may be a better estimation of true values. It is not easy to assemble facts. It is not easy to draw deductions. It is not easy to distinguish between the accidental and the essential. In the complications of modern civilization these are becoming more and more difficult. If world problems are to be solved it will be through greater application, through more education, through a deeper faith and a more complete reliance upon moral forces.

It is only those who can not see beyond the present, who are lost in particulars, and who have no training to comprehend the greater sweep of events that come to lack the necessary courage to bear their share of the common burden. To a race which claims a heritage of eternity the important question is not where we are, but where we are going. Education fails which does not help in furnishing this with some solution. It ought to confer the ability to see in an unfolding history the broadening out of the base of civilization, the continued growth of the power and the dignity of the individual, the enlarging solidarity and stability of society, and the increasing reign of righteousness.

There are two great standards, and two alone, by which men measure progress—creation and redemption. These are not accomplished facts; they are ever-present processes. While we speak their work is going on. They are the measure of the dominion of man over himself and over nature, and of his dedication of himself and all his powers to a moral purpose.

Measured by these standards, it would not seem difficult to justify the superiority and the increasing progress of modern civilization. Looking far back, the circumference of the enlightened world was very small. Its light existed, but it was everywhere surrounded by the darkness of ignorance, of superstition, and of savagery. There is no nation existing today which does not trace its ancestry back to a primitive people, yet each has come up through all the intermediate gradations to the present state, which it is scarcely too much to designate as world enlightenment. There are still dark places. There are yet remnants of the lower order, but even the Dark Continent is yielding to the light. There have been times when peoples

have elapsed, when the march of a certain limited progress which they appeared to represent has ceased, but the cause has never lapsed. The Greek and Roman world lost for a time a part of its power of creation, but the power of redemption was not lost; it was rather increased as the people who inhabited those ancient empires and their dependencies turned to the Christian faith.

It was through that faith and through the rediscovery of ancient learning by larger and larger masses of people, the great universities and through the teachings of the clergy, that there was brought about the final great reawakening of the Middle Ages which reestablished and strengthened the mighty creative power of modern science and invention. No one can dispute that power, no one can deny its increased and increasing dominion over all the forces of nature. Science stretches out its hand and reaches instantly any portion of the earth. It has brought under control forces comparable only with the resistless rise of wind and tide. It has weighed the earth in a balance and created instruments so delicate that they can detect a far-off whisper or measure the dynamic force of thought.

The Old World motive for creation, the motive of selfishness, of military aggrandizement, of imperialism, and of slavery, the motive which finally gained the ascendancy over the one-time devotion to moral purposes which characterized the early rise of Greece and Rome, was lost. It was lost because it became a perverted motive. It destroyed itself. A reawakened world rededicated itself to what was sound and true and good in the old motive strengthened and purified by Christian ideals. It was the general acceptance by modern life of this new motive which gave it direction and strength and an increasing creative power.

It was under its inspiration that despotism and slavery have steadily been diminished and self-government and freedom have steadily been increased. It has been the directing force which has provided the material development of the modern world, established the groundwork of enlightened institutions, and given to humanity the moral character which has been the sustaining power of them all. The supremacy of this motive has marked the great world decisions of recent times. It lay at the foundation of the ambition of Peter the Great to reorganize and direct the energies of the Russian people, it inspired Gustavus Adolphus in his struggle for freedom, it was the deeply cherished sentiment of the parliamentary forces under the leadership of Oliver Cromwell, it was exhibited in the spirit of the French people when they were rousing themselves against despotism, it broke the power of the great Napoleon when he grasped at world dominion. The final consummation of these world forces has been America.

Wherever you may explore the high pieces of American history you come upon this same motive as the main cause of the action of her people. It was the thought of the early settlers as they hewed out for themselves a home in the wilderness where they raised up their altars and established their schools. It was the meaning of the life of Washington, of the great Declaration, and of the greater Federal Constitution. It is the explanation of Abraham Lincoln and the all-embracing freedom wrought out in his day. Finally, it sent 2,000,000 men across the sea that the cause of a Christian civilization might still remain supreme.

The power of creation and the power of redemption have come down through all the ages with mankind in ever-increasing proportions. They are the power to build and the power to endow with righteousness. They represent intelligence and sacrifice, the state and the church, the material and the spiritual. These are the forces upon which mankind can rely; they do not fail, they endure.

The world has been greatly shaken in the past decade. These forces have been tested as they never before were tested. The wonder is not that Russia, under a comparatively new organization which had never reached down to the heart of the people, collapsed; the wonder is that the world as a whole has stood firm, that it is gathering up the threads of existence, resuming its orderly progress, creating and redeeming itself anew. In the doing of this it is doing more, it is striving successfully to reach higher ideals.

The lessons of the great conflict have not gone unlearned. There is, to be sure, disappointment, disagreement, and irritation; but where in ages past such conditions would have made armed conflict inevitable they are yielding to the power of persuasion and reason, through mutual consultation. There is a general admission throughout the earth of a mutual relationship and a mutual responsibility. There is the League of Nations, which, whether it be successful or not, whatever imper-

fections may be contained within its terms, is at least the attempted expression of a noble aspiration for world association and understanding. There is the four-power treaty and the covenants for the limitation of the extent and use of armaments, all expressive of an even higher and nobler aspiration and an even firmer reliance upon reason as the foundation for all peace.

All these are creations the like of which the world has never before seen. There is, moreover, the working out of the salvation of mankind through the ever-existing law of redemption through sacrifice.

It would be easy to glance back over recorded history and see how when new institutions are needed they have been brought forth and how when they have ceased their usefulness they have been cast aside. It would likewise be apparent that when there has been need for leaders they have been raised up to direct and to inspire and when there has been a requirement for the results of science and invention these have been produced to meet the increasing necessities and to lighten the burden of mankind. Intelligence never rests; ceaselessly it works, building, perfecting, adorning. When creation has been required, creation has appeared.

Along with creation has gone redemption, always through sacrifice. The power of good ultimately to triumph over evil has never failed. When western civilization was threatened by Attila, Rome and Gaul in common cause made that heroic sacrifice which redeemed all subsequent history. When later the followers of Mahomet imperiled Christianity, it was the Frankish hosts who saved it forever at Tours. Always the story runs the same. Whether it be necessary to meet the evil intent of Stuart kings or the liberty-destroying acts of a Parliament inspired by a mad monarch, or to preserve a nation and rescue it from the curse of slavery, or to overcome the great delusion of world dominion, always there have been those who have made the supreme sacrifice by which these results have been accomplished. Always the cross and always the response. There is a power which moves resistlessly that justifies our faith.

There is scarcely any reliable authority which denies the right of the people to self-government, there is scarcely any dominion which denies obligation to the law of righteousness. Institutions of learning, organized charities, all of the forces of government and of religion, are making their ceaseless contributions to the unbought salvation of the world. The redemption goes on. The moral forces of the world are supreme.

This is the civilization which intelligence has created and which sacrifice has redeemed. We did not make it. It is our duty to serve it. Education ought to assess it at its true worth. It ought not to despise it, but reverence it. If there be in education a better estimation of true values, it must be on the side of a great optimism. Under its examination human relationship stands forth as justified and sanctified. There is no place for the cynic or the pessimist. Who is he that can take no part in business because he believes it is selfish? Who is he that can take no part in government because he believes it is sordid? Who is he that can take no part in religion because he believes it is imperfect? These institutions are the instruments by which an eternal purpose is working out the salvation of the world. It is not for us to regard them with disdain; it is for us to work with them, to dedicate ourselves to them, to justify our faith in them. It is a high calling in truth to be even a doorkeeper is better than to rule over many multitudes of critics and Philistines.

The great service which education must perform is to confirm our faith in the world, establish our settled convictions, and maintain an open mind. The heritage of all the past is neither mean nor insignificant. It is a high estate. The work of the world is neither undignified nor degrading. It lacks neither character nor nobility. It is the means and measure of all real manhood. It is truly the creation and the redemption. Those who are worthily engaged in it are ministers of a holy cause, priests of a divine imposition.

INTRODUCING BISHOP BRENT.

There is no creed to which a man holds and that holds him like the man himself. Great doctrines have raged up and down the world like wild beasts escaped from a circus, but when the right man, a great tamer and good keeper, goes after them he gets them back into their cages, with no dispute. Arguments have doubled themselves up in battle, and what was left of both armies, like peeled and scattered refugees, gone limping

home when neither was whipped. But no matter what or how big the argument goes up, head on against a good man, it falls down like the uncircumcised Philistine.

We have with us today a man whose voice has gone out from the far-away Philippines until it has been heard in all zones because he cried out more for human fellowship than denominational fences—"if thy heart is as my heart, give me thy hand." He is the Apostle of good will. "But when the enemies of peace and good will came forth to eat up the Christian nations he buckled on the armor of St. Paul and went into battle as the pastor of General Pershing. It is fitting that they should meet again on this platform. "He who did well in war just earns the right to begin again doing well in peace," said Browning.

It is with exceeding great pleasure I am given the Christian privilege of introducing to you my honored brother, the Right Reverend Charles H. Brent, now Bishop of the Protestant Episcopal Church of the Diocese of Western New York.

ADDRESS BY THE RT. REV. CHARLES H. BRENT, LL. D.,
OF BUTEALO, NEW YORK.

Mr. Chancellor, Mr. Vice President, Members and Friends of the American University:

The Chancellor in his introduction has made it very difficult for me to speak. Perhaps he intended to see just how much courage I had, and so put me up against a difficulty. It is a profound satisfaction to address the members and friends of a university which is frankly, sincerely and publicly Christian.

We are living in a day that cannot be compared to any moment of preceding history. I question whether at any time there have been so many people, relatively speaking, who have felt the burden of the world on their own individual shoulders as thinking and sensitive men and women today feel. It is one of the most hopeful signs of a troublesome age that we are not shirking hardship and difficulty, but we are doing what every true man, by virtue of his virility must do, we are facing those problems with the determination that we are going to solve them. We have, at any rate, the will to win.

Another thing: This is a moment of extraordinary hope, of great ideals; and is it not so just as truly as it was in the day of Abraham, that the man who sees an ideal already possesses its essence? There is such a thing as giving present substance to treasures that are yet delayed as a general and public possession; the individual, by seeing the ideal and cherishing the ideal, has it as the most substantial thing in his life; and he can say what was said of Abraham, by the Christ, "Abraham rejoiced to see my day. He saw it and was glad." Now, I contend that even though it be but a small minority who are assured that it is in God's purpose that there should be a world that is at peace with itself, even though they be but a scattered few who maintain that it is in God's purpose to have one united church of Christ in mankind, yet those few can serve the ideal and make it possible for the great creating and redeeming God to effect that which it is his purpose to effect.

Education must be Christian if it is to be complete; and when I speak as I do, I recognize that there is a great uneasiness among all of us considering American education at this present time. In no other country of the world has there been such a generous effort to give to the whole people the whole of education. However, and here I am afraid I must fault the Church, owing to the fact that the Christian ranks are broken, religion has not been in that close intimacy with education which is a necessity, if we are to have Christian education; but we are feeling our way to see what can be done to unite again these two great forces, the forces that make for the development of the intellect, and the forces that make for the development of the soul, which never should have been divorced. I venture to prophesy that in less than one hundred years, if we Americans are true to our opportunities, we will have brought about a reconciliation that will make it possible in this country, yes, and beyond the seas, for a united Church to give such moral sanctions and inhibitions as will be a support to the consciences of the people, and enable us to build up a human fabric worthy of being called the body of Christ.

Christian education means that all research, knowledge and scholarship have their source and their goal in God as revealed in Jesus Christ. In that your university confines its attention to the highest development of scholarship, it sees in the rational processes and the activities of honest research nothing that is contrary to Christian truth, and everything that will contribute to its apprehension. If I judge aright, I apprehend

that your university, though under Methodist auspices, is Christian before it is Methodist, and that you are not adverse to a frank facing of those facts and arguments that may make against rather than for your position as a Church; not that I am going to adduce any of them. Indeed, no Church can hope to live and serve that thinks otherwise. I speak with the thought of my own Church in mind, and when the happy day comes when each Church will have discovered publicly and with its own voice its own faults, then I believe unity will be close at hand.

Knowing that you represent a Christian university, I know that you are entitled to claim as your own the Christian scholar's charter of freedom. Quite frequently that charter is seized upon and used by people who have no authority or claim upon it. They cut away text from context, and say "Ye shall know the truth, and the truth shall make you free." That promise is not an unconditional promise. The whole of the statement of Him Who is the source of light and life reads as follows: "If ye abide in Me; word, then are ye My disciples, and ye shall know the truth, and the truth shall make you free."

There is, I am afraid, a false optimism in many quarters today. There are those who believe that progress in the human race is a necessity, whereas it is not progress that controls the human race; it is the human race that controls progress. "Progress is not a necessity; it is a task," and even the God who puts progress as a goal for the human race cannot accomplish that which He purposes unless we cooperate with Him.

As I view it—and I am inclined to think you will agree with me—the first duty of the Christian university is to put the first-hand study of Christ's teachings, unadorned by eclecticismism, untrammelled by sectarianism, as the preliminary preparation for scholarship, and to leave nothing undone to make Christian discipleship the primary requisite of the student. Scholarship, if scholarship leads to God as revealed in Jesus Christ, springs first of all from Him.

Reference was made by your Chancellor to the constant change that has been going on in the matter of education since earliest times. It perhaps is "bringing coal to Newcastle" to remind you of the origin of all universities, beginning with the pre-Christian universities of Athens, Rome—and Alexandria. They were all based upon religion and sprang from religion. If you were to look in the curricula of colleges and universities today for something analogous to the curricula of these pre-Christian universities, you could find it only in the curriculum of a theological college; and when you come on into Christian times, and consider the origin of the University of Paris, of Oxford, of Cambridge, of Harvard, of Yale, Universities, it is religion that brings the university into existence, that fosters it, that develops it, that makes it what it is.

Now, Christian discipleship gives certain qualities of heart and soul which heighten ability to use the critical and constructive faculties of mind and the rational processes. I do not hesitate to say that the scholar who tries to hold his being entirely from the forces of religion is at the same time stunting his possibilities as a scholar. Religion sets him free with a freedom that reaches every faculty of the human being; and religion—at any rate, an earnest desire and striving after religion—is as much a part of the normal man as is knowledge or what is ordinarily called the results of education.

We have yet to correct a fault that I am afraid controls many of us, namely, belief that there is some opposition between the rational and the spiritual. It was in the middle of the seventeenth century that that wise, platonic scholar, Whichcote, in a letter to one who had been his instructor, Tuckney, says, "Sir, I oppose not rational to spiritual, for the spiritual is most rational."

During the war, a distinguished biologist of Cambridge University was asked to go and serve in France by giving lectures to the soldiers in the huts, when they were on leave or in the rest areas. His reply was, "I desire to help, but what can I a dry-as-dust professor, do for those men?" He was persuaded to make the endeavor, and his first lecture was such as he might have given to a body of first-class scholars in his university. The result was that the "Tommy," although a very forbearing person, couldn't stand it, and the audience all trickled out of the hut, so that at the conclusion of the lecture the lecturer was alone and in despair. However, he said to the head of the hut that he was ready to try again. He did so, and he became human. Then, as night after night he spoke

to his fellow men, he held their attention so that when he left France for England he was ready to come the next winter if need should arise. But the significant thing still remains to be said. As he was leaving he told the head of the hut that he had been a lifetime in his laboratory without finding God, but he said, "I have found God in France." He had been using only his rational processes; his soul had been stagnant and untroubled, but the moment he came close to human need, then his whole being awoke. I venture to say that Prof. Bateson today is a better scientist, as well as a better man, because active religion has been awakened in his soul. Think of Pasteur going from his laboratory to prayer, and from mass to his laboratory. All true philosophers have as their *terminus ad quem* God. From Plato and Aristotle to Plotinus, and from Plotinus to Thomas Aquinas, and Kant, and Royce, and James, and your own philosophers of this university, unhappy, indeed, has been and is the philosopher whose religious nature is not awake and crying aloud for God, the living God. "Sober trust in religious experience, when that experience has been earned," is an essential factor even in platonic faith.

Another thing about Christian discipleship, it assumes no conflict between religion and science. More than that, the honest disciple of Jesus Christ is as keen for all the truth about everything as the most meticulous scientist. "Let no man suppose that the intellectual virtues are outside the range of religion. Candor, moral courage, intellectual honesty, scrupulous accuracy, chivalrous fairness, disinterested collaboration, unconquerable hopefulness and perseverance, manly renunciation of popularity and easy honors, love of brazen labor, and strengthening solitude—these and many other cognate qualities bear upon them the impress of God and of His Christ." [von Hügel.]

We have heard quite frequently from the lips of scientists how unfair it was in the beginning of those days when Darwinism shook the world, that the Church should have opposed the findings of science. But have the scientists always been as scrupulously fair when they talked about religion? There are in our universities in the United States today men who prove that they have not highly scientific minds, because of the implicit if not the explicit opposition to religion which mars their work. The true scholar, though leaving no claim unchallenged or untested, must not assume hostility of science to religion or of religion to science. If he does so he thereby demonstrates defects of reason which cast the shadow of doubt on all his teachings. Just as religion is deeply concerned with the findings, and even the working hypotheses, of science, the unfoldings of the mind in literature of every sort, as well as with the pieties of worship and the affirmation of faith, so is science, by virtue of its own fundamental principles, deeply concerned with the findings and working hypotheses of religion. If at first sight there seems to be antagonism, the assumption should be, in view of the fact of the accepted belief in the unity of all knowledge, that reconciliation is certain in the end.

The steady trend of scholarship's findings to mount up into the truth as proclaimed in Jesus Christ, gives a new confidence in abstract truth. I am going to mention just three things. Sir E. Ray Lankester, one of the great biologists of this century, and by no means a Christian apologist, says in his book, "The Kingdom of Man," that sin is the cause of disease. He is speaking on scientific grounds. He goes further and attributes disease in the animal and vegetable world to man's interference.* In other words, the old statement that smms up the great disease of human life in one small word of three letters, is proclaimed to be true by scientists on scientific grounds. And so the truth as it is found by science mounts up into the truth as revealed by Jesus Christ.

In the second place, take the realm of psychology, and one of its great exponents, Freud—what he has made perfectly clear is that the only cure for sin—he calls it some other name, but that does not make any difference—is that it should be brought out into the air and the sunlight; because it is darkness it flees before the light.

Or again, take the experimentations—I am speaking now of only those which are scientifically accredited—the experimentations to discover whether or not life beyond the grave is so close to us that there may be communication with those of us who are still in the flesh. Every effort to prove this fact only tends to confirm that which has been a fixed Christian belief since "Christ abolished death and brought life and immortality to light."

So I say I find the justification of modern scientific scholarship in its approximation to Christ's teaching rather than in the mere conclusions of research as logically demonstrated.

* Quoted by Gore in "Belief in God,"

Now the end of scholarship and the consequent apprehension of the truth is perfect freedom. You know it just as well as I, that the greatest difficulty and enemy of human life today is fear. One reason why, with all our accumulated knowledge, we are unable to achieve better results in life is because we are afraid to make great big ventures of faith. If this world, for instance, were to make the great big adventure in the matter of forgiveness, nation with nation, individual with individual, section with section, I believe that there would be more progress in that one great venture than in all the conferences that could possibly be called.

Think of the Christ while being true to His faith, the Jewish faith, rising above the sectarianism of the Jews, though still remaining a Jew. Fairness is one of the most difficult, one of the most majestic, and one of the most possible virtues for the human race. Yet we shy away from it because we are afraid that by being fair to others we will be unfair to ourselves.

The truth is not to be admired; it is to be lived. We pray today, and let us continue to pray it, that we may know the truth, and live the truth.

We Americans are tremendous idealists. I doubt if God has ever endowed a nation with such quickness to perceive what is noble and high. But you know the defect which I share with the majority of American people, that when an ideal becomes thorny, we are very apt to drop it, and think that, after all, there may be another way out and an easier way.

Inaction today we must stand out against—and localisms that are threatening to drag this country back from the high idealism that it had in the war to a state of self-contentment and sluggishness which means stagnation and death. Take, for instance, this thought which I find still in the minds of many people—although theoretically they may say that change and progress are bound to be—the belief that the present order is final, and must be defended against all attacks, politically, and socially, and industrially. Why, my friends, we of the American Republic, in our infant democracy—for that is all it is—we are only on the threshold of what may be. The present watchwords and theories will be obliterated in another century of mankind, if mankind is to progress towards God's kingdom among men. Future generations will look back upon the defects and the limitations of our day as we do upon the feudal ages. Do not plume yourselves that you are the last word in social and industrial progress! Our first duty is to be ready to study radical propositions—mark my words, radical propositions—with an unbiased mind. Red revolution is more often due to the refusal of conservatives to face facts than to any other cause or group of causes. I shall not argue the case, but I simply point to the record of history, from the strike of the Israelitish brickmakers in Egypt to the strike of the American colonists against British denseness, and to the strike of the Russian peasants against the age-long tyranny of Czarism. Let us take warning, that in all our industrial upheavals the strikers are not men who love violence; they are men and women like yourselves who love peace, but they love justice quite as much as those who fight to maintain things as they are.

May I close by three bits of advice to those whom I may address as scholars and whose lives are dedicated to scholarship? No man can take a post-graduate course without having intellectual responsibility placed upon him which he can never shake himself free from without detriment to his character and without injuring all the possibilities of his life. Those three bits of advice are first of all, to remember the truth is never a mere conquest of the mind. "There are three avenues to the knowledge of God and of the world and of ourselves—purposive action, reasoning thought, and loving affection—a three-fold cord which is not quickly broken." The words are not mine, but those of Dean Inge.

In the second place, do not look on knowledge as a mere servant of personal and immediate interests. Knowledge has something in store for you and for the world above that which can be turned into dollars and cents. I recognize the value of vocational training, but I dread its abuse. It is abused all through this country—as for instance when men take relatively easy courses in order that they may quickly be in a position where they will earn money.

Dr. Pritchett in his recent report for the Carnegie Foundation, speaks about the way that graduate schools are being abused. He says that there are many who are playing at research, or if not playing, at least pursuing some scientific game in a mediocre fashion. To quote him further, "the graduate schools are filled with researchers whose research ends in a doctor's degree." Research is the beginning of a life-long

responsibility, and those who take it up may never lay it down without, as I have already said, bringing injury to themselves and to their power of service.

And, in the third place, and here I speak to myself before I speak to you in the pursuit of truth, never dodge the enemies of truth, which is a very different thing from what you may think the enemies of truth. Face them and give them their due. If they are real enemies, well, smash them! If it is you who are wrong, and they who are right, then in that particular matter, smash yourselves! Do not cherish your own opinions. Sit lightly to them. It is enough to be loyal to the few convictions which are the controlling factors in life. And, above and beyond all, remember that there is a power, working in us and through us, it is true, but beyond us as well, that in the end will bring us all to that goal for which we are yearning, and which can be summed up only in that noble phrase—the Kingdom of God.

PRESENTING GENERAL PERSHING

The man who can rise superior to his own sufferings that have taken from him all but life itself can, with or without commission, take a city and a hundred more, for it is the man that conquers in war and not his weapons. The measure of his manhood is his opportunity. The estimate of his value rises with his achievements. It is honor enough to be an American when a brother comes home from the battle of freedom bringing no spoils of the war, but himself, and bringing on his shield the sympathy, admiration and applause of all nations. It is my high privilege today to present to you that man, General John Joseph Pershing, Commander of the armies of the United States of America.

REMARKS BY GENERAL JOHN J. PERSHING, U. S. A.

Mr. Chancellor, Mr. Vice President, Members of the Faculty, Ladies and Gentlemen:

It is a very distinct privilege to be here today to participate in these wonderful exercises. An institution which promises as much as this does is worthy of the distinguished speakers who have addressed you today.

I must, however, hold you Chancellor to his promise, which he has mentioned, not to ask me to make an address. But I do wish merely to thank you for this opportunity to greet the members of this graduating class and this splendid audience.

SUMMER SCHOOL REGISTRATION.

The registration of students for the Summer Term, June 19 to September 2, 1922, was seventy, being a decided increase over that of 1921. The Fall Term will open October 2, 1922.

THE RED BOOK—NEW EDITION.

The broadest circulation of the American University Courier to the thousands of subscribers is but one evidence of the widespread interest in the institution. The rapidity with which the first edition of the "Three Nations at the American University" was disposed of and a second edition called for shows the sympathy with which the purpose of the school is supported.

The new edition of the Red Book is a great improvement on the first one. It contains affectionate tributes to the late Chancellor, Bishop Franklin Hamilton, with an excellent portrait of him; it also gives a concise account of the opening of the University by him. The worthy contributions were made by the Revs. W. V. Kelley, Litt D., recently editor of the Methodist Review, and the late Rev. George P. Eckman, D.D., LL.D., formerly editor of the New York Christian Advocate. The portraits of the entire Board of Trustees also appear in the volume. All this with much more has been added to what was printed in the first edition. As the greater part of the 2,000 books are being mailed from the office, calls are pouring in for copies of the second edition. If printed only at a thousand copies at a time each of the new books would cost one dollar and a half without postage. But that a permanent memorial of the University may be preserved in the home the new Red Book is sent to any one who will send to the office of the University one dollar and promise within the ensuing year to send an additional dollar for the addition of the new property of the University. In the meantime they will receive the current issues of the University Courier.

DEGREES CONFERRED AT CONVOCA- TION, 1922.

Master of Commercial Science.

Lee Somers, A. B.—Thesis: Bribery in Business Practice.

Master of Science in Chemistry.

Ernest William Guernsey, B. S.—Thesis: The Preparation and Chemical Nature of Caked Phosphate.

Herbert John Krase, B. S.—Thesis: Physico-Chemical Studies on the Cyanamide Process of Nitrogen Fixation.

Norman William Krase, B. S.—Thesis: A Process for the Synthesis of Urea from Ammonia and Carbon Dioxide.

Oliver Reynolds Wulf, B. S.—Thesis: The Oxidation of Nitrogen Tetroxide.

Master of Arts.

Samuel Poe Carden, A. B.—Thesis: The Opportuneness of the Incarnation.

Raymond Alexander Kelser, D. V. M.—Thesis: Bacillus Botulinus; Its Pathogenicity, and Its Identification in Food and Canned Foodstuffs by Serological Methods.

Master of Arts in Diplomacy.

Abdul Sula, A. B.—Thesis: Albania's Struggle for Independence.

Master of Law in Diplomacy.

Narciso Estrella-Frasqueri, LL. M.—Thesis: The Distinction Between Federal and State Citizenship in the United States.

Edward Finston New, LL. M.—Thesis: The Diplomacy of the American Revolution.

George Curtis Peck, LL. B.—Thesis: The Function of the Legislative Branch of the United States Government in the Recognition of New Governments and States.

Hugo V. de Penn—Thesis: Uruguay and the Monroe Doctrine.

Maurice Edward Salisbury, LL. B.—Thesis: United States—Canadian Boundary.

Doctor of Jurisprudence.

Stuart Lewis, A. B., LL. M.—Thesis: A Comparative Study of the Principal Features of Corrupt Practices Legislation in the Forty-eight States.

Doctor of Civil Law.

William Lawrence Clay, LL. M.—Thesis: The Right of Labor to Organize.

James Lane Donahue, LL. M.—Thesis: The Shantung Question.

William Thomas Hammack, LL. M.—Thesis: Revision of the Federal Statutes.

Wilson Forman Harper, LL. M.—Thesis: Administrative Laws of the United States as Applied to Local Taxation.

Rosalie Gardner Jones, A. M., LL. M.—Thesis: Influence of International Relations of the Different Standards of Living in Different Countries.

Harry George Mellon, A. B., LL. M.—Thesis: Jurisdiction of the Court of Claims.

Lowell William Raymond, A. B., LL. M.—Thesis: Amending the Federal Constitution.

Wilmer Franklin Stickle, A. B., LL. B.—Thesis: Petroleum and Its Effects on International Relations.

Doctor of Philosophy.

Joseph Herbert Ford, A. M., M. D.—Thesis: Removal of the Wounded from American Battlefields in France.

Carl Holliday, A. M.—Thesis: Woman's Life in Colonial Times.

Charles Emile Morganston, B. S., LL. M.—Thesis: The Appointing Power of the President.

TABLE TALK

It is interesting to note the kind of men people of different minds desire for President of the United States. One is sure that only a military leader like Washington should be chosen; another would have a statesman like Webster; another a politician like Arthur; another a financier like Hamilton; another a literary man like Hawthorne. How has it worked to have a man of the people like Lincoln?

The greatest argument against certain of the "Anti-Enforcement Advocates" is their admission that they have no reverence for law, as law.

"THE LORD BLESS YOU AND KEEP YOU"

Words Spoken by Bishop McDowell When This Photograph Was Taken

INAUGURATION OF LUCIUS CHARLES CLARK AS CHANCELLOR OF THE AMERICAN UNIVERSITY

Memorial Continental Hall, December 15, 1922 at 4:30 o'clock

PROGRAM

ACADEMIC PROCESSION.

Mr. John C. Letts, President of the Board of Trustees,
Presiding.

INVOCATION.

By the Reverend Joseph J. Muir, Chaplain of the United
States Senate.

Our Father, and our God, the God of our fathers, to whom in the early interests of our land and the establishment of our institutions Thou didst give Thy blessing to rest upon this fair country, we thank Thee that among all its progress there has been the recognized need of education in all

its various phases of development. We thank Thee for this institution under whose auspices we gather this afternoon; and we humbly beseech of Thee that large blessings may crown its every endeavor, that in this form of a higher education there may be such advance made that under this new administration great direction of forces in the higher elements of thought may be evidenced that God himself may be glorified; and that here gathered together the representatives of the great institutions of our country, we may bow reverently, seeking Heaven's benediction.

Remember the President of the United States. Give him wisdom in every problem, and lead him onward in the under-

standing of truth and of righteousness, that he, with his family of advisors, may find that they are doing God's will, and serving the best welfare of our beloved land.

We humbly ask in Jesus Christ's name.

INSTALLATION OF THE CHANCELLOR.

Conducted by Bishop William Fraser McDowell, President of the Board of Education of the Methodist Episcopal Church.

Bishop McDowell said, "In the year 1893, the American University was chartered by the Congress of the United States for the promotion of education. There have been four Chancellors: Bishop John Fletcher Hurst, the Founder; Bishop Charles C. McCabe, The Rev. Franklin Hamilton, Retired Bishop John W. Hamilton."

In June, 1922, the Trustees elected the Rev. Lucius Charles Clark, Doctor of Divinity, to be Chancellor. We here and now formally install him. We invest him with all the rights, dignities and privileges, and with full confidence and faithful pledge of loyal co-operation commit to him the duties, responsibilities and obligations of that high office.

Therefore, in behalf of the Trustees of the American University, the oath of office is hereby administered to Lucius Charles Clark, the charter and keys of the University, its symbols of authority, are presented to him and he is invested with the appropriate academic insignia of his office.

And upon this act performed for the glory of God, in the interest of true religion, sound learning, genuine patriotism, wholesome internationalism and the welfare of humanity, we solemnly invoke the good will of students, graduates, patrons and friends of the University, and the abundant favor and blessing of Almighty God.

Lucius Charles Clark, do you promise to keep and uphold the American University; to maintain her laws and her ideals; to broaden her service in the world; to seek out youth of high aspiration and promise; to enthroned teachers of quickening and inspiring power; to find men and women of generous spirit and adequate means; to advance the boundaries of human knowledge; to enrich human life with poetry and science and to ennoble human character with lofty purpose and Christ-like consecration; to hold in everlasting regard the things that are true, honorable, just, pure, lovely and of good report; to face the future with hope unquenchable, with labor untiring, with faith unterrified; and above all things to love truth, honor and service?"

Chancellor Clark answered, "In this great presence, with a sober sense of my own insufficiency, I take this office and this oath; and with heart, mind and strength, I give myself to this high and holy task. As best I can I will be Chancellor for the American University—God help me—so I will."

Presentation of the keys and charter by Mr. Letts, President of the Board of Trustees.

Investment with the Hood of the University by Dr. Albert Osborn, who has served with every Chancellor the American University has had.

Bishop McDowell then added:

"The Lord bless you and keep you,
The Lord make His face to shine upon you,
And be gracious unto you;
The Lord lift up His countenance upon you
And give you peace. Amen."

GREETINGS FROM THE PRESIDENT OF THE UNITED STATES.

Read by Dr. Charles W. Baldwin, Secretary of the Board of Trustees

THE WHITE HOUSE,
WASHINGTON.

December 15, 1922.

DEAR SIRS:

I sincerely regret that pressure of other duties makes it impossible for me to share with you the public installation of the Reverend Dr. Lucius C. Clark, as the Chancellor of the American University. As a member of the Board of Trustees, I send my most cordial greetings and best wishes to you and to him on this day of the formal beginning of his administration which I hope will be long and useful in the highest degree.

The plans and purposes of the American University have a very profound meaning for the nation itself and for the world at large. It seems to me very significant that we should have this institution here at the Capital, proposing under expert guidance to utilize the vast and highly valuable educational resources and materials available in our libraries, museums and archives; and especially to take advantage of the presence here of scholars distinguished in every department of advanced learning. The United States though one of the younger nations is, by the blessing of God, rich in all the materials that make for educational strength and progress. We shall certainly be false to our highest duty, to the world in which we live, and to the times through which we are passing if with our possessions we fail for any reason to make our largest possible contribution to the higher life of the world.

Please be assured of my most cordial greetings to the retiring Chancellor, to the incoming Chancellor, to the trustees and all others gathered on the occasion of the inauguration.

Sincerely yours,

Signed: WARREN G. HARDING.

Trustees of the American University,
Washington, D. C.

INAUGURAL ADDRESS.

By Chancellor Lucius Charles Clark.

MR. PRESIDENT, HONORED GUESTS AND FRIENDS OF THE AMERICAN UNIVERSITY:

I have been able to discover but one theme for this occasion. That theme is

THE AMERICAN UNIVERSITY.

The American University is the product of a Prophet's vision. It is the dream of the Christian seer. It is the intellectual aspiration of a great church. It is an attempted climax of Protestant scholastic attainment. It has been an altar for the prayers and gifts of a multitude. It is pledged to the best intellectual effort in behalf of piety and patriotism this nation can make. It is a contributor to the world's good.

IDEALS, MEN AND MONEY.

The blue print of a yesterday will not fully answer for the constructing process of our today. Whatever were the apparent difficulties under which the fathers worked, they left no barriers builded against the day of our toil. We have limitations, but not of their doing. They sought and obtained a charter which granted them and us power to "confer diplomas and the usual college and university degrees and honorary degrees." They had the unlimited sweep of vision that was to permit us to do anything that could be done by any university on earth when men and money are available for the task.

They saw and advocated an educational institution that was to be builded at the Nation's Capital to do special graduate and research work. This appealed to them as the unique field we first should enter. They never fixed upon their successors the necessity of doing this kind of work and nothing more. It is apparent in any study of our problem that the first task and constant effort of The American University should be in graduate and research work. It is at present her only and exclusive task.

There is an unquestioned opportunity and responsibility upon The American University for undergraduate work. Because of lack of funds and accommodations the schools of the land are inadequate for the youth of the land. Entrance classes are limited. We have a responsibility to those overburdened. The local obligation will not give way by recognizing some of the fine advantages our Washington youth now have. The younger boys and girls of college years and attainment are entitled to an unhampered college course. They should reap the large advantage of college spirit and fraternal benefit that was yours and mine. Part-time students and disarranged hours and the enforced mingling of youth and years will never bring about a college life that many of the young men and maidens most desire and need. When a dormitory is at our disposal upon our great University campus

that will accommodate one hundred students, I would dare to say we could open a school of highest grade for a limited number of undergraduates.

We are now a graduate school, the only exclusive graduate school in this country. We give only the higher degrees. In this field there is offered to a university or to a student no larger opportunity than the city of Washington offers.

Bishop Cranston expressed the ideal of the University in these words: "To create here at the National Capital a commanding center of advanced teaching which shall be at once reverently Christian and fearlessly progressive." The American University stands for the highest type of scholarship. She does not undertake to shield any student from any theory of life. She will undertake to say that the investigation made will be with men who will build no barriers to faith. She will endeavor to lead every student to find the real Christian interpretation for the problems of life.

Our fathers did their task well. They sought to build a material plant where the work could be done and collect sufficient endowment with which to meet the demands of a teaching force. Thomas Carlyle, in his inaugural address as Rector of Edinburgh University, made an earnest plea for endowments. We are in an honored line when doing such service. We plead for endowments. It is our hope as well as that of every other college and university of the land. Every professorship endowed means a new field entered.

As fast as means are obtainable and the men can be discovered or developed we want to bring together a teaching force worthy of our place in the Capital of this country. In this theory six men may mean more than six hundred. We are most interested in the product of the instructor and the instructor. Bishop Nicholson put into a paragraph the illustration of what is meant. "What were the Academy without Plato? What were Alexandria without Origen, or what Rugby without Arnold? For fifty-five years Richard Busby taught at Westminster, but in that time Westminster turned out Dryden, Cowley and Prior among the poets; Atterbury and South among the theologians; Sir Christopher Wren, the builder of St. Paul's Cathedral; John Locke, the philosopher; generals and statesmen beyond naming." We want a group of men unhampered who can give an undivided service of teaching. We who are called to administration and business and politics must give these educational servants their fullest chance.

WASHINGTON—A UNIVERSITY CENTER.

There is nothing new in the chancellor of a university trying to put in order an outline of idealized educational effort. We assume that this is much easier in the beginning of an administration than in the struggle of attainment. John Henry Newman, as Rector of the Catholic University in Dublin, applied his brilliant mind to the study of the needs of a university. He put in fine phrases this study under the topic, "The Idea of a University." His description would make us think he was dreaming of the ideal situation in which The American University is placed. The greatest possibilities he desired are surrounding us on every side.

Enclose the city of Washington and you have gathered in one place the most complete material equipment for a university that can be found in the world. Add to this the remarkable group of scholars, scientists and specialists centered here and you have a suggestion of the advantages of a university in the nation's Capital.

Poverty has always circumscribed the scholar and the school. It may have stabilized them both. The insistence for endowment funds in educational institutions has been so great that there has been left only the occasional unbroken noble campus in the world. The University in Paris parted with its vast domain and has had to live a cramped life ever since. World universities have always tried to have space enough for men to live and move and have their being without forever falling in each other's way. The great universities of the world are usually located in the great cities. Ninety-two acres on the very crest line of this Capital city of ours is the inheritance of those interested today in The American

University. Our danger point is in a possible division that would make for probable dividends. No man has vision clear enough to say how great will be the need in years to come of all the land we now possess.

An American university should be so located as to give students some chance of self-support. Students cannot live upon poetry or thrive even upon the best philosophy. The student having abundant resources wholly furnished by another has never in this land done most for the public good. It is the man who wants a chance to live and work and study who will yield largest results upon that invested in him. It has been suggested that a rotation of government employes to give the advantage of Washington and her institutions would be a good expression of our democracy. There may be nothing to recommend this suggestion, but it is self-evident that those who serve the Government have an advantage that is unequalled elsewhere in all the land. The American University undertakes to do her full part in giving these sons and daughters of the Americans, and of the whole world, her best services for their common good.

President Daniel Coit Gilman of Johns Hopkins writes interestingly of "The Launching of a University." It is a vastly different thing to launch a university on the crest of a few millions of dollars than it is to launch a university upon the good wishes and hopes and tears of even many people. Our American University craft was of such Leviathan aspiration that for twenty-five years she never ventured out on the intellectual sea of life. We are only a few years set to going and no man yet is sure of the better course to take. For thirty years and more the wisest men of church and state have sat in council devising the best way to found here in Washington the greatest university. Many of the visions builded into the castles of fancy for this City of Letters have already been destroyed. The wonder will forever remain of the faith and perseverance of these men and women who for a quarter of a century gave themselves to this enterprise before a door was opened or a professor chosen or a student accepted.

INTELLIGENT NATIONALISM AND INTERNATIONALISM.

The university will last as long as the nation. The influence of some universities lives, though the nation in which they were born has long been dead. The history and life of our University, with others, will be the balancing influence to the movements of parties and the changes in political progress. The saving power of the world is not in the masses, though the masses must be saved. True leadership is the only hope of real democracy. You will not arrive at truth by simply taking a ballot. The hope of democratic institutions, both in church and state, is in the men and women who have learned to think straight, with a moral pathway over which to go, and a spiritual passion to drive them on. You can paralyze the hand of anarchy with a clear head and a pure heart.

This Government has done her part in furnishing a ground-work for education. This is especially true as it applies to Washington. Professor Balfour declared "there is no city in the world where scientific study can be pursued to so great advantage as in Washington." By act of legislation students are given free use of all the Government has in educational advantages. In this the nation has done well. These advantages are open to men of high or low degree, the rich or the poor, and to those of every faith.

To articulate these advantages freely offered by governmental act and hold them to ideals untrammelled by political change or unmolested by competitive ambitions is the task of the men of the schools. They must be men who are dedicated to truth for truth's sake.

"The true university is a collection of books," said Carlyle. A survey of any school takes its library into account. The American University has a fine library in its own name. Its library and that of every other educational institution of the land becomes insignificant when placed beside our Library of Congress, named as one of the three greatest libraries in the world, visited

by one million persons every year. "Every branch of human knowledge has a literary deposit in Washington." Every theme, from music to mammals, finds here its best expression. Music in the greatest musical library the world possesses and mammals in the finest of museums.

American university life—in fact, the life of the world—is destined to center here. Washington is the acknowledged political capital of the world. It is for us to make it the educational capital of the world. What sort of direction shall it have? We have read of "soggy headed professors sitting on high stools trying to work out abstruse problems with no heart behind their work and with no enthusiasm steaming through." An American university must be true to life as our people live it. Pedantic scholarship is not the American type. We will have no Hegal say that "Learning is the knowledge of things which have no value except that others don't know them." The intellectually brutal must find for himself another arena. Scholarship with us must have in it the fine quality of sympathy. The men called to work on the intellectual fabric embracing the American ideal are those who work in the reality of experience. These research students of ours may bring dissertations of theme and character the most of us do not understand, but their efforts must be for the common good. Of necessity the returns upon the university product in graduate work is a democratic denomination. If it is any good at all, it must be for the good of all. It is not for the glory of the few. The real American university must be a contributor to the common welfare of all. Her workers are all builders.

I will not particularize, but would suggest by way of illustration our educational program for the present. We specialize in those subjects that are best offered in our surrounding advantages.

The American University attempts to prepare men for a better service to their country. Many of the nations of the earth have a trained diplomatic and consular service. We admit the pre-eminent natural qualifications of Americans, but we are bound to say that political parties who through Presidents make possible our foreign program will find it easier if there is a group of men who have had training in the schools of foreign service. There is no other place in the land where the schools can furnish this training as they can in Washington. The attempt has only been made in recent years, and the schools offering such courses are the Foreign Service School of Georgetown University and the School of Diplomacy and Jurisprudence of The American University.

World trade, world tariffs and world traffic may never be settled by the schoolmen, but the American youth who will dictate all vital and essential lines for our future has a right to the fullest instruction and the best opportunity for study and research that can be given him. Industrial turmoils at home and abroad will never be settled by any chance happening. No problem is settled until it is settled right. Here is an open field for student and specialist. Where are our educational facilities for training in trade expansion? Business is the practical world ruler. Other nations help and protect their merchants in foreign markets. The flag must follow the salesman as well as the soldier. The American University in its School of Business Administration has an ideal larger than the phrase would indicate. Our dream is of the day when her scholars and teachers shall make a real contribution to national and international commercial relations.

THE INTELLECTUAL REBIRTH OF PROTESTANTISM.

Protestant Christianity is no longer spending her energies in protest, but is marshalling her forces for conquest. There is a new spirit for the new day. The universities are helping interpret this spirit in terms of service.

The Liberal Arts will ever remain the fountain from which our individual and national ideals will flow. The nation must not be permitted to lose its soul trying to save its body. The nation cannot live by bread alone. Her ideals are greater than her self-interests.

Religion has never had an easy road over which to

drive her merchandise of good and mercy. The Bible tells of a fool-proof road which is cast up into a high-way, but also knowingly intimates that it is no crowded path. If there is one thing needed in church and state, it is for folks who can think straight. A man is what his philosophy makes him. What he does is determined by his philosophical position. An institution is determined by its philosophy. The philosophy expounded at The American University makes evident the reality of the spiritual world. As a Christian institution, this should be its supreme work. Philosophy is materialistic and mechanical, or spiritual and purposive. Our teaching is spiritual and personal. Personal intelligence as the source and sustainer of all things underlies the instruction in every department given at The American University.

The psychology of today has distanced that of twenty years ago. Racial psychology and the experimental psychology in which The American University is specializing were unknown to those studying twenty years ago. Where is there a more vital theme for the men in church and state? Every diplomat, every foreign representative, every missionary, every world trader would be greatly benefited in the study of racial psychology that will help him understand the life of the other man and the other nation. Mr. H. G. Wells says, "I am convinced that there is no more evil thing in the present world than race prejudice—it is the worst thing in life." We are permitting race prejudice, personal privilege, national antagonism, selfishness to regulate our acts between men and races and classes and workers when we should seek to know, regard, and sympathize with the other man or nation. This helpful attitude is not born of ignorance, but of intelligence. I heard our honored President say to a small group of callers, "In good will we seek the tranquility of the world." True intelligence stands for this idealism.

"In nature there's no blemish but the mind.

None can be called deformed, but the unkind."

The fabric of our national character is being woven in the institutions that are about us. Yonder is the Capitol, the depository of the people's judgment. Guarding the Capitol is the Cathedral, the repository of the people's faith and hope. Backing these and surrounding both is the University, the creator of the people's leadership and the inspiration of the people's thought. These three institutions occupying hilltops of our surrounding grandeur, are the guardians of the state. They make possible a Washington and a Lincoln monument and the field of Arlington that lies near by. Highest intellectuality must mean highest interest in and inspiration for humanity.

Bishop McDowell speaks our conviction when he said, "The youth of the universities and colleges, the men and women who have studied in America and Britain, are the youth who are the makers of tomorrow and can make China and Japan and India Christian. Nobody else will do it." In the world field The American University can make quick returns. Her students have come from more than one hundred and fifty colleges and universities of our own land and these have mingled with students of twelve universities of foreign lands. Her students are now in places of trust in foreign fields. The sort of science and scholarship that turns into social service for mankind is that upon which we depend. A consecrated devotion plus a community duty is the least we can permit. We can well take our place with Mahomet and declare, "I abhor the learned in his infidelities and the fool in his devotions."

The Pope in Rome has been giving special watch care from the beginning to "The Catholic University of America," located in Washington. Four Bishops of the Methodist Episcopal Church have given some of their best years with their experience and efforts to the founding of The American University. The General Conference of the Methodist Episcopal Church has repeatedly taken favorable action on The American University. This Conference declared in 1892 that, "It is the imperative duty of the Protestant Church to provide in the city of Washington a university, Christian, catholic, tolerant and American." Great men in the world's affairs

have officially associated themselves with the promotion of The American University. Our great Presidents, McKinley, Roosevelt and Harding, during their terms of office have been members of the Board of Trustees of The American University. There are members of the present Board of Trustees who have given a loyal service to the institution from its beginning until now. These Trustees consider no task too difficult, or requirements of time and money too great for them to assume. All these are backed by an expectant church and a hopeful Protestantism.

There comes to me now the high privilege of an association with such as these in the task most thrilling. If there are grave responsibilities, I hope to match them with a devotion to duty. If there are seeming great obstacles I would like to discover the greater opportunity. If here is a way we can honor our Lord in an added emphasis in Christian education I would like to seek it in His way. If this suggests the task to which you have called me, then I come to declare that all I am and have are cheerfully pledged to you and to the church general and to the great Head of the Church, our Eternal Teacher and our Lord.

PRAYER OF BLESSING AND BENEDICTION.

Bishop John William Hamilton, Chancellor Emeritus.

Our Father in Heaven, we beseech Thee to hear us as we continue to worship. We are not only constrained by our inclinations, but are moved by our responsibilities to come here. We desire to know and reverence truth, that we may vindicate the dignity and yearning of our spirits. We purpose and plan to know that only from us others may know.

To this end we pray Thee, give to the new Chancellor inspiration, initiative, courage, wisdom, strength for his great task. Gather about him every possible assistance from trustees, teachers, students, patrons, and friends, to make of the University a great and growing honor to every school of the country.

Direct us now, O Lord, by Thy most gracious favor in all our doings; and further us by Thy continual help, that in all our works begun, continued and ended in Thee, we may glorify Thy name, and finally, by Thy mercy, obtain everlasting life, through Jesus Christ, Our Lord.

And now may the peace of God that passeth all understanding keep our hearts and minds in the knowledge and love of the truth and the peace of God; and may the blessing of God Almighty, the Father, the Son, and the Holy Spirit, be among us, and remain with us always! Amen.

MRS. GUSTAVUS FRANKLIN SWIFT.

Mrs. Gustavus Franklin Swift began life at North Eastham, Massachusetts, on August 13, 1843. Her grandfather was a sea captain and her father was a merchant in the town.

She was married when eighteen years of age to Gustavus Franklin Swift. Their noble family of children rise up to bless their memory.

Mr. and Mrs. Swift were alike in their devotion to the Methodist Episcopal Church. They were wise and thoughtful in service and were strong supporters of the church by their gifts and by their regular attendance upon the services. For a number of years, they were intensely interested in St. James Methodist Episcopal Church to which church they gave themselves with ardent devotion.

During the nineteen years of widowhood, Mrs. Swift continued her generous and joyous service of beneficence. Local

MRS. GUSTAVUS FRANKLIN SWIFT.

institutions and numerous world-wide interests received her attention. The life she lived was one of beauty, nobility and grandeur. She was a true Christian and loved every work of the church and every cause of her Christ.

ANNUAL TRUSTEE MEETING.

The Trustees met in the new office of the Chancellor, at 1901 F Street N. W., at the downtown center of the University. The Treasurer, W. S. Corby, made an exhaustive report of the financial affairs of the University. Bequests reported since the June meeting were those of Mrs. Gustavus Franklin Swift for \$25,000; Dr. Bartlett L. Paine, first distribution of \$6,832; David H. Carroll Estate, \$8,833.

The Chancellor, Lucius C. Clark, made his first report and considered largely the educational program for the University. The various recommendations, including the educational policy, were approved as made by the Chancellor.

Mr. Melvin E. Church, of Falls Church, Va., one of the outstanding Methodist laymen, was elected as a member of the Board of Trustees.

The officers elected for the year were:

President, John C. Letts.

First Vice-President, William S. Pilling.

Second Vice-President, William Knowles Cooper.

Treasurer, William S. Corby.

Recording Secretary, Charles W. Baldwin.

Assistant Secretary, Albert Osborn.

INAUGURAL BANQUET

Three hundred guests and friends of the University gathered at Rauscher's on the evening of December 15th, for the banquet in honor of the new Chancellor of the American University.

Mr. Edward F. Coladay, a leading attorney of the City of Washington, and a member of the Board of Trustees, was the presiding officer. Mrs. Flora McGill Keefer sang beautifully a number of solos.

Dr. George F. Zook, specialist in higher education of the United States Bureau of Education, gave a most illuminating address with special application to the ideals and efforts of the American University.

Bishop Francis J. McCormell probably was never more brilliant in public address than upon this occasion. The large group of educators present seemed to draw out the very best in him.

The Chancellor in his response made the observation that a university could not be maintained by a Board of Trustees or administrative head. A university is dependent upon its force of instructors. The Chancellor then took occasion to introduce the instructors of the university in the following words:

"Frank W. Collier, our 'Ancient of Days.' The first instructor in the American University, now Director of Research and Dean of the Schools of Arts, Science and Religion.

"Albert H. Putney, Dean of the School of Diplomacy and Jurisprudence. An author, teacher and former Dean of Illinois College of Law.

"Frederick Juchhoff, Dean of the School of Business Administration. Former instructor in Berea College and William and Mary College.

"C. Elery Stowell, graduate of the University of Paris, author and Professor of International Law.

"William Moulton Marston, Professor in Experimental and Legal Psychology. Dr. Marston is the inventor of the 'Lie Detector.'

"George S. Duncan, Assyriologist and Egyptologist. Professor of Oriental literature.

"Mitchell Carroll, Archeologist.

"Charles W. Needham, Former President of George Washington University. An authority on Interstate Commerce Law. Professor of Comparative Constitutional Law and Interstate Commerce Law.

"W. H. S. Stevens, formerly professor of Economics in Tulane and Columbia Universities. Instructor in Business finance.

"W. R. Manning, formerly professor in University of Texas. Regional economist in State Department. Instructor in courses in Latin American Relations.

"Curtis Fletcher Marbut, former instructor in the University of Missouri. Counselling professor in geology.

"Harry Church Oberholzer, world authority on birds.

"Arthur Parker Hitehens, as editor, he gives the English speaking world the latest information in bacteriology.

"Oswald Schreiner, formerly instructor in the University of Wisconsin. International reputation as a scientist. Member of our Board of Award, and counselling professor in chemistry.

"Blaine F. Moore, general economist for the Chamber of Commerce of the United States. Instructor in political science.

"Gilbert O. Nations, editor of 'The Protestant' Magazine. Instructor in Canon and Roman Law.

"Ales Hrdlicka, the leading physical anthropologist in the world. Gives courses in anthropology.

"Knut E. Carlson, formerly of the University of Nebraska. Gives courses in Trade with Europe.

"G. A. Stevens, formerly professor in the University of Nebraska. Gives courses in Insurance.

"Edwin Fowler Puller, lawyer, author, lectures on Citizenship.

"Raymond F. Crist, of the Naturalization Bureau of the United States. Lectures on Immigration and Naturalization.

"Frederick E. Lee, lectures on Trade with the Orient.

"Francis S. Key-Smith, lawyer, lecturer on Departmental Practice.

"Roger W. Cooley, lawyer, author, professor of law.

"Walton C. John, specialist in technical education.

"Paul Kaufman, president of the Yale Alumni Association of Washington. Exchange professor in France. Instructor in literature.

"Charles C. Tansill, author, internationally known as an expert research historian."

WARREN GAMALIEL HARDING
TRUSTEE OF THE AMERICAN UNIVERSITY, 1921-1923

WARREN GAMALIEL HARDING*Trustee of the American University.*

Greeting sent by President Harding to the Trustees of the American University at the Inauguration of Dr. Lucius Charles Clark, as Chancellor of the University.

"As a member of the Board of Trustees, I send my most cordial greetings and best wishes to you and to him on this day of the formal beginning of his administration which I hope will be long and useful in the highest degree.

"The plans and purposes of the American University have a very profound meaning for the nation itself and for the world at large. It seems to me very significant that we should have this institution at the Capital, proposing under expert guidance to utilize the vast and highly valuable educational resources and materials available in our libraries, museums and archives; and especially to take advantage of the presence here of scholars distinguished in every department of advanced learnings."

INTONING LIBERTY'S LAMENT.

ALBERT OSBORN.

California's Golden Gate ofttimes hath swam—
An entrance or an exit to great souls.

Lo! now its flags half-masted stand, while tolls
Vibrating through the world the radio tongue
Intoning Liberty's lament, grief-wrung.

Not to the White House, highest of earth's goals,
Comes back good Warren Harding, on the rolls
Of famous friends of man 'er to be sung.
On angel escorts now he looks with joy.

Lining the path to Heaven's Golden Gate,
In little Plymouth on Green Mountain slopes,
Dauntless and strong, a judge without alloy
Grasps with firm hands the straining helm of state.
Eternal Lord, fulfill a nation's hopes.

GORDON BATTELLE.

After the copy of the COURIER was in type, word was received in Washington of the death of Mr. Gordon Battelle of Columbus, Ohio.

Mr. Battelle was one of the youngest trustees of the American University. He was elected about four years ago and has shown great interest in the University. At the time of printing this issue of the COURIER, there is not sufficient information in hand to write a proper recognition of Mr. Battelle. The next issue of the COURIER will contain a more extended account of this great friend of the American University.

The Washington papers carried on September 29th, the following Associated Press Dispatch from Columbus, Ohio: "Creation of a Memorial in his honor at the American University at Washington, D. C., is provided in the will of the late Gordon Battelle, local steel man, probated today. One hundred thousand of the estate, valued at \$1,500,000 is set aside for the memorial."

THE AMERICAN UNIVERSITY CONVOCATION.

The Ninth Convocation of the American University was held in the Grove Amphitheater on May 29th, at two o'clock.

LUCIUS CHARLES CLARK, Chancellor, Presiding.

CHIEF MARSHALLDR. CLARENCE TRUE WILSON

Chief Marshal's Aids.**REPRESENTING THE CHURCHES:**

Rev. Joseph T. Herson, D. D., Hamline Methodist Episcopal Church.

Rev. Harry Evaul, Iowa Avenue Methodist Episcopal Church.

CONFERRING OF DEGREES:**Master of Commercial Science.**

Benjamin Edwin Buente, A. B., LL. B. Thesis: Methods used in Financing Building Projects in the District of Columbia.

Master of Business Administration.

Forrest Dwight Stout, A. B. Thesis: Concession Policy of Russia.

George Charles Williams, M. C. S. Thesis: Accounting and Administrative Problems Peculiar to the Mining Industry.

Master of Laws in Citizenship.

Henry Bernard Hazard, LL. B. Thesis: The Philosophical and Educational Backgrounds of Germany's Pre-War Nationalism.

Master of Laws in Diplomacy.

Charlie Campbell McCall, LL. B., LL. M. Thesis: The Administration of Military Justice in the Army of the United States.

Master of Arts in Diplomacy.

Hirsch Lech Gordon, Ph. D. Thesis: International Treaties of the Fifth Millennium, B. C.

Francis Marion Van Natter, A. B. Thesis: The Diplomatic Relations which Led up to the Annexation of the Hawaiian Islands by the United States.

Master of Science in Public Health.

James Almer Tobey, B. S., LL. B. Thesis: A Review of State Laws on Tuberculosis.

Master of Science.

Cyrus Bcynton Wood, B. S., M. D. Thesis: The Availability of Catechol Sulphophthalein as a Polychrom Indicator.

Master of Arts.

Willis Power Baker, M. D. Thesis: A Practical Method for the Chlorination of Water at Bathing Beaches.

James Alexander Bell, A. B. Thesis: A Survey of the Young Men's Christian Association Collegiate Work of the United States and Canada.

Frederick Leslie Benton, B. S., M. D. Thesis: The Last Resting Place of Christopher Columbus.

James Fitton Couch, A. B. Thesis: A Contribution to the Chemistry of the Lupines, *Lupinus Spathulatus* (Rybd.) and a new Alkaloid Isolated from it, named Spathulatine.

Doctor of Civil Law.

- Paul Emery Hall, LL. M. Thesis: The Law of Trade Association.
- Samuel Theodore Holmgren, A. B., LL. M. Thesis: The Commercial Power of Municipalities.
- Edward Funston New, LL. M. Thesis: A Study of Crucial Indicators and Statistical Calculi for Judgment Values in the use of the Marston Deception Test in Court Cases.
- Margaret Mary Stewart, LL. M. Thesis: The Legal Aspects of Fecklessness with Illustrative Cases.
- Lester Wood, LL. M. Thesis: The Recent Development of the Use of the Injunction in Labor Disputes.

Doctor of Juristic Science.

- Ollie Roscoe McGuire, A. M., LL. B. Thesis: Legal History of the Government of New Orleans.
- Michael Angelo Musman, A. M., LL. B. Thesis: The Proposed Amendments to the Constitution of the United States from 1889 to 1921.

Doctor of Philosophy.

- Thomas Fitzgerald Carroll, A. M. Thesis: Freedom of Speech and the Press in the Critical Periods of American History.
- Isaac Witman Huntzberger, A. M. Thesis: Survey of the Schools of Lebanon County, Pennsylvania, with Special Reference to the Establishment of Community Schools on a Basis of Twelve Square Miles as a Unit.
- Raymond Alexander Kelsler, A. M., D. V. M. Thesis: A Study of Rabies from the Standpoint of Etiology and Diagnosis.
- Stuart Lewis, A. M., LL. M., D. C. L. Thesis: Corrupt Practices in British Parliamentary and American Congressional Elections.
- Wilbert Walter Weir, M. S. Thesis: A Study of the Relations of Soil Profile, Structure, Texture and Chemical Composition to Productivity.

Awards of Fellowships 1923-24.**Swift Foundation**

- John Vincent Madison, A. B., B. D., to study at University of Chicago.

Massey Foundation.

- John Burns Martin, A. B., to study at Harvard University.
- James Ernest Ainsworth Johnstone, A. B., to study at Oxford University, England.

The American University Fellowships.

- Robert Moulton Gatke, A. B., A. M., B. D., to study at the American University.
- Ryea Sik Kim, A. B., A. M., to study at the American University.
- "STAR-SPANGLED BANNER".....United States Army Band
BENEDICTION: Dr. J. Martin Gilman.

"CAN WESTERN CIVILIZATION BE SALVAGED?"

ABSTRACT OF ADDRESS GIVEN AT THE NINTH CONVENTION BY
GLENN FRANK.

The next twenty-five years will be challenging years to the man who has any sense of intellectual and spiritual adventure, for they will mark a turning-point in human history. Will they be the beginning of another Dark Ages or the spring-time of a new Renaissance? The politics and the religion of the future are alike involved in this question.

For more than the lifetime of most of us the chill winds of materialism have been blowing across Western civilization. Its spiritual fires have been banked, if not burned out. Unscientific observers have tried to keep warm under the cloak of their uncritical optimism, meeting all doubt with their

will to believe in the myth of automatic progress. More scientific, but equally unimaginative, onlookers have turned unqualified prophets of doom, merely hoping against hope that the relative security and comfort of the present order will last their lifetime. Outside these circles of incurable hope and inveterate despair men have resigned themselves to such bleak satisfactions as they can find in what seems to them at best an uncertain future.

Of these last George Santayana is a good example. In his "Character and Opinion in the United States" he ventures the prophecy that civilization is perhaps entering one of those long winters that overtake it from time to time, that a flood of barbarism from below may soon level all the fair works of our ancestors, as another flood two thousand years ago leveled those of the ancients. But even such a bleak future is, for him, touched with light. "Such a catastrophe," he bravely asserts, "would be no reason for despair. . . . Under the deluge, and watered by it, seeds of all sorts would survive against the time to come."

Every honest student of contemporary affairs appreciates the fear if he cannot agree with the prophecy of Mr. Santayana. The civilization that preceded and precipitated the war was at best a thinly veneered barbarism that was slowly consuming the life of the race in the poverties of peace no less than in the perils of war. Pagan ideals of power and pleasure had spread their nets anew for the capture of our souls. Power was the goal of the state; pleasure was the goal of the people. Political life had become paganized by its passion for power at any price; business life had become paganized by its scramble for profits at any price; and social life had become paganized by its devotion to pleasure at any price. In this reluctant indictment little, if any, discrimination can be made between allied, enemy, and neutral peoples. We were all guilty of the sin of surrender to pagan ideals. We practised paganism while we professed Christianity. All of Western civilization was thus a sort of corporate hypocrisy. And this meant that it had no inner peace. For a generation before the war it stirred uneasily in its dreams, and pricked by an accusing conscience, it shivered with a sense of impending disaster.

The verdict of history will be that Germany caused the war, but for a deeper reason than propagandists or politicians have yet guessed. As Charles A. Ellwood, in his highly significant book on "The Reconstruction of Religion," points out, the pagan program of self-interest, material satisfaction, and brute force was dominating all Western civilization before the war. This program simply came to a head in Germany first. Germany caused the war because Germany led in repaganizing the world. Germany caused the war not because she alone had sinned, but because she sinned more perfectly than the rest of us. The basic paganism of politics, of business, and of social life that the rest of the world denounced and practised, Germany openly adopted as her creed and practised. Germany was the Samsun that pulled down the pillars of the temple, but the temple was rotten. Not in the cheap sense of war-time hysteria, but in a very real sense, Germany was the antichrist, the perfect embodiment of the pagan and anti-christian ideals that were leading all of Western civilization straight to destruction. All this is said in no sense of apology for Germany but only that we may see ourselves more clearly and repent while it is yet time.

The war brought a brief armistice between the new paganism and the old spirituality that had been battling for control of Western civilization. Every country, of course, had its profiteering and patrioteering traitors, but for the mass of common men and women politics became for a season the supreme spiritual adventure of the race. It was everywhere predicted that the most ruthless war of history would result

in the spiritual regeneration of Western civilization. But this colossal paradox was not to come true. After Versailles the search for the Holy Grail of a new world degenerated into a sordid struggle for existence, with little thought of the quality of that existence.

And so men are again speculating upon the possible breakdown of the Western civilization. Dean Inge closes an essay by saying, "I have, I suppose, made it clear that I do not consider myself specially fortunate in having been born in 1860, and that I look forward with great anxiety to the journey through life which my children will have to make." About a year ago a group of distinguished leaders of religions thought in England issued a statement the burden of which was: "No lover of mankind or of progress, no student of religion, of morals, or of economics, can regard the present trend of affairs without feeling of great anxiety. Civilization itself seems to be on the wane. . . . Never was greater need of all those qualities which make the race human, and never did they appear to be less manifest. . . . It is becoming increasingly evident that the world has taken a wrong turn, which, if persisted in, may lead to the destruction of civilization." There is a whole literature of despair from which I could quote.

Now, nothing can prevent Western civilization from entering the long winter of Mr. Santayana's prophecy except a vast spiritual renaissance, a vast process of moral renewal sweeping through the world like another Reformation. Only it must be a more fundamental reformation. Personally, I believe that we are in the morning hours of such a renaissance. I believe that the raw materials for such a renaissance are lying all about us, waiting only for some truly great spiritual leader to bring them together and to touch them into life.

Let me make clear what are *not* the grounds of this hope. I am not reviving the exploded notion that the war stimulated in the soldiers a spirituality that will be the basis of a religious revival. I do not believe that war ever ministers to spirituality. Much of the apparent spirituality of men under fire is a mere scurrying to cover under the lash of fear, an attempt, as H. G. Wells phrased it, "to use God as a gas mask." The spiritual renaissance that will redeem Western civilization will not spring from war-stimulated emotions.

I am not resting my faith upon the new mysticism that has swept the world in the wake of the war. I do not believe that the new popularity of mediums and all the current hammering at the gates of the other world have any basically spiritual significance for our time. Sir Arthur Conan Doyle is our guest as I write. Sir Oliver Lodge was with us a while ago. They bring us what they regard as indisputable proof of contact with the other world. Our printing-presses pour out a stream of spiritual literature. Never was there such wide interests in spiritualism. All this is only natural when a great war has left empty chairs in millions of homes but it has nothing to do with the spiritual and moral renewal of which I am writing.

In fact, this next great revival of religion will not be a religious revival in the accepted sense of that term. Many of its most striking episodes will not occur in the carpeted aisles of cathedrals or in the sawdust aisles of evangelistic sheds, but in laboratories, in school-rooms, in factories, and at political headquarters. I do not mean to suggest that the church will play no part in this spiritual renaissance. The church should furnish the leadership for this adventure in the depaganizing of Western civilization; but before the church can do this, it must have the vision and the courage to substitute the religion of Jesus for the Christianity that has for long taken its place.

When the church has scrapped its ancient vocabulary and begun to talk to the men of this generation in figures of speech they understand; when a ceaseless search for truth has

supplanted dogmatism; when the church spends more thought upon its service than upon its services; when denominationalism has been recognized as the twin brother of the nationalism that has plunged the world into its periodic wars; when the church has undertaken the redemption of institutions with as sincere conviction as it has brought to the redemption of persons; when the church adds to its preaching of abstract virtues a continuous moral analysis of modern social, political, and industrial life in order that men may know the new and subtle ways that ancient sins may be committed; when, in short, the church becomes its severest critic and takes the whole of modern life for its field, it will be on the way toward effective leadership in the depaganizing of Western civilization.

The renaissance of which I speak, however, will not be essentially a church movement. Its prophets will not thrill the world with any new doctrine. Their service will consist rather of the bringing together in a new synthesis the new idealisms that have been springing up as a by-product of the "secular" thought and investigation of creative-minded scientists, educators, industrialists, and statesmen. This spiritual renaissance will not mean the imposition of an alien idealism upon the secular activities of mankind, but will consist rather of what, for want of a better phrase, I shall call the recovery of the lost spirituality of public affairs.

The John Wesley of this moral renewal, perhaps, will not appear in surplice or gown. The man who lights the fires of this renaissance may be a statesman. When the partizanship of our time—sorry product of small minds—has had time to die, some man may arise who will lead the world past the bogies of covenants, entangling alliances, and sovereignties into a creative internationalism that will be the rallying-point not only for the political, but for the social and spiritual, hopes of mankind. The leader may be an educator who will transform the sterilities of scholarship into the creative adventure of helping students to make themselves at home in the modern world, of giving them standards of civilized values, of equipping them with hopes as well as with habits. Again, this new reformation may find its Luther in some biologist who will rid eugenics of its barn-yard and stock-farm implications, and put behind it a racial conscience that men will recognize as a logical development from the individual and social consciences that have preceded it.

At any rate, whatever may be the point of departure for this renaissance it will draw its power from two sources—science and religion. As Dean Inge has put it, "The spiritual integration of society which we desire and behold afar off must be illuminated by the dry light of science, and warmed by the rays of idealism, a white light but not cold. And idealism must be compacted as a religion, for it is the function of religion to prevent the fruits of the flowering-times of the spirit from being lost."

During the last three or four years I have been impressed by the extent and cock-sureness of the literature of despair that was being written. Not in the exhaustive sense of a scholarly research, but as a more or less casual attempt to clarify my own thinking, I subjected this literature of despair to analysis. I think it is accurate to say that the prophecy of a new Dark Ages for Western civilization springs from some one or all of five distinct fears. We may for convenience of discussion call these the five fears of Western civilization. Let me state them briefly, without discussion:

First, the *biological* fear. This is the fear that has inspired the thousands of articles, pamphlets, and books which assert that the best blood of the world is turning to water, that mankind is biologically plunging downward. This is the fear, haunting the reading public as well as the writing fraternity, that has given instant and wide popularity to such books as Lothrop Stoddard's "The Rising Tide of Color." We may

expect that this fear will for some time to come inspire writers in whom a sense of scholarship and a nose for news values are united to translate into journalistic patois and relate to the news despatches the philosophy of the Gobineaux and Chamberlains.

Second, the *psychological* fear. This is the fear that the crowd-man and crowd-processes of thinking will push to the wall that saving insurgency of the individual man that has hitherto furnished the world with its creative ideas. This is the fear that has fallen like a shadow across the writings of Lebon, Trotter, and others, and of late inspired Everett Dean Martin to write his "The Behavior of Crowds," an interesting and significant book.

Third, the *economic* fear. The prophecies of economic disaster are so varied that it is difficult to reduce the economic fear to a single definition. Every reader, however, will understand what I mean when I refer to the fear that our industrial civilization is approaching a collapse.

Fourth, the *administrative* fear. This is the fear, effectively stated by Lord Bryce, L. P. Jacks, and many others, that the bigness and complexity of the modern world have outstripped the administrative capacity of mankind. "What's wrong with the world," asserts a recent writer, "is its vastness."

Fifth, the *moral* fear. This is the fear that has given rise to the whole literature about the younger generation. The whole range of topics in this literature, from the rolled stocking of the flapper to the hectic theology of the rationalist, has been discussed in the light of this moral fear—this fear that our generation is witnessing a universal orgy of moral laxity.

Whether it is Dean Inge, H. G. Wells, Edward Grant Conklin, Lothrop Stoddard, Ralph Adams Cram, Madison Grant, or a still wider list of men more scholarly or more sensational whom we are reading, we find some one or all of these fears leering over the shoulder of the writer, making him the prophet of doom that he is. It was inevitable that this extensive literature of despair would stimulate a mood of despair in the minds of large bodies of the reading public.

I do not mean to wave this literature of despair aside. I do not suggest that the Western world can realize a renaissance by the blind avoidance of such books. I do not suggest that the Western world, if it will only stand still, look up, and think beautiful thoughts, can wish itself into a renaissance. I am concerned only to suggest the fact that side by side with this literature of despair there exists an even more significant literature of hope. Unfortunately, the literature of despair has had better advertising. There are, of course, perfectly clear reasons why this is true. A prophecy of doom, however, scholarly its presentation, is a half-brother to the screaming head-line of the yellow newspaper. Pessimism, like politics, makes strange bedfellows. The biologist, the psychologist, the economist, and the moralist, dignified savant though he may be, when he predicts the decline or doom of Western civilization, finds that he shares audience with the ordinary sensation-monger. But there is another and equally fundamental reason why the literature of despair has attracted more attention than the literature of hope. The literature of despair was consciously written and plainly labeled as a literature of despair. That is to say, it is a literature of conclusions. Its authors have made their analyses, and announced their conviction that we are approaching a new Dark Ages.

Our literature of hope, on the other hand, has not been consciously written as a literature of hope. It is not a literature of conclusions; it is a literature of raw materials upon which we may base conclusions. The coming renaissance, as I have said, will result from a bringing together into a new synthesis all of the new idealisms and new spiritual values that have been springing up as unconscious by-products of the creative thought that has been going on in the fields of science, education, industry, politics, and religion. That is, our literature

of hope does not consist of the smiling pronouncements of our *Pollyannas*. It has been produced in the main by men who were, perhaps, not at all animated by the spirit of the prophet or propagandist, but by men whose primary inspiration was merely the itch to know.

It has not been easy for the reading public to ferret out and to recognize this literature of hope. Let me illustrate this difficulty. John Dewey, for example, has been working away at the problems of educational theory and philosophy throughout his fruitful career. Now, it may be that buried away in the numerous papers and books that he has written there are, let us say, two ideas that have in them the germs of the future. I am speaking now purely by way of a hypothetical illustration, not as the result of a thorough analysis of Mr. Dewey's books. Now, if Mr. Dewey's contribution to the creative thought of this generation is represented by these two ideals, then the chapters or paragraphs containing these two ideas represent one section of our literature of hope. We could face the future with a calmer spirit if these isolated chapters and paragraphs were receiving the wide spread attention now accorded to the innumerable prophecies of doom that pour from our presses.

It is needless, I suppose, to suggest that we should apply the statement I have just made respecting Mr. Dewey's work to all the scholars who are doing similar creative thinking in biology, in psychology, in sociology, in economics, in political science, and in other fields of scholarship. As I see it, one of the important duties of our publicists, one of the important responsibilities of journalism, is to play sleuth to the minds of the creative scholars of our time, to disentangle from the mass of their writings the few really creative ideas that they contribute, and to translate these more and more into the language of the man in the street. The men who can do this will be the engineers of the coming renaissance.

It will not do to trust to our creative scholars for this popularization of their own contributions. In the first place, the creative scholar in most cases is not the best judge of what his real contribution is. If he undertakes to propagandize his own ideas, he is likely to dissipate his energies and obscure the main point by spending too much time on a hundred collateral aspects of his ideas—aspects that seem very important to him as a scholar, but which have no practical significance in terms of social application. Then, too, the spirit of propaganda and the spirit of scholarship do not work well in the same mind. Each cuts down the efficiency of the other. There is urgent need for what I may, lacking a better phrase, call the evangelism of scholarship; but the evangelist should be the servant of the scholar. Let the scholar furnish the material, the evangelist the technique of popular appeal. To date good evangelism has been the servant either of the sensational or of the traditional. Creative scholarship has stood too much aloof from the crowd, with the result that the vast literature of hope it has produced is to-day virtually unrecognized save by a few intellectuals. All this sounds, I realize, very theoretical. It is easy enough, the reader may say, to suggest that we might avoid a new Dark Ages by bringing together all the now unrecognized creative ideas that have been thrown up out of our laboratories, classrooms, philosophers' closets, industrial institutions, and political adventures; but the difficulty lies in finding anywhere in the world an effectively popular impulse to search for these ideas and to apply them to the practical undertakings of human society. Here, again, we are suffering on account of the lack of interpretative reporting. For instance, there is at this moment going on in Italy a movement, many-sided, elusive, and difficult to define, but strangely reminiscent of that "new human springtime" that swept over Italy centuries ago, and produced the old Renaissance.

PAUL KAUFMAN, PH.D.
Professor of English Literature

Graduate of Yale with the degrees of B. A. and M. A. Professor Kaufman received his Ph. D. degree at Harvard. He has been instructor in English at Lafayette College and at Yale, acting professor of English Literature at Trinity College (Conn.), and lecturer d'anglais from Harvard at the University of Bordeaux, France. During the war he became acting director of the Department of Communication, National Headquarters, American Red Cross, and afterward was chairman of the committee which formulated the program of instruction in English for the U. S. Army.

He is a member of Phi Beta Kappa, the Association of American University Professors, the Arts Club of Washington; president of the Yale Club of Washington and secretary of the Research Group in the Critical Study of Romanticism of the Modern Language Association of America. He is the author of numerous studies in the learned journals and of articles in literary periodicals.

Dr. Kaufman has just returned from England where he has been investigating Shakespearean problems.

He is the son of Rev. M. S. Kaufman, D. D., Ph. D., Northwestern '74, for thirty-three years a member of the New England Southern Conference, and Mrs. A. L. Kaufman.

AMERICAN METHODISM INTERESTED IN THE AMERICAN UNIVERSITY.

Representatives of the General Boards of Education of the Methodist Episcopal Church, South, and of the Methodist Protestant Church, met in joint session with the Executive Committee of the American University on September 19th. Eighteen men spent the day considering the question of a united effort of Methodism in maintaining and developing the American University.

WASHINGTON AS AN EDUCATIONAL CENTER.

(This article was printed and circulated by prominent men of the Methodist Episcopal Church, South, who are greatly interested in the American University.)

Washington is potentially the most attractive city in the world for students of higher education. It is a center of National and world affairs. It suffers less than other cities from the noise and smoke of commercialism. It is a

city of government and of homes and of national welfare offices. It is the healthiest large city with a white death rate of only 11.64 per thousand population. It is recognized as the most beautiful city in the world. Washington today is the nerve center of civilization, the most influential city of the world. Through the gate of Washington every world leader must pass sooner or later with his influence and message. Scarcely a day fails to see some event transpire there which, if it took place in any other college community, would be regarded as having extraordinary educational interest. The great preachers, educators, musicians, statesmen, authors, actors, lecturers, artists and leaders in business come to Washington. A student there stands at the crossways of humanity where he may see the genius of the world go by. In Washington during the student's college days he gains first-hand knowledge of world affairs by virtue of working in the cosmopolitan atmosphere of national and international thought and this enlarged outlook is an incalculable asset for his whole future career. All this has great educational value.

The educational resources of Washington are almost limitless. There are forty-three embassies of foreign governments, all open to serve students in such subjects as political economy, sociology, history and education. The Public Library has 227,500 volumes and 50,000 mounted pictures. The Library of Congress has over 3,000,000 volumes, 170,000 maps, 919,000 pieces of music, 424,783 photographs, prints and engravings. The Bureau of Standards has a scientific staff of 550 specialists. Graduate students may be admitted on salary to continue their studies for advanced degrees. Work done in the Bureau is accepted by the best universities. Among other facilities for educational work in Washington are: The Pan American Union, the United States Public Health Service, the Bureau of Education, the Department of Labor, the Woman's Bureau, the Children's Bureau, the Smithsonian Institution, the Bureau of American Ethnology, the National Zoological Park, the Bureau of Scientific Literature, the Corcoran Gallery of Art, the Corcoran School of Art (which is free), the National Gallery of Art, the New National Museum, the Carnegie Institution, the offices of fifty-four national patriotic and welfare organizations, the offices of forty-three religious bodies, the offices of twenty-nine scientific societies, and headquarters of twelve reform associations. The free resources afforded by Washington for educational work could not be provided by hundreds of millions of dollars in endowments.

A World University in Washington—Who Shall Build It?

The one place for "a World University" is Washington. Who shall build it? Shall the Government? No; for it must never be hampered by politics. Shall great wealth? No; for it must be kept free from the suspicion of vested commercialism. Shall the world university be built by religious reactionaries or by religious "free-thinkers?" No; for it must be an institution in which any religious person may feel absolutely free to think and work. It certainly must be religious; for, as the Duke of Wellington has said, "education without religion only makes a race of clever devils." Modern education is the product of religion at the hands of many religious martyrs. To build a world university without religion would be a desecration of our sacred inheritance and a crime against posterity. Who, then, shall build the first "world university?"

The experience of centuries has given the Roman Catholic Church the wisdom and prophetic vision to sense the trend

of human affairs for many generations to come. That Church sees clearly that Washington is increasingly to be the strategic center of civilization. Consequently that Church is fortifying itself here in a masterful manner. While there are only about 38,000 white members of the Catholic Church in the District of Columbia, they have twenty-six churches and parochial schools and five institutions of higher education, these five institutions are: The Catholic University of America with its eleven affiliated colleges, the Georgetown University, the Columbus University, Trinity College, and the Catholic Sisters College. In these five institutions there is an investment, including endowments, estimated at over sixteen millions of dollars and a campaign is now under way for five millions of dollars. There are in these five institutions 3,875 students. The Catholics have already gone far toward making Washington their greatest educational center in the world.

The Protestant forces have been slow in grasping the strategic opportunity of Washington as an educational center. There is but one Protestant institution of higher education in the District of Columbia. The Methodist Church has laid the foundations for a great educational enterprise in Washington in the American University with 215 graduate students, but with no college of liberal arts. Its total assets amounts to about \$1,000,000.00.

A Challenge to the Methodist Church.

It appears that a World University in Washington is the opportunity and task providentially assigned to Methodists. Washington is particularly important for Methodists. Washington is a world center. Methodism is a world church. In the Capital of the Nation Methodism is the strongest Protestant denomination, and the best field in which the Methodist bodies of America can make a demonstration of practical cooperation on a large scale. The present lack of Protestant facilities for education in the District with the fact that the Methodist Episcopal Church has already laid a foundation for a great university in Washington, makes an opportunity that calls upon Methodists to take the lead in providing an adequate educational institution in this world center. All Methodists share this responsibility and should join hands in making the American University what it was intended to become, the first "World Protestant University."

Whoever builds the first World Protestant University must accept the solemn responsibility of developing a religious institution and at the same time maintaining it for all time to come religiously free. Who are best qualified to work religiously without religious bigotry? Methodism is probably best qualified, being liberal and at the same time being the largest of all the Protestant bodies in America.

The patronage of such an institution would be limitless. In addition to serving the youth within the bounds of the Baltimore District of each of the Churches outside of Washington, there are in the District of Columbia alone 8,672 students in the white high schools with 1,010 in the senior class. About 82 per cent of these graduates go to college. But owing to the meagre non-Catholic facilities for college work here, it is estimated that at least 75 per cent of these high school candidates for college go elsewhere to attend college. If there were adequate Protestant colleges in Washington there would be at least 620 more students entering college here annually than now. Such an institution would attract students from every state. Foreign students especially would be interested in attending college in Washington. What greater missionary task could possibly be achieved? Many millions of dollars are being poured into Protestant schools in foreign fields every year. It appears to be a wise policy as a part of the world missionary program, to establish the strongest educational-missionary institution of Methodism in the Capital of the

United States—an institution so powerful that it would be as a great educational magnet drawing to itself the best minds of all the world. It is therefore for Methodists to take the lead in building the "World University" in Washington—the biggest educational task and the greatest missionary opportunity of today.

DIGEST OF ADDRESS DELIVERED AT THE AMERICAN UNIVERSITY DECEMBER 15, 1922.

By GEORGE F. ZOOK, SPECIALIST IN HIGHER EDUCATION,
UNITED STATES BUREAU OF EDUCATION.

Thirty years ago Bishop Hurst and other prominent members of the Methodist Episcopal Church conceived the idea of founding here in the Nation's capital a great university which should be devoted exclusively to graduate work. Not only was the university to be the capstone or at least one of the capstones of the Methodist system of institutions of higher education, but it was also hoped that it would perform a unique service to the people of the whole nation.

At the time the ideal of a graduate university was conceived it was no doubt considered as visionary by a large number of people acquainted with the field of higher education. Even yet there may be those who occasionally have doubts as to whether an institution of this character can succeed so well as the typical university possessing a strong undergraduate college of liberal arts and sciences on which to base its graduate work. Developments in the field of higher education during the last thirty years, however, have made it plain that the original ideals of the founders of the university were not only sound fundamentally but in these later years they appear to be far more practical than they were at the time the university received its charter.

In order to make this point clear it may be well to recall that during the thirty years from 1890 to 1920 the total number of students attending all types of higher institutions except normal schools and other teacher training institutions increased from 123,566 to 462,445, or 274 per cent. In 1910, 3.8 per cent of all persons between the ages of 19 to 23 were in college, while in 1920 it was 6.8 per cent, or nearly twice as great. It is clear that there is a very great increase in the proportion of young people who are going to college. Under these circumstances the universities and colleges of the country in general have been crowded as they have never been before.

At the same time the increasing amount of vocational work done in the secondary schools and the diminishing number of prescribed units required for entrance to college have greatly widened the gap between the secondary schools and the higher institutions and made it necessary for the colleges during the freshman and sophomore years to repeat an increasing proportion of secondary school subjects. In other words it is becoming more clear all the time that the work of the first two years of the American college is essentially an extension of the period of secondary school education and that in line with almost universal practice abroad it should be so regarded in this country. For this reason, in a number of States, notably California, Michigan, Minnesota, Illinois, Missouri, Texas and Virginia so-called junior colleges have been established in conjunction with local secondary schools. In these States the feeling is becoming quite general that the large universities, particularly the State universities, should eventually turn over the first two years of college work to the secondary schools and thereafter confine themselves to advanced, graduate and professional instruction. Personally I have little doubt that within a comparatively short time arrangements of this character will be seriously considered and probably resorted to in several States. There are perhaps at least a dozen States at the present time where such an arrangement would be feasible.

The action of the professional schools of late years in requiring one or two years of college work for entrance has added impetus to the junior college movement. The medical schools now almost universally require two years of college work for entrance. Many of the dental schools require at least two years of college work. The law schools belonging to the Association of American Law Schools have pledged themselves to a requirement of two years of prelegal education in 1925. At present the engineering schools are struggling with the problem of studies which ought to be prerequisite to an engineering education.

From these illustrations it is clear that there is a growing tendency to recognize the end of the sophomore year in college as concluding the period of secondary education. Thereafter students have the choice of pursuing advanced and graduate work in the arts and sciences or they may enter any one of a number of professional curricula.

From the point of view of this discussion it is interesting to see that the founders of the American University, looking into the future, saw the vision of an institution which should confine itself to graduate work and that the trend of events in recent years has demonstrated the wisdom and the practicability of the vision. It is to the honor therefore of the American University that it has led in a movement which as years go by is undoubtedly destined to become of increasing consequence. For this reason I believe that we as members of the Methodist Church may well take pride in the fact that the founders of the American University decided to establish here in Washington a great institution dedicated to the preparation of young men and women to assume positions of leadership not only in the educational program of our church but also in the wide realm of higher education everywhere. The American University has before it an incomparable opportunity to perform a service that cannot be performed by any other university in the country.

Surely here in the Nation's capital, if anywhere in the country, it ought to be possible for the University to fulfill its mission. Here there exists every possible advantage for the pursuit of advanced and graduate work. The Congressional Library with its great collection of books and manuscripts not equaled anywhere in the land is open to students free of charge. The files and collections of the various departments and bureaus may generally be used without difficulty. Even the research laboratories of the Bureau of Standards and other government divisions are in effect at the service of research employees who may desire to use the results of their research for advanced degrees. All these incomparable advantages in Washington make unnecessary at the American University an expensive duplication of plant, apparatus, and buildings which otherwise would be necessary and which would run into the millions of dollars. Happily through the use of the government libraries and laboratories in Washington the American University is able to offer incomparable advantages to students in the pursuit of advanced and graduate work. The University is to be congratulated on so great an opportunity for service in the educational world.

If the University continues to take advantage of the matchless opportunities in Washington it will doubtless measure its success by the quality rather than the quantity of the students upon whom degrees are conferred. In view of this situation its greatest concern will always be to select a faculty of outstanding professors. So far as possible these members of the faculty should be upon a full-time basis, but the University also has the invaluable opportunity of drawing upon the remarkable collection of specialists and leaders in technical and

professional education who have been assembled in the service of the Federal Government here in Washington. Under these circumstances the problem of obtaining a superior faculty for advanced and graduate work is greatly simplified.

In these few words I have attempted to set before you some recent developments in the field of higher education which seem to me to demonstrate the wisdom and foresight vision of the founders of this University. I have also reviewed briefly the incomparable opportunities there are in the Nation's capital in the way of libraries and laboratories which together with numerous leaders in various fields of higher education are available in limited degrees for service in cooperation with the American University. I wish therefore to offer the new chancellor the congratulations of the Commissioner of Education and the Bureau of Education and to wish for him unbounded success in carrying forward the University to new and greater victories.

No. 1

GORDON BATTELLE
Trustee of the American University.

Memorial

ADOPTED BY THE BOARD OF TRUSTEES IN SESSION,
December 5, 1923.

The Trustees of the American University, with deep regret and sorrow, record again the death of one of their number. In this instance, it is of the youngest members of the Board, who died September 21, 1923—Gordon Battelle of Columbus, Ohio. His death was so unexpected and sudden as to give the greatest shock to his many relatives and friends. There is always mystery in the death of an unfinished life.

The young man succeeded his father, Colonel John Gordon Battelle, as a Trustee of the University. His father's interest in the institution encouraged the son to take unusual interest himself in its growth and prosperity. He has given substantial expression of his intention to promote its welfare by the be-

quest in his will of \$100,000 to the University. If he had lived he had still more liberal plans in mind for the development of the research departments. He has given further evidence of his far-seeing policy and generous disposition in the large sum of money he has given for the founding of the Iron Institute in Columbus.

Like his father, the young man was a modest and, for the most part, a silent participant in the meetings of the Directors and Trustees of the great enterprises in which he was engaged, but never without a mind of his own. The President of the largest corporation, of which he was a member, said of his co-operation in the meetings: "His words were few, but his judgments were wise and influential."

Born in Covington, Kentucky, as late as August 10, 1883, he felt that his business career was but just begun. He grew up in Ohio, but received his education in military, other prepar-

atory schools, and Yale University. Industrious, ambitious, exemplary in his habits, he had acquired a prominent position among the business men of Columbus and in other cities east as well as west.

He and his mother were devoted friends of President and Mrs. Harding and had contributed not a little to the political promotion of the editor and publisher of Marion, Ohio.

Having "a heart with a room for every joy," Gordon Battelle had kept in close sympathy with the young life of his home city. Affectionate, affable, unselfish, he had won for himself a large place in the social circles where he was so well known. With "a face untaught to feign," he had suffered nothing from reproach. He was a communicant in the Protestant Episcopal Church.

His funeral was largely attended. The laborers from the manufactories, from the blast furnaces and shops came in companies. The officials of the several large corporations with which he was connected came from New York, Chicago, Cincinnati, and other cities, to pay tributes of respect.

Resolved, that we, the Trustees of the American University, hereby express our high appreciation of the personal worth of Gordon Battelle, and, in cordial recognition of his noble spirit, commemorate his devotion to the University.

Resolved, that we extend to his bereaved mother, other relatives and friends, our deepest sympathy and pray devoutly for them.

Resolved, that this paper be spread upon the minutes of the Board of Trustees and a copy be engrossed and presented to Mr. Battelle's mother.

WARREN GAMALIEL HARDING.

(A fine likeness of President Harding was printed in the October COURIER.)

The Trustees of the American University share in very special manner the loss sustained by the United States and the world in the death of President Warren G. Harding. A native of Ohio, a graduate of a small college in that State, an honored Senator from that State in the United States Senate, and finally President of the United States, Mr. Harding in all his relations bore himself with proud distinction and high honor to the country and the world. As President, his notable achievements were the Council on the Limitation of Armaments by the Great Powers, and his projection of the World Court for the settlement of international differences by legal process rather than by an appeal to arms. He gladly accepted membership on the Board of Trustees of the American University and was deeply interested in all its large plans, and its high relation to the life of the Nation and the world.

We extend to his widow the assurance of our profound sympathy, as we cherish his memory as a friend and co-laborer. (Adopted by the Board of Trustees in annual session December 5, 1923.)

CONVOCATION JUNE FOURTH.

The Tenth Annual Convocation of the American University will be held on June 4th. The annual meeting of the Board of Trustees will be held at 10 A. M., June 4th, and the Convocation program will be given in the afternoon.

Dr. Edwin E. Slosson, chemist, author, educator and editor, will give the address. Thirty men and women will receive degrees.

SUMMERFIELD BALDWIN.

Mr. Summerfield Baldwin, one of the outstanding laymen within the bounds of the Baltimore Conference, died recently at his home in Baltimore. Mr. Baldwin has long been a friend

of the University and made a bequest of \$5,000 to the University. He is a brother of Dr. Charles W. Baldwin, one of our honored Trustees, and for many years the Secretary of the Board of Trustees of the University.

SCHOOLS REORGANIZED.

The Schools of Diplomacy and Jurisprudence have been changed to THE SCHOOL OF THE POLITICAL SCIENCES. The divisions will be Jurisprudence, Diplomacy, Government, Economics, Foreign Trade. Dr. Albert H. Putney is Dean of the School of the Political Sciences. The School is organized on the same general lines of the School of the Political Sciences in Paris. Full three-year courses will be given in each of the five divisions above. With specialists as instructors and with every facility of library and laboratory, courses of exceptional attraction are offered.

WESLEY AND MODERN THOUGHT.*

Our Director of Research, Dr. Collier, has written a little book, in which he claims to show that the attitude of John Wesley toward religion, the Bible, theology and physical science is remarkably like the attitude of the best minds in the Church today.

He claims that the standards of our day in things pertaining to religion are Christ and reason. He quotes Wesley as saying: "I therefore take no author for better, for worse (as, indeed, I dare not call any man Rabbi), but endeavor to follow each as far as he follows Christ, and not (knowingly) one step farther." Wesley thus made Christ final authority. But, as the author makes clear, even the words of Christ must be interpreted by the individual; hence, Wesley said: "Are we to be guided by our own conscience, or by that of other men? You surdy will not say that any man's conscience can preclude mine. You, at least, will not plead for robbing us of what you so strongly claim for yourselves: I mean the right of private judgment, which is indeed inalienable from reasonable creatures. You well know that, unless we follow the dictates of our own mind, we can not have a conscience void of offense toward God and toward man." The claim is that, philosophically and psychologically, Wesley's attitude here is unassailable.

Then it is shown that Wesley has a principle which he called the sum of religion, namely, love, which is more basal than reason. He claimed he sought only two things: truth and love. But if he had to choose between them he would take love, saying, "for, how far is love, even with many wrong opinions, to be preferred before truth itself without love?" Here we see that, while it underlies the entire work, the author has not specifically dwelt upon enough, for this is an exceedingly fertile field: the primacy Wesley gives to the emotional nature of man. Since the publication of Kant's "Critique of the Practical Reason" to James "Pragmatism," and Bowne's doctrine of the "practical nature of belief," and to psycho-analysis and the newer psychology, the primacy of the emotional nature as emphasized in Wesley's work, has been growing in importance.

The author shows that Wesley made a decided difference between the few essentials of Christianity and the less basal things which he called "opinions." This gave him a broad catholic spirit, not only toward other denominations, but even toward the heathen, Mohammedans, and the Jews. But it did more. It left his mind perfectly free to follow without any fear the processes and results of physical science. Indeed, the author's contention that Wesley looked upon the Bible as a

*Back to Wesley. By Frank W. Collier, Director of Research in the American University. New York and Cincinnati: The Methodist Book Concern.

book to teach religion and not science or history he has fully proven.

And here will be a great surprise for many readers. How many of our day know that Wesley wrote two good-sized volumes entitled "A Survey of the Wisdom of God in the Creation: or a Compendium of Natural Philosophy" and that he incorporated in this survey an abridgement of that beautiful work, "The Contemplation of Nature"? This latter work was by Bonnet, who coined the word "evolution." Natural philosophy was the term used in Wesley's day for physical science. As we read we wonder how Wesley ever got the time to survey the physical science of his day, and we are surprised to find one apparently so entirely absorbed in preaching so interested in physical science.

Dr. Collier makes very clear Wesley's attitude toward physical science, pointing out that his clear-cut distinction between the fields of philosophy and science is an anticipation of the position of the most lucid thinkers of the last quarter of the nineteenth century. He says that Wesley was obsessed with the general idea of evolution, that is, gradual progression. He quotes not only from the Survey of Natural Philosophy, but also from Wesley's "Notes on the Old Testament" and "Notes on the New Testament." Some of the quotations on the "gradual progression of beings" and "the beautiful graduation" in nature are astonishing for a churchman of the eighteenth century.

The book closes with the challenge that Wesley makes to the Church today. It is not a challenge to any one denomination. If there was anything that Wesley repudiated without reserve it was denominational narrowness or sectarianism. The only time he shows a boastful spirit is when he warns the Methodists against denominational narrowness. Then he boasts consciously and frankly. He says: "The Methodists alone do not insist on your holding this or that opinion, but they think and let think. Neither do they impose any particular mode of worship; but you may continue to worship in your former manner, be it what it may. Now, I do not know any religious society, either ancient or modern, wherein such liberty of conscience is now allowed or has been allowed, since the age of the Apostles. Herein is our glorying, and a glorying peculiar to us. What society shares it with us?"

This little volume is, in exhibiting the modernness of Wesley, giving us a good review of some of the prevailing modern attitude toward religion and science. It is very compact—perhaps too much so. No words are wasted. Wesley is seen in a new light. But it is a true light. Everything is authenticated by Wesley's own words. If the reader disagrees, the disagreement is with Wesley. That the author agrees with Wesley for the most part is evident, but he is not expounding his own views, but Wesley's position. This little book is certain to make the reader eager to know more about Wesley.

HISTORY OF THE UNIVERSITY.

Dr. Albert Osborn, who has been with the American University since it was founded, is arranging materials preparatory to writing a history of the American University. No other person can do this as well as Dr. Osborn. He has had large experience in authorship. He knows at first hand the facts of the University. He has carefully preserved all documents and vast material of value for writing such a history.

MINISTERS AND MISSIONARIES.

The ministers of Washington and from the nearby towns are realizing their opportunity in the American University. Twenty-seven ministers and special workers have received free tuition at the University this year. The Baltimore Conference is recognizing the great benefit the University is to the men of the Conference. There is a general inclination to give financial help, to at least care for the free tuitions given.

JOHN EDWARD BENTLEY.

Dr. John E. Bentley begins work at the American University with the beginning of next year, October 1st. Dr. Bentley will be Director of the School of Religious Education. One of the outstanding opportunities of the University as a contributor to the life of the Church is in the field of Religious Education. A full three-year course is provided. A program of fundamental subjects will be given. Dr. Bentley will have an exceptional opportunity and he has unusual qualifications for the position.

He has for three years been professor of Religious Education in the Iliff School of Theology.

Dr. Bentley was born in Knottingley, England. Educated in the secondary schools and the University of Manchester. He entered the ministry of the Canadian Methodist Church in 1910. He is a naturalized American citizen. Graduate of McGill University, Montreal, 1915, with Sanford Senior year honors. Received an M. A. from Clark University, Worcester, with special work in Psychology and Sociology. S. T. B. Boston University School of Theology; M. R. E. Boston University School of Religious Education. Student in Harvard University and Boston University Graduate Schools. Fellow in Psychology in Clark University, 1918-1920. Th. D. Wesleyan Theological College, at McGill University, Montreal.

He is Chairman of the National Professors of Religious Education, International Council of Religious Education. He is a member of the Educational Committee of the International Council of Religious Education. He is a member of the New England Conference of the Methodist Episcopal Church.

NEW INSTRUCTORS.

In addition to Dr. John E. Bentley, who becomes director of the School of Religious Education, Dr. Horace B. Drury of the Institute of Economics, and formerly of the Department of Economics of the Ohio State University, will give courses in Economics.

Henry Warren Van Pelt, with the Research Council of the National Transportation Institute, will give courses in Transportation. The name "Henry Warren" will remind our readers that Mr. Van Pelt is the grandson of Bishop Henry Warren.

LECTURE FOUNDATION.

One of our Trustees has given \$5,000 with which to establish a lecture foundation. It is intended by the giver that the amount he has given or may give shall be added to by other friends of the University. Large liberty is given in the selection of lecturers and subjects to be considered. A series of a few lectures will be given as the fund accumulates and these lectures shall be published in a series of American University lectures. It will be a great thing in the near future when funds for lectures will be available to have these courses given in the Nation's Capital and under the auspices of the American University.

(The following article was requested for the COURIER and written by Dr. Ellery C. Stowell, Professor of International Law, the American University.)

ENFORCEMENT OF PROHIBITION AND THE LAW OF NATIONS.

Great Britain and the United States have just reached an understanding in regard to the prevention of illicit liquor importation. Out of a due regard for the peace of nations and a proper consideration for the conflicting rights and interests of neighbors, every state is obligated under International Law to evince a spirit of reasonable compromise in regard to the enforcement of its own rights.

The agreement between the two branches of the English-speaking world is such a compromise. It is really a double compromise or balance struck between two sets of compromises. The first of these covers the permission accorded to British vessels to bring within the ports and harbors of this country spirituous liquors intended for consumption on the return voyage. On the one hand, it is admitted that the United States as a sovereign nation has a right to make and enforce within its jurisdiction regulations governing foreign commerce. Nevertheless, every nation is expected to exercise this right of sovereign regulation in such a manner as not unnecessarily to interfere with the customary and generally acknowledged rights and privileges of international commerce.

The people of the United States in their Constitution or through congressional enactment made in pursuance of the authority therein delegated declare what these regulations shall be, and the Supreme Court interprets in how far any regulation adopted by Congress is authorized under the Constitution. In fulfilling this high office, the Supreme Court decided that the Volstead Act, carrying out the 18th Amendment of the Constitution, prohibited all vessels, foreign as well as domestic, from bringing any spirituous liquors within the territorial waters of the United States.

France and other nations protested and declared that by long-established custom foreign vessels were entitled to bring in what are known as ship's stores, including a reasonable per capita allowance of wine, etc., for the crew and for medicinal use. Extending this idea by analogy, foreign vessels claimed the right also to bring in under seal enough spirituous liquor for use on the return voyage. But the Supreme Court decided that the Volstead Act had prohibited every importation of liquor, even when under seal and in bond.

The foreign representatives at Washington in their protests considered that such prohibition constituted an unreasonable interference with the universally recognized rights of international commerce and it does not appear that the Federal authorities did at once rigorously enforce upon foreign vessels a strict compliance with the terms of the Supreme Court decision. A period for discussion and adjustment seems to have been allowed.

The situation, from a political point of view, was complicated because the United States owned and was operating its own lines of steamships and it was said to be the opinion of shipping men and officials that strictly dry liners could not successfully compete for the lucrative passenger traffic across the Atlantic. By using the power of sovereign regulation to prohibit foreign vessels from bringing within American harbors and territorial waters any spirituous liquors whatsoever, the use of liquor on foreign liners competing with dry American vessels would be restricted to a limited consumption during a portion of the voyage to the United States.

Still another aspect of the prohibition question is what may be called the purpose of humanitarian intervention. That is the desire of the advocates of prohibition to use the leverage of American port regulation to make the foreign vessels touching at an American port dry until the next non-American port and to force upon the earnest attention of other nations a consideration of the desirability of the reform. The refusal of the Volstead Act to permit the transportation even under seal and in bond of spirituous liquor across the territory of the United States may probably be regarded as another instance of the manifest intention to refuse the co-operation of the United States in the liquor trade and thus to put pressure upon other nations to abolish it. Such refusal would seem to indicate in the clearest fashion that the United States condemned the trade and that this country intended, in so far as reasonably possible, to refuse to consider the trade in spirituous liquor a fit object for that international co-operation which is customarily accorded between friendly nations in order to facilitate international commerce.

Just such action was formerly taken by the most advanced and humane nations in regard to the Slave Trade. The moment a slave entered British territory, he was free, notwithstanding the general rule and practice of nations not to interfere with what takes place on board foreign vessels when the peace of the port is not disturbed. Great Britain certainly would not have permitted a slave to be held on board a foreign vessel in its harbors even if a bond were given that he would not escape. Great Britain has given us another instance of this use of the right of sovereignty to intervene on grounds of humanity by making regulations in regard to the so-called Plimsoll line prohibiting all vessels, foreign as well as British, from leaving a British port when overloaded to the danger of the crew and often of unsuspecting passengers.

In other instances and with similar humane objects in view, Congress has enacted legislation applicable to foreign vessels as well as domestic, prohibiting them from bringing immigrants to our shores unless the transporting vessels were provided with adequate accommodations. In this way foreign immigrants coming from beyond the seas have been protected by congressional enactment on their voyage made under a foreign flag and outside the jurisdiction of the United States. The sovereign control of the last three miles of the journey and the right of exclusion from American harbors has been used as the leverage or means to effect this humane intervention and to constrain foreign vessels to refrain from maltreating their passengers for love of gain. The list of such Acts could be extended—notably by including the many applications of the Seamen's Act, which was intended by its sponsors to put indirect pressure on all foreign vessels touching at American ports to force them to pay an adequate wage to seamen. The sovereign right of exclusion is also made use of by the Seamen's Act to compel all vessels entering American harbors to adopt certain precautions for the safety of passengers and crew and to make reasonable provision for the comfort of seamen.

But in pursuit of the laudable aim of fighting beyond the confines of the United States the ravages of rum, philanthropists would be illogical and inconsistent with their humane purpose

if they were to advocate such drastic and unreasonable regulations as should lead to serious international complications. To sow the seeds of another war would cause evil out of all proportion to the good likely to be achieved by such high-handed insistence. For this reason the Volstead Act justly refrained from intervening in the case of vessels passing through the Panama Canal and imposing upon them the same prohibition which has by the opinion of the Supreme Court been interpreted to apply to vessels entering our ports. Actuated by a similar spirit of measure, the Government of the United States has entered into negotiations with foreign states and sought to effect a compromise regulation which shall not under all the circumstances appear too drastic. And by the terms of the treaty entered into with Great Britain her vessels are permitted to bring in under seal spirituous liquors for use on the return voyage outside the territorial waters of the United States. In making this concession the United States has been stimulated by the desire on its own part to secure a concession in regard to another phase of this same question of the enforcement of prohibition so that concession might balance concession to enable the states concerned to obtain by compromise a complete and satisfactory settlement. The second concession to which I refer relates, of course, to the prevention of smuggling or rum-running along the Atlantic Coast. In this case it is the foreign nation that is sovereign over the rum-laden vessels under its flag. These vessels lie off our coast intent upon smuggling in liquor despite our laws.

In transporting rum these vessels do not, it is true, violate any express provision of the laws of their own state. But every state is obligated to prevent its territory or its flag from serving as a base of attack or unreasonable annoyance against a friendly state. It may be that these rum runners are not engaged in actual war against the United States, but they are conspiring and aiding Americans to subvert the law of their country, and it is not here the case of an ordinary law. It is one which the United States has considered important enough to exact in a special amendment to the Constitution at a cost of a loss of billions of revenue from excise taxes, to say nothing of the expense and inconvenience necessarily resulting from the enforcement of the law and the losses to the owners of confiscated property. In conspiring to aid in the criminal importation of rum, these foreign vessels may, from the point of view of the United States, be said virtually to serve as a base of attack upon our vital interests.

Sacred as is the sovereignty covering the National flag, and the immunity of vessels from search and seizure upon the high seas in time of peace, there is another rule of international law not quite so easily formulated but still more fundamental and important, which takes precedence over it. This superior right is the right of Prevention, or the right of every nation to intervene to prevent neighboring territory or a friendly flag in neighboring waters from serving as a base of attack or intolerable nuisance. But before the United States, to ward off injury, steps out beyond the three-mile limit and seizes the transgressing vessels, as it rightly may under International Law, it is first obligated, out of a due regard to the peace of nations, to do its best to obviate the necessity by using every means within its power to police its own territorial waters. Even after it is apparent, as it must be to all, that it is practically impossible to enforce the Volstead Act when rum-runners lie with impunity along the coast just outside the three-mile limit, it is not yet permissible, nor is it yet time, to justify the taking of so serious a step as the seizure of foreign vessels on the high seas. It is first incumbent on the United States to allow the governments of the offending vessels a reasonable period of time to make the necessary regulations and to take the necessary measures effectively to police their vessels in order to prevent their

flag from covering these unjustifiable defaults upon the institutions of a friendly state.

What if the sovereign deny its responsibility and consider that it is unreasonable to expect it to make such an effort and to enact and enforce regulations which may be unpopular and inconvenient to its own people, and if in consequence there is a refusal or an unreasonable delay in making effective the necessary measures of police? Then, and only then, may the United States use its own naval force in place of the delinquent sovereign and policing the seas along its coast make beyond the three-mile limit such seizures and confiscations as may reasonably be necessary to prevent and to punish rum-running. But such action in the case of Great Britain has been rendered unnecessary because a reasonable compromise between the above explained right of prevention as instanced in the case of the rum-running and the freedom of commerce from search and seizure on the high seas has been effected.

The British concession made in regard to the very concrete and generally understood freedom of the high seas beyond the three-mile limit has been balanced by the previously mentioned concession on the part of the United States covering another equally concrete and well understood sovereign right, namely, the right of regulating importation and entry into the harbors and waters of the United States. The concession thus made by the United States covering the permission to bring in liquor under seal balances the permission given by Great Britain to search, within certain specified limits, vessels under the British flag hovering along our coast with the manifest intention of violating our law, and International Law and consequently their own law. We may say all law. This balanced compromise between the two nations is more than a solution of the rum-running controversy. We may also regard it as clear indication of the firm intention of these two highly civilized and friendly states to settle all their differences on an equitable basis of give and take in order always to effect some reasonable compromise. Now that Great Britain has led the way in reaching a compromise settlement, and with this example before them, it is hardly to be expected that the other nations will refuse to enter into similar agreements for the purpose of preventing any longer the abusive use of their flags to cover rum-running and conspiracies against the enforcement of the terms of the United States.

WASHINGTON PREACHERS' MEETING.

The Washington Methodist Preachers' meeting has had as speakers during the year Dean Collier of the School of Arts and Science; Dr. Stowell, Professor of International Law; Professor Kaufman, Department of English Literature, and Dr. Tansill, Professor of History.

HAMILTON-STAFFORD.

Miss Helene Hamilton, daughter of Bishop John W. Hamilton, Chancellor Emeritus of the American University, was united in marriage during the holidays to Geoffrey Wardle Stafford. Mr. Stafford gave a course of lectures in the American University during the summer session in 1922.

SUMMER SCHOOL.

The Summer School opens June 18th and continues until August 30th. Dean Putney of the School of The Political Sciences is the Director of the Summer Schools. Courses will be given in Diplomacy, Jurisprudence, Economics and Government. Special attention is given in this summer quarter to teachers. The National Teachers' Association meets in Washington in July. This will bring probably 15,000 teachers to Washington. The University courses are so arranged that teachers will have the benefit of a full term with credit and

also attend the Association meetings. The further opportunity of getting acquainted with the National capital will undoubtedly appeal to many people. Schedule of classes will be furnished upon request.

**MANUSCRIPT AND AUTOGRAPH COLLECTION
OF UNUSUAL VALUE RECENTLY PRE-
SENTED BY JOHN L. HURST TO
AMERICAN UNIVERSITY.**

Among the most recent bequests to the American University not the least valuable or interesting is the impressive collection of old manuscripts and of autographs and holographs of distinguished persons gathered by John La Monte Hurst, the son of Bishop John F. Hurst. The collection represents the result of intelligent selection throughout the life of the donor, from his graduation from Harvard in 1885 to his death in 1919. As he served for years in the American Embassy and the Methodist Mission in Rome, many of the choicest specimens are Italian. They include the handwriting of cardinals, statesmen, scientists, and writers, such as three letters of Garibaldi and documents of Pope Clement XIV, the suppressor of the Jesuit Order, Francesco Boybone, first king of Naples, and an unpublished poem of Carducci, one of Italy's most distinguished poets. Some thirty other documents complete the Italian collection.

France is represented in the collection by two of her greatest writers: La Rochefoucauld and Buffon, by Cuvier, the great naturalist, and others. Two letters from Alexander Humboldt and two from Paul Heyse constitute the most notable contribution from Germany, while manuscripts of Michael Faraday, the physicist, and of Herschel, the astronomer, make outstanding additions from England. The total number of these documents is sixty-three, ranging in date from the 16th to the 19th century.

Besides these are nineteen manuscript volumes, mostly in Latin and Italian, some of which date from the Middle Ages. The most ancient is a specimen of old Egyptian inscription on papyrus. The greater part of these, on account of their condition and of difficulties in calligraphy, have been only partially deciphered, but experts who have examined them believe them to be of unusual interest and value.

This collection was sent to the American University by Col. Paul Hurst, U.S.A., brother of the donor. As soon as proper provision for display can be made, the University plans to place it on public exhibit.

AN UNPUBLISHED LETTER.

[The following is a part of a letter written Bishop Hurst in 1899 by the Dr. James Boyd Braly, well known preacher of the Methodist Episcopal Church.]

Notwithstanding all uttered, and utterable, in regard to personal independence, the world needs centrality of authority in education, and that can only be created by a Supreme Teacher and a Supreme School. Christ, the Supreme Teacher, is here. The Supreme School should be put there. Not only the tendency of exterior things, but the spirit of the age, is moving toward centrality for man.

The races have diverged into heterogeneity, but now are converging toward homogeneity under common interest and mutual culture.

Each move on the chessboard of the world is toward the fuller introduction of the Centralizing King and not to capture but to crown. This King is as necessary in the spiritual system as the sun in the solar, and a Centralizing King is becoming as useful in the intellectual realm as in either the physical or the spiritual.

This movement grows by individual evangelization and education. Other ages wrought on wood, canvas, marble. This age works on man, woman, and child. And yet the machines of destruction were never so many and mighty. Indeed, so multiplied have they become and are becoming that they tend rather toward preservation than desolation. Their destructiveness prevents destruction, and Nicholas II wants them abandoned altogether. Nevertheless, owing to the unreliable passions of man, society can only be secure by multiplication of educational and ethical powers, till they overwhelm the need of the machinery of death. These powers are God's men. These men must be developed by a mighty school.

God has used great schools to equip His heroes in the past, Paul, Luther, Wesley and others are witnesses. God has not changed and never will. He will, therefore, use a great school to rear about His champions in times to come. To meet growing demands, champions must be multiplied manifold in the near future.

As these times are superior to all past times, in gravitating toward the Christ, so the school must be superior to all schools in the Christ-centric feature. His mission will be to unite the scientific with the spiritual by demonstrating that they are essentially of the Christ Kingdom. All good goes by method. At root, Protestantism is scientific and spiritual. She has insisted on "I know." Her mission is not to follow, but to lead statesmen, soldiers, preachers, journalists and all people so scientifically and spiritually that they shall move as one.

Rome is right when she claims centric authority, but wrong when she claims it in a secularizing way. As the Christ is the central, spiritual, and scientific force, the mission of Protestantism is to make your school the central scientific and spiritual instrumentality through which His force will flow in new streams, through new channels made by progress. Your school, therefore, should be supreme not only as authority in science, but as authority in salvation.

The work of our established colleges and universities is efficient but not sufficient. The universities of Europe and America are constructive in some things, and destructive in others. Their lack is the sovereignty of salvation indissolubly united with the supremacy of science, so that both may move together with the advance of the Church to save the world. The nations are opening, the fields ripening, the spirit and methods of peace prevailing. War is giving place to kindly proposal. The Conqueror by love is moving and modern mechanism is His avant courier. He now needs not so much heralds to go before Him like John the Baptist, as mighty men to go with Him, to announce the superlative grandeur of His person, the scientific nature of His plan, and the spiritual splendor of His purpose. Such men should be specialists, who can go farthest into any line of investigation relating to the kingdom. This is the era of specialism in physical science; it should be the age of specialism in spiritual science; that specialism should be so strong that it will loosen the clutch of unbelief and fasten the closing love-clasp of the Christ upon every living spirit. Thus by your university, learning could be made not only commandingly progressive to the conservative, but demandingly conservative to the progressive. It can be made an illuminating mountain of far-shining light so radiant that it will shoot its rays ahead of the most advanced, yet so conservative that it will linger and bring up the least progressive. This educational specialism must be supplied with the divine specific that at the first was the charm of Methodism so that, instead of producing stultification, it will spiritualize the intellect in proportion as it advances, and brighten into beauty the affections of the human heart, and produce such polished Christians as shall wipe away the disgrace now endured in seeing our promising offspring forsake vital evangelism for the enfeebled forms of less energetic churches. The one great *sine qua non* of our Church,

country, and world is the kind of institution I think you are founding. It is indispensable to preachers and people at home and abroad. If the sacred trio—Patriotism, Philanthropy and Christianity—could lift up their voices, they would demand it in such tones as would rouse Americans to build it. It is pressed upon us by the logic of recent events, by the strides forward of the world, and by the demands of the advancing God, who is pushing us, His final nation, to the front to execute His final purpose.

If properly presented, no worker with God can ignore this call. It is as important and opportune in this age and place as was the call to rear the Tabernacle in Arabia or the Temple on Moriah; and it is to be as much superior in its results as these times are superior to those times, and as all nations are superior to one only. Out, then, of new circumstances a new voice is born calling for knowledge commensurate in compass and authority with the world compassing conditions.

"New occasions teach new duties,

Time makes ancient good uncouth;
They must still be up and onward
Who would keep abreast of truth,
Lo, before us gleam her campsides;
We ourselves must pilgrims be;
Launch our Mayflower and steer boldly
Through the desperate winter sea,
Nor attempt the future's portal
With the past's blood-rusted key."

The times are intense, they are full of resources, they demand an institution equivalent to themselves. An institution that shall by ripest scholarship, the richest religion, guide intensified humanity into the path of redeeming light, that shall lead to the heaven of abysmal love. Let some one fill the dome of the American sky with these and kindred truths, and the grandest educational and inspirational university that yet has kissed the sun will rise like a sculptured mountain on the site so suitably provided by you at the Nation's capital.

But hereabouts preachers are bewildered, people are dazed. The seeds of rationalism spring apace, and the tendency of all not attracted to the Christ is toward the breakers. And yet nothing is clearer to an all-observing mind than the fact that science and salvation are hemispheres of the one redemptive sphere. Not that science is salvation, nor a salvation science, any more than land is water or water land; but both are necessary to life and operate together. There is no spiritual law but roots itself in some corresponding natural law; and by passing down the natural law to its source, we find the Father passing up the natural law into the spiritual law, and using both to bring His children home.

The spiritual man alone can hold conscious communion with His Creator; and so God has built nature and given grace to produce spiritual men. When men see this scientifically they move toward Him with repentant gratitude as long-lost children to a newly-found Father.

GRADUATE THESES.

(The University of Iowa, in a series on "Aims and Progress of Research," has set forth the significance of the thesis or dissertation in such accord with the aims of the American University, that we quote in part for the Courier.)

Theses and dissertations have come to take a place of the first order in the beginning of graduate work because their preparation develops independent thinking. The form may be as varied as the interests of science, art, and literature, pure or applied. Method may be equally varied; the more original the mode of attack, the better. The thesis may take the form of an experiment; a technical, historical treatment; a critical examination of a situation, either destructive or constructive, or both; the application of science or art to any project in daily life, industry or art; creative work, such as mathematical or philosophical theory, a poem or a symphony. In other words, it offers the greatest freedom as to choice of subject, method of treatment, and mode of presentation, in order that the candidate may launch himself most naturally and enthusiastically into the project and give orderly expression to something that is near to his heart and may be looked upon as his first love in creative learning.

The dissertation which records the results of investigation should be written in good English; the illustrations should show good taste and technique; the treatment should show a thorough acquaintance with the history of the problem, accurate workmanship, the power of pose in balanced criticism, and some evidence of inventive and constructive ability.

The dissertation at the graduate level should thus be an exercise for training in scholarly procedure, laying special stress upon accuracy in observation and record, a command of logic and statistics, independence of thought, the development of literary style, and the rise of a spirit of independence and self-confidence which makes the candidate ready to defend one proposition before the world on first-hand evidence.

In the absence of the exercise of the creative powers as demanded by a thesis or its equivalent, the graduate student may continue indefinitely taking graduate courses and still remain of the undergraduate mind and attitude expressed in mere passivity and docility. He may acquire a world of learning and still remain in the childish attitude of desiring to have knowledge fed to him, admitting his inability to use his knowledge for the cultivation of further knowledge.

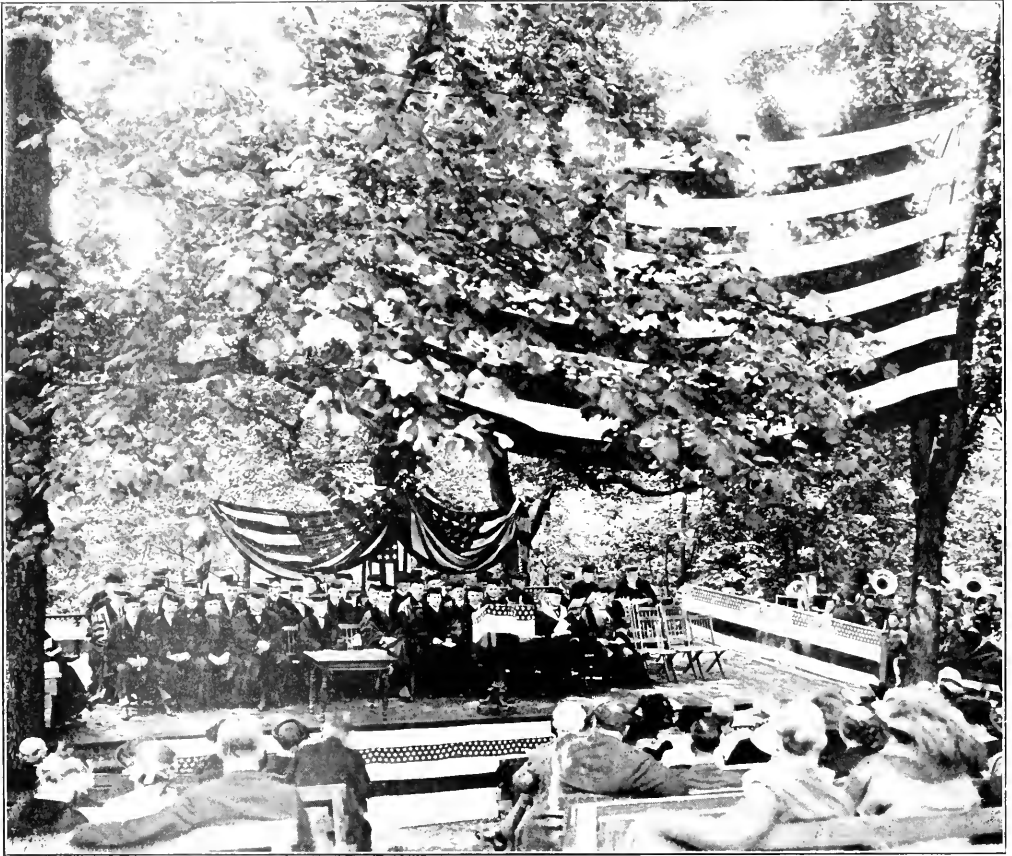

The development of the doctoral thesis is usually called a dissertation. Ordinarily the work on the thesis, both the master's and the doctor's, should occupy from one-fourth to one-third of the student's entire time, the remainder being devoted to courses or unrelated original work. The thesis may be long or short; sometimes a fifteen-page master's dissertation is more valuable as a contribution to science than a two or three-hundred-page, padded recitation of facts and figures undigested in a doctoral dissertation. It should by preference be prepared exactly as copy for publication, whether it is to be published or not.

Although the facilities vary in different subjects, a well prepared graduate student should find his thesis near the very beginning of his graduate study; because, in so doing, he sets up an objective around which his reading may center with a deepening interest, and he may work economically on the principle of specialization. A student who starts out to review or consume all knowledge in a given field will soon get weary of the task; concentration is essential.

As to choice of subjects, this advice is pertinent. (1) Find out what is likely to be your major interest in a life work; (2) find out which specialist within that field you would regard as best equipped to be helpful in the direction of your work; (3) after conference with him and others select a subject which interests you and in which he is interested and can furnish good facilities; and (4) take a subject which (a) is small, specific, and tangible (as opposed to one of unlimited scope which can issue only in frothy array of opinion or recital of facts); (b) places demands upon the continuous exercise of the higher intellectual and creative powers (as opposed to manual labor and clerical drudgery); and (c) is feasible on the ground of your preparation and natural ability.

It has become customary at the University of Iowa to allow the student who is preparing for the doctorate to take the master's degree first for the reason that this gives him a foretaste of the pleasure of accomplishment, gives him confidence in himself, and allows him a longer time to grow gradually into the attitude of true scholarship. Those opposing this policy maintain that before the student undertakes to do creative work he should master existing knowledge within his field by scholarly studies. But those who hold that point of view fail to recognize that the most effective way to master a field of knowledge is to accumulate it for some purpose; and no thesis is so small or unrelated that it does not call for very extensive orientation in all knowledge having bearing upon that problem. Thus, while the candidate is performing an experiment, he is in the meantime looking up the entire history of the subject and the facts bearing upon its control and interpretation, as well as that knowledge which furnishes him the tool for research.

Should the thesis imply a contribution to human knowledge? On this the Graduate College places no unreasonable demand. Thesis research is primarily an apprenticeship in training for the making of a contribution to knowledge. Both master's and doctor's dissertations, when successful, contain actually valuable new contributions to knowledge. The primary object of developing the thesis, however, is not the securing of a fact or facts but the training of a potential discoverer of facts; and this is the main objective of graduate study. If graduate study accomplishes this object, it plants a seed which may grow into fruitage and self-perpetuation in productive scholarship without limit.

CONVOCATION MAY 29TH, 1923

The American University Courier

PRO DEO ET PATRIA—FOR GOD AND COUNTRY.

PUBLISHED QUARTERLY BY THE AMERICAN UNIVERSITY,
Massachusetts and Nebraska Avenues, Washington, D. C.

ALBERT OSBORN, Editor

25 Cents a Year—Free to Contributors of University Funds.

Form for Will.

I give and bequeath to "The American University," a corporation in the District of Columbia, the sum of (insert amount), and the receipt of its Treasurer shall be a sufficient discharge to my executors for the same.

APRIL, 1924

Officers of the American University.

Chancellor, Lucius C. Clark, D. D.
Chancellor Emeritus, Bishop John W. Hamilton, LL. D., I. H. D.
Director of Research, Frank W. Collier, Ph. D.
Registrar and Secretary, Albert Osborn, S. T. D.

Officers of the Board of Trustees.

President, Mr. John C. Letts.

UNIVERSITY HALL.

NEW DORMITORY FOR WOMEN.

The above picture is the drawing of the architect for the new building on the American University Campus to be used as a dormitory for women. The ground floor will be set apart for the dining room service, the first and second floors completed to house one hundred and twenty-five women and the top floor will remain open for social and athletic purposes. During the War, the Government expended upon this building over \$300,000

and it will require at least \$200,000 more to complete it. The University authorities are assured this building will be in entire readiness for the opening of the College of Liberal Arts in September next year. The building is entirely fireproof and will make a great addition to the quadrangle, where are located the Hall of History and the McKinley Building.

ANNUAL MEETING OF THE BOARD OF TRUSTEES.

An unusually interesting meeting of the Trustees was held on December 3rd at the downtown center of the University. One of the most welcomed members of the Board at this meeting was Mrs. J. Frank Robinson, who came all the way from Rock Island, Ill., for this special purpose of the meeting of the Board of Trustees. There were interesting reports given by the Chancellor and the Treasurer, Mr. W. S. Corby. All affairs of the University were reported in excellent condition.

The most interesting action of the Trustees was in approving the plan submitted by the architect for the

dormitory for women and the Chancellor's House. Bishop John W. Hamilton, while Chancellor, started a Chancellor's House Fund, which has grown to the present to about two-thirds of the cost of the building of the house. Col. Peter M. Anderson, the architect for the University, submitted a campus plan of development, which had been approved by the Fine Arts Commission and was adopted by the Board of Trustees. Subscriptions in cash and pledges from five members of the Board of Trustees totaling \$32,000, was announced.

Dr. George B. Woods was elected Dean of the College of Liberal Arts.

JULIAN S. CARR

WHEREAS, In the ripeness of almost four score years, spent in a glad service to his fellowmen, and after more than thirty-two years of membership in the Board of Trustees of the American University, the Honorable Julian S. Carr has been called from the earthly to the heavenly life; and

WHEREAS, His high character as a citizen has been manifest through his manifold activities, in the military, civic, economic, social, industrial, educational, political and religious interests of his State and of the nation; therefore,

Resolved, That we hereby record our appreciation of his lofty ideals of life and his continued devotion to the well-being of all men, especially of those whose toils of brain and hand were under his own employment or supervision;

Resolved, That we extend to his family and relatives our sympathy in their loss of one so tender and beloved, together with our congratulations upon their inheritance of memories so sweet and satisfying as they keep in remembrance his manly and Christian virtues and his affectionate spirit.

HENRY O. S. HEISTAND

Col. Henry O. S. Heistand served actively in the United States Army for forty-two years from his graduation at West Point and was on the retired list as Colonel for four years prior to his decease.

His varied fields included frontier lines in North Dakota and Montana, the National Guard of Ohio, where he was instructor, member of the Military Commission to the Paris Exposition, Chief of Staff and Adjutant General of the China Relief Expedition at the time of the Boxer rebellion, Adjutant General of the forces in the Philippines at two different periods, Adjutant General of the Department of the East, Adjutant General at Camp Grant, Rockford, Illinois, then of the Central Department at Chicago, and again at the Eastern Department at Governor's Island, New York.

Through this long series of military duty he maintained a warm and active interest in church and other philanthropies. In his case, the soldier never supplanted or submerged the civilian. His sympathy and co-operation with the American University was intelligent and ardent. His plans and hope long contemplated the enlargement and fruitfulness of the Memorial to President McKinley.

His contributions to current literature were quite numerous, both interesting and informing.

To Mrs. Heistand, who survives her husband, after long, anxious and faithful vigils, we extend our sympathy.

A. M. SCHOYER

Mr. A. M. Schoyer was born in 1859 and died August 26, 1924. Of his sixty-five years he gave to the Pennsylvania Railroad Company fifty-two. From 1872 he rose steadily from messenger through earned promotions to telegraph operator, from dispatcher, chief train dispatcher, and division operator, superintendent of telegraph lines east of Pittsburgh and later in addition over the Vandalia Railroad, superintendent of the Eastern Division, then General Superintendent of the Northwest System, then General Manager of the Vandalia Railroad, then assistant Vice-president of the lines west of Pittsburgh, then special assistant to the Federal Manager, and thence to his latest position as Manager of Through Freight Traffic of the Pennsylvania Railroad.

Kind and considerate of the vast number of men under his inspection and control, he won their respect and confidence. His benefactions to needy and worthy causes and people were generous and sympathetic. In administration he was loyal to his convictions and firm in the defense of the right. Modest and retiring in disposition, his spirit and quality of service brought him to leadership in every place where he lived and worked.

Devoted to business, he ever kept a warm heart toward the church and gave personal time and energy to the activities, especially as a Bible class teacher. In each of the four great cities, St. Louis, Chicago, Pittsburgh, and Philadelphia, he made his connection with Christian societies a channel of good works and formed strong friendships through his consecrated zeal. He was a splendid combination of business sagacity and spiritual ideals. May his tribe increase.

ROBERT SENEY INGRAHAM

WHEREAS, The Reverend Robert Seney Ingraham has given a glad and faithful ministry for many years and has been a member of the Board of Trustees of the American University and held by its members in high honor; and

WHEREAS, His interest in education, his wise counsel in her various organizations and his large benefaction for the same have given him great distinction throughout the church and the nation; therefore,

Resolved, That we hereby record our appreciation of his noble manhood, high character and devotion to the well-being of his fellowmen;

Resolved, That we extend to his wife, Mabel Dixon Bell Ingraham, our sympathy in the loss of one so true and noble and that we together shall always feel the large inheritance we have in the remembrance of one so manly and truly a Christian.

HOW GENIUS WORKS.

Address to the graduating class of the American University, June 4, 1924.

By E. E. Slosson, Ph.D., J.L.D.

Director of Science Service, Washington.

In considering what I could say that would be worthy of your attention on such an occasion as this, it occurred to me that you might be interested in a question in which I have been interested in recent years, namely, the question of how great scientific discoveries have been made, or, in other words, how genius works.

You may not all be geniuses. I do not know you well enough to say that any of you are not, but it is rare that a graduating class consists exclusively of geniuses. But those of us who are not geniuses may learn something from those who are, just as those of us who are not great tennis or golf players may learn something about the game by watching the champions play.

In looking up the lives of the leaders of science I have been struck by their precocity. Oliver Wendell Holmes used to say that those who get up so early in the morning are apt to be very conceited all the forenoon and very sleepy all the afternoon. But I begin to question that epigram. In fact I hold in my hand a document which proves at least that there are exceptions to this rule.

The man who came nearest to being a genius, of any whom I have known intimately, was the late William Hayes Ward, and he certainly was not sleepy in his old age. He was over eighty, yet as editor-in-chief of the *Independent*, he put in more hours at the office than any of the younger men on the staff, he was intensely interested in scientific progress and social movements of the day, and after a hard day's work at the desk he went home to spend a large part of the night in the study of Assyrian seals for the monograph with thousands of illustrations which he wrote for the Carnegie Institution. That was toward the end of his life. I will read a letter that Dr. Ward wrote in 1913 to a friend who asked advice as to the education of his son:

The *Independent*,

Feb. 15, 1924.

MY DEAR SIR:

I don't know whether I am old-fashioned in education or not—children are not crowded enough. It does not hurt them if they have plenty of exercise. I was taught by my father at home. On my sixth birthday I began Hebrew, and read the Hebrew Bible thru before I was nine, the Greek Bible, Old and New Testaments, before I was twelve, and the Latin before fifteen, besides the other usual and some unusual studies. I believe in *one* study at a time, and push it, till the boy learns it. But science can be made a play. Your boy is old enough, but he can not read well enough, I fear, to analyze a flower from the book, even with your teaching. It is the best way to begin science. At least he can learn to distinguish plants, and as far as possible, by the Latin names.

"The only question about other studies is that he is backward in his English. He ought before this to have begun French (or German), not as much by book, in his case, as by word of mouth. Can't he find

some teacher of French to talk with? I am sorry that Latin seems to be out of the question. For his play I would take botany, in walks and talks, and for his study in all probability, arithmetic, and *push* it."

Yours truly,

WILLIAM HAYES WARD,

Editor.

This idea of education, as you see, is quite the opposite of the popular theory and prevalent practice of today. Students in our high schools and colleges take from four to six studies at a time and the class is supposed to keep in step for four years, whatever may be their natural gait. In the army it is considered essential that all the soldiers shall keep in step, regardless of their various length of leg and rhythm of movement. I am somewhat skeptical about the necessity of such rigid conformity in the army, and I am quite sure that it is undesirable in education. I am glad to see that the American University is specializing in individual instruction. The result of the lock-step system is that the laggards are pushed and the eager are checked. Consequently the students who are not able to keep up the pace get discouraged and fall out, and those who do not find an outlet for their energies in the class room turn to athletics and what are euphemistically called "extra-curricular activities." It is not true that bright students are overworked. On the contrary they are underworked. That is why they are apt to lose interest in their studies, acquire a contempt for their slower classmates and plunge into dissipation. It is not work but play that brings them to ruin. The idea that precocious students break down from overcrowding may serve as a plea in a court of law, but it has no standing in the court of reason.

You will also see that Dr. Ward believed and demonstrated that some of the sciences, such as botany could better be learned as recreation rather than tasks. I think that the same could be said of the cultivation of literature and the fine arts, and the reading of history, philosophy and science. Interest and appreciation in these fields can best be acquired through voluntary and individual initiative than by compulsory and uniform drill.

Kindergartners used to think that because children had little fingers they should be set at fine work. Nowadays the theory and practice is reversed. The larger muscles are used first. Children begin by writing on the blackboard where they can use the whole-arm movement. The mental development seems to follow the order of the muscular, starting with whole-arm movements of thought and coming down gradually to the minutest investigation. The early years of adolescence are the period of sweeping generalization, of cosmical theorizing, of wild speculation, of unbounded ambition. Doubtless this tendency of the adolescent mind to enlarge its orbit has to be held in check lest it run off on a tangent and arrive nowhere. Yet, like other natural tendencies, it should be guided rather than thwarted. A study of the biographies of great scientists shows that many of the most important and revolutionary generalizations of science had been conceived in youth, often in the later teens or early twenties, though it required a lifetime of labor to substantiate them. One of the factors in scientific progress, the free formation of old hypotheses, is allied to the crea-

tive capacity of the artist, musician, or poet, and normally appears at the same early age.

When Tyndall, in 1870, delivered his famous address on "The Scientific Use of the Imagination," unscientific people did not take him seriously, for they were accustomed to think of the imagination as the inventor of fiction, not as a guide to truth. They regarded it as a faculty for the manufacture of the mythology in which they delighted, and they resented its employment for the advancement of the science which they despised. But the creative faculty is essentially the same whether it serves the purpose of the poet, the novelist, the painter, the historian, the statesman, or the scientist. Big ideas are apt to be born of young brains. In the field of physical speculation the greatest fundamental generalizations are Newton's law of gravitation and Einstein's theory of relativity. Both were achievements of youthful minds. Isaac Newton, after telling how he worked out the binomial theorem, the method of tangents, the differential and integral calculus, the theory of colors, and the law of gravitation, concludes:

"All this was in the two plague years of 1665 and 1666, for in those days I was in the prime of my age for invention, and minded Mathematics and Philosophy more than at any other since."

These words are worth nothing, since Newton was born in 1642, and was, therefore, 23-24 years old.

Albert Einstein conceived the idea of his theory of relativity when he was eighteen and published it at twenty-six. He is, as we should expect, an advocate of shortening up the school period and making it more practical, so that the student can get at his life-work earlier. This, at least, seems the best plan for brilliant minds like these, and educators are coming to the conclusion that special facilities should be afforded such, so that they may advance as fast as they can without waiting for their slower schoolmates. To give one young man of this sort the peculiar training he needs will benefit the world more than the education of a whole collegeful of the ordinary caliber.

The modern theory of the resolvability of algebraic equations is largely due to two young mathematicians, Niels Henrik Abel, of Norway, who died at the age of 27, and Evariste Galois, of France, who was killed in a duel at the age of 21.

In metaphysics we see the same as in mathematics. Leibniz began his philosophical work at the age of 22, Berkeley published his theory of vision at 25, Hume composed most of his "Treatise on Human Nature" while at college. Schilling was 20 when he published his "Principles of Philosophy," Schopenhauer produced his "Fourfold Root" when he was 25. Herbart's essays were written at 20. Letze published his "Metaphysics" at the age of 24. Jonathan Edwards was only 16 when he composed his "Notes on Mind." At the age of 21, Linnæus devised the system of classification and nomenclature that now prevails in all branches of biology. Another Swedish scientist, Svante Arrhenius, was only 24 when he devised the electrolytic theory of solution, the idea that salts are decomposed in water to positive and negative parts. Kekule, the German, was 28 when he hit upon the theory of types, which led him at the age of 36 to the symbol of the benzene ring. Berthelot, the Frenchman, was only 24

when he began his career in what he called "Creative Chemistry" by the synthesis of benzene compounds. William Crookes, the Englishman, was 29 when he discovered thallium by the spectroscope, a new metal by a new method. Emil Fischer, the German, was 23 when he discovered the hydrazine reaction that led to the analysis and synthesis of the sugars. Perkin, the Englishman, was 18 when he discovered the first aniline dye, mauve. Pasteur, the Frenchman, was 20 when he became intrigued with the puzzle of the right and left-handed crystals of tartaric acid, which six years later he solved by making the inactive racemic acid by combining the two forms.

Twenty years later the explanation of this phenomenon burst simultaneously into the brains of two young men, the Frenchman, Le Bel, and the Dutchman, Van't Hoff. The former was 21, and the latter was 22. Van't Hoff was still a student when he published his eleven-page pamphlet on "The Structure of the Atom in Space," and how he did get laughed at by his elders for his crazy notion!

So, I would urge you to harness your imaginations and set them to work. Do not despise the strange and unconventional ideas that spring up in your youthful brains. Put them down on paper and think them over at intervals, but do not hasten to put them into print. Nine times out of ten, or more often than that, they will turn out to be unfounded and if you publish them in their first undeveloped state you may get a reputation for rashness that you will find it hard to live down. Better do as Darwin did. He definitely conceived the idea of the transmutation of species at the age of 28 and opened his first notebook on this question. For twenty-two years thereafter, he collected evidence and considered criticisms so when "The Origin of Species" was published in 1859, it marked an epoch in the progress of science and remains a model of scientific investigation and presentation. The conception of new thought may be instantaneous, but needs to be followed by a long period of incubation before it is fully enough developed to be brought to light.

There are as you know two theories of genius. Some say that genius is merely another name for hard work, that inspiration means perspiration, that genius is an infinite capacity for taking pains, and so forth. Others say that a great achievement can only be accomplished by a great man and he does it easily, that bright ideas come to one in moments of relaxation, not at times of intense concentration, and so forth.

Obviously, neither of these theories can include all cases. There must be the flashes of insight. There must be also long continued reflection and research. Rarely are both kinds of ability combined in the same individual. When they are we find the true man of genius.

Niels Bohr, of Copenhagen, who in 1922 was awarded the prize for the greatest discovery in physics, was only 28 when he startled the world by his bold conception of the atom as a sort of solar system in which the sun is represented by a nucleus of positive electricity and the planets by particles of negative electricity, revolving around it with amazing speed. On this theory he was able to calculate just what shiftings in the orbit of these planetary electrons would give off light of the particular wave-length to make each line of the spectrum.

But it was a man even younger who in the eventful year, 1913, made a still greater contribution to our knowledge of the interior of the atom. Henry Moseley, the Englishman, was only 26 when he found a way to analyze the elements by the reflection of X-rays from their atoms. This led him to "the most important generalization in the history of chemistry since Mendeleef's Periodic Law," the idea that the chemical properties of an element depend upon the number of free charges of positive electricity upon its nucleus. This shows us that there are ninety-two possible elements from hydrogen, the lightest, to uranium, the heaviest, and they are now all known but four.

Two years later young Moseley was killed at Gallipoli, and the premature extinction of his brilliant brain was one of the greatest losses of the Great War, a loss that no territorial gain can compensate; and it was, as we know, a useless sacrifice, for Gallipoli has gone back to the Turks. "Some one had blundered."

This list of examples of youthful genius might be extended indefinitely but this is sufficient to show that really revolutionary conceptions in science are apt to arise in adolescent minds.

Science is built up by patient and persistent labor, most of it drudgery of the hardest kind. But it is not altogether done by work of the bricklayer sort, the slow fitting together of fact upon fact and cementing them in place with the mortar of logic. There must come to somebody some time a vision of the edifice as a whole, the fundamental theory of the thing complete and perfect. This vision may come in a flash quite like the inspiration of the author or artist, and often when the mind is not consciously working on the problem, but is, so to speak, off guard. It seems almost as though the answer were being whispered to him from without by some one who had watched with sympathy, his fruitless efforts to solve it.

We find in the biographies of men of science frequent references to this, so curious sensation of inspiration. One of the most explicit is the account given by the German chemist, Kekulé, of how he came to hit upon the ring formula for the benzene molecule. The twenty-fifth anniversary of this discovery was celebrated in Germany, and on that occasion Kekulé told how he came to conceive the idea of atomic linkages which has served as a guide to research ever since. It was during his *Wanderjahr*, when he was living in London, at the age of 22. He was in the habit of discussing chemistry with a friend living on the opposite side of the city, and this often kept him up late. He says:

One fine summer evening I was returning by the last omnibus, outside as usual, through the deserted streets of the metropolis, which are at other times so full of life. I fell into a reverie (Traumerlei), and, lo, the atoms were dancing before my eyes! Whenever, hitherto, these diminutive creatures had appeared to me, they had always been in motion, but up to that time I had never been able to discern the nature of their motion. Now, however, I saw how, frequently, two smaller atoms united to form a pair; how a larger one embraced two smaller ones; how still larger ones kept hold of three or four of the smaller; whilst the whole kept whirling in a giddy dance. I saw how the larger ones formed a chain, dragging the smaller ones after them, but only at the ends of the chain. I saw what our Past Master Kopp, my highly honored teacher and friend, has depicted with such charm in his "Molecular-Welt"; but I saw it long before him. The cry of the conductor, "Clapham Road," awakened me from my dreaming, but I spent a part of the night in

putting on paper at least sketches of these dream forms. This was the origin of the structure theory."

This gave him the conception of the chain formula for the ordinary hydrocarbons of the paraffin series, but benzene known to have the composition of C_6H_6 could not be so pictured, and this whole field of the aromatic hydrocarbons was an impenetrable mystery. Here again the imps of his subconscious, or what Socrates called his demon, came to his aid, when he was professor at Ghent:

I was sitting, writing at my text-book, but the work did not progress. My thoughts were elsewhere. I turned my chair to the fire and dozed. Again the atoms were gamboling before my eyes. This time the smaller groups kept modestly in the background. My mental eye, rendered more acute by repeated visions of this kind, could now distinguish larger structures of manifold conformation, long rows, sometimes closely fitted together, all twisting and twisting in snake-like motion. But, look! What was that? One of the snakes had seized hold of its own tail and the form whirled mockingly before my eyes. As if by a flash of lightning I awoke, and this time also I spent the rest of the night in working out the consequences of the hypothesis.

And Kekulé concludes with this bit of advice and warning:

Let us learn to dream, gentlemen, then perhaps we shall find the truth. * * * But let us beware of publish our dreams before they have been put to the proof by the waking understanding.

Kekulé was certainly excusable in indulging a bit in day-dreaming, for he did not have much time to sleep. No eight-hour day for him, and he never charged for overtime. He says in this autobiographical talk:

During many years I managed to do with four and even three hours' sleep. A single night spent over my books did not count. It was only when two or three came in succession that I thought I had done anything meritorious.

In pursuing this hard course of life he was following the advice of his great teacher, Liebig, who said to him:

If you want to be a chemist, you will have to ruin your health. No one who does not ruin his health with study will ever do anything in chemistry nowadays.

If that was true of chemistry in the forties, how many hours a day would a man have to put in nowadays to master the science? But Kekulé managed to live to the age of 67 and Liebig to the age of 70, while their French contemporary, Chevreul, died at 103, so that chemistry need not be classed as an extrahazardous occupation in spite of its fumes and explosives.

To cite another instance let me quote from Henri Poincaré, one of the greatest of modern mathematicians and cousin of the President of France. When he was trying to work out the Fuchsian functions of the hypergeometric series whatever they are—he tells us in his "Science and Method":

Naturally, I proposed to form all these functions. I laid siege to them systematically and captured all the outworks one after the other. There was one, however, which still held out, whose fall would carry with it that of the central fortress. But all my efforts were of no avail at first, except to make me better understand the difficulty, which was already something. All this work

was perfectly conscious. Thereupon, I left for Mont Valerion, where I had to serve my time in the army, and so my mind was preoccupied with very different matters. One day, as I was crossing the street, the solution of the difficulty which had brought me to a standstill came to me all at once. I did not try to fathom it immediately, and it was only after my service was finished that I returned to the question. I had all the elements, and had only to assemble and arrange them. Accordingly I composed my definite treatise at a sitting and without any difficulty.

Another great mathematician, Sir William Rowan Hamilton, could likewise give the exact moment and spot when and where he made his most famous discovery, the new form of calculus called quaternions. His experience is as definite and vivid as the conversations we used to hear narrated at the old-fashioned prayer-meetings.

Quaternions started into life, or light, full grown, on Monday, the 16th of October, 1843, as I was walking with Lady Hamilton to Dublin, and came up to Brongham bridge, which my boys have since called the Quaternion Bridge. That is to say, I then and there felt the galvanic circuit of thought close, and the sparks which fell from it were of fundamental equations between i, j, k ; exactly such as I have used them ever since. I pulled out on the spot a pocketbook, which still exists, and made an entry on which, at the very moment, I felt that it might be worth my while to expend the labour of at least ten (or it might be fifteen) years to come. But then it is fair to say that this was because I felt a problem to have been at that moment solved—an intellectual want relieved—which had haunted me for at least fifteen years before. Less than an hour elapsed before I had asked and obtained leave of the Council of the Royal Irish Academy, of which Society I was, at that time, the President—to read at the next General Meeting a paper on Quaternions, which I accordingly did, on November 13, 1843.

Hamilton, also, I must mention, was noted for his power of thinking long and hard. Many times he sat at his mathematical work for more than twelve hours at a stretch; and, as Liebig said a scientist must, he ruined his health in the end by neglect of sleeping and eating.

Kropotkin, the prince of anarchists and a great geographer, relates a similar experience in his autobiography, "The Memoirs of a Revolutionist":

To discover the true leading principles in the disposition of the mountains of Asia—the harmony of mountain formation—now became a question which for years absorbed my attention. * * *

Beginning, then, with the beginning, in a purely inductive way, I collected all the barometrical observations of previous travelers, and from them calculated hundreds of altitudes, etc. * * * This preparatory work took me more than two years; and then followed months of intense thought, in order to find out what all the bewildering chaos of scattered observations meant, until one day, all of a sudden, the whole became clear and comprehensible, as if it were illumined with a flash of light. * * *

There are not many joys in human life equal to the joy of the sudden birth of a generalization, illuminating the mind after a long period of patient research. What has seemed for years so chaotic, so contradictory, and so problematic takes at once its proper position within an harmonious whole.

To show how close this is to the use of the subconscious imagination in literary art, we need only refer to what Stevenson, in his well known "Chapter on Dreams," says of

My Brownies, God bless them! who do one-half my work for me while I am asleep, and in all human likelihood do the rest for me as well, when I am wide awake and fondly supposing I do it myself.

It seems that he was particularly indebted to their aid in the theme of his most gruesome stories, "Dr. Jekyll and Mr. Hyde" and "Olalla." Of the former he says:

I had long been trying to write a story on this subject, to find a body, a vehicle, for that strong sense of a man's double being which must at times come in upon and overwhelm the mind of every thinking creature. * * * Then came one of those financial fluctuations to which (with an elegant modesty) I have hitherto referred in the third person. For two days I went about racking my brains for a plot of any sort; and on the second night I dreamed the scene at the window, and a scene afterwards split in two in which Hyde, pursued for some crime, took the powder and underwent the change in the presence of his pursuers. All the rest I made awake, and consciously, although I think I can trace in much of it the manner of my Brownies. * * * The business of the powders, which so many have censured, is, I am relieved to say, not mine at all, but the Brownies. Of another tale, in case the reader should have glanced at it, I may say a word: the not very defensible story of "Olalla." Here the court, the mother, the meetings on the stair, the broken window, the ugly scene of the bite, were all given me in bulk and detail as I have tried to write them; to this I have added only the external scenery (for in my dream I was never beyond the court), the portrait, the characters of Felipe and the priest, the moral, such as it is, and the last pages, such as, alas! they are.

It will be noticed that in all these cases, as in many others that might be cited, the revelation succeeds a period of intense and anxious thought on the problem to be solved. Then, when the strain of conscious attention has been relaxed, the solution comes spontaneously and seemingly from an external source. The idea may pop into one's mind as in the case of Poincaré when he is busy about something else or as in the case of Stevenson, when he is asleep, or as in the case of Kekulé, when he is in a reverie. This last, sometimes called the hypnoideal state, seems to be peculiarly favorable to the evocation of fancies, whether factual or fictional, from the depths of the unconscious mind.

We may then conclude that in the normal process of making a great scientific discovery, there are two periods of prolonged, conscious and concentrated effort, a preliminary period devoted to a survey of the subject and the amassing of material, then comes a flash of insight into the solution of the problem, a vision of the new conception in its entirety, which should be followed by a second period of laborious study, devoted to the development and verification of the hypothesis.

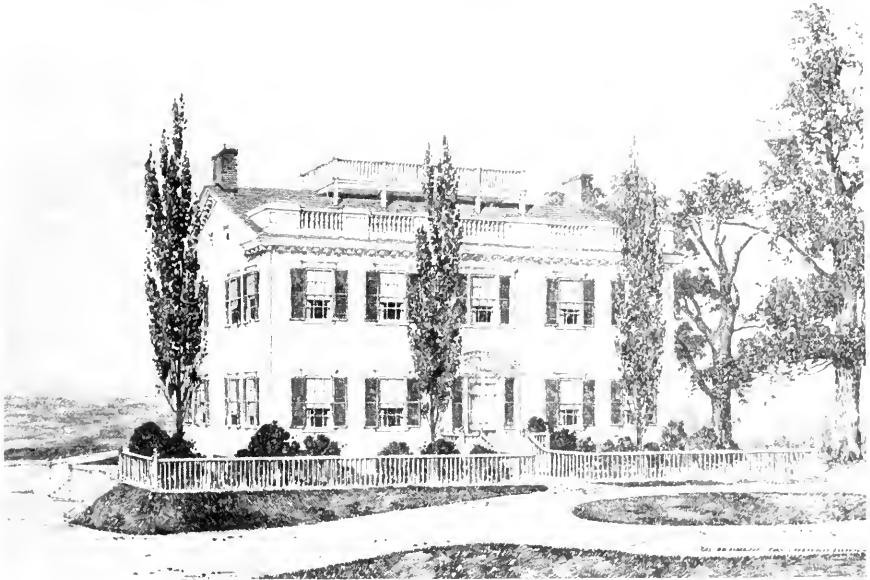

I believe that the main principle of this process may be applied by those of us who are not geniuses to the production of our lesser works of creative thought. In the sheet of suggestions that I send out to the young writers who desire to contribute to the publications of Science Service, I have embodied this injunction:

Don't refer to notes or books while writing. Read up on the subject as thoroughly as you can, and take as many notes as you need; then put away all your notes and books out of reach and next day or at least an hour later lay clean sheets of paper on a clear desk and write out what you know about it, in your own way. Afterwards, preferably next day, read over your manuscript

critically, verify your facts, correct your data, revise your English and add any essential facts, but don't expect the reader to be interested in what is so uninteresting to you that you can not keep it in mind a single hour.

Or in other words, write out of your own minds but fill up your mind first. Remember that you are not writing for your own amusement but for the profit of others. So be unselfish about it.

I was asked the other day by some school of journalism to state what I had found in the course of twenty years of editorial experience to be the most common fault of writers. I answered that it was their failure to obey the old maxim "Put yourself in his place." They failed to realize the reader, to consider what he wanted to know and how he needed to have it put. This means essentially that they failed to follow the Golden Rule, which is not only a good guide to life, but a guide to good writing.

CHANCELLOR'S HOUSE.

As can be easily discovered, the Chancellor's House is a typically New England design. In fact, in its exterior it is a practical reproduction of the Macey House on Nantucket Island. This house will have one of the most superb locations to be found in the District of Columbia. On a clear day, it will have a view of nearly twenty-five miles to the Blue Ridge Mountains.

It is located in the front yard of the General Murdock home. When Massachusetts Avenue was cut through, the old Murdock house had to be torn down and taken away. The three old trees of the Murdock yard are still standing, though one of them shows but little signs of life. It is said these trees have been in existence as long as the city of Washington.

THE WOMEN'S GUILD OF THE AMERICAN UNIVERSITY.

With the opening of the College of Liberal Arts, and the development program of the University, the Women's Guild renews its activities.

Mrs. John C. Letts is the President of the Guild and Mrs. Wm. F. McDowell, Vice President. A meeting is called for December to make definite plans for co-operation.

Probably no better statement of the purpose and plan of the Guild has been made than that written by the President, Mrs. M. E. Hartsock, on September 1, 1900. It is so clear and complete that this open letter is presented again in the UNIVERSITY COURIER.

The Woman's Guild of The American University proposes to enlist the womanhood of America in one of the noblest enterprises for a higher Christian culture that ever presented itself to her zeal and consecration.

Methodism, though the youngest force in Protestantism, has already justified its leadership, which it shall maintain only so long as its spirit is aggressive and timely. It saved eighteenth century Christianity from secularism and moral laxity; it is, with others, arousing the whole Church to its

duty toward the twentieth century, in saving it from agnostic tendencies and beliefs without foundation.

The Church must fulfill its mission to be the leader of thought and the new education. That this University may reach its ideal, the influence and labor of Protestant womanhood should be enlisted in its behalf.

Womanhood has always been a prominent factor in the work for the betterment of mankind. Especially has the work of education appealed to woman's heart and judgement, standing guardian over the states of childhood and adolescence. The full significance of the duty of the Church toward the education of young manhood and womanhood makes this appeal most timely and serious.

Much earnest thought and effort have been bestowed to accomplish what has already been done. But that the new century may open with a splendidly equipped institution for the highest education at the capital of the nation and under the direction of a strong Christian administration, the Trustees call upon the intelligent womanhood of America to organize under the Woman's Guild, which proposes—

To collate woman's gifts to the University into a general fund to build a College of Religion called The Woman's Guild College of Religion.

Dr. George B. Woods

New Dean of the College of Liberal Arts.

Dr. George B. Woods, who was unanimously selected by the Trustees of the University as Dean of the College of Liberal Arts, has the best preparation for this important position. He received his A. B. from Northwestern University in 1903, A. M. from Harvard in 1908, and Ph. D. from Harvard in 1910. The following are his educational positions since graduation: Superintendent of a High School; Professor in Pacific University, 1904-5; instructor in English and Principal of Evanston Academy, Evanston, Ill., 1905-7; Professor of English and head of Department of English at Miami University, 1910-13, and from 1913 to the present he has been professor of English and head of the Department in Carleton College, Northfield, Minn. He has had twenty years of constant association with co-educational institutions. He is a recognized teacher and author.

Mrs. Woods is a graduate of Northwestern University. They have three children, a daughter in college and a daughter and son in the public schools.

Dr. Woods will move to Washington at the close of the college year at Carleton, and will give his entire time to the development of the College of Liberal Arts.

COLLEGE OF LIBERAL ARTS.

By action of the Board of Trustees in June, 1924, the College of Liberal Arts was to be opened in September, 1925. The Chancellor with Dean Woods will complete the list of Faculty members by the first of the new year and the catalog will be out soon thereafter.

The College of Liberal Arts will have the Hall of History as its main building. This marble building is one of the most beautiful college buildings in the country. Its normal lecture room capacity will be over 600. The College next year is to be limited in number, and it is understood that one-half the student body are to be men. One hundred and twenty-five young women can be cared for in the new dormitory the first year. The purpose of the American University is to provide the best instruction for the number that can be adequately taken care of with her equipment and teaching staff. Students are to have healthful and helpful college surroundings.

When the University grounds are fully developed there will not be found a more ideal situation in any land. Every advantage of the Nation's Capital is at hand. The American University students will be far enough removed from the center of the city to make an ideal college community of their own.

The Graduate School of the Arts and Sciences, and of the Political Sciences will be continued as at present in the downtown center at 1991-1907 F Street.

COLLEGE OF LIBERAL ARTS NUMBER

The College of Liberal Arts of The American University opens September 23rd, 1925.

A full four-year course leading to the degree of Bachelor of Arts, will be given.

The College is co-educational.

A fire-proof dormitory for women will accommodate 180.

A common dining room for all students is provided in University Hall.

Washington offers many educational advantages.

CHANCELLOR CLARK

Chancellor Lucius Charles Clark assumed charge of the administration of the American University in June, 1922. He succeeded Bishop John W. Hamilton who resigned after six years of valued service to the University.

The Chancellor is a graduate of Cornell College, Iowa, and received the degree of Bachelor of Sacred Theology from Boston University. Upper Iowa University gave him the honor degree of Doctor of Divinity. Dr. Clark was a student in Glasgow, Scotland, in 1909 and 1910. He has lived in Washington since 1913. He was pastor of Hamline Methodist Episcopal Church for seven years and Executive Secretary of the Washington Federation of Churches for two years. He is the author of "The Worshipping Congregation."

Under the present administration the School of the Political Sciences in the Graduate School has been organized. The College of Liberal Arts begins under the direction and management of Chancellor Clark.

DEAN WOODS

Dr. George B. Woods is the Dean of the College of Liberal Arts and Professor of English. He received his A. B. from Northwestern University in 1903, A. M. from Harvard in 1908 and Ph. D. from Harvard in 1910. He has been a Superintendent of a High School, Professor in Pacific University, instructor in English and Principal of Evanston Academy, Professor of English and Head of the Department of English at Miami University and from 1913 to the present he has been Professor of English and head of the Department in Carleton College, Northfield, Minn. He is Editor of English Poetry and Prose of the Romantic Movement and author of a College Handbook of Writing. He has been special lecturer in Northwestern University, University of Minnesota, Ohio State University and University of California.

FRANK W. COLLIER

Frank W. Collier was born in Maryland. He has been connected with The American University in its Graduate Schools from the opening. He is Dean of the Graduate School of Arts and Sciences. He is an A. B. Johns Hopkins 1896, S. T. B. Boston University 1899, Ph. D. Boston University 1910. He is a member of numerous educational associations, a frequent contributor of periodicals, author of "Back to Wesley." Dr. Collier will give the courses in the College in Philosophy.

DEAN MARY LOUISE BROWN

Miss Brown is the Dean of Women of the College of Liberal Arts.

Dean Brown is an A. B. from DePauw University, was elected to Phi Beta Kappa. She has been a teacher in High Schools, traveled in Europe, Field Secretary for the Illinois Women's College, received her M. A. degree from University in Michigan, 1920, director of Residence Hall, Iowa State College 1920-22, Dean of Women Lawrence College, 1923-25. Dean Brown will live in the dormitory and will be instructor in English.

ALBERT H. PUTNEY

Albert H. Putney, A. B. Yale, LL. B. Boston University, Ph. D. American University. Dr. Putney is Dean of the Graduate School of the Political Sciences of The American University. Is the author of "Government in the United States," "Law Library" 12 vols., "United States Constitutional History and Law," "Currency, Banking and Exchange," "Corporations," "Principles of Political Economy," "Bar Examination Review," "Foreign Commercial Law," "Handbook of Election Laws." Dr. Putney will give courses on The Constitution and Government in the College.

JOHN WESLEY HORNBECK

John Wesley Hornbeck secured his Ph. D. at the University of Illinois in 1913 and has been Professor of Mathematics and Physics at Carleton College since that time. Dr. Hornbeck while at Cornell University on a Sabbatical furlough last year completed a significant piece of research, the results of which are published in the Physical Review.

As a scholarly, thorough and enthusiastic teacher, he has been able to send a larger proportion of his students into graduate study than has any of his associates.

Dr. Hornbeck is Professor of Mathematics and Physics.

ELLEERY C. STOWELL

Ellery C. Stowell is Professor of Political Science and head of the Department of International Law in the Graduate School of the Political Sciences. He is an A. B. Harvard, 1898; a student of the University of Berlin and the University of Paris with the degree of Docteur en Droit, Paris, 1906. He has been instructor of International Law in George Washington University, the University of Pennsylvania and Columbia University. He has been Professor in The American University since 1922.

JOSEPH DAWSON

Dr. Joseph Dawson graduated from DePauw University in 1892. Received S. T. B. from Boston University, also his A. M. and Ph. D. Dr. Dawson majored in Sociology for one of his degrees. He will be instructor in the English Bible and Sociology in the College of Liberal Arts.

BARTLETT BURLEIGH JAMES

Dr. James is an A.B. and A.M., Western Maryland College, and Ph.D. from Johns Hopkins University. His special field is History, but he has taken graduate courses in a variety of subjects and has had large experiences as an associate editor in all subjects of Political Science. He is a member of several historical associations. He is known as an enthusiastic teacher and highly esteemed for his rare scholarship. He is a lecturer, essayist and contributor to current historical, musical and dramatic literature. He is Professor of History.

PAUL KAUFMAN

Dr. Kaufman has the degrees of B.A. and M.A., from Yale, and his Ph.D., from Harvard. He is the author of numerous studies in learned journals and his recent book, "Outline Guide to Shakespeare," has passed through two editions since October. Dr. Kaufman will be Professor of English in the College of Liberal Arts.

WILL HUTCHINS

Professor Will Hutchins is an artist, author and instructor in Art Appreciation and Dramatics.

He is an A.B. and Bachelor of Fine Arts from Yale. He has been a special lecturer at Yale and other institutions. Professor Hutchins will give courses in Art Appreciation and Dramatics in the College of Liberal Arts and also in the Graduate Schools.

MINERVA A. MCCULLOCH

Minerva A. McCulloch, Instructor in Home Economics, is a graduate of Howard Payne College and of the Scarrett College. She is the founder of the first Wesley House of the Southern Methodist Church in Nashville, Tennessee, and was head resident for five years. She has had six years' experience in teaching.

LOIS MILES ZUCKER

Lois Miles Zucker received her M.A. degree from the University of Illinois. She was for five years instructor in languages in the Government Schools of China. Her Department in The American University will be French and Latin.

ERNEST WILLIAM GUERNSEY

Dr. Guernsey has his B.S. from the University of Illinois, M.S. from the American University, and Ph.D. from George Washington University. He is one of the research men of the Fixed Nitrogen Research Laboratory of the Department of Agriculture. Dr. Guernsey's field is chemistry and he will be instructor in Chemistry in The American University.

FREDERICK JUCHHOFF

Dr. Frederick Juchhoff came to the American University from the College of William & Mary, Virginia. He is a graduate of the Kansas City University where he took the Bachelor's and Doctor's degrees, and of the Law School of Ohio Northern and University of Maine, receiving the LL.B. and LL.M. degrees. He has been instructor in Berea College (Ky.), in the James Milliken University, and the University of Toledo. He became instructor in The American University in 1921. He is Professor of Economics in the College of Liberal Arts.

CONVOCATION JUNE 3rd.

The Annual Convocation of The American University will be held on June 3rd. All exercises this year, will take place on the University Campus. The meeting of the Board of Trustees convenes at 10:00 o'clock in the Hall of History. At the same hour in the parlors of the Hall of History, the Woman's Guild of The American University will hold its annual meeting.

The Trustees' luncheon will be served at noon. At 2:00 o'clock public Convocation exercises will begin with the Academic Profession. Bishop William Fraser McDowell will give a brief address and dedicate University Hall, the new dormitory for women. The second address will be given by Mrs. Anthony Wayne Cook, President General of the National Society of the Daughters of the American Revolution. Doctors and Masters degrees will be conferred by the Chancellor upon thirty-five candidates.

The Campus can be reached by the Massachusetts and Western Ave. car, coming from Lincoln Park through the city or by the Woodley Road Bus, transferring to the electric at Macomb St. The Campus is located at Massachusetts and Nebraska Avenues, Northwest. It is planned to hold the exercises in the reception room and lobby of University Hall. The large space in this Hall will furnish abundant seating capacity.

CAMP AMERICAN UNIVERSITY MARKER.

The Daughters of the American Revolution of the District of Columbia are marking the World-war Camp sites in the District of Columbia. The marker will be of rough, light grey granite, three feet high, two feet wide, and four inches deep. It will have a bronze tablet on the front with the following inscription:

Site of Camp
AMERICAN UNIVERSITY
and
CAMP LEACH

1917-1918

Erected by

The Daughters of The American Revolution
of the District of Columbia.

Approximately 100,000 soldiers received training on the Campus of The American University during the war. At the close, Colonel G. A. Burrall, Chief of the Research Division of the Chemical Warfare Service, wrote the University the following: "The American University helped in a very real way to win the war and any credit which is due the Research Division, Chemical Warfare Service, must be shared by The American University."

JOHN E. BENTLEY

Dr. John E. Bentley is the Director of the Department of Religious Education in the Graduate Schools. He came to The American University from the Hiff School of Theology. Is an A.B. from McGill University, M.A. from Clark University, S.T.B. Boston University, M.R.E. Boston University, Ph.D. McGill University. His major work has been in Psychology. He will be professor of Education and Psychology in the College of Liberal Arts.

ALBERT OSBORN

Dr. Albert Osborn is an A.B. His D.D. is from Drew Theological Seminary and S.T.D. from Syracuse University. He has been with the American University since its organization, in 1893. He is the author of the biography of Bishop John Fletcher Hurst. Dr. Osborn is instructor in English Bible.

THE WOMAN'S GUILD OF THE AMERICAN UNIVERSITY.

The Woman's Guild of The American University was organized twenty-five years ago. Some very distinguished women have been associated with the Guild during its history. With the beginning of the College of Liberal Arts, new interest is manifested by the Guild, and meetings are being held at regular stated times. Twenty-five new members have been added since the first of the new year. The annual election of officers will take place on Convocation Day, June 3rd. A definite program of work will be outlined at that time. The members of the Guild will be guests at the Trustee luncheon, held in connection with the Convocation exercises.

SUPERINTENDENT OF GROUNDS AND BUILDINGS.

Mr. Wm. A. Prye has been secured as Superintendent of Buildings and Grounds. Mr. Prye is a native of Ohio. He has had experience as a contractor and builder and is greatly interested in landscape gardening. He and Mrs. Prye are now living in the Superintendent's house, on the Campus.

Mr. C. G. Torreyson, who has been Superintendent of Grounds and Buildings for twenty-two years, found it necessary on account of failing health, to resign. Mr. Torreyson has not been well for some months, and the unusual amount of work to be done in the development of

the Campus and the care of the buildings, made it impossible for him to serve longer. He has given the University a very faithful service and his many years as Superintendent, indicates the high esteem in which he was held.

BUILDINGS AND GROUNDS.

The new buildings are going forward rapidly. More than 100 men are at work on the University Hall and the Chancellor's House. University Hall will not be completed by Convocation, but it will be in sufficient readiness to entertain the guests to the Convocation exercises and will give an opportunity for inspecting the various rooms and appointments of the building. The Chancellor's house is to be completed by mid-summer. Plans are now being drawn for the heat and power plant, the temporary gymnasium and the new Library building. These are to go forward as rapidly as possible.

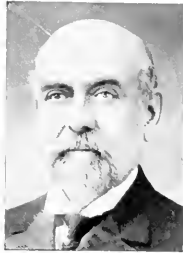

MRS. JOHN GORDON BATTELLE.

It occasioned great sorrow to the many friends of Mrs. John Gordon Battelle when her sudden death, in the Willard Hotel of Washington, was announced. Mrs. Battelle was the mother of Mr. Gordon Battelle, who left a bequest of \$100,000 to The American University for the purpose of establishing a "Battelle Memorial." Mrs. Battelle was the sister-in-law of John W. Hamilton, Chancellor Emeritus.

ADOLF EDWARD ZUCKER

Adolf Edward Zucker is a Ph.D. from the University of Pennsylvania. He will give instruction in the German language and literature in the College of Liberal Arts.

GEORGE C. STURGISS

Honorable George C. Sturgiss, born 1842, died February 25th, 1925. He was an honored Trustee of The American University for a number of years. He was a jurist, educator, banker, capitalist, legislator and editor. He was prominent in the church, the state and in educational affairs.

GEORGE S. DUNCAN

Dr. George S. Duncan received his Ph.D. from Johns Hopkins. He will have the department of Ancient Languages in The American University. Dr. Duncan's work in the ancient languages and especially in the translation of the Pyramid Text, has given him recognition throughout the world. He is a graduate of Williams College and took research graduate work in Princeton, Johns Hopkins, Oxford and Berlin. A student having any desire to do work in Ancient Languages could not find a more favorable opportunity than will be given through Dr. Duncan.

GEORGE BAILLIE SPRINGSTON

Mr. George Baillie Springston, LL.B., George Washington University, becomes Director of Athletics and Physical Education for men. Mr. Springston was a member of the football squad of the University of Illinois and Captain of the team in George Washington University. His all-round ability as an athlete and fine personality as a man, will make him very effective in developing athletics in the college.

STUDENT ENROLLMENT.

It is very gratifying to the University to have so many inquiries from students throughout the country. There are already enrollments from California to Massachusetts, and from Michigan to Texas. Application for rooms in the dormitory are filed in the order of receiving and the assignment will be made in the same way.

An opportunity will be given young men to work on the campus grounds during the spring and summer to pay in part for tuition. These young men should apply at the office, 1901 F St., N. W.

The American University believes in both character and culture. They must be builded together. Formal opening of the College of Liberal Arts will be held September 23rd 10:30 A. M.

Graduates 1925.

The following is a list of those receiving Master's and Doctor's degrees at the Convocation, June 3, 1925:

MASTER OF COMMERCIAL SCIENCE

Wesley Earle Craig, LL.B. Thesis: Preferred Stock.

MASTER OF POLITICAL SCIENCE

William Smith Stoner, D.C.L. Thesis: Governmental Assistance in Stabilizing Wholesale Produce Markets and Regulation of Terminal Yards.

MASTER OF LAWS

Henry Martyn Lewis, Jr., LL.B.
Charles Pergler, LL.B. Thesis: The Cause of Czechoslovak Independence in the United States.
Frederick Peter Myers, M.A.
Angel Pecson Casiano, LL.B. Thesis: The Distribution of Governmental Powers in the Philippines.

MASTER OF SCIENCE

Charles Spaulding Howard, B.S. Thesis: A Critical Study of the Determination of Total Dissolved Solids and Loss on Ignition in Water Analysis.
Amer Benjamin Nystrom, B.S. Thesis: The Influence of the Sciences in Improving Dairy Husbandry Practices.

MASTER OF ARTS

Isidoro Rubio Collado, B.D. Thesis: The Color Preferences of Nine Hundred and Ninety Filipinos.
Clarence Herman Corkran, A.B. Thesis: The Historical Background of the Monroe Doctrine.

Dedimo Maylaya Fonbuena, A.B.

Estelle Satchwell Gatke, A.B. Thesis: The West in American Verse.

Wilbur Lake Harrison, A.B.

Lilian Agnes Helliwell, A.B.

George Edgar Johnson, B.C.S., LL.M.

William Earl LaRue, B.D. Thesis: The Justification of Christian Ethics.

John Chambers McDowell, A.B. Thesis: The Trend of the Dairy Industry in the United States.

Irene de Poplawska Leineweber, A.B. Thesis: The Emotions and Their Characteristics in Polish Life and Literature.

Willis Cleaves Russell, A.B.

Ralph Dela Smith, A.B. Thesis: The Moralization of the Idea of God in the Old and New Testaments.

Edwin Allan Swingle, LL.M.

Matas Joseph Vinikas, Ph.D. Thesis: Foreign Trade Relations of Lithuania.

William Claude Waltmeyer, A.B. Thesis: Aims for Modern Religious Education.

Joseph Steinhauer Zucker, A.B. Thesis: Labor Banking—Its Development and Future.

Mariano Carreon Lopez, B.F.S. Thesis: The Political Parties in the Philippines and Their Attitude Toward the Form of Government.

DOCTOR OF CIVIL LAW

Seth Thomas Bowen, A.B.

Walter Alexander Brown, LL.M. Thesis: The Character of the Cases in Which Acts of Congress Have Been Declared Unconstitutional by the Supreme Court of the United States.

Henry Bernard Hazard, LL.M. Thesis: Racial Qualifications for Naturalization and Citizenship in the United States.

Ezekiel Ranson Stegall, M.A. Thesis: The Interpretation of Federal Tax Laws.

DOCTOR OF SCIENCE

Frederick Leslie Benton, M.A. Thesis: The Hygiene of the Mind with Special Reference to the College Age.

DOCTOR OF PHILOSOPHY

James Alexander Bell, M.A. Thesis: Resources and Standards of Y. M. C. A. Colleges.

Frances Moon Butts, M.A. Thesis: Standards in the Non-academic Subjects for College Entrance and Graduation in Relation to the Bachelor's Degree.

Engenio Maglaya Fonbuena, M.A. Thesis: The Doctrine of Continuous Voyage—A Study of the Historical Development of the Doctrine as Applied by Judicial Tribunals.

Robert Moulton Gatke, M.A. Thesis: Plans of American Colonial Union, 1613-1754.

Marie Margaret Ready, M.A. Thesis: A Study of the Status of Physical Education, Including Military Training and Hygiene in American Colleges and Universities.

Helga Colquist Todd, M.A. Thesis: Women's Organizations in the United States—Their Development and Present Status.

Harry Swain Todd, M.A. Thesis: International Agreement of the United States Other Than Treaties.

Sarah Agnes Wallace, M.A. Thesis: Public Opinion in Great Britain on the American Civil War, 1861-1865, as Shown in the London Times.

AWARDS OF FELLOWSHIPS, 1925-26.

THE SWIFT FOUNDATION

George Edward Scheider, A.B., B.D., S.T.M. To study Old Testament at the University of Chicago.

THE MASSEY FOUNDATION

Joseph McCulley, A.B. To study at Oxford University, England.

Thomas Archibald Stone, A.B. To study at École Libre des Sciences Politiques, Paris.

Convocation Academic Procession.

Washington, D. C.

CONVOCATION ADDRESS.

At the Convocation of the American University on June 3 Bishop William F. McDowell dedicated the new half-million-dollar dormitory for women. This is one of the new buildings on the American University campus. Bishop McDowell at the dedication made the following address:

THE IDEALS OF THE AMERICAN UNIVERSITY.

"Thirty years ago Andrew D. White, the first President of Cornell University, said these words to the young Chancellor of a small young university in Denver: 'Every institution must work out its own life on its own grounds.' He meant that Colorado differed from New York and Ohio. Years later he agreed with that same chancellor, no longer young, that 'Every institution must also work out its life in its own times.' This venture of idealism and faith upon which we hopefully embark today is begun with a profound consciousness of both its locality and times. Its locality or grounds is the new Capital of the United States in its new place in a world radically changed since the first corner-stone was laid on this campus. Its times are in an

era which men are calling an absolutely new era in human history. The American University seeks to do what it ought to do here and what it ought to do now. It seeks to work out its current life in its own place and in these times. It regards the double law of locality and timeliness. It wishes to do here and it wishes to do now what it ought to do for the world here and now. This Capital seems to us to be a strategic center from which to work for world welfare in promoting the higher education of the world. This hour seems to us one of the supreme hours in human history, a fateful hour in which the thoughts, the attitudes and the spirit of men are being remade throughout the nations and the races. Opening a new institution bears a vital relation to those world forces that are to set the pattern for the ages to come and create the mind of the present world for its future ongoing. People who care have a right to know our essential principles and the vital basis upon which we propose to carry on this high adventure. These briefly and in somewhat general terms we try to state. We make a sort of profession of the faith in which we live and propose here to labor.

"The eminent Italian historian, Ferrero, declares that the fundamental force in history is not economic but psychologic. This is what makes education so vital in the life of the world. The forces that determine the economic policies of a nation are very important, as anyone can easily see. But the forces that make the mind of a nation, that determine its mental life, that create the soul of a people, reach to the heights and depths of life. Education is not an incident in national life, but an essential to a true national life. Bishop Simpson once said: 'Educated mind controls the world. If Christianity shall ever gain control of the world, it must establish and maintain colleges where educated minds are trained.'

"The great question of psychology and character building relates to the pattern on which the soul or mind of a people shall be based. We do not make any concealments of our desire or feel any necessity to defend it. We desire, as far as we may, to make our contribution toward making the mind of America and the mind beyond America according to the mind of Christ or the pattern shown us in the mount. This seems to us to constitute the highest educational and intellectual ideal. We know that this age in which we live thinks and talks much of democracy. We must work out our life in this age, but we must interpret and help to create a democracy which shall be personal, social, spiritual, intellectual, and economic according to the principles of Jesus. This seems to us the most fateful hour in human history. And it is the only hour we have. Others have had other hours and have not made the most of them. Others will have other hours after we are gone. But in this hour which is given to us, the thoughts of men, the souls of men, of classes, races, and nations are being remade. There are several ways that can be taken, some of them ways that have been taken in other years. They are ways that have looked wise and promising. Especially have they looked sensible and practical. But we have come to our present sad confusion by following them. It now seems to the American University that the time has come to make a full, perfect, and sufficient application of the mind and teaching, the principles and spirit, the methods and purposes of Jesus to higher education as well as to the life of our time, our Nation, and our world. It might seem easier to conform to the spirit of this world, but it seems far better to have the mind of the world renewed and transformed in its nature into the image of the Master. The American University believes with Mazzini that 'he who can spiritualize democracy will go far toward saving the world.' It believes in the way of Jesus with the mind and character of a man and with the mind and character of nations and races. It is Protestant and evangelical, democratic and free. It believes in the mind, the ideals, and the ethics of the Kingdom of Christ. It sees the forces that strive for the creation and mastery of the mind of the world and that seek

in education the supremacy in making that mind. It takes its place, modestly and quietly, with those forces now in existence and yet to come into being which endeavor to enthrone in thinking, teaching, and life the things that are true, that are just and pure, lovely and of good report, according to the perfect personal illustration of them. It can go up or down with the Great Teacher. It does not wish to go anywhere without Him. For today and tomorrow it takes its stand with the Master with His spirit, His truth, His purpose. Jowett said at Balliol: 'The college should be first a place of education, second, a place of society, and third, a place of religion.' And this vision we hold before ourselves in this new day in our history.

"Upon this declaration the University asks the confidence, the patronage, the cooperation, and the support of those who believe with it. It asks youth to come to its halls for instruction that they may be prepared to be co-workers with the Master of life in His program and work for the world. It asks parents to trust their sons and daughters to it on this basis. It asks the church to believe in it and to work with it in the common task of redemption. It asks men and women of wealth, whether large or moderate, to give to it those millions which such an institution requires and deserves for its high tasks in these modern days. And it pledges its utmost loyalty now and always to the country whose name it proudly bears, and the living Lord and Master whose principles it holds and whose spirit it desires to possess and practice. It asks great wealth. It hopes to make the rich return spoken of by President Eliot long ago: 'It will make rich return of learning, poetry, and piety. It will foster the sense of public duty—that great virtue which makes republics possible.'

"And to these purposes and ideals, in this spirit and fellowship, for the service of youth, the good of mankind and the glory of God, here at this Nation's Capital, on this June day, with the American flag flying above us, with the world in our view, with the ever-living Master at our head, we dedicate this building and pray that the abiding favor and blessing of God may rest upon what we do here and now in His name.

"In Thomas Hardy's novel, 'Jude the Obscure,' there is a thrilling picture of the boy Jude looking from a Wessex hilltop toward Oxford as the lights come out at evening:

"'It is a city of light,' he said to himself.

"'The tree of knowledge grows there,' he added, a few steps farther on.

"'It is a place that teachers of men spring from and go to.'

"After this figure he was silent a long while, till he added: 'It would just suit me.'

"'A city of light,' a tree of knowledge growing there,' teachers of men,' a castle manned by scholarship and religion,' all this we desire youth to see as it looks toward this high hill in years to come."

PRESENTATION AND UNVEILING OF CAMP AMERICAN UNIVERSITY MARKER.

At the Convocation in June, District of Columbia, Daughters of the American Revolution, presented a "Camp American University" marker. The presentation was made by Mrs. J. F. Wheat, State Historian of the District of Columbia, Daughters of the American Revolution.

PRESENTATION.

She said: "In just a few words I want to say that last fall in planning the work of the 'State Historic' several projects were considered, but it was finally decided to mark the Camp

Sites of the World War situated in the District of Columbia. We had hoped to mark all of them, but Camp Meiggs and Camp East Potomac Park being on Government Reservations, it would have required an Act of Congress to authorize work of that kind. We then decided to concentrate on the camp sites located on the grounds of the American University. In this we were graciously encouraged by the Chancellor and Trustees. The work was then undertaken and steadily progressed through the efforts of the committee, supported always by the ever-ready cooperation of the Associate Chairmen, Mrs. W. D. West, Mrs. H. H. Thompson, Mrs. Samuel Polkinhorn, and Mrs. Elizabeth M. Hesse, and every member of the Committee. And now Madam State Regent, I take pride in turning over to you our work finished to present to the American University."

UNVEILING GROUP

Underwood & Underwood, Washington, D. C.

Mrs. John M. Beavers responded as follows: "As State Regent of the District of Columbia Daughters of the American Revolution, I accept this marker from the Chairman of the State Historic Committee with much pleasure, and I feel a just pride in being privileged to pass it on to this great University upon whose campus one of the first pages of the history of the District of Columbia's part in the World War was written. This marker is another link in the long chain of commemorative markers throughout the land which tells the story of our struggles, our ideals and our love of country, and it is dedicated with our deepest reverence and respect to the memory of those who served and sacrificed.

"In the name of the Daughters of the American Revolution of the District of Columbia, and through the efforts of the State Historic Committee, and able assistance of Mr. Fred B. Owen, I have the honor to present to the American University this record of the first Camp Site in the District of Columbia during the World War."

ACCEPTANCE.

Address to the Daughters of the American Revolution in receiving the marker to the memory of the American University Camp, by Bishop John W. Hamilton:

There are Markers and Markers—monuments of fame and fiction, flattery and history, sacred and secular, men and nations.

Cleopatra flattered herself with Pillars and Needles; London dates her greatness as the World City from and with the

Pillar of the Great Fire; Napoleon puffed his vanity with the Arc de Triumphant; America honored her history with her monument to Lincoln; the Notre Dame is the principal monument of Paris; Washington's, her monument to the unknown soldier.

Freeman called the American Constitution the most abiding monument of human wisdom; the same may be said of the Emancipation Proclamation to the memory of Abraham Lincoln.

The beautiful monument to the love of home and country is found in the cheery and mellifluous lines of Father Proud to the Church Bells of Cork:

"With deep affliction and recollection
I often think of those Shandon bells,
Whose sound so wild would in days of childhood
Fling round my cradle their magic spell.
On this I ponder, wher'er I wander,
And thus grow fonder, sweet Cork, of thee;
With thy bells of Shandon
That sound so grand on
The pleasant waters of the River Lee."

The majestic but simple lines of Smith's American Hymn ring the Nation over with our patriotic fervor and imperturbable devotion:

My Country, 'tis of thee,
Sweet land of liberty,
Land where my fathers died,
Land of the Pilgrims' pride,
From every mountain side
Let freedom ring.

No less lasting are the monuments of victory and defeat where sleep the dead of all ages—the battlefields for human freedom and the manhood of man. Many years ago, I carried at his request the venerable Dr. Rigg, burly and self-sufficient Englishman, to the battlefield and monument of Bunker Hill. He stood a while, looking up at the historic pile of stone, when he said to me: "I would like to ask you how you happened to build so great a monument on the battlefield where you were defeated." I said I had not thought of it, but, if you will not be offended, I must answer: "We have so few such places, I assume that it was thought we would forget this one without the monument."

But, good ladies, you have come to mark this school yard of the American University Camp where our boys came to school themselves to know how to die, when from their youth they had been taught to horrify the wickedness and torture of felonious and fiendish war.

It is great honor accorded me to receive in behalf of the Trustees of the American University this testimonial to the God-like men who went forth to bring triumph to the New Age for truth and righteousness.

It is written in the "Girl on the Karpathians": "It is a great many years since I learned that people rarely say 'I thank you' when they have strong reasons for doing so."

It will require the long life and history of this institution to express the adequate gratitude to the honorable women who have thus brought us into the assembly of world monuments.

May this granite never be moved from its firm foundation while so many students who were here and whom God needed sleep at Belleau Wood and in Flanders Field, or the yonder mountains fall in ashes to the sea.

It is highly fitting that the Daughters of America should bring this noble tribute to the Sons of America and that it should be gratefully received by this school of the Holy Grail, whose highest aim, and now this enduring stone, are consecrated to the end that there shall be no more war.

So mote it be!

ADDRESS TO THE GRADUATES, 1925.

Mrs. Anthony Wayne Cook, President General, Daughters of the American Revolution, addressed the graduates of 1925. Her address was brilliant, patriotic and given with an enthusiasm that captivated the large company attending the Convocation exercises. Though we are unable to reproduce the address, the impression of it will remain upon the lives of all who heard her.

ADDRESS GIVEN AT OPENING EXERCISES OF THE COLLEGE OF LIBERAL ARTS.

Dean George B. Woods.

OPENING OF THE COLLEGE OF LIBERAL ARTS.

The College of Liberal Arts of the American University was formally opened on September 23rd. The exercises were held in Hurst Hall, where the following program was given:

Invocation—Dr. Bartlett B. James, Professor of History.

Scripture Reading and Prayer—Dr. Frederick B. Harris, pastor Foundry Methodist Episcopal Church.

Address of Welcome to the students—Chancellor Lucius C. Clark.

Quartette—Mr. W. A. McCoy, Mr. A. C. Wright, Mr. Howard P. Bailey, Mr. James P. Schick. Professor Dean Shure at the piano.

Address—Dean George B. Woods.

Solo—Mrs. J. Frank Rice.

Benediction—Bishop William Fraser McDowell.

Address of Dean Woods at the Opening of the College of Liberal Arts.

There comes a time in the life of every young person when he longs to achieve—when the spirit of faith in the unseen and the unaccomplished makes him venturesome and unafraid.

WILLIAM JENNINGS BRYAN.

William Jennings Bryan, known and loved by the entire country, was a member of the Board of Trustees of the American University for a number of years. He made as great effort as any member of the board to be present at the annual meetings. His death having occurred since the June Convocation, a suitable memorial will be presented at the annual meeting of the Trustees in December.

GEORGE C. STURGISS.

Resolutions on the death of George C. Sturgiss read at the meeting of the Board of Trustees, June 3, 1925:

One of God's noblemen, a lifelong Christian, has been promoted to his eternal reward.

Since the last meeting of this Board, the earthly career of one of its members, the Honorable George Cookman Sturgiss, came quietly to its end on February 26th, 1925. Eighty-two years measured the span of his life, begun in Mahoning County, Ohio, whence at the age of 17 he moved to Morgantown, then a village of 800 in Virginia, and now a thriving city of 25,000, Monongalia County, West Virginia. In the growth and development of this town he has been a pioneer and leader, in its financial, industrial, civic, educational and religious activities. His positions of public trust and honorable service include county superintendent of schools, member of State Legislature, county and federal district attorney, State Regent of the University of West Virginia for 17 years and president of the board four years, twice a Representative in the National Congress, County Circuit Judge for eight years, editor and owner of the Morgantown Post.

In recognition of his valuable services as a Trustee of the American University for 22 years and as a memorial of his hearty and helpful co-operation, we here express and record our sorrow over the loss of his brotherly counsel and convey to his surviving wife and daughters our sympathy in their bereavement. In this rich inheritance of his good name and precious memory we, too, claim, though it be a minor share.

No mountain is too high or too steep for him to climb, no cavern too vast or too black for him to explore. I hope that you have come to this new college prompted by such a spirit.

If you would succeed in your college work, you must be grounded in devotion and loyalty to a cause. You seek a college education. You are setting out upon the great American quest. Like the lad that young Gareth told about, you have seen a golden egg in an eagle's nest on the mountain. If you could climb and lay your hand upon it, you think you would be wealthier than a leash of kings.

What is it you seek? What constitutes an education? Knowledge? Most surely; but God grant that the knowledge you gain may be purchased without the loss of power. Rightly evaluated, knowledge should enrich your life and increase your usefulness; but without character and common sense, sheer intellectual training may be more mischievous than beneficial.

What is it that you expect this college to do for you? Do you expect it to make of you something that you have not been before? Are personal shortcomings to be supplied here? Are warped characters to be smoothed out? Are weakness of will and indifference of spirit to be supplanted by strength and ambi-

tion? Do you expect these miracles to be performed for you by the college? Do not think it; the transformation is not so easy as that. A miracle of change is observable in the college life of many students between the day of registration and the day of graduation. Some students above the rank of freshman consider the supreme miracle that of changing a freshman into a sophomore. I have observed many generations of students, and I rejoice in the recollection of their development. Some I have known who developed but little, because there was little need of change; others have been completely transformed, because the need and the opportunity of improvement gave room for no other course. But I am trying to suggest to you individually that you should not expect the impossible from your sojourn here. College may enrich your life—it should; it may improve your ability and enlarge your purpose—it should. But it cannot accomplish any of these desires of your heart unless you come possessed of initiative and self-reliance and self-respect and courage and ambition and zeal; unless you come already disciplined and chastened in mind and spirit; unless you come vigorously determined to achieve. My young friends, we of the faculty of this institution cannot make men and women of you against your will. We cannot even train your minds unless you help us.

It has been said that an educated person is one who has learned to do the thing he does not want to do, at the time he does not want to do it. This may be the justification for required courses in college, since some students seem to have a decided preference for those courses that are not required. Many duties of life will be found to be unpleasant; and your characters will be severely tested when disagreeable tasks are assigned to you. I hope that you may learn this philosophy—whatever must be done, should be done cheerfully.

I have been urging you to be ambitious, to have a purpose. I urge you also to be patient. I know that many of you want to begin where your parents left off. I find no fault in you for that. You ought to accomplish more than your parents have accomplished, because your opportunities have been greater. But keep on with your training. Let nothing deter you from finishing your college course. Do not think now of taking your parents' place. Some of us are loath to give over our work. We may be with you young people a long time yet, and we do not intend to wait for you to catch up. We do not grow weary with walking; it is not yet time for you to mount up like eagles. Until you are chosen to be good leaders, you must learn to be good followers. Many times during your college course you will be told that you are to be the leaders of the world. I am not so sure about that. Tenyson was right, I think, when he said "self-reverence, self-knowledge, self-control—these three alone lead life to sovereign power"; and I am sure that that power comes only after a long period of training for leadership. Don't be in a hurry to get through. The world is not waiting for you. All the good jobs are filled already, and if you would make a place for yourself, you must be thoroughly trained for it. At any rate, we shall be happy to keep you here as long as possible.

Be slow in choosing a profession. It never worries me when college students are undecided about their life work. It is not necessary to know now what you are going to do four years hence. Large fish have been caught from drifting boats. All I ask is that you keep the way open, that you keep yourself fit and alert—ready for a vigorous and a sudden march ahead. It may be necessary for you to burn bridges behind you, but do not burn them ahead of you. Whatever way of escape you must have must be found only straight ahead. The circle of human knowledge is too large, the horizon of life too distant, for you to choose your place in life before you are half-way

through college. Your main purpose now should be training for the great days to come.

I should like to offer two ideas as a background for right training:

First, we must learn to look for happy days ahead. School days are not the happiest days of one's life, neither are college days. It is an insult to tell young persons that youth is the happiest time of life. Happiness is not physical; it is mental. The happiest person is he who thinks the most interesting thoughts, and accordingly we should grow happier as we grow older. Browning expresses the idea rightly in the philosophy of Rabbi Ben Ezra:

Grow old along with me,

The best is yet to be,

The last of life for which the first was made.

Joseph H. Choate once said that unquestionably the happiest period of life is the decade between 70 and 80 years of age. It is the function of a college course to enlarge the area of your thinking, to supply you with interesting thoughts in order that your life may expand in happiness.

At the same time you must learn to make the most of dull hours and dull companions—perhaps dull classes. Life ought to be interesting always, but it is not. Companions ought to be bright always, but they are not. And it is necessary to our happiness to know how to surmount hours and companions that may be dull. Sometimes we may not be able to find the star to lead us on; and we shall have to follow Bliss Perry's suggestion to hitch our "wagon to the old horse if no star is handy."

Secondly, I believe that true happiness does not come by chance, but by proper education, by the proper ordering of the affairs of life. If happiness is mental—and it is—the possession of interesting thoughts is the secret of it. Four agencies especially contribute to the development of an interesting mind. I have time merely to mention them; they constitute a large portion of the culture of the world.

The first is music. Few of us can create symphonies; but if we cannot produce the music of the spheres, we ought to hear it. We ought therefore to cultivate the habit of listening so that we may be good listeners. I like the interest of the old colored woman a friend of mine told about. He heard her humming a melody one day and said: "Mary, you're quite a singer." "Go long, chile," she replied. "I ain't no singa; but I can hear singin' all de time."

The second source of influence is art. Surely we cannot all be painters; but, if you could paint the sunset, wouldn't you do it? Even if we cannot paint, or draw, or chisel, we can enjoy the masterpieces of art. And we should study art in order to enlarge our interests and to acquire culture. We should surround ourselves, if possible, with the best that art affords, always remembering that the print of a masterpiece is better than an expensive painting poorly done.

The third agency of culture is nature. A study of nature leads to a love of the beautiful. A cultivated spirit is sensitive to all forms of beauty. "A thing of beauty," wrote the youthful Keats,

"is a joy forever;

Its loveliness increases; it will never

Pass into nothingness; but still will keep

A bower quiet for us, and a sleep

Full of sweet dreams, and health, and quiet breathing."

An old woman was one day standing beside Turner, the famous painter, looking at one of his colorful pictures. "Mr. Turner," she said, "I can't see in nature what you do." The artist turned toward her with a smile and replied: "Don't you wish you could, madam?"

The fourth agency that fosters culture, that helps to make an interesting mind, is books, especially books of fact and books of faith. We need both, and we must read both. Books of fact give us beauty of precision; science is the gate to fairyland. But science changes. Books of faith endure for all time, because they are founded upon a human nature that is changeless.

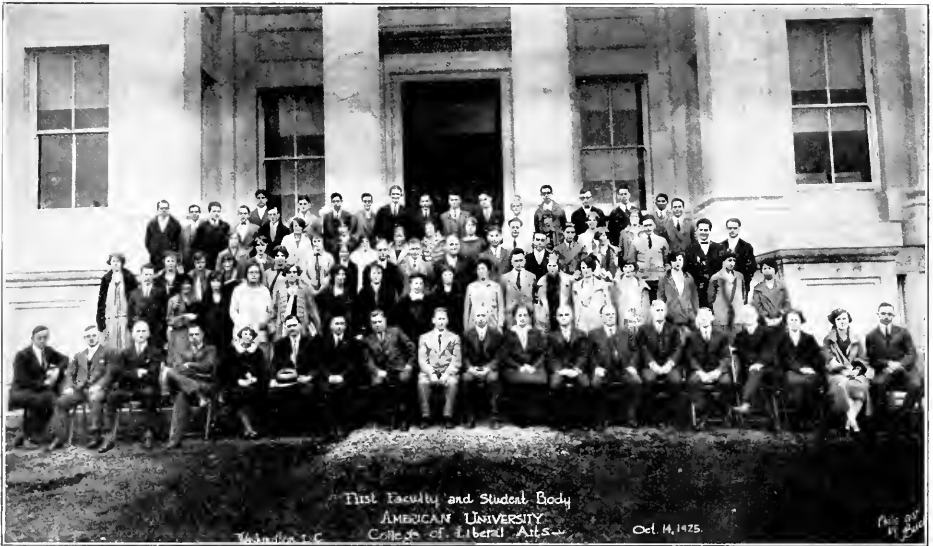

The cultivation of an interest in music, in art, in nature, in books, will make an interesting mind and a refined spirit—sensitive to every good impulse, responsive to every noble emotion.

Perhaps it is in place to say something of the aims and ideals of this college. You above all persons have a right to know what we stand for. An impression of our purpose may be gained from what I have already said. To be more explicit, I am here to declare that the great aim of this college is culture, and whatever fosters and develops culture may rightly be cultivated here. The atmosphere of the college will be Christian, but non-sectarian and tolerant. It shall be our purpose to work for the greatest good for the greatest number. Many details of our educational policy are yet to be determined, but we shall hope to build upon the studies and the researches of eminent scholars in the field of education and psychology. One significant point of view that we shall hold is to regard education not primarily as a preparation for life, but as life itself. With this idea in mind, we shall regard education, as an eminent educator has said, as a means or as a process of "bringing out of a person what is in him, in him individually, as revealed by his instincts, his interests, his temperamental, his elemental qualities." We want your experiences to be rich and varied, and we shall aim to offer such courses of study and such opportunities of personal contact as will most largely contribute to this end.

It is an unusual experience that has been granted to us—to inaugurate a college of liberal arts. To Chancellor Clark belongs the credit for what has been done. His was the vision of the great possibilities for the future. He has been the burden of making things ready for us. We are all indebted to him for his vision and for his faith. In accomplishing the work committed to our hands, we are fortunate in having no traditions to hamper us; we are equally unfortunate in having no traditions to guide us. It therefore behooves us to establish customs slowly, making sure that whatever is practiced frequently enough to become a tradition is what will make for the benefit of generations of students yet to come. It is no ordinary privilege that we share—it is a sacred right, and I believe that by taking thoughtful consideration we shall not fail.

Virtually all of you have come to the college on faith. You will subject us to severe tests. Likewise we admit you on faith, and we shall subject you to severe tests. We aim to maintain high standards of admission and of graduation, and whatever recognition comes to the college will come because you, the first students who enrolled, have been faithful to the high purpose that is set before you.

We want you to gain a proud and loyal sense of membership in an institution pledged to high purposes and appreciations, devoted to the glorious task of sustaining interest in things that do not perish. We have confidence in you, my young friends, Chancellor Clark has bidden you welcome; I bid you God speed. What you are to accomplish rightly remains a delightful mystery, but with minds alert and interesting, with hearts tender and sensitive, with souls burning with a zeal for service, I bespeak for you a college life overflowing with happiness, shedding a radiance of beauty all along its path.

CLASS AND FACULTY—COLLEGE OF LIBERAL ARTS

Photo by Buck
Washington, D. C.

STUDENTS OF THE COLLEGE OF LIBERAL ARTS.

The national character of the College of Liberal Arts of American University is attested by the fact that the seventy-five students in attendance for the first year of the College comes from nineteen states of the Union and two foreign countries.

It was expected that the College would make an appeal to young men and women in various parts of the country because of the unusual educational advantages offered by the City of Washington. The registration for the opening year is most gratifying, and it is anticipated that another year will see a considerable increase in the number of states represented. America is rightly the field of American University.

The largest representation is from the City of Washington, which furnished twenty-four students. Fifteen registered from Maryland, eight from Pennsylvania, five from Minnesota, three each from New Jersey and Virginia, two each from Delaware, Kansas, and Wisconsin. Other states represented include Alabama, California, Connecticut, Illinois, Indiana, Iowa, Ohio, Massachusetts, Missouri, and West Virginia. Singapore and the Philippine Islands are represented with one student each. Of the students enrolled, thirty-four are men and forty-one women.

Eleven religious denominations are represented among the students. Although the College is nominally a Methodist institution, it is by no means sectarian. It aims to appeal to

all earnest young people, irrespective of their church affiliations. The following churches are represented:

| | |
|-------------------------|----|
| Methodist | 48 |
| Presbyterian | 7 |
| Catholic | 4 |
| Congregational | 2 |
| Baptist | 2 |
| Episcopal | 2 |
| Hebrew | 2 |
| Latter Day Saints | 1 |
| Lutheran | 1 |
| United Brethren | 1 |
| Schwenkfelder | 1 |
| No church | 4 |

It is very unusual for a college to graduate a class the opening year. In this respect, the College of Liberal Arts sets a new standard in that it has registered six Seniors. The Junior Class comprises fourteen students, the Sophomore Class six, the Freshmen Class forty-nine. All classes have organized by electing officers.

Several organizations have already been effected. A glee club of thirty mixed voices, a women's athletic association, and a mathematical club are already at work promoting their various interests.

Interest also in debate and oratory is marked. A devoted friend of the College has offered the sum of fifty dollars to be used for prizes in an oratorical contest. No training a student receives is of more value than that which comes from practice in public speaking. Most colleges offer a large number of prizes for speech contests, and it is hoped that liberal endowments may be received by the College for stimulating work in oratory and debate.

The students have a helpful opportunity for the expression of their religious interests and convictions in a weekly Vesper Service conducted in the parlors of the Women's Dormitory on Sunday evenings. A student committee is in charge of the services. Varied and interesting programs are presented consisting of special music, short talks, and discussions of vital problems.

An unusual example of devotion to the welfare of the College is furnished by the interest of the students in publishing a college newspaper. Virtually all the students put themselves on record as supporters of a college paper, and it is anticipated that six or seven issues of a paper will be published during the year.

Work in athletics is carried on vigorously and enthusiastically in spite of handicaps that are usual during the opening year of a college. It would have thrilled anyone interested in the College to see the twenty-five men, clad in new football suits, engage in practice after the first call was issued. Indeed, the team is being rounded into shape for participating in a schedule of several intercollegiate games. Nothing promotes college spirit quite so much as wholesome athletics, and every effort is being made to provide facilities for enlarging the athletic opportunities of both men and women.

Visitors to the College have been impressed with the serious attitude of the students toward their studies. This may be partly accounted for by the fact that more than twenty of the number are earning a part or all of their way. Fifteen of the young men are preparing themselves for the Christian ministry.

The courses of study elected by the students give evidence of their interest in culture and sound learning. Deserving of special mention are the classes in Art, Bible, Literature, and Greek. A beginning Greek class of fourteen students challenges comparison with the largest and the oldest colleges and universities in the country.

The students now in attendance are setting high standards—in scholarship and in character—that will quickly win recognition for the College. Plans for two hundred students are now being made for next year. Additional courses of study are to be offered and additional instructors secured.

The College exists to serve the young people who enter its doors, and the success of the first year's work gives an earnest of larger and fuller years ahead.

TRUSTEE MEETING.

The annual meeting of the Board of Trustees will be held on Tuesday, December 8th, at 10 A. M., in Hurst Hall of History on the campus. This should be one of the most interesting Trustee meetings held for many years. Reports on the progress made and plans for the future will be presented.

Twenty-Fifth Anniversary

The Women's Guild of the American University was organized twenty-five years ago. In celebration of this event the Guild has arranged for a banquet to be held in the Willard Hotel on the evening of November 21st.

Under the inspiration and direction of Mrs. Mary Logan Tucker, the President, the Guild is becoming very active and is a great help to the University.

BATTELLE MEMORIAL

Battelle Memorial.

The Battelle Memorial Building is in process of construction. It is to be completed and ready for the opening of the College in September. This building is a memorial to the family of Mr. Gordon Battelle of Columbus, Ohio. Mr. Battelle was the youngest trustee of the American University at the time of his death. He

made a bequest of \$100,000 which with the interest has amounted to \$110,000. The building is to be used as a Library. It will be finished throughout in first class material and will be a great advantage in the work of the College of Liberal Arts.

Convocation Exercises.

The Convocation exercises were held on the College Campus June 1. The semi-annual meeting of the Board of Trustees convened at ten o'clock and the Women's Guild at eleven o'clock. Intensely interesting sessions were held by both. Mr. L. E. Breuninger, a well-known contractor and builder, and Dr. Wm J. Showalter of the National Geographic Society were elected as Trustees of the University.

At two o'clock the academic procession was formed and the first order of exercise was the laying of the cornerstone of the Battelle Memorial by Bishop John W. Hamilton. The Chaplain of the day was Dr. Harry Earl Woolever and the Convocation address was delivered by Dr. Edward Thomas Devine, the newly elected Dean of the Graduate School of the University. His subject was "Intrepid Scholarship."

The candidates for degrees were presented by the Deans of the Schools and the Chancellor, Lucius Charles Clark conferred the degrees upon the following:

BACHELOR OF POLITICAL SCIENCE

Ambrosio Pablo

Kirby Alfred Strole, LL. B.

BACHELOR OF ARTS

Florence Lect Allen

Dorothea McDowell

Claude William Hunter

Lucy Mabel Merkle

Dorothy Quincy Smith

THE SWIFT FOUNDATION

Lowell Brestel Hazzard, A.B., B.D. To study New Testament in University of Edinburgh.

THE MASSEY FOUNDATION

Edward Killoran Brown, A.B. To study Comparative Literature at the University of Paris.

Carl Arthur Pollock, B.S. To study Natural Science at the University of Oxford.

CONVOCATION ADDRESS

BY

Edward T. Devine.

INTREPID SCHOLARSHIP

Among the messages of congratulation and welcome which I received a few weeks ago when my appointment as Dean was announced, was one from the Department of English Literature in the University. To use his own words, Professor Kaufmann welcomed me in the name of "a small but I hope intrepid band." There was something in that message which intrigued my fancy.

Intrepid is one of those words which, while negative in form, is affirmative in content. To the Greeks *τολμα* means merely to turn, and from it we have our words *tropic* and *trope*. But to the Romans it already suggested the kind of turning which implies uncertainty, palpitation, agitation, trembling; and therefore it was the negative form, expressing the opposite idea—unshaken, damntless courage—which was in more frequent use. Boldness in action, then, coolness in the face of danger, daring resolution, is the quality which I understand that my colleague claims, or hopes that he may justly claim, for this band of scholars and teachers in American University.

There is no quality which I would rather find here. Intrepid bravery in the face of present physical danger the world has always admired. Richard of the Lion-heart, scattering the Saracens of Saladin; Temyson's Sir Richard Grenville, at Flores of the Azores, who had never turned his back upon Don or devil yet; Scott's James Fitz James who, you will remember, was quite unexpectedly confronted with full five hundred of Clan Alpine's warriors, but

Who manned himself with damntless air,

Returned the chief his haughty stare,

His back against a rock he bore,

And firmly placed his foot before.

What he said is too familiar to bear quotation. The stalwart Diomedes, of the fifth book of Homer's "Iliad," venturing even to face Apollo and to inflict, shall I say, an immortal wound on Aphrodite—what intrepid warriors they were! Great Hector of the glancing helm; Ajax, bulwark of the Greeks; fleet footed, goodly Achilles, and the rest. It is tempting to enrich our souvenirs by recalling Daniel among the lions; Arthur of the Table Round; Prometheus, fire-bringer, inventor of the useful arts, benefactor, but above all, as the poets understood him—Aeschylus, Shelley, Lowell—an intrepid, defiant, unconquerable hero, facing arbitrary power, facing mighty Zeus, triumphing over torture and solitude, scorn and despair:

..... these are mine empire,

More glorious far than those which thou surveyest

From thine unenvied throne, O mighty God.—

Almighty, had I deigned to share the shame

Of thine ill tyranny—

And that defiance inevitably recalls to us another who with ambitions aim against the throne and monarchy of God raised impious war. The Satan of Milton is no weakling. He, too, has courage. What does he say and do, after the great conflict, the dubious battle on the plains of Heaven, which shook the throne? This is what he says:

What though the field he lost?

All is not lost—the unconquerable will,

And study of revenge, immortal hate,

And courage never to submit or yield;

And what is else not to be overcome?

And what he does, you remember, is to set out, all alone, proudly refusing any military escort, to find and perchance to amaze that new world, the happy seat of some new race called man, about this time to be created. If he cannot drive out the puny habitants of earth, he may be able to seduce them to his own party, so that their God may prove their foe, and with repenting hand abolish his own works. I do not now inquire how nearly he succeeded, or examine the great plan of salvation by which his evil designs were to be frustrated. I merely call attention to the intrepid courage of the arch-enemy who speaks such words and undertakes such high enterprise on the very morrow of his experience in being hurled

headlong flaming from the ethereal sky,

With hideous ruin and combustion, down

To bottomless perdition, there to dwell

In adamant chains and penal fire.

I am by no means the first to point out that if John Milton, Puritan, had not been essentially a dissenter, a non-conformist, a defender of liberty against arbitrary tyranny, he could hardly have painted so understanding and sympathetic a portrait of man's arch-enemy, the embodiment of the evil principle in the universe. Here it is only of his courage that we think; of Milton's declaration, put into Satan's mouth, that all is not lost even if the field is lost. It turns our minds toward a distinction which we shall hereafter have to make more clear.

Our times are not barren of occasions for exhibiting heroic physical courage. The Arctic explorations prove it; the rescue at sea by the Roosevelt's crew; such individual heroic acts as the Carnegie Hero Fund seeks to discover and to honor; and countless inconspicuous deeds by policemen, firemen, life guards on the coast, foresters in the woods, doctors and nurses in epidemics, missionaries at home and abroad, coal miners and structural steel workers, soldiers, sailors and marines, labor leaders, red communists and white counter-revolutionists, and plain people who have no special color or group loyalty to inspire their acts but who rise, nevertheless, to heroic performance when unheralded the occasion comes—unrewarded, it may be, and unrecorded, save in the character of the hero and in the lives of those whom he serves. We have a right to say, as Lowell said,

No age was e'er degenerate

Unless men held it at too cheap a rate.

If the age is not to be held at too cheap a rate, then there is need of courage in the classroom, the library, the laboratory, where truth may be served as well as on the field of battle, in an airplane, on the frontier, at the North Pole, in the angry sea, in the midst of epidemics, where physical dangers threaten. What are the dangers before which teachers and investigators need to stand unshaken? I will name five.

1. Academic freedom may be in danger. Above all else the scholar must prize the freedom to search for the truth and to teach the truth he finds. In a state university politics may interfere with this freedom. In a university under denominational auspices ecclesiastical tradition or authority may interfere with it. In an endowed institution the founders may impose limitations. In a struggling institution, short of funds, the implied or explicit promises of the canvassers may interfere with it. But in every true university, trustees and faculty, patrons and students, cherish it and defend it.

If a university teacher shows a decent respect for the current standards of manners and morals, if his character is such as to command confidence, then the trustees and chancellor and deans have a clear obligation to hold an impregnable wall of defense before him, behind him, and on the flanks, to protect him in the exercise of his freedom to think, to investigate, to analyze, and to teach.

I am not now concerned, however, with the duty of others to defend or to respect the freedom of the investigator and the teacher, but with our own obligation to assert it—without shaking, without excitement, without fear of consequences. Freedom to report the results of inquiry, to express opinions, to announce even revolutionary or surprising conclusions, can never safely depend on good-natured indulgence. It is a precious, dearly bought freedom of the scholar himself. Its security depends on its exercise. The university is responsible for finding men qualified for research and for teaching; but it is our own responsibility to create the atmosphere of scholarship, the *esprit de corps* of a corporation of scholars, the traditions of quiet, untrammelled thinking, the organization of knowledge both of research and of education.

II. Standards of scholarship may be imperilled. It requires quite as much courage, unshaken courage, to establish and defend standards as to defend freedom. There will be—there is—almost irresistible pressure to be lax about conditions of admission, conditions of credit, conditions of graduation and of post-graduate degrees. The competition for numbers is only one aspect of it. Even after numbers become an embarrassment there will be pressure for particular students, for certain classes and groups of students; pleas for sheer favoritism, on behalf of ministers, or missionaries, or teachers, or public officials; appeals to sympathy, to institutional interest.

No university has sufficient standing to eliminate the danger. Everywhere eternal vigilance is required to meet it. Intrepid scholarship will demand that degrees and credits be difficult to get, and valuable; of value not, of course, solely because of the difficulty of their attainment, but mainly because of the mental

growth attained, the satisfaction realized, the pleasure from the carrying out under favorable conditions of the candidate's own plans, the solution of interesting problems, the discovery of new and unsuspected truth, the culture of the mind. Let the word go out from the Bay of Fundy to the Paso del Norte, from Nome to Miami, that American University degrees are hard to get, and that the journey to them lies through a rich, well watered, and fruitful country.

III. Intellectual integrity may be involved. I have been asked before now to furnish carbonite statistics to prove that welfare work in factories, stores, and mines had reduced the number of orphans in orphanages, of aged in almshouses, and of prisoners in jails; and I have been threatened with the displeasure of the largest contributor to the current work of the institution of which I was executive when I insisted that no honest statistician could establish such a causal relation from the available data. We have daily instances of the unwarranted, unscientific, and at bottom dishonest use of statistics in discussions of the social effects of the Eighteenth Amendment. An honest intention is not enough to protect our intellectual integrity. We have an obligation to be intelligent, to be discriminating, to take into account the other factors which may for example be operating along with the prohibition law.

Here also the scholar has need of vigilance. The danger is not only that of good-naturedly or unwittingly bearing false witness in order to please others or to uphold a cause in which we believe on quite other grounds than statistical evidence. Unshaken stubbornness in telling the truth, in saying what our available evidence does prove and not going one step beyond that or short of it, is of course an elementary expression of the scholar's courage. But we have also to be vigilant against the danger of fooling ourselves, of seeing in all social statistics the results which we predicted and which we so much desire and not bothering to consider whether they may not have been brought about by some other line of influences which may lie outside our present preoccupation; of seeing in all social statistics the results which we predicted and which we so much desire and not bothering to consider whether they may not have been brought about by some other line of influences which may lie outside our present preoccupation; of being unconsciously prejudiced against the evidence adduced by our antagonists, especially if we mistrust their motives. The intrepid scholar has an open mind for evidence even from the adversary—even especially from an adversary whose intellectual integrity he does not trust—and that not for the practical purpose of putting himself in position to refute it, but to examine dispassionately whether there really is anything in it; and he challenges with particularly alert scepticism what seems to prove his own contention.

IV. Values may be distorted. In the world in which we live there are, as there have always been, false standards of value. Cheap, ugly, meretricious commodities are manufactured and sold. Bad books, plays, newspapers, and sermons; bad houses and furnishings; bad food and patent medicines; very bad liquor, I am told,—are put upon the market and voraciously devoured. To stand for good and useful and beautiful things requires intrepid fortitude.

By a high standard of living, we here in the university must mean not merely large incomes, but knowing the difference between the good and the bad, and preferring the good; between the good and the better, and seeking the better; between the better and the best, and demanding the best. The standard of living, like the kingdom of heaven, is within us. It means precisely knowing how to discriminate between the higher and the lower and invariably choosing the higher. The standard of living is spiritual. It has very little to do with material wealth; or rather, wealth is the effect and not the cause. The destruction of the poor is their poverty. The pauper, etymologically, is not one who has little, but one who makes little, who produces little, who does little. Education makes the producer, the doer, the poet.

The ignorant have low standards because of their ignorance; but in the university also there are temptations to put the lower in the higher place. Income, prestige, advancement, popularity, partisanship may be insidious temptations; and to put above them beauty, truth, the advancement of science, the clarification of thinking, perfection in the art of self-expression, humility in the utmost respect for the personality of others—this, too, requires intrepidity of scholarship, the courage of downright conviction, unshaken devotion to the higher ideals.

V. The way of life itself may be lost. There is, after all, the fundamental distinction between the courage of the warrior, which either Satan or Prometheus may exemplify, and the intrepidity of the scholar. Spiritual dominion is won not by inspiring fear, but by removing it. Patiently the scholar—like

Prometheus, but not like Satan—throws light into dark places. Bigotry, superstition, class divisions, racial antagonisms, crippling conceits, do not live in the sunlight of science and scholarship. Fears are manifold, but they rest mainly on illusions. What we have to do is to unmask the villain, to lay the ghost, to expose the pitiful rags of the scarecrow; to find a mare's nest, if you like, but then, having found and been deceived by it, to go on to the discovery that it is a mare's nest and to start the laugh at its absurdity; to demonstrate that fears are childish, their origin lying in natural phenomena which need only to be better understood, or else in problems of social organization—like insurance against sickness, unemployment, and old age—which have still to be faced and solved.

The scholar needs faith; but not in armaments or in shibboleths or in headlines; He needs courage; but not of a kind that expresses itself in terrifying yells. He stands steadfast, unterrified, unshaken; but not in shining armor and glancing helmet, striking terror and inspiring awe. His intrepidity is that of guide, comrade, fellow citizen in the commonwealth of the mind.

This final danger—of my short list—against which the highest courage of all is required—is precisely that of falling into the way of the unregenerate world in trying to take the Kingdom of Heaven by storm; in relying upon force, violence, compulsion, instead of on education, communion, cooperation, realistically facing facts. The way of life lies in attempting to overcome evil by love, and not by violence.

Against the invasion of the domain of the spirit by the material powers, the subordination of the mind by the body, the domination of man by the machine, let American University scholarship remain intrepid—I will not say to the death, but in faith that there is no death.

Students—graduate and undergraduate, and especially you who are about to depart with academic degrees. Do you think I have forgotten you?

You have been gathering here, I trust, something of the fruit which I have called "Intrepid Scholarship": Something of the cool and dauntless courage which casts out childish fears of the dark, of the cold, of the strange, of the jungle. You have gained, I trust, a better perspective of the practical problems of life—war, politics, disease, crime.

It is our best wish for you at this mizpah hour that you fortify your faith, buttress your philosophy of life, have a poise, a capacity for endurance and intrepid and unconquerable will, open indeed to persuasion, to reason, to conversion but not contemplating or inviting the possibility of defeat.

The School of the Political Sciences.

The School of the Political Sciences has been made a professional school. Two years of college work is the entrance requirement and with two year courses in the Political Science School, the student will receive the degree "Bachelor of Political Science." Courses in Jurisprudence, Diplomacy, Government, Foreign Trade, Economics, History, and Languages will be made prominent in this School.

Dr. Albert H. Putney is the Director of the School of the Political Sciences.

Ida Letts Educational Fund.

Mr. John C. Letts, President of the Board of Trustees of the University has recently made a cash contribution to the University of \$25,000 to establish, in honor of his wife Mrs. Letts, the Ida Letts Educational Fund. This Fund is to be held in trust by the University and the income upon the same is to be used as a loan fund for worthy and needy men who are students in the University.

In order that this fund might be available for the coming year Mr. Letts has also given the University \$1500 and from this sum loans will be made for 1926-27. This fund is in addition to \$25,000 Mr. Letts has paid and pledged the past year.

1926 CLASS GIFT TO THE UNIVERSITY

National Photo
Washington, D. C.

The College Spring.

There is a spring on the College Campus which is unsurpassed for clear crystal water. One of the most interesting events of Convocation week was the presentation by the Class of 1926 to the University of this spring in its new setting. The spring was walled in as the picture indicates and was beautified by its landscape setting. The presentation by the class was made by Mr. Claude Hunter, President of the Class of 1926, and the Chancellor received the gift on behalf of the Trustees of the University.

College of Liberal Arts.

The College of Liberal Arts closed a most successful first year. At the last chapel service of the year, leading students of college activities were honored at a recognition service presided over by Dean Woods.

Distinctive athletic emblems were awarded the following: In foot ball, Charles McDowell (manager), James H. Atkinson, Garth L. Beaver, Donald S. Bittinger, Carlisle Christie, Arthur Gerth, Seeley Gray, Samuel Bilbrough, Kenneth O. Pratt, Frederick B. Reynolds, Hugh W. Speer, Preston W. Spence, jr., James P. Sullivan, Archie R. Van Hise; in basket ball, Seeley Gray (manager), Donald S. Bittinger, Samuel Bilbrough, Carlisle Christie, Arthur Gerth, John C. Hayward, Frederick B. Reynolds, James P. Sullivan, Archie R. Van Hise, William C. Warner, Louis M. Young, Lucille B. Inlay, Aileen Vivash, Beulah M. Widstrand.

LEADERS ARE RECOGNIZED.

Special recognition was also accorded the following: Dorothy Wadleigh and Helen Roher, for standing in the oratorical contest; Roland Rice, Hugh Speer and Charles McDowell, the undefeated debating team; the following recipients of class honors for the first semester: Dorothy McDowell, Katharine Woods, senior class; Chew Lian Chan, Bernice Field, Dorothea Mehring, Vera Stafford, Laura White, junior class; Gordon Smith, sophomore class; Rose Kaycoff, Leonard Mikules, Roland Parrish, Helen Roher and Sarah Roher, freshman class; these class presidents: Claude Hunter, senior; Charles McDowell, junior; Hugh Speer, sophomore; Seeley Gray, freshman; presidents of organizations: Dorothy Mehring, Women's Student Government; Jacob Snyder, Men's Student Organization; Ruth Rinkel, Women's Athletic Association; Courtney Hayward, Glee Club; Arthur Gerth, Pi Mu Kappa; Dorothea McDowell, Dramatics Club; William Warner, chairman of vesper committee; Leonard Mikules, editor, and Roland Rice, business manager of the *American Eagle*, student publication, and the following were given recognition for music: Bernice Field, William Warner, Charles McDowell, Garth Beaver, Helen Edwards, Ruth Ely, Fred Barnes, Carlisle Christie, Courtney Hayward and Jacob Snyder.

At the Convocation Dean Woods of the College announced that the scholarship distinction for the Senior class was given to Miss Dorothea McDowell. The \$20.00 gold prize for the best scholarship for the entire school was awarded to Roland E. Parrish, a Freshman and the youngest student in the College.

DRAMATIC CLUB OF THE COLLEGE

National Photo
Washington, D. C.

Dramatic Club.

The Dramatic Club of the College of Liberal Arts under the direction of Professor Hutchins presented "The Rivals." Their presentation was highly praised by students and visitors. With a suitable place for such plays, the club plans large developments for next year.

The University, Today and Tomorrow.

Two questions forced themselves into the consciousness of those who established American University. In the illumination of those questions it has developed and achieved as widely as circumstances have made possible.

The same queries today confront the University and in so doing stand full face before United Protestantism of America. What must American University be? What must American University do? These vital questions interlock. Each is cause and effect. Each refuses to be evaded or belittled.

In the light of the past with its difficulties and perplexities, in the face of doors that seemed hermetically closed, American University has done much and has been a considerable factor, though not a large one at Washington and elsewhere. Now come new conditions, determined demands, greater needs and doors to the future that must be opened wide.

What shall American University be; what shall American University do? To be, makes necessary that it have. What it has now can suffice only as a start. Education of the present is organized and standardized. There are relatively few poor high schools, few inferior secondary schools or even colleges. The buildings and faculties of the majority of them completely outclass what most colleges and many universities possessed a few years ago. Thus any institution which essays to lead, which assumes to offer undergraduate and graduate work along technical, professional, and highly specialized lines, has literally but one course. It must equip itself properly and largely. This requires buildings that are beautiful, appropriate, adaptable and durable—buildings enough to make possible the efficient doing of what the University aspires to do.

American University has a fair beginning along this line. The College of Liberal Arts at Massachusetts and Nebraska Avenues has its Women's Residence Hall for the accommodation of 300 students. A mere start however has been made toward furnishing it. More than forty thousand dollars is needed immediately for fittings and furnishings for this Residence Hall for Women of American University in order that it may be in harmony with such buildings in other colleges.

Hurst College of History is marble, beautiful of architecture and adaptable for years ahead, though needing now some radical repairs and improvements. The Hall of Science which, with the consent of the University, is used by the Department of Agriculture of the United States Government for its Fixed Nitrogen Research Plant, must soon be used as the University's Science Hall, and by that very fact requiring thousands of dollars for its rehabilitation and proper equipment toward presenting modern science to the students of today.

The Battelle Memorial, to be used as a library, is a gracious gift and adds another to the University's complement of buildings. For the College of Liberal Arts Library which it will temporarily house, very liberal endowment is necessary to bring that library to its rightful efficiency and provide the skilled, technical supervision by competent librarians which a modern library must have; especially a University library.

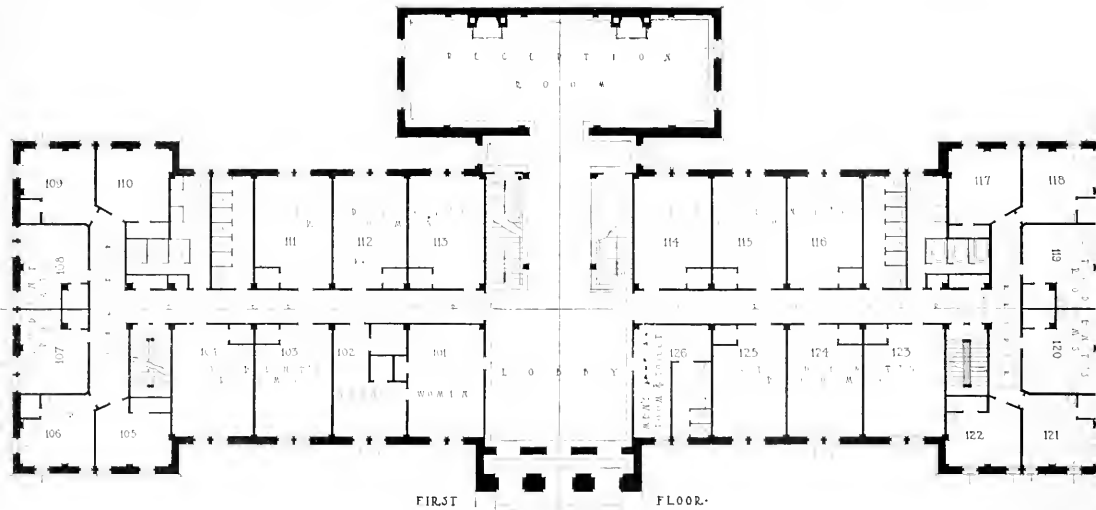

American University at Washington, D. C., is not a local, community institution. It never has been; never should it be. It is cosmopolitan and international. Accordingly there is pressing need for the immediate erection of a Residence Hall for men who come from many cities and countries. Ultimately to house at least 350 students, built in units, this present year should see completed the main central unit for 150 students. To erect this necessary building for the University's College of Liberal Arts means a half million dollars.

For just the immediate present the temporary assembly hall in the Hurst College of History will suffice for chapel service, debates and kindred college gatherings, but not for long. This University at the heart of

DOUBLE ROOM IN THE WOMEN'S RESIDENCE HALL

The above photograph shows the room as actually in use by students. They are large, high ceiling, well ventilated and good lights, hot and cold water in each room and an abundance of heat.

FIRST FLOOR OF THE WOMEN'S RESIDENCE HALL

The above cut is the first floor of the four floors of the Women's Residence Hall. This building will accommodate two hundred young women and has diningroom and kitchen facilities for three hundred and fifty.

the American Capital must have its chapel building commodious, capacious, churchly and scholastic, housing also the Chancellor's and the Dean's offices, and serving as headquarters for other University Administration. This will require many thousands of dollars.

The graduate and professional schools of the University at 1901-07 F Street share in building needs. On that strategic corner, almost within a stone's throw

of every Department of the United States Government, it offers technical work which reaches through its students to the ends of the world. For these schools American University can afford nothing but buildings commensurate with need and service.

The School of the Political Sciences, through its existence at Washington, is at the very center of governmental life. It must command the best men there are

available for its places of instruction. It must offer them everything they need for work that touches governments, world peace, commerce and international law and politics, and thus legislation and achievement for humanity. As the School of the Political Sciences needs equipment and buildings of such sorts, so does the Graduate School. There are too many high class Universities offering graduate work in this country to permit American University's Graduate School to be other than as fully efficient; to be less than the best for which it was established.

It is thoroughly well understood in the world of education, that relative to its buildings, its plant and student body, every institution of learning which is not tax supported, must have proportionate endowment. Only thus is stability assured. Only thus are funds for maintenance, salaries and expansion at hand. The erection of any building on any college campus brings with it the companion necessity of adequate endowment for that building. Thus now that American University faces squarely its immediate and far-flung building program it wisely sets forth to its clientele the necessity for multiplied millions for endowment. Six million dollars pledged within three years for building, equipping and endowing, is the minimum sum on which the University can justify itself in life and in service.

It would be folly to say that these essentials for the life of the University are cheaply or easily available. This institution seeks these funds that it may serve in proportion to the need and opportunity, that it may stand at Washington a great, commanding, unsurpassed institution of liberal learning maintained by the United Protestantism of this country, for the most liberal education of the young people of Protestantism. Whatever their technical ambitions American University should be superbly ready to lead them. Whatever their line of research, American University in its equipment, its spirit, its atmosphere, its faculties, its standards and its fellowships should represent to them the acme of educational challenge as the Protestantism of America unites in its development and its service.

To be and to do?—these burning questions with their implications are putting American University before its constituency of United Protestantism in a new way. They are setting forth a policy, a statesmanlike, comprehensive, working plan and program that will give the University a new place of promise and power in the thinking of educational America. Meanwhile in a quiet, carefully organized and systematic way funds are being sought to make possible the first step in this expansion which must lead the University straight away into its rightful and logical service.

Gymnasium.

At the meeting of the Board of Trustees held June 1, it was unanimously voted to proceed at once with the building of a gymnasium. Five friends of the University have each pledged \$10,000 for this purpose. We are seeking five more which will make a sum sufficient to build the required gymnasium. The committee plans to provide a suitable stage for college dramatics. The gymnasium with its stage will furnish a suitable assembly hall for the large meetings of the University.

The Graduate School.

Upon recommendations of the Chancellor and Faculties of the University, the Trustees took action that all Graduate work for the future shall be done in the one Graduate School.

Dr. Edward T. Devine becomes Dean of this new Graduate School. Dr. Devine is a Ph.D. of the University of Pennsylvania and did special research work in Germany. He was for sixteen years Professor of Social Economy in Columbia University. He organized the New York School of Philanthropy and was its director for three years. He is the author of a number of books on social and economic problems and has been lecturing on social and industrial problems for a number of years. He was selected by President Harding as a member on the Fact-Finding Coal Commission. He has been a representative of the American Red Cross in relief work in the United States and in Europe.

Dr. Devine and his family will move to Washington in September and his administration of the Graduate School will begin at that time.

No. 2

GYMNASIUM AND COLLEGE THEATRE

The above picture is the architect's drawing of the new gymnasium and College theatre. This building is to be completed soon after the opening of the school year. Its showers and lockers, with rooms available for twenty-four men will be ready at the opening of the college. The building is one hundred and twenty-five feet in length by sixty feet in width. A stage twenty-five feet by sixty feet with a work-shop of the same size, beneath the stage, will give the college one of the best equipments for dramatics in the country. The gymnasium will answer all the general requirements for such purposes and will also furnish an auditorium for the largest functions of the University with a seating capacity of one thousand persons. This gymnasium is being made possible by the gifts of ten ten thousand dollar pledges from trustees and friends of the University. Six of the ten pledges have been made and it is confidently expected that four more will be made by the time the Gymnasium is opened. A tablet with the names of the donors will be placed in the gymnasium.

Opening Day Exercises of the College of Liberal Arts.

The formal exercises for the opening of the College of Liberal Arts will be held on September 22, 1926, Chancellor Lucius C. Clark, presiding.

Prof. David A. Robertson, Associate Director of the American Council of Education, will give the address. Dean Woods will present the new students to the University. Prof. Shure has charge of the music. The Exercises will be open to the public.

The Battelle Memorial.

The Battelle Memorial, which has been completed during the summer, will house the College library. The building harmonizes in design with the other buildings on the campus. It contains several reading rooms, stock rooms, and administrative offices.

EDWARD T. DEVINE

Dr. Edward T. Devine is the new Dean of the Graduate School. All graduate work will be under his direction. Dr. Devine has his A.B. and A.M. from Cornell College, Iowa, and his Ph.D. from the University of Pennsylvania. He was general secretary of Organized Charities of New York for sixteen years, was the editor of the *Survey* and Professor of Social Economy in Columbia University for fourteen years. He organized and directed the New York School of Philanthropy, and has been upon a number of important Red Cross Commissions in this country and in foreign lands. He is the author of fourteen important volumes which treat on his major work in Social Economy. He was selected by President Harding as a member of the Fact-Finding Coal Commission.

Dr. Devine, Mrs. Devine and their daughter, Miss Ruth, will be located in their Washington home about September 15th.

 MISS CLAY

Miss Josephine Clay, Instructor in Chemistry and Physics, received her A.B. degree from Carleton College. She has had successful teaching experience as instructor in science in several high grade schools, and is especially well equipped for assisting in the chemistry and physics laboratories.

DELOS O. KINSMAN

Dr. D. O. Kinsman, for ten years head of the Department of Economics at Lawrence College, will be Professor of Economics. He received his Ph.D. degree at the University of Wisconsin. Dr. Kinsman has an unusual background of practical experience for teaching his subject. He is the author of a number of notable books and articles dealing with various economic subjects. His most recent book is *Economics, or the Science of Business*, published for use in high schools.

 MRS. VARRELMAN

Mrs. Sallie Kappes Varrelman will be librarian. She received her A.B. degree from Northwestern University and a diploma in library work from the New York State Library School, at Albany. Her extensive library experience includes the organization of a new library, which gives her special fitness for directing the work in our library. Mrs. Varrelman served two years in the library of Northwestern University; for the last three years she has been assistant librarian and instructor in library science at Drexel Institute, Philadelphia.

C. HENRY LEINEWEBER

Dr. C. H. Leineweber, who will be Assistant Professor of Modern Languages, will have charge of the work offered in German and Spanish. Dr. Leineweber received his Ph.D. degree from the University of Fribourg. He has studied widely in the universities of Europe where he acquired command of nine languages and distinguished himself in music, philosophy, and history. He is the author of several books, including a volume of sonnets, and numerous articles and verses in German papers and periodicals.

MINNIE JANE MERRELLS

Miss Minnie Jane Merrells is to be Assistant Professor of Education. Miss Merrells is a graduate of West Virginia Wesleyan University and has her master's degree from Columbia University. Her experience has been wide and varied, including an assistant professorship for the last three years at Temple University, Philadelphia.

WILLIAM B. HOLTON

Dr. William B. Holton will direct the work in chemistry and physics. Dr. Holton is a graduate of the University of Illinois; he has studied also at California Institute of Technology. He held a graduate fellowship at the University of Illinois where he served as instructor in chemistry from 1923 to 1925. He received his Ph.D. degree in June, 1926. Dr. Holton has made important discoveries in the field of chemistry. He is a member of several honor societies including Sigma Xi, the national honor society in science.

HAROLD M. DUDLEY

Mr. Harold M. Dudley comes as Instructor in History. Mr. Dudley was graduated from Simpson College, Indianola, Iowa, in 1917, and received his B.D. degree from Garrett Biblical Institute, Evanston, Illinois, in 1920, and his M.A. degree from Northwestern University in 1921. He spent two years in postgraduate work in the field of history at the University of Chicago, 1921-23, and for the last three years has been teaching history as Simpson College. He spent seven months with the A. E. F., serving with the 33rd Division, and was in the front lines of Somme, Verdun, and Meuse-Argonne sectors for 60 days as an infantryman.

MISS RUTH DEVINE

Miss Ruth Devine is a graduate of Boulder College, Colorado. She becomes registrar of the Graduate and Political Science Schools and instructor in French and Italian in the School of the Political Sciences.

MISS HELEN WILCOX

Miss Helen Wilcox, instructor in French received her A.B. degree from Radcliffe College. She will conduct classes in first and second year French.

Dr. Haggerty is a native of West Virginia and a graduate of the State Normal School at Fairmont. He prepared for College at the West Virginia Seminary at Buckhannon acting as instructor in English and Mathematics while thus engaged. He graduated from the Ohio Wesleyan University in 1900 with the A.B. degree and from Boston University in 1903 with the S.T.B. degree and during this time completed the class work under Dr. Borden P. Bowne. He spent three years at Harvard University doing Research work in Religion and Philosophy and received the Master of Arts degree from Harvard in 1904, and the Doctor of Philosophy from Boston University in 1906. In 1907 he was elected Dean of the West Virginia Wesleyan College at Buckhannon where he remained two years. He begins his work as Assistant Professor in the American University and will teach Philosophy and Religion.

Miss Elizabeth Stewart will be college nurse. Miss Stewart completed the regular course of three years in the Training School for Nurses of the Jefferson Medical College Hospital, Philadelphia. She is a registered nurse in Pennsylvania and Maryland.

Mrs. Eleanor A. Sharkey, Washington, D. C., has been appointed manager of the Student's Supply Store. Mrs. Sharkey attended Western Maryland College and has been in government employ in Washington. She will give her entire time to the store, which will be open daily from 8:45 a. m. to 5:00 p. m.

The Catalog.

The books in the library are being arranged according to the scheme of classification used at the Library of Congress, and a card catalog of the books is now being made. The catalog will contain author, title, and subject entries for all books.
